Nevertheless, impossible as it is for even the coldest of critics to withhold his admiration, the Walhalla has been assailed by criticism—hyper-criticism included; and that in some—at least in one instance, with considerable bitterness. It has been objected, first, that the Walhalla is merely the Parthenon revived; next, that it was a very great error—not to call it falsification of sentiment—to adopt the Grecian style at all for such purpose, it being quite at variance both with the name and the intention of the structure, which last is that of honouring not Grecian, but German worth and worthies: in this there may be something. As regards the discrepancy between the Germanism of its name, and the Grecianism of the building itself, that we hold to be an objection hardly worth notice; and objection there would still have been had the name, like those of the Munich 'Glyptothek' and 'Pinacothek,' been Greek. But it will, doubtless, be said—indeed, has been said—that the incongruity should have been obviated by selecting, not a different name, but a different style, meaning the Gothic or *Alt-Deutsche*. This is easily said; but would that style have suited the purpose equally well? Had it been adopted, the Walhalla would probably have been to all appearance a church—i. e., ecclesiastical in character; and, however respectable in itself, would have been insignificant in comparison with such monuments of the style as Strasburg and Cologne. It may, besides, fairly be questioned, whether there is at present any one in Germany capable of doing full justice to the style, and treating it with what they themselves call *geniality*. Even Schinkel himself failed lamentably whenever he attempted Gothic; Ohlmüller is dead; and Leo von Klenze is almost the very last person in the world who could enter into the spirit of Gothic, which he himself has not scrupled to call "*Das Grandiose Elende*"—"stupendous littleness." Upon the whole, therefore, it is better as it is. It is certainly something to have, at least, one edifice—and we believe it is the only one—which revives for us the most glorious monument of Athenian Art in its pristine beauty; at the same time, we confess that we ourselves should have preferred a free and spirited imitation to a mere copy. Let it, however, be borne in mind, that if with respect to its exterior the Walhalla is a mere transcript of the Parthenon, it is also more, and very much more besides. Not only does the immense substructure on which it is elevated in front, with its terraces and flights of steps—to the height of 130 feet at the level of the bases of the columns—give it a decided and imposing cha-

acter, but its interior is a perfectly original design, and with some ideas unborrowed, but worthy to be borrowed from. As has been observed, the exterior is in every respect a model of a Grecian work, consequently has no windows in its walls—a circumstance quite as much in favour of internal character and dignity also. The problem was not how to obtain light; for, there being no upper floor of any kind, there was no difficulty whatever in that respect: the difficulty was how to keep up strict consistency. The architect saw at first no other alternative than to adopt the usual hemi-cylindrical vault, which, richly coffered and embellished, would, no doubt, have been exceedingly beautiful, and would hardly have been objected to by any except those determined to cavil. Such determined caviller was Wiegmann, who, in his "*Ritter Leo von Klenze und Unsere Kunst*," written expressly to depreciate Klenze, sneeringly remarks, "We are to have a Walhalla scrupulously Greek in its exterior, but a compound of Greek and Roman within." The remark was somewhat premature, or else the critic was not aware of the change that had been made in the design; for, instead of either a vault or a flat ceiling, the architect has, by employing cast iron and metal work for the purpose, been enabled to make the roof and ceiling in one—answering to what is called in Gothic architecture an "open roof." Consequently there is no masking whatever: the roof slopes within, from the side walls to the centre or ridge, just as it does on the outside. But then does it not partake, in some degree, of the character, or at least recall the idea, of a Gothic roof, thereby disturbing our associations? Not at all; for, in point of design, the character is here totally different from that of the other style.

One strikingly characteristic feature of the exterior is not only introduced, but repeated: we mean the Grecian pediment, of which, besides those at the ends, there are two intermediate ones, helping to support the roof, and resting upon the massive piers on each side, which, with the beams and pediments themselves, are not only of indispensable aid in the construction, but occasion picturesque variety by breaking up what would else be too monotonous a ground-plan into three divisions; and corresponding with these there are as many large skylights, or open spaces in the roof, filled with plate-glass—certainly a very great improvement upon the hypæthral temples of the ancients.

Exclusive of a fourth compartment, separated from the others by a screen of Ionic columns and *antæ* (which order is continued by similar *antæ* at the angles of the large piers), the dimensions of the interior are 150ft. by 57ft. and 54ft. high (rather less than English measure): in point of mere size, therefore, it is nothing very extraordinary, but almost unrivalled in richness, at least as a specimen of its peculiar style. The floor is entirely inlaid with marbles of different colours, forming a tasteful pattern throughout; and other marbles of various species and hues are employed for the walls, columns, *antæ*, &c. Gilding has not been spared, for the ceiling is entirely lined with bronze and gold. While of sculpture, independently of the busts themselves which are here deposited, the display might be called profuse, were it not so judiciously distributed that there is no confusion; on the contrary, there is a sufficiency of plain surface to produce repose and breadth. Besides the series of bas-reliefs, or frieze, composed by Wagner, extending altogether to the length of 290 feet, there are fourteen colossal female statues introduced as Caryatides, forming a second order above the Ionic one. These amount to very much more than mere architectural decoration, being—those by Rauch more especially—of very superior character as original productions of sculpture, and full of beauty and expression. Every part of the interior is finished up in its minutest details; even the furniture (if it may so be called), the candelabra, and marble chairs, or seats à l'antique, serve to enhance the general effect, and to produce an *ensemble* and *coup d'œil* so unique and so striking, that it may be fairly asked—Quando ullam invenimus *parem*?

What we have said we do not offer as a perfectly clear and satisfactory architectural description, but merely a general and characteristic account of this truly extraordinary edifice—than which Ludwig the First, of Bavaria, will need no other monument. Henceforth its name will be one of those

which are consecrated in the history of Art, and belong to the poetry of architecture. To those of Parthenon, Pantheon, Alhambra, may now be added that of "WALHALLA."

## ROYAL ACADEMY.—DISTRIBUTION OF MEDALS.

ON the 10th of December the usual honorary distinctions were bestowed upon successful competitors, by the President of the Royal Academy in the presence of the members and the students. The gallery of the lecture-hall was crowded; about 300 being present to witness the ceremony. The copies exhibited were few, and certainly not above the average merit; the more prominent draughtsmen of the schools not having entered into the competition; but competition appears just now to be out of fashion. The works were divided into the five classes; and the honours were awarded to the following:—

To Mr. James Clarke Hook, for the best copy made in the school of painting, the silver medal, with the lectures of the professors Barry, Opie, and Fuseli.

To Mr. Alfred Rankley, for the next best copy made in the painting school, the silver medal.

To Mr. J. C. Hook, for the best drawing from the living models, the silver medal.

To Mr. John Clayton, for the best drawings of the ground plan, sections, &c., of St. Stephen's Church, Walbrook, the silver medal.

To Mr. James Harwood, for the best drawings from the antique, the silver medal.

To Mr. Alfred Gatlley, for the best model from an antique statue, the silver medal.

The gold medal was not presented this year; that prize being biennial.

The President, previous to presenting the prizes, made these observations:—"The Academy is, upon the whole, satisfied with the results of your progress during the year—and as a proof that they are so, they have voted medals to every class but one; I regret that this should be the one which, more than any other, stands in need of public patronage. I allude to models from the life, of which there is but a solitary instance; and although this is creditable, as the student has had no competition no prize can properly be awarded for it. In lessons in colouring you have had a fine but difficult example; and the copies are all of them meritorious. In the drawings from the life the competition has been respectable; and you will do well to remember that accuracy of imitation is the great object of Art. In some of these copies we have observed a want of anatomical precision—a want which only the study of anatomy can remove; and that this study is most essential to you, you must be well aware; for the student can never imitate the human figure correctly until he knows what it is. In architectural drawings the competition has been highly creditable—the students having manifested a degree of zeal, attention, and industry, which deserve the approbation of all persons connected with this institution. They have indeed felt a difficulty in deciding, where the merits of the competitors were so nearly on a par; and regret that where all are deserving only one can be rewarded. In drawings from the antique the competitors have been numerous, and generally successful. The comparatively new custom of drawing upon white paper must be considered most judicious—this improvement must be traced to the officer who presides over this department. There is no mode of design so surely calculated to produce an expert draughtsman. The models from the antique possess much merit; and redeem the schools from the reproach attached to the paucity of the competition by the students in models from the life."

When the President had distributed the prizes to the several successful candidates, who advanced to the chair to receive them, he addressed the students:—

"Gentlemen,—I congratulate the candidates on their success; but I hope they will consider the prizes they have obtained less as rewards for the past, than as incentives to the future—as just and honourable stimulants to urge them forward, so that they may, by the achievement of greater merit, obtain higher distinctions. This annual ceremony is one to which you naturally look forward with anxiety, but it is one which I anticipate with anxiety still stronger; for upon it largely depends the credit of the British school. It is now more

than 50 years since I entered a student of the Academy—introduced by the great founder of our school, our first president; during 43 years I have enjoyed the rank of an academician, discharging in my turn each of the duties that appertain to the office; and for 12 successive years I have had the honour to fill this chair, elevated to the highest station in the profession, by the concurrent voice of the eminent, accomplished, and distinguished men who placed me there. If, therefore, I did not take a deep, an earnest, I may truly say, a paternal interest in this Institution, I should indeed be unworthy, and indeed ungrateful to those of my brethren who generously waived their own high claims in favour of my humble pretensions. Of this Institution, then, the schools are the primary objects, for its schools afford the best test of its utility. These schools are supplied with all the advantages we could obtain, and the most serviceable means we could afford; they contain, indeed, all that may be considered useful and necessary for the formation of the artist. To you, then—to you, upon whom the honours of the British school will hereafter depend—we look for a proper use of these advantages, trusting that you will avail yourselves of them; and hoping that you will not allow our liberality in placing them at your disposal, to work prejudicially instead of beneficially, by leading you to undervalue what you receive with little trouble and without any expense. We have here proofs to-night that you may become the worthy successors of the existing ornaments of British Art; but efforts will be necessary to conduct you to so proud and honourable a distinction; you must be industrious, you must be persevering, for genius otherwise is of little worth.

"The Fine Arts are, unluckily, not among the favoured pursuits of the age and country; few are the honours, and still fewer the emoluments held out to their pursuers; and I lament that we find no desire in the public press to aid your efforts by generous co-operation—to balance your demerits by your merits. I had hoped that this ill feeling had been finally allayed; but it is not so; it appears to have revived of late, and in a spirit more offensive than ever, because more strikingly unjust. Our critics seem, indeed, desirous to submit the Arts of Great Britain to a foreign yoke; while every saunterer in the Vatican, and every lounging in the Louvre, is elevated into an oracle of taste by depreciating the productions of his country. This unjust and ungenerous hostility on the part of the public press must be met by corresponding exertions on your part—so that you may put to shame the illiberal assailants of your school—a school which may boast of producing the best artists of modern times—artists who have rescued this country from the reproach of rudeness and barbarism—artists who have forsaken the commonplace and conventional insipidity by resorting to Nature and to Truth!

"Recollect that whatever may be your lot here—however illiberally and unjustly you may be assailed—your high destiny is with futurity; and that your names may shine on the page of history long after the names of those who undervalue your services are blotted from the records of Time.

"Gentlemen, I wish you health to prosecute your studies; and success to reward them!"

[The estimable and accomplished President delivered the address with considerable feeling. His manner is always impressive and persuasive; he looks the kindly and conciliatory "master," who may have many followers from personal affection as well as from respect. His eloquence is of a rare order among men whose school has been the studio; and who have mingled but little with their compeers on the great theatre of life.

We desire to speak most respectfully of the President of the Royal Academy—not only because he is the head of his high and honourable profession, but because of those private virtues as well as public abilities, in many and varied departments, which so peculiarly qualify him for the important office he holds; but it is our duty to protest against the sweeping censure he pronounced against the Press of this country. He may be himself indifferent to its praise or censure; he has reached the highest point of professional distinction; but he is the guardian of the interests of hundreds of young men far less auspiciously circumstanced, and he is not justified in counselling them to despise a power which no individual in these king-

doms can despise with impunity. We make no exceptions, from the crown to the meanest citizen; there is no man in the British dominions who can scorn and condemn the British press without sustaining injury. The President, therefore, has—we humbly think—acted most unwisely and most unjustly in stimulating a war between this mighty engine and the many artists who, with a long future before them, and reputations all to seek, must mainly depend for the prosperity or adversity of their after career upon the conduct pursued towards them by the only legitimate organs of public approval or disapprobation. If the President had made any exceptions to his wholesale condemnation, these remarks would not have been called for. Such, indeed, we should have thought might have been conceded by his sense of justice; for although the severest sentence cannot be too severe, applied to a part of the public press, there are other parts of it that demand a far different verdict. For ourselves, we feel that it is not deserved—either in reference to an absence of desire to "aid the efforts of artists by generous co-operation," or a willingness to "submit the Arts of Great Britain to a foreign yoke." There are other journals—and not a few—that were equally entitled to be excepted from the reproach cast upon them by the President of the Royal Academy.

The Report in the *Times* newspaper describes him as speaking only of the "minor press;" if he had so limited his observations, no remark would have been necessary. But he did not so limit them; nor could he have done so with justice; for unhappily hostility to British Art is not confined to the lower class of periodical publications; some which affect a higher tone, and are indeed unexceptionable upon other topics, continually indulge in most ungenerous sarcasms at the expense of our English Artists—labouring to depreciate their labours, and to make it appear that they are considered as contemptible at home as a few ignorant and insolent critics pretend to consider them abroad. This is sadly to be deplored; the more especially because too many of these censors are themselves artists who, having suffered tribulation, should have learned mercy; and who might have been taught by their own failures and disappointments how difficult of access and "full of pitfalls" is the path that leads to distinction, and how cruel it is to place additional barriers in the way.]

#### ART IN CONTINENTAL STATES.

ITALY.—ROME.—*A Leaf from a German Journal.—Artists in Rome.*—In painting, during the past season, the works by living artists which have made the greatest impression on the public mind are, a picture by Papety, a student of the French Academy; and one by the celebrated young Italian artist, Podesti.

The picture by Papety is entitled, 'A Dream of Happiness.' The happiness is somewhat of a material kind—a Horatian realization of earthly blessedness; a banqueting repose with oblivion of all oppressive cares, on a summer's day, under shadowing trees, on the shore of a blue sea.

The epoch is not clearly expressed, for we have the worship and poetry of the old world with the life of the modern. This lessens the simplicity and unity of the idea; but the picture is in so fine a style—there is so much life and variety in it—that we cannot feel surprise at the impression it has produced. The lights are not sufficiently quiet, but the firm handling of the brush is admirable. There is none of the ideal here, but the forms are fine, and there is withal a touch of antique beauty. The rival picture, Podesti's 'Judgment of Solomon,' we have before noticed, and we retain the opinion that it is not one of the happiest efforts of the artist. The drawing shows his able and practised hand, but there is something theatrical and overdrawn in the whole arrangement of the picture, and the juxtaposition of the colours is not well considered. The execution is careful and clever—the architecture pure Egyptian.

Overbeck is painting his 'Pieta,' and making drawings for frescoes for the chapel of Castel Gandolfo, the villa of Don Carlo Torlonia. The subjects are, 'The Apostles and the Evangelists'; the frescoes will be executed by another hand. Engravings are to be made from the drawings by Professor Keller, of the Dusseldorf Academy: they are beautiful works, drawn with the severity

of the old style. Some drawings by Overbeck, from 'The Parable of the Rich Man and Lazarus,' are equally admirable.

An oil-painting by Müller, the subject, 'Romeo and Juliet,' at the moment Juliet awakes, is well composed, but unnaturally coloured.

Werner's 'Return of Andrea Contarini and his comrades, Pisani and Zeno, to Venice, after the Battle of Chioggia,' is an important work. It is in water-colour, but for force and richness will bear comparison with oil-painting. On the foreground is the palace of the Doge—all the details of the architecture are accurately yet broadly given. The interest of the picture is increased by the introduction of the portraits of many celebrated living artists now at Rome, including Thorwaldsen, Overbeck, Catel, Riedel, Pollak, &c. The subject of the companion picture to this work is 'The Arrival of King Henry III. in Venice;' and here we have portraits of the great Venetian painters of those times. Werner's portfolio is very rich in drawings and sketches. Catel's last work is a view of 'The Crater of Vesuvius with Naples, its Bay and Islands in the distance;' there is also by his hand a very perfect view of 'The Villa of Mæcenas at Tivoli:' the colour and light of a southern sky are beautifully reproduced in this picture. 'A View of Camaldoli' is one of the best works of the Flemish Teerlink, well known for his pictures of animals.

By Castelli, a Roman artist, there was in the last exhibition a fine 'View of the Castle of Terracina.'

In Sculpture, Gibson has completed the model of an 'Aurora,' represented at the moment when she rises from the sea, proclaiming a new day. The graceful port of the somewhat bending-forward figure, the forms of the drapery, the youthful beauty, and pure features of this lovely creation, render it one of the most charming works Gibson has ever given us. His colossal statue of Huskisson, for the city of Liverpool, is nearly completed.

Wolf has finished his fine statue of 'Prince Albert of Saxe Coburg;' and he has begun a statue of 'Pandora.' A graceful little figure of 'A Girl holding a Muscle-shell to her Ear,' by Steinhäuser, pleases every one.

Tenerani is occupied on a sepulchral monument to the late Princess of Arsoli, born Princess of Saxony Carignan; after which he is to execute, in marble, some of his great works—'The Pieta' and the 'Saint Bernard.' Generally speaking, there is much activity in the work-rooms of the sculptors.

As to Engravers, there is really no one deserving of much praise among the Roman artists. The two Romans who are truly famous in that department are both established in foreign countries, namely, Calamatta and Mercuri. Here flourish none but the old-established stipplers of views, costumes, and objects of antiquarian curiosity. This is singular, when we consider how rich Upper Italy is in excellent engravers in every walk of the Art. We need only mention Toschi, Anderloni, Perse, and Guadagnini, &c.

Of foreign artists resident at Rome we have already named Professor Keller. He is employed on a great work for the Art-Union of the Rhine, engraving Raffaele's 'Dispecte of the Sacrament.' G. Busse is continuing his interesting collection of Italian scenes. The 'Ciceronian Villas of Tusculum' and 'Mola da Gaeta' are the last completed. An excellent collection of views of Rome and its environs, the drawings by a living English artist named Lear, have been admirably lithographed in London. They are not quite without mannerism and effect-seeking, but they are well understood, and executed with a free, clever, characteristic pencil. Gruner is in England, making drawings from the Cartoons of Raffaele at Hampton Court; and, from his knowledge of the characters of Raffaele's style, we anticipate a perfect and long-desired work.

NAPLES.—'Della originalità del ritratto di Leone X., dipinto da Raffaele, nella Galleria reale.' Opuscolo di Carlo Pancaldi, Avvocato, Stamperia Francese, 1842.—"On the originality of the portrait of Leo X., by Raffaele, in the Royal Gallery." By Charles Pancaldi, Advocate.

This question, so interesting to amateurs, has been brought forward by the directors of the Gallery at Naples, and of the Ducal Gallery at Florence: each pretends to have the original. It is well known that one of these two pictures is a copy by Andrea del Sarto. Various works by different authors, full of curious notices, have

been published, regarding this subject, *pro* and *con.*, the pretensions of each gallery. Signor Pancaldi, with his usual talent and learning, seeks to prove that the original picture is in the Gallery at Naples. Shall we ever see the question decided?

**BOLOGNA.**—M. Rio, the elegant author of "L'Art Chrétien," is now at Bologna, and has visited Signor Gualandi in his studio, which is in the celebrated Galleria Fava, painted by the Caracci, and bestowed many encomiums on his great and useful enterprises in the history of the Fine Arts. Other writers, we believe, are now in various parts of Italy, following out Signor Gualandi's plan of searching public and private archives for documents interesting to the history of Art.

**Academy of Fine Arts.**—*Distribution of Prizes.*—The usual great annual solemnity for the distribution of prizes to the students of the Fine Arts, took place on the 17th of November, in the "Aula Magna" of the Academy. All the civil and military authorities were present, the professors and "Doctores Collegiati" of the University; among the crowd of students and of distinguished persons, the body of Academicians of the Fine Arts were remarkable, appearing for the first time in their new uniform, much resembling that of the Institute of France. The President, the Marquis Amorini, opened the sitting with an elegant and learned discourse, tending to show the danger to young students in following the innovators of the present day in matters of Art, thereby dividing schools into factions, instead of inspiring union and the desire to imitate and select true beauty in nature, according to the example of the great masters of every age and every school. Rapidly glancing over the number of those belonging to the Bolognese School, the learned Marquis particularly alluded to Guido Reni, this year being the two hundredth anniversary of his death. After the distribution of the prizes, Professor Rambelli pronounced another erudite discourse, the scope of which was the discoveries and improvements achieved by Italians in the Fine Arts; amongst other things, asserting their claim to the invention of oil-painting (as Toselli did in his writings an age ago), the transporting pictures from wall and panel to canvas, &c. Thus, on the subject of architecture, he alluded to the military architect, the Bolognese De Marchi, who preceded Vauban, and the other Bolognese Fioravanti (called Aristotiles), who, in the year 1445, transported houses and towers from one place to another; an operation now talked of in America as being a wonderful advance in the application of mechanical power. Professor Rambelli exhibited proofs of all that he asserted.

**Exhibition at Bologna.**—In the usual manner, after the distribution of the prizes, the saloons of the Academy were opened. We cannot give a full account of it; but in affirming that the exhibition was a very interesting one, both from the numbers and quality of the works, we shall point out the leading pictures in the various classes.

**Historical Pictures.**—A. Malatesti, professor in the Ducal Academy of Modena, exhibited the most important picture of this class—"Alphonso III., of Este, laying down the Ducal Crown, and adopting the Dress of a Capuchin Friar." The composition is rich as to the number of figures, and philosophical as regards the expression of the history, the sentiment, and the character of each one. The style is pure, the manner classical; the colouring is that of the Venetian school. L. Manaresi has an altar-piece representing the "Vision of the Pope Saint Eleuterius." Here we trace the study both of nature and of the antique. The young artist has, between the two, been successful. From nature, he has studied the heads which are feeling, soft, and full of life; from the antique, he has acquired the harmony, the simple attitudes of the "purists," the fluidity of pencil and the fusion of colours. His manner recalls the Florentine school. He is a young painter of much hope.

D. Vanni has painted "Marsyas Giving Lessons in Music to the Boy Olympius." The story is well told, and the colouring is lively; but the drawing leaves something to be wished for. F. Zanotti exhibits a well-imagined figure, "Faith in God." The execution is somewhat timid.

The Marchioness B. Amorini Salina (honorary Academician) has in this exhibition a large altar-piece, "The Bishop Saint Folco, who in a vision

contemplates the Virgin in Heaven." This picture is light, transparent, and harmonious, recalling the famous style of the painter Gandolfi, but with less bold oppositions of light and shade. The noble artist, in the midst of her wealth, is occupied in the unwearying study of painting, proving that talent for the Fine Arts is hereditary in her family, and adding another name to the still increasing band of illustrious female painters at Bologna; of these were E. Sirani, Lavinia Fontana, T. Muratori, B. Burrini, and others.

**Portraits.**—Malatesti, before mentioned, has three magnificent portraits—a *tour de force* in three different styles: the one being in the style of Carlo Dolce, the other of Rembrandt, and the third of Titian. The first may be copied without much difficulty, the second at much risk, the last with vast labour.—F. Rossi, "Portrait of a Noble Lady." An admirable work, that may be compared in style with Vandyke.—L. Aureli. This very young painter exhibits the portrait of a man conducted in such a style that it may defy the old masters; also a sweet copy of a Madonna, by Guido Reni, which will be his style.

[We regret that our limits oblige us to pass over many other works worthy of notice. In our next we shall mention a few of other kinds, particularly calling the attention of connoisseurs.]

**FRANCE.**—**PARIS.**—*Periodicals on Art.*—We have before noticed an excellent periodical on subjects interesting to the Arts, now publishing in monthly numbers, entitled "Le Cabinet de l'Amateur et de l'Antiquaire." Its articles embrace every branch of ancient and modern Art, reviews of paintings, engravings, &c. The number at present under our eye contains an elaborate article on armours and weapons used in war, and an interesting autobiography and series of letters of Albrecht Dürer; from these we translate the following fragment, which is given in a fac-simile of his handwriting, and we regret we cannot borrow more from this work:—

"ALBRECHT DÜRER TO A. W. PIRKHEIMER.

"I have many friends among the Velch—(a name applied by him to all who are not Germans)—and they advise me not to eat or drink with their painters, amongst whom I have many enemies. They counterfeit my works in the churches, and everywhere; where they can have them, they patch them up, and say they are not ancient, and not worth anything. But Gian Bellini has praised me in the presence of many gentlemen; he wishes to have some work of mine, and he came to my house and begged me to do something for him, and that he would willingly pay for it. Everybody says what a pious man he is, so that I am full of affection for him. He is very old, but in painting he is still the best.

"Given at Venice, at nine o'clock at night (half-past twelve.) Saturday after the Purification, this year, 1506."

N.B. All the letters bear the impression of the seal here annexed.

The contributors to this journal, as well as those to the "Bulletin de l'Alliance des Arts," are such well-known and distinguished names that we cannot feel a doubt of the success of both.

From the "Bulletin de l'Alliance des Arts," we abridge the following anecdote:—The Museum of the Louvre makes few purchases; it considers itself sufficiently rich, though it is without specimens of many fine masters found in private collections. It possesses one picture only to which the name of Balthasar Denner is given. It is the highly-finished head of an old woman—every hair, the very pores, the tissue of the skin is seen. Denner died in 1747. How does it happen that this picture is not hardened by time, and that the nail makes an impression on the paint as on a picture painted last year? Shall we assign as a reason that the gallery of Dresden possesses the original picture, painted by Denner, and that a living artist boasts of having made this copy? The price given for it was 6000*fr.* (£240). Not much, if it were an original; for the Emperor, Charles VI. gave 5675 florins for the picture now at Dresden.

**Tomb of Napoleon.**—The plan is to be exhibited at the Invalides. In the sub-basement of the

equestrian statue of the Emperor to be placed in the Court of the Invalides, a door is to be opened, which shall conduct by a gallery, 88 metres in length, to the dome within the church. This gallery is to be divided into three parts: in the first, bronze tablets between the arcades are to represent the triumphs of the Republic and the Empire; in the second division, which now exists, are the tombs of the Governors of the Invalides: it will be enlarged, and candelabras of bronze placed between the tombs on each side. The last division of the gallery will contain symbols and bas-reliefs, having reference to the glories of the Empire. Under the dome will rise the tomb of the Emperor, of Corsican granite, bearing only in gold letters the word NAPOLEON. The architect is Visconti; the sculpture of the statue is by Marochetti.

**Exhibition at the Louvre.**—According to the Royal "Ordonnance," the Directors of the Louvre inform artists and the public that the usual great exhibition will open on the 15th of March, 1843, and continue open till the 15th of May. Works of every description will be received at the gallery (closed for every other purpose) by the committee appointed, each day from the 1st of February till the 20th inclusive, from ten till four o'clock. The jury for accepting or rejecting the works will begin its labours on the 21st of February. Artists of every nation are invited to send a notice of their works before the 1st of February, addressed *Au bureau de la direction des Musées*. Artists are also reminded that works sent from the provinces or foreign countries cannot be received directly by the Directors of the Museum. Artists must forward their works to a person residing in Paris, furnished with a power of attorney to deliver and withdraw them from the Museum.

**Dantan.**—*Miss Kemble.*—The French sculptor Dantan has been in London for the purpose of making a statue of Miss Kemble in the character of Norma, for an admirer of her talents. The Duke of Devonshire has given Dantan a commission for a marble bust of Bellini, to be placed in his princely residence, Chatsworth.

**STRASBURG.**—*A Letter of the Sculptor David.*—We mentioned in our last, the intolerance of the ultra-Catholic party in this place, as having compelled the sculptor of the monument of Gutenberg, M. David, to withdraw the bas-relief on it which contained the portrait of Luther. We think his letter on the occasion does him so much honour, that we cannot resist giving here a literal translation of it. It is addressed to the mayor of Strasburg:—

"I have learnt with deep sorrow—I, who believed myself well acquainted with the age we live in—that religious intolerance is still lively and ardent even in the city of Strasburg, famed for its lights of knowledge, its virtues and its patriotism. Further, my respect for the Alsations will silence every other feeling; they have deigned to accept my offering; it becomes my duty that it should contain nothing offensive to their ideas. The figures of Luther and Bossuet shall disappear in the bas-relief representing the great literary characters of Europe; happy if the Strasburgians see in this abnegation of the sculptor, a new proof of his respectful devotion."

The Mayor of Strasburg has decided that the withdrawn bas-relief shall be deposited in the museum of the city. Let us hope that in a little time a better spirit will replace it in its original destination.

**SAXE WEIMAR.**—*P. Delaroche.*—The Grand Duke of Saxe Weimar has named the French painter, P. Delaroche, a Knight of the order of the Falcon.

**BRUSSELS.**—*"Joconda,"* by Leonardo, engraved by M. Fauchery.—This beautiful engraving from the *Joconda* of Leonardo da Vinci, by M. Fauchery, having been sent to the exhibition here, has procured for the artist the great gold medal of the first class, bestowed by King Leopold.

**GREECE.**—**ATHENS.**—*The Observatory.*—The foundation-stone of the observatory to be erected by Baron de Sina Hellenic, Consul-General at Vienna, was laid on the *Hill of the Nymphs*, near Athens. The expense of erecting the observatory, and providing it with suitable instruments, is entirely defrayed by Baron Sina. The King of Greece, Prince Frederick of Hesse Cassel, and all the authorities, civil and military, were present on the occasion.

**"WHIST!" ILLUSTRATED BY KENNY MEADOWS.**

FROM this very elegant little volume we borrow two engravings from the drawings of KENNY MEADOWS, engraved by Smith and Linton. The book is published by Messrs. Bell and Wood of Fleet-street. To those who enjoy the old English game, it comes recommended by the information it affords in a very pleasant form: giving its history; a number of striking anecdotes; all "the rules;" with hints in abundance, as to what should be avoided and what encouraged or studied. In fact, as a teacher of the game, it is at once succinct and comprehensive—a wise instructor, amusing all through the lesson it gives. It may delight as well as inform the young player, and afford a vast deal of pleasure to the old practitioner who "knows all about it;" while neither will complain that, with the serious matter appertaining to the subject is mixed up a mass of puns, fantastical allusions, odd stories, and merriment befitting Christmas. Our business is however more with the artist; yet we cannot here say of him half "our say." We should gladly devote to his praise a column as long as that in Trafalgar-square—was to have been, but we must dismiss him with a sentence, giving him what he has so often given us—a *cut*. But these two examples of his GRACEFUL HUMOUR—the term is more applicable to him than to any other living artist—will speak more for him than words. No man so happily blends the pathetic with the comic—true pathos with true art. If he sometimes verges upon the grotesque, he is never vulgar; never descending to caricature, although with a keen eye to the ridiculous, and a strong appreciation of "fun." We might write a long essay on his genius—a task we shall assign to ourselves ere long. Now, we shall better serve him by giving two of the 15 illustrations, all from his pencil, contained in this beautifully "got up" little book: one is "The Knave of Hearts;" the other the "Four by Honours."

**RESTORATION OF THE CHURCH OF ST. MARY, REDCLIFFE, BRISTOL.**

"AN Appeal" has been sent forth to the Public, with a view to the restoration of this venerable and once splendid fabric: it will be, we earnestly hope, emphatically responded to. There are thousands, and tens of thousands, able, and we trust willing, to contribute in order to preserve from ruin one of the noblest monuments, most beautiful examples of architecture, and most interesting churches of the kingdom. We shall, no doubt, have other opportunities of bringing the subject before our readers, a very large proportion of whom must have the means, as well as the desire, to aid in so honourable a project. At present our space may be better occupied, and we may more effectually assist the cause by supplying the accompanying "VIEW OF THE NAVE, ETC., LOOKING TOWARDS THE EAST, RESTORED." We borrow it from a valuable work, on the eve of issue, containing the "Proposals for the Restoration;" the "Original Address of the Vicar, Churchwardens, and Vestry;" the "Conditions on which Subscriptions are received;" and "Remarks and Suggestions by J. Britton, Esq., F.S.A.," who was selected by the parochial officers to "advise respecting the decayed state of their church, and the best mode of restoring it to its pristine integrity and beauty." Accordingly, Mr. Britton called to his aid Professor Hosking, and, together, they have made "a Report." Apart from more important considerations, it is a valuable document, written in a clear, sensible, and comprehensive style, and advocating the great purpose with simple but convincing eloquence. We shall take an early opportunity of recurring to the subject. But this print, of what the edifice has been—and we are confident will again be—makes a more powerful "appeal" than language can do.

Divested of pews, seats, and other furniture of a Protestant Church, the above print shows the architectural character and details of this truly beautiful edifice. If not equal in sculptured decoration to the gorgeous chapels of Henry VII., London, and King's College, Cambridge, it will bear comparison with those justly famed buildings, and will be found to surpass most of the cathedrals and other large churches of our own and of foreign countries in this respect. Although in miniature, this beautiful delineation in wood engraving displays the finely moulded and shafted piers or pillars, with the arches to the aisles, and the panelled walls above them in the situation of the triforium of the large cathedrals. Over this tracery wall is a series of clerestory windows of large dimensions, and of fine forms and proportions, with mullions and tracery. These, it is reasonably inferred, were originally filled with stained glass, "casting a dim, religious light" over the whole scene. Connecting, and apparently tying together, the two side walls, is a groin-vaulted ceiling, profusely adorned with intertwining moulded ribs, foliated tracery, and richly sculptured bosses spreading over the whole. In the view presented by the engraving, the eye ranges through a beautiful vista full of the most charming architectural effects. It requires but little stretch of fancy to imagine the exquisite, and indeed sublime, appearance of the whole, were the windows filled with pictured glass, and the ribs, bosses, and capitals of the vaulted ceilings, and of the shafted pillars, with gold and colours "richly dight."

## ART IN THE PROVINCES.

[The following returns of sales effected at the several provincial exhibitions will be found, on the whole, satisfactory. It should be borne in mind that the past year has been one of more than usual pressure upon the manufacturing and commercial towns of the kingdom, and that the luxuries of life must have been severely affected by it. If, therefore, the desire to obtain works of Art has operated to a considerable extent, it is only reasonable to assume that, if circumstances had been more propitious, the feeling would have been manifested far more extensively. We are free to augur an immense increase next year.]

SOCIETY OF ARTISTS, BIRMINGHAM, 1842.—Two exhibitions have, this year, been open to the public in the town of Birmingham—one of Deceased Masters, at the Society of Arts, New-street; the other of Modern Paintings in the Gallery, Temple-row, originally erected for the purpose in that midland Metropolis. We had occasion, in a former number, to allude to the measures advocated by the unprofessional supporters of the Society of Arts, which occasioned the secession of the artists from that body; and we now communicate, with feelings of high satisfaction, the result of the independent and valuable exertions of the professional supporters of Fine Arts in the great workshop of our commercial empire.

Encouraged by the generous and almost unanimous support of their metropolitan brethren, they formed a collection unrivalled in the history of provincial exhibitions. Sir Martin Archer Shee, with the high feeling that has distinguished his public career, stamped their importance with the fiat of his name, and ascended their presidential chair. An impartial and enlightened band of the unprofessional patrons of the old Institution assembled in their aid, and by vigorous exertions, though at a late hour, established an Art-Union on the most disinterested plan for the encouragement of their undertaking; and their exhibition, as well as the Art-Union connected with it, have received the sanction of an extended public patronage in a year of unexampled inactivity and depression. We may, therefore, confidently affirm, that the utility of a body of independent artists is permanently established in Birmingham, on the wide basis of public approbation and support; and we congratulate the age on an event promising every advantage that can be anticipated from the uncontrolled efforts of men of genius. When we review the metropolitan ranks of those who occupy high places, we readily acknowledge the merits of Phillips, R.A., Creswick, A.R.A., Hollins, A.R.A., Evans, D. Cox, Derby, and Hill, among painters; of Wilmore, Pye, Brandard, J. B. Allen, Fisher, Griffiths, and others, among engravers; of Wyon, R.A., and Mills, medalists; of P. Hollins, among sculptors—all natives of Birmingham and its vicinity, and own the attic influence of a midland origin in the culture of a refined public taste. For such a nursery of Art, then, we loudly challenge the spirited patronage of the public. We may appear earnest in our advocacy of a body of men whose services, in the eyes of careless observers, may seem unimportant to the public weal. But as much indefinite applause has recently been lavished on the importance of the Fine Arts, in terms so general indeed, that it would seem to the reader difficult to particularize their value, we take this opportunity, when mentioning the subject in connexion with one of the largest and most influential manufacturing populations in the world, to venture somewhat at large into the connexion there exists between our commercial prosperity and the classic attainments of native artists, in the several schools of painting, sculpture, and engraving.

We know that many extensive manufacturers, not only of Birmingham, but of our manufacturing districts generally, are insensible to the influence of a high state of Art on the foreign sales of British manufactures; but we would suggest to such, while every civilized nation of the world is girding itself for an active competition with British enterprise, that it is of the first importance to our commerce, not only that our productions should be as good in quality, but that they should be also superior in design to those of all her competitors. If this position be admitted, and we can scarcely suppose a dissentient, we are bold to affirm that a new duty devolves upon us, that we are called upon to foster by an anxious and persevering patronage the highest aspirations of British genius. The psychological effusions of ancient Art; the elevated idealities of ancient Greece and modern Rome, must occupy the early hand and the matured contemplation of those who are to lead up the humble conceptions of the mechanic to meet the applause of amateurs in all nations. Those only, in a word, who have felt the impulse of "a divine afflatus" can impart the required refinement of taste to even the simplest designs of our workshops and our manufactures. The mineral, animal, and vegetable materials that, under the creative hand of man, minister to the elegancies and utilities of life, have hitherto been too exclusively submitted to the vulgar manipulations of the mechanic untaught by the spirituality of Art, and have yet to owe their highest value to the refined taste with which they may be elaborated, and for which they must be indebted to the student of antique models, and to the consummations of modern idealism. No nation in the world with which we are acquainted excels our

own in the Arts of preparing and compounding for human uses the manifold materials supplied by nature, and we may challenge mankind in the application of science, chemical and mechanical, to the structure and uses of our manufactures; but every tyro in Art will perceive, and every amateur will lament, that they are still defective in the elegance of form and the graces of decoration of which they are susceptible. The manufacturer and the capitalist engaged in the active and engrossing pursuit of riches may be allowed, perhaps expected, to have overlooked those deficiencies, and accordingly to have undervalued the province of the artist; but they will no longer be indulged in such an estimate of Art and its votaries when it has been shown to them that the commerce of Great Britain has yet to sustain its ascendancy by the infusion of elegance into our manufactures from the laboratory of exalted genius; in a word, that our manufactures are to keep the markets of the world by classic elegance of design and decoration, superadded to excellence of material and the scientific application of it to the uses of mankind. From the records of history then, the indisputable monuments of human experience, we must ascertain the most efficient means of evoking, of nursing, of sustaining, the efforts of genius, and from these records it is palpable that in every civilized age and nation the production of works of genius has been commensurate with the remuneration of artists. In Egypt, in Greece, in ancient as in modern Rome, in Venice and in Florence, in Spain, in France, and in Holland, the rise and decadence of the Fine Arts may be successively and even accurately measured by the amount of wealth devoted to the encouragement of native artists; and the state of the Fine Arts, in their turn, will be found to have been as a political barometer of the splendour or declension of the hierarchy of Egypt, of the military empires of Athens and of Rome, of the unity or dismemberment of the Christian Church, of the flux or reflux of the precious metals through the royal coffers of Spain and of France, and of the successive ascendancy or decline of Florentine, Venetian, or Flemish enterprise. In the earlier of these empires, rescued from oblivious extinction by the mouldering relics of elevated genius, the individual ambition and open hand of priest or prince, cited and sustained the creations of genius; but the commercial genius of Florence, of Venice, and of Holland disseminated the patronage of Art amongst the people; and upon this general diffusion, this ubiquity of patronage, must the lustre of the Fine Arts be elevated, in this the most extensive empire, and most emphatically commercial people that has hitherto occupied a place in history. From the hand of princes, patronage can extend to but a few men of genius, and a few could ill supply the demands of an extended commerce.

The returns of sales, this year, from Birmingham correspond with our hopes; the total amount has reached £1481 6s.; a very large sum, indeed, considering the depression that has existed throughout the country, and in which Birmingham extensively shared. Of this amount it appears 650 guineas were subscribed by the Art-Union. (£500 was divided into 21 prizes, the remainder purchased an engraving given to each subscriber, and covered the expenses incidental to the undertaking.) But the 21 prize-holders added to the sums allotted them, no less than £208 15s.; so that through the Art-Union sales were effected to the extent of £708 15s. The private sales have reached £782 11s.; but, we believe, "the books" are not yet considered as closed, and that other pictures may be retained in Birmingham. The following is a list of works sold, distinguishing by a \* those that were selected by prize-holders in the Art-Union:—"A Lock near Windsor," A. Vickers; \* "Maxtoke Priory, Warwickshire," H. Harris; "The Dance" (£367 10s.), W. Etty, R.A.; \* "A Lane Scene near Kinsford, Worcestershire," H. H. Lines; \* "Favourites with the Ladies," J. Bateman; "The Look-out—Swiss Soldier of the 16th Century," J. A. Houston; "The Duel Scene from Twelfth Night," W. P. Frith; \* "The Return of the Knight" (£210), D. MacLise, R.A.; \* "Cottage on the Banks of a River," F. Watts; "Babrick Mill, North Devon—showery effect," H. Jutsum; \* "Drovers," H. Smith; \* "A Peasant Girl," J. J. Jenkins; "At Kenilworth, Warwickshire," Miss E. Oliver; "A Roundhead," J. J. Jenkins; \* "Near Montauban, Pyrenees—Evening," W. Oliver; \* "The Will of Mrs. Margaret Bertram, of Singleside—vide 'Guy Mannering,'" T. Clater; \* "Distant View of Erith, on the Thames," J. Tennant; \* "The Italian Boy," G. Bullock; \* "Fruit Piece," J. C. Ward; \* "Sportsmen Refreshing," J. Bateman; \* "Lucy Ashton at the Mermaids' Fountain—vide 'Bride of Lammermoor,'" A. J. Woolmer; \* "A Water-mill," J. Stark; "The Stile," R. Redgrave, A.R.A.; \* "Wash-mill on the River Cole, Worcestershire," F. H. Henshaw; \* "Sir Toby, Sir Andrew, and the Clown," F. P. Stephanoff; "A Sketch," F. Topham; \* "Lane Scene at Witton," H. H. Lines; \* "Love," T. M. Joy; "Sketch of a Horse," W. Kidd; "A Wealthy Dog," J. Bateman; "Looking for Poppies," H. Room; \* "A Persian Jew," T. Ellerby; \* "Coroletto, a fishing village near Genoa, which claims the honour of giving birth to Chris. Columbus," H. H. H. Horsley; \* "Hay-mill Vale," J. White; \* "Rocky Landscape in Derbyshire," T. Baker; \* "Margaret alone at the Spinning-wheel," P. F. Poole; \* "Old Mill at Ambleside, Westmoreland," F. H. Henshaw; "Scene in the New Forest, near Minstead, Hants," C. Fielding; "The Struck Eagle," J. Ward, R.A.; \* "Lane Scene," J. Stark; "Bo-peep," J. B. Pyne.

LIVERPOOL.—The returns from Liverpool are as

cheering as those from Birmingham. We are not, this month, in a condition to give any particulars connected with the proceedings, beyond the following statement:—

Private sales amount to .. ..	£743
Amount by Art-Union .. ..	625
Amount added by Prizeholders .. ..	128

£1496

The following are the Pictures disposed of:—

Private Sales.—Ware Mill, F. R. Lee, R.A.; "Mill on the River Teign," F. R. Lee, R.A.; "Fingall Bridge," F. R. Lee, R.A.; "Sunset," W. Havell; "In the New Forest," A. Vickers; "Scene in the New Forest," A. Vickers; "A Farm-yard," T. Creswick, A.R.A.; "The Dairy-maid," P. F. Poole; "The Gipsies' Toilette," P. F. Poole; "Nature," R. Rothwell; "Scene from the Devil on Two Sticks," A. Egg; "Dutch Punt ashore," E. W. Cooke; "The Smugglers' Cove," E. W. Cooke; "Antique Interior, Nesthill House, Hastings," W. Collingwood; "Cherubim," H. Le June; "Aspiration," S. Gambrell.

Pictures chosen by the Art-Union Prize Holders.—"Dutch Boats beating into the Scheldt," E. W. Cooke; "Pastoral," John Wilson, jun.; "Mending the Net," W. Shayer; "The Cotter's Saturday Night," T. F. Marshall; "The Farmer's Shop," H. J. Boddington; "Old Gateway, Ambleside," A. Hunt; "The Nook at Ambleside," W. Collingwood; "A Sluice," J. Stark; "Boys Fishing," T. Crane; "Gipsy Haunt," H. J. Boddington; "Banks of the Medina, Isle of Wight," A. Vickers; "River Scene—Evening," F. W. Watts; "Girl at a Well," T. Crane; "The Dilatory Cobbler," T. F. Marshall; "The Lock at Windsor," T. W. Watts; "The Mountain Rivulet," P. F. Poole; "Gathering Water Cresses," S. R. Percy; "View of Langdale," Miss J. Nasmyth; "The Barefooted Friar," J. Phillip; "Hastings Fishing Boats," S. Walters; "Grotto of Neptune, Tivoli," W. Havell; "The Politicians," J. A. Puller; "Interior of a Cottage," F. Goodall; "Cattle on a Moor," J. T. Eglington; "Kirkstall Abbey," J. T. Eglington; "Haddon Chase," A. Vickers; "Mackworth Castle," J. T. Eglington; "A Salmon Trap," W. Collingwood; "Scene off Whitby," C. Fielding; "View on the Derwent," L. Aspland; "Il Condottiero," E. M. Ward; "Valle Crucis Abbey," W. Havell; "Borrolale," A. Hunt; "Study in Dunham Park," Miss C. Nasmyth; "View near Grange, Borrowdale," L. Aspland.

MANCHESTER.—The exhibition (the 21st) of the "Manchester Institution" has closed. The sales were but few; yet they were quite as numerous as we expected; for it ought not to be concealed, that, for some years past, the exhibition in this wealthy town has been formed mainly out of the "remainders" of Suffolk-street; which, moreover, last year had been pretty well gleaned by the London Art-Union; for by some means or other (to which, by the way, we may, hereafter, more distinctly refer), "the Society of British Artists" are "lucky" in persuading prize-holders that the surest and safest way to encourage British Art is to remove pictures from their walls. This may be very just and fair; but it is neither just nor fair to transplant the refuse to Manchester; thus preventing useful competition and deteriorating the taste—such as it is—of the good people there. In the recent exhibition at Manchester, it appears that pictures were purchased from 25 artists. Now of these 25, no fewer than TWELVE are members of the Suffolk-street Society. There is surely something wrong in this: there must be, meanwhile the interests of Manchester are sacrificed; the council are hoodwinked; they have grown indifferent to the welfare of modern Art, by perceiving how poor a display modern artists can make there, and irreparable injury to the great cause is sustained. Already, if we are rightly informed, "measures have been taken by the artists in Manchester to follow the example of Birmingham, and get up another exhibition next year." This spirit of disunion we shall deplore; but it is the inevitable consequence of bad management. The following is a list of the pictures disposed of; the eight marked \* were private sales; the remainder were obtained as prizes in the Art-Union. \* "Fishermen preparing for Sea," Evening on the Yorkshire Coast, A. Clint; \* "View of Fleetwood," F. English; \* "A Flower Girl of Andalusia," F. Y. Hurlstone; \* "Summer," H. J. Boddington; \* "Lane Scene, painted from Nature," C. R. Stanley; \* "Interior in the Cliffs of Hastings," J. Tennant; \* "Water Seller of Seville," F. Y. Hurlstone; \* "Off the Norfolk Coast," J. Wilson; "An Old Water-mill—an approaching Shower," Wilson, jun.; \* "Money Changers—Siout, Egypt," Muller; "Hungarian Ark at Offen, on the Danube," Zeitter; "A Farm-yard, with Cattle and Figure, Dearman," Touchstone, Audrey, and William, Keeling; "Near Clifton," Pyne; "Entrance to a Village," Boddington; "On the Scheldt—Antwerp in the distance," Lancaster; "The Street of the Quay near the Church of St. Pierre, Caen, Normandy," Baker; "Children Crossing the Brook," Pollitt; "Murché aux Gufs, Antwerp," Hassell; "Distant View of Laminion and Warwick," Baker; "Dead Game," Stephens; "Lane Scene, near Kenilworth," Baker; "View in Glen Dochart, in Breadalbane, West Highlands," Fielding; "Fisherman's Cottage, on the Fifeshire Coast," J. Wilson; "A Scene at Calais," Kidd; "Mischief," Puller; "The Shell Merchant," Stewart; "Denbigh Castle," Royle. — The amount subscribed by the Art-Union this year was £721 7s.; less, by about £150, than it was last year.

Of this £721 7s., however, no more than £342 9s. was expended in the purchase of pictures; the sum of £378 16s. being reserved for the print to be given to the subscribers—considerably more than one-half of the entire sum subscribed. This is not as it should be. Of the twenty paintings (there were no drawings) purchased by the committee, no fewer than fifteen were at and under the estimated value of fifteen guineas each; descending so low as *four or five guineas each*! It is unquestionable that such arrangements do deteriorate Art. Who will deny it? The print bestowed upon subscribers we have not seen. It is of 'a Hop-garden,' engraved by Posselwhite, from a painting by Witherington, R.A. Whether it is in line or mezzotinto we cannot say. But the name of its engraver we never before heard of.

EDINBURGH.—THE NEW ASSOCIATION FOR PROMOTION OF THE FINE ARTS IN SCOTLAND have published their Fifth Annual Report. The progress of the society has been very encouraging. "In the first year, the sum subscribed amounted to £337 10s.; in the second year, £351 11s.; in the third year, £1051 11s.; in the fourth year, £1289 8s.; while this year the subscription amounts to £1318 3s.—a rate of increase in the funds, which shows, not only that the public interest in the Association is unabated, but demonstrates the more gratifying fact of the still growing desire for a spread of its advantages." The Society has, it appears, distributed an engraving by Mr. Bell, from Sir William Allan's painting of 'The Widow.' The print we have not seen, but the picture we recollect as interesting and effective. The print for the next year is to be from Fraser's painting of 'The Expected Penny.'

The concluding paragraph of the Report is so sensible and judicious that we quote it:—"In conclusion, the committee have to congratulate the public generally, and artists in particular, on the increasing interest awakened to the subject of Art; and, in pressing their conviction of the great utility and advantages, in a national point of view, to be attained by encouraging this Association, as a powerful means of disseminating a taste for the Fine Arts, they would earnestly call upon the members to exert an undiminished zeal in propagating so good a cause. At the same time, they would most respectfully remind those gentlemen, that, in obtaining subscriptions, they are doing something more than merely procuring support to a lottery for pictures; on the contrary, that they are exerting a wholesome influence in promoting the spread of civilization in the country,—by assisting in the encouragement of those refining Arts, by whose aid the moral and intellectual well-being of a nation is powerfully advanced."

At the distribution of prizes there were, it appears, selected 16 prizes of £10 each; 10 of £15; 6 of £20; 2 of £25; 2 of £30; 1 of £40; 2 of £50; and 1 of £100; making a total £780.

We direct particular attention to an advertisement of this Society which appears in another column, received at too late a period of the month to permit our comments upon it.

GLASGOW.—WEST OF SCOTLAND ACADEMY.—The second annual exhibition of this Society has taken place. It seems to have been very successful; and by the assistance of "the Association for Promoting the Fine Arts in Glasgow and the West of Scotland," to have effected sales to a considerable amount—nearly £3000 having been raised, within the two years of the existence of the Institution, for the purchase of works of Art from the gallery. The catalogue is thus prefaced:—"In opening their second annual exhibition, the members of the West of Scotland Academy feel that the success of the first exhibition, and the unprecedented success of the "Association for Promoting the Fine Arts," ought to have been to them a great inducement to exertion; and, however short of their own expectation they may have come, they trust that the present exhibition, the character of the works of Art exhibited, and the addition of a room to the gallery—thus procuring accommodation for a greater number of pictures—will evince to their fellow citizens, that the artists have endeavoured to deserve a continuance of that support which they now gratefully acknowledge." The Society consists of thirteen members and three associates; the president being John Graham Gilbert, Esq., and the secretary J. A. Hutchison, Esq. The purchases have not been limited to the works of Scottish artists; although, very naturally and very properly, native painters seem to have had the preference.—The following is a list of the works sold:—"The Morning after the Wreck of a part of the Spanish Armada, on the West Coast of Scotland," J. C. Brown, W.S.A.; 'Newark Castle,' Horatio McCulloch, R.S.A.; 'Cottage near Rutherglen,' Thomas Watt; 'The Village of Monnetier, on the summit of the Petit Salere, near Geneva,' F. H. Henshaw; 'Moonlight,' Horatio McCulloch, R.S.A.; 'The Bass Rock,' John Wilson; 'Scene in Glenfalloch,' D. M. McKenzie, W.S.A.; 'Sunset on the Clyde,' Horatio McCulloch, R.S.A.; 'The City of Zion, in the Valley of the Rhone, Switzerland,' F. H. Henshaw; 'The Earl of Strathford in the Tower, receiving intelligence from Carlton, Secretary to Charles I., that the King had assented to his death,' S. Blackburn; 'Study of an old Water-Mill, from Nature,' John Wilson, jun.; 'Releasing the Protestant Prisoners in the Tower, in 1558,' J. A. Houston; 'Falconer Resting,' James Drummond; 'Evening on the Hudson River, United States,' Andrew Richardson; 'Niddry Castle,' Robert McKay; 'The Shrine,' J. A. Hutchison, W.S.A.; 'A Lane at Capel Carig, North Wales,' A.

Vickers; 'The Watch,' Charles Lees, R.S.A.; 'Morning Scene on the Clyde—Roseneath in the distance,' William Clark, A.; 'Banks of the Severn, at Shrewsbury,' A. Vickers; 'She never told her love,' Henry O'Neill; 'A Scene from the Antiquary,' William Kidd; 'Scene at Peetre Kyles, North Wales,' A. Vickers; 'At Ambleside,' A. Vickers; 'Newhaven Haddock,' James Derrin; 'Sea-Piece, View on the Forth,' E. T. Crawford, A.R.S.A.; 'On the Forth, near Alloa—Benlomond and Benledi in the distance,' Robert Kilgour; 'View of Hastings—the West Cliff in the distance,' Alfred Clint; 'Coast Scene near Beaumaris,' Francis Slater; 'Crossbasket—a Scene on the Calder,' David Marshall; 'Scene at the Heads of Ayr, Coast of Carrick—Evening,' George F. Buchanan; 'Water-Mill—Braes of Balquhider,' Andrew Donaldson, W.S.A.; 'At Brachistoun, near Greenock,' John Fleming, W.S.A.; 'View on the Clyde, near Crawford—Evening,' William Nicholson, R.S.A.; 'Scene on the Shore of Cantyre,' Robert Carrick; 'View on the River Tyne, near Newcastle—Sunset,' T. M. Richardson, jun.; 'Tynemouth—Northumberland,' T. M. Richardson, jun.; 'Head of Loch-Long,' T. M. Richardson, jun.

IRELAND.—ROYAL DUBLIN SOCIETY.—The old custom of distributing honorary rewards by the hands of the hall porter has been done away with. The medals to successful students in drawing were given to them on the 8th December, by his Excellency the Lord Lieutenant—a nobleman very conversant with the Fine Arts, and who has long been conspicuous among their most liberal and distinguished patrons. There were present a large number of eminent persons of all professions, and the ceremony was highly imposing. A long and eloquent address was delivered by the venerable Isaac Weld, Esq., after which the premiums were presented by his Lordship to Messrs. R. G. Kelly, W. Dowling, W. Dillon, J. Wall, J. M. Sleanor, J. L. Jones, M. R. Neilan, R. Baker, W. Kelly, C. V. Foley, R. Maguire, A. G. Johnston, E. Fitzpatrick, M. Daly, F. M'Donald, J. Smith, G. V. Dobbin, J. Gilbert, and G. Curran—pupils in the schools. The prizes consisted of books connected with the Arts. His Excellency subsequently addressed the Assembly. Among other observations he stated that "he had been engaged for some years in England, before he came to Ireland, in building; he might say, therefore, that he had taken an interest in the science, and indeed he would recommend any young man going forward in life to learn the Arts, and every parent to cultivate in their children the arts of drawing and designing, because, independently of their other advantages, there was not one position in life in which a man could be placed that a knowledge of those arts might not be of service. He had alluded to what he had been engaged in before he came here, because it was in some measure connected with Dublin. He had been some time engaged in decorating as well as building; and while so engaged he looked into every shop in London for some matters he required: he not only inquired all through London, but also had inquiries made in various places abroad, but without success. Since he came to Dublin he met with what he wanted. He was now to be supplied with it by a modest, unassuming, diffident man of the name of Farrell, a pupil of the schools of the Royal Dublin Society. This young man had shown talent which he trusted would do the poor man himself some benefit, while it would do him (his Excellency) credit."

ROYAL IRISH ART-UNION.—This Society has issued a Report of its "Plan and Proceedings for 1842." We have already referred to its principal features. There is one passage in it, however, that we extract with exceeding pleasure:—

"The Exhibition of Prizes, pursuant to the resolution passed at the above meeting, was thrown open for one week to the public generally, and was thronged daily by persons of all classes, not a few of whom were respectable operatives and their families. The various institutions connected with education, in or near Dublin, received particular invitations from the committee, and sent such pupils and persons connected with their establishments as could feel an interest in the exhibition. It may be interesting to mention, that Donnybrook Fair was raging at the time, and many masters who would not allow their apprentices and dependants to partake of its drunken revelries, or join in its demoralizing vortex, indulged them by permission to view these Works of Art. Upwards of twenty thousand persons visited the collection, yet not a single instance of irregularity or injury occurred."

There are three plates in progress—"The Young Mendicant's Novitiate" (for the subscribers of 1841), now nearly completed by Mr. Sangster, from Mr. Rothwell's painting; "A Peep into Futurity"

(for the subscribers of 1842), now in the hands of Mr. Golding (who is to receive £600 for the plate), from M'Clise's picture; and "the Arran Fisherman's Drowned Child," to be engraved from a drawing by Mr. Burton: the engraver of this plate has not yet, we believe, been selected.\* There is, it appears, to be a second exhibition in Dublin; and, according to a circular, issued and signed by "one Mr. Michael Angelo Hayes," ("Phœbus, what a name!") none but native Irish artists are to be permitted the honour of exhibiting there. This exceedingly simple gentleman states in his printed plan that the members of the society

"Have come to this resolution, not from any exclusive motive, being actuated by the most friendly feeling towards their brother artists in England and Scotland; but because they have read with some pain, remarks in a London publication, entitled the ART-UNION, reflecting severely on Irish art and artists; and they therefore resolve to rely on the resident talent of Ireland for giving a practical refutation to the aspersions cast upon it."

The "practical refutation" we should receive would be a comical one, no doubt; but whether it would be a convincing one is quite another matter. It is not worth our while to reply to this attack; we might furnish, if we pleased, abundant evidence how little we are disposed to "cast aspersions" upon Irish talent. We imagine we have done a little more to render it appreciated than Mr. Michael Angelo Hayes has yet been able to effect, or will have effected when he has opened, at "the Royal Irish Institution, on the 19th of April, 1843," an exhibition, which we prophesy will never exist anywhere, except in his silly "circular," which he entitles "L'Envoy."

Nevertheless, we sincerely hope that this year Messrs. Burton and Hayes will have competitors who will teach them to know themselves, and to put a just value upon their own productions; for several contributions from London will be on their way to Dublin in the month of May or June next; of the appointed time our readers shall receive due notice.

\* It will be no easy matter to procure an engraver to undertake it, for it is in no respect calculated to make an effective print. The tone of the drawing is low and heavy, and the subject is by no means pleasing. Popular it is not, and never will be, either as a picture or a print. And the best proof of the fact is, that it has been for several weeks exhibited publicly in the great room of Messrs. Graves and Co., 6, Pall-Mall, where attention was called to it by several advertisements in various newspapers; in the ART-UNION, among the rest; and in the *Times*, we believe daily, for a fortnight. The painting has been seen by many hundreds, yet the number of subscribers to the Irish Art-Union obtained in consequence, by Messrs. Graves and Co., is *exactly* SEVEN; producing about a third part of the cost of the advertisements. This is a kind of criticism about which there can be no mistake, although people may differ in opinion as to the taste of the Royal Academy in pushing it to the top of the miniature-room. Yet this—will our readers believe it?—is the very picture for the copyright of which the committee of the Royal Irish Art-Union gave the painter, Mr. F. W. Burton, the sum of 100 guineas! A more discreditable bargain is not upon record. It goes further than any other circumstance we could quote, to prejudice the cause of these Art-Union societies, and to deprive them of the confidence of the public. In order to give a sort of sanction to this "job" (we can use no milder term), the committee have turned critics; and in their annual report they thus refer to it:—"The merits of this work are so well known, by the admiration it elicited at the exhibition of the Royal Academy, London, this year, and that of the Royal Hibernian Academy, in the year preceding, that it is needless to occupy much time or space in expatiating on it." This is exquisitely comic. "The admiration it elicited at the exhibition of the Royal Academy!"—where it was almost as much out of sight as the 'Spanish Fleet,' so happily pictured by Mr. Puff, in the *Critic*. We suppose we shall next hear of the "unbounded admiration it excited in the gallery of Messrs. Graves and Co.," where it obtained *seven subscribers*, after being advertised abundantly, and being placed for a whole month where it *was* seen.

## VARIETIES.

**THE ROYAL ACADEMY.**—The officers for the ensuing year were appointed on Dec. 10. They are as follows.—Sir Martin Archer Shee having been unanimously elected President. Council, New List: Messrs. Charles Barry, George Jones, Alfred E. Chalon, and Thomas Phillips.—Old List: Messrs. Philip Hardwicke, David Roberts, John James Chalon, and William Mulready.—Visitors in the Living Model Academy, New List: Messrs. Edward H. Bailey, Alfred E. Chalon, Richard Cook, and William Frederick Witherington.—Old List: Messrs. Charles Robert Leslie, William Mulready, Thomas Uwins, and W. Wyon.—Visitors in the School of Painting, New List: Messrs. Henry P. Briggs, Charles L. Eastlake, Charles Robert Leslie, and Thomas Uwins.—Old List: Messrs. W. Collins, W. Etty, Edwin Landseer, and David Roberts.—Auditors re-elected: Messrs. William Mulready, and J. M. W. Turner, and Sir R. Westmacott.

**STATUE OF MR. KIRKMAN FINLAY.**—Our last number contained some remarks upon this subject. A committee for conducting the proceedings connected with it, has been since appointed; to that committee, by a resolution moved by *Mr. Sheriff Alison*, "the whole powers of the subscribers are delegated." They are "to select the artist they shall consider best qualified to fulfil the wishes of the subscribers, and to obtain from him a STATUE IN MARBLE, which shall unite a correct likeness with the highest style of sculpture." Those who recollect the discreditable mode in which a Frenchman has been employed to "make a figure" of the Duke of Wellington to the prejudice of British sculptors, will be anxious to know what are the chances in favour of Marochetti's being called upon to "do" the late Mr. Kirkman Finlay. The probabilities are that he will have this "job" also, and that the artists of our country will have another push back from the Glasgow bodies, or rather those who govern them in matters appertaining to Art. We find upon "the committee" the names of twenty-two gentlemen; of these, ten were members of the Wellington committee; and of these ten there are seven who were strenuous supporters of the Baron; *one* who was neither for nor against; and only *two* who stood up manfully for the cause of their country and its artists. Of the remaining twelve, there are seven, who, residing at a distance from Glasgow, are not likely to act; and of the opinions of the other five nothing is at present known. But if they *all* join the two tried friends of the British artist, they will not even then outnumber the patrons of Marochetti; and surely, if the Frenchman was considered best qualified to execute a statue in honour of the great captain of the age, he may be accepted as the fittest to be intrusted to perpetuate the memory of a Scottish merchant. At all events the alarm may be taken in time. If the sculptors of Great Britain are again to be injured and insulted by having preferred before them a foreigner, who is many degrees their inferior, the subscribers for his behoof must not plead ignorance of the project in excuse for their want of patriotism, taste, and judgment. They know their danger by experience; and may prevent Glasgow from being a second time disgraced. At present it would be neither just nor prudent to say more than that the public will watch the proceedings with suspicion; and that, if the committee are wise, they will, as soon as possible, prevent the holding back of subscriptions by advertising the public of their intention not to employ a foreigner.

**THE BRITISH INSTITUTION.**—The works of Art by British artists, "intended for exhibition and sale," must be sent to the gallery "for the inspection of the committee," on Monday, the 16th and Tuesday the 17th December, between the hours of ten and five. Artists will recollect that—

"Each picture is to be marked on the back with the

name of the artist whose performance and property it is; and if more than one be sent they must be numbered. Written accounts must be addressed to the keeper, containing the names of the respective subjects, as proposed to be inserted in the catalogue, together with the prices, with or without the frames; and the name and residence of the artist." And it is also desirable to recollect that—"In the selection of works for exhibition and sale, the directors feel themselves called upon to give the preference to such as have not been previously offered for inspection and sale at any other place."

We hope the Artists will bear this paragraph in mind before they forward their contributions; and that the Directors will not forget it when they are forming their exhibition. There will be NO PRIZES bestowed this year. We regret this for many reasons. Last year the experiment was not fairly tried; a second would have been more successful in inducing artists to compete. It is only reasonable that some inquiry should be made concerning the mode in which the funds of the Institution are disposed of.

**THE THREE STATUES.**—Parliament during the last session voted a sum of money for the erection of three statues—to the memory of Lord Exmouth, Lord de Saumarez, and Sir Sidney Smith. The execution of these statues has been confided—of the first, to Mr. M'Dowall, A.R.A.; of the second, to Mr. Steil, of Edinburgh; of the third, to Mr. Kirk, of Dublin. We learn from the *Times* that "Sir R. Peel has announced his desire to discontinue the old practice of giving a monopoly of all these great orders to artists of great name, and to make the patronage of this kind at the disposal of Government available for bringing forward men whose fame has not yet risen to a point commensurate with their genius." This determination may be better in theory than it will be in practice. The profession has high confidence in the judgment, taste, and integrity of Sir Robert Peel; and we have a right to assume that he has accurately informed himself concerning the capabilities of the artists to whom he has intrusted the discharge of important commissions they are to execute for the Nation. We are told, indeed, by the same authority, that "the Premier visited, in person, the studio of Mr. M'Dowall, before making the selection; but it was, we humbly conceive more necessary, that he should have examined the works of Messrs. Steil and Kirk, with whose abilities he is less likely to have been familiar. They may be men of great powers, although the world is ignorant of them. We confess—and we judge from some knowledge of their productions—that we have apprehensions touching the result. The nation ought to possess the best examples of the Art: it is honourable to the Premier, that his choice has not been determined solely by previously-acquired fame; but it will be matter for regret, if in avoiding one evil he has incurred another. It is to be noted that this plan does not give employment to artists of the three countries—for Messrs. M'Dowall and Kirk are both natives of Ireland.

**SCULPTURE.**—Occupation, honourable and profitable to our sculptors, is, we rejoice to say, much on the increase. Several works, private and public, besides those above alluded to, are about to be undertaken; some have been already intrusted to worthy hands, such, for example, as that which Mr. Westmacott, jun., is to undertake for the Exchange; others are "under deliberation;" and, from the great abilities of some of the candidates, we trust there is little fear of an unsatisfactory issue.

**ALLAN CUNNINGHAM.**—When Chantry was building the mausoleum in which his mortal remains now lie interred, he proposed to Allan Cunningham to make the vault large enough to contain those of his friend also. "No," said Allan, "I should not like, even when I am dead, to be so shut up. I would far rather rest where the daisies will grow over my head."

**FREEMASONS OF THE CHURCH.**—Under this title a new Architectural Society has just

been formed, by several professional gentlemen and artists, among whom are Messrs. Gwilt, Cresy, W. Fisk, C. H. Smith, T. Dighton, A. Bartholomew, &c., for the purpose of encouraging a more systematic and complete study of the Art than obtains at present. As one part of their scheme, "it is proposed that the present unsatisfactory division and nomenclature architecture shall be remedied, and that all the publications of the Society upon that subject shall be issued according to such classification and nomenclature." Though by no means a very easy one, we hope that in such hands the task will prove successful; and it is one where almost as much is needed in the way of enlargement as of extension. We are glad to perceive, from the passage above-quoted, that it is the Society's intention to diffuse the result of their inquiries and researches by means of publications; and so far they will laudably depart from the jealous spirit of the ancient "Freemasons," and act in conformity with that of our own times. We shall no doubt have to recur to this subject as the Society progresses.

**"CATHOLIC" ART.**—We lament that we have to record an illustration of bigotry worthy of the dark ages. M. David, the eminent French sculptor, presented to the people of Strasburg a bas-relief for the base of Guttenberg's statue. The ultra-Catholics of the town objected to Luther and Bossuet being represented upon it in association with other great men of Germany; in consequence, the statue has been covered ever since the day of its inauguration. At length M. David has been induced to withdraw the obnoxious bas-relief, and to substitute for the portraits of Luther and Bossuet those of Erasmus and Montesquieu. The following is M. David's dignified reproof, addressed to the Mayor of Strasburg:—"I have learnt with deep sorrow—I, who believed myself well acquainted with the age we live in—that religious intolerance is still lively and ardent even in the city of Strasburg, famed for its lights of knowledge, its virtues and its patriotism. Further, my respect for the Alsations will silence every other feeling; they have deigned to accept my offering; it becomes my duty that it should contain nothing offensive to their ideas. The figures of Luther and Bossuet shall disappear in the bas-relief representing the great literary characters of Europe; happy if the Strasburgians see in this abnegation of the sculptor a proof of his respectful devotion."

**THE NATIONAL GALLERY.**—Two additions have recently been made to the catalogue of the national exhibition—the one a portrait of Sir William Hamilton, by Reynolds; and the other a Van Eyck. In the portrait, which is a full-length, Sir W. Hamilton is seated, turning over the leaves of a large volume, and from the way in which it is circumstanced the figure looks small. The work does not belong to the Gallery, but to the British Museum, whence it has been transferred for exhibition. The Van Eyck is not yet exhibited in the rooms, although it is in the possession of the authorities of the institution; the fact is we believe that it is not yet paid for, and it will not be hung until the purchase be consummated. We are most happy to find in the committee the exercise of a taste which must add to the gallery a class of pictures highly valuable on many accounts. When this picture is hung we shall notice it more at length.

**THE WELLINGTON STATUES.**—At the death of Sir Francis Chantry, the equestrian statue of the Duke of Wellington, which it is known he was commissioned to execute, was left unfinished, the modelling having proceeded no further than the horse. According to a resolution of the committee, the completion of the work was confided to Mr. Weeks, who has carried out the design according to the original sketch. The colossal model is therefore finished, and further progress temporarily suspended until it shall have been inspected by the committee, who have not yet appointed a day for that purpose. The figure is

habited in a manner differing but little from the dress which we have been accustomed to see worn by the Duke—a frock, trousers fitting the leg, and a short cloak descending in ample folds from the shoulders. The head is uncovered, and the features are those of greener years. The figure is erect and firm on the horse—he is not yet bowed down, as now, with the harvest of those laurels which do not fade as the man decays. In features and general character, we may suppose a strong resemblance to what the Duke has been; the former are expressive of a fixed attention, and a rapid current of thought. In the horse there is much natural movement: in the clay he looks warm and breathing; we trust the bronze will not destroy the effect. This statue is to be placed on the site occupied by the houses near the Bank called the Bank-buildings, which are to be removed for that purpose.—Mr. Wyatt's statue: The casting of this work has not proceeded beyond the parts mentioned in a former notice. The huge model is surrounded by a scaffolding, erected in order to effect a division of the parts preparatory to casting, which will recommence as soon as the necessary metal is provided. With respect to this we cannot help thinking that there must have been some tardiness on the part of the committee, otherwise the work must have been in a more advanced state. There is, we believe, a difficulty in procuring metal; if the government are in possession of the necessary quantity that could be so applied, they are unwilling to part with it for this purpose; but from whatever causes the difficulty may arise, it would be by no means a flattering reflection for the subscribers hereafter that their memorial was cast out of refuse metal—in short, the gleanings of marine store-shops. Casting is not well understood in this country, at least from practical experience, nor in any other country, upon the scale of this model; the preparations therefore for realizing in metal the colossal-horse—"instar montis" must be conducted and surveyed with the nicest caution on many accounts; the admission, for instance, of a portion of moisture might be attended with fatal consequences to all employed. The cores also of solid metal within, will require a long time to cool; the very magnitude of the work multiplying its liabilities to accident, and producing other difficulties which there is no previous experience to combat.

**METROPOLITAN IMPROVEMENTS.**—The Commission which has just been appointed for the purpose of forming some comprehensive and systematic plan for the improvement of the metropolis would have no very arduous task were it limited to merely pointing out on the map where it would be a very great improvement to open new thoroughfares and cut through close and overpopulated districts, noisome in every respect, both physically and morally. The difficulty is, not to show what most excellent improvements might be effected, but *how* to carry them into effect; for, when it comes to pulling down and cutting through, improvement is a vastly expensive matter and a very tedious operation. Long before Hogarth broached his theory, or Price wrote on the picturesque, our ancestors seem to have had an innate love for the Hogarthian line of beauty, and for the picturesque, both as regards crookedness in streets, and the labyrinthine intricacy of lanes and alleys. To be serious, we fear that no very great results from the labours of the commission can be looked forward to for some time to come. Perhaps the most they can do will be to draw out a general plan to be adhered to, and afterwards carried out in detail, by local and partial improvements. It certainly has not been for want of suggestions of the kind that many improvements, some of them on a very magnificent scale—by far too much so to admit of any hope of their being realized—have not been adopted. We have had one for remodelling the area around St. Paul's, so as to render it perfectly regular in plan, and uniform

in the elevations of the houses, which would certainly be a very great *architectural* improvement, but is not of a nature to urge itself very strongly upon public attention. One projector brought forward a scheme some years ago for opening a wide street in a direct line from the front of that cathedral to Hyde Park-corner! Again, we have had plans for forming a terrace from Whitehall to London-bridge, on the north side of the river; and, they being regarded as chimerical, others have been started for effecting the same purpose by means of a series of suspension bridges. If, however, all that is desirable cannot be accomplished, very much good may be effected by adopting some systematic course for the future. Had such been done before, hardly should we have had such a piecemeal improvement as Wellington-street and Wellington-street North: the former with a huge gap never likely to be filled up, desirable as it is that there should be something to shut out from view the unsightly backs of the buildings on the west side of Somerset-place; the other strangely irregular, instead of being, if not in a straight, at least in a continued, line.

**MODERN PRINTS.**—It is worthy of note that at the sale of the effects of the late Mr. Binmer, by Mr. Sotheby, during the past month, an unlettered proof of "The Jew's-harp" brought the sum of £22 1s. 0d. This print, engraved by John Burnet, from the painting of Sir David Wilkie, was originally published at one guinea, the proof, which sum was paid for it by the collector, whose representatives realized by it exactly twenty times the amount. In our age of "steel proofs," which employ printers for weeks, and "electrotypes," that multiply "early impressions" by thousands, such an event is not likely to occur often.

**DRAWING SCHOOL OF THE LIVERPOOL MECHANICS' INSTITUTION.**—In another part of our journal will be found an advertisement for a principal master in the drawing department of the above Institution. A few facts connected with the Institution may, perhaps, prove interesting. Though, as its name implies, it was originally intended for a *Mechanics'* Institution, yet the directors soon established day schools for the various classes of society; and, to accommodate the pupils of the evening as well as of the day classes, a sculpture gallery was erected in which the drawing-classes might be taught. This gallery is situated in the east wing of the Institution, and measures 75 feet long and 26 feet broad. It was fitted up under the immediate superintendence of B. R. Haydon, Esq., and is excellently lighted from the roof. It contains a very extensive collection of casts, statues, busts, &c. The principal are casts of the 'Apollo Belvidere,' the 'Medicean Venus,' the 'Fighting and Dying Gladiators,' the 'Dancing and Piping Fauns,' the 'Thorn Picker,' &c. &c. There are also several casts from the Elgin marbles, and a great number of busts, both ancient and modern. Besides the drawing and painting classes taught in this gallery, there are other classes in the Institution for mechanical, architectural, and naval architectural drawing. There are in all eight teachers of drawing regularly employed.

**PAINTED WINDOWS—CHICHESTER CATHEDRAL.**—The lovers of the Fine Arts will be gratified to learn that it is intended to fill with painted glass the triple Norman lancet windows at the east end of Chichester Cathedral, and that a public subscription is opened for that purpose, which already amounts to nearly £700. The design is open to competition, which will also be satisfactory to the public; but it would be most desirable for the interests of Art, that *artists* should be invited to furnish drawings, and that the design should not be left to those engaged in the glass-staining business, who, whatever may be their technical skill, can hardly be expected to know much of the higher rules of composition and effect, &c. It may be remarked as some-

what singular that the restoration of these windows should be undertaken by voluntary subscription after the lapse of exactly 200 years, the original ornaments of the cathedral having been destroyed by the Puritans at the siege of the city of Chichester, December 1642.

**MR. R. H. C. UBSDELL'S** painting of 'her Most Gracious Majesty and H. R. H. Prince Albert receiving the addresses of congratulation from the Corporation of Portsmouth,' was placed in the council chamber of the borough, on Monday the 28th of November. Besides the portraits of 49 members of the Council, there are those of her Majesty, H. R. H. Prince Albert, Lady Portman, the venerable Archdeacon Wilberforce, and the Earls of Liverpool and Hardwicke. All the local papers speak highly of this picture; and the Right Worshipful the Mayor, in introducing it to the Council, warmly eulogized it. Previous to its being sent to the hall, it was inspected by the Queen and H. R. H. Prince Albert, at Windsor Castle, who were graciously pleased to express their approbation of it.

**THE POLYTECHNIC "ETCHINGS."**—There can be no second opinion as to the policy of the projectors of the "Polytechnic Art-Union," in having secured the co-operation of the distinguished artists who form the "Etching Club." The design is to produce a series of illustrations of the "Songs of Shakespeare," in "finished etchings;" a copy to be presented to each subscriber of twenty shillings, in addition to which, he obtains the "chance" of a prize (in the usual manner); the prizes to consist of "Paintings, drawings, engravings, sculpture, bronzes, mathematical and all kinds of philosophical apparatus, working and other models made to scale, and musical instruments." This heterogeneous mixture may provoke the laugh of the unthinking; but it should be borne in mind that the gainer of a prize may select according to his own taste; that, consequently, the lover of pictures will not be forced to take a fiddle; and that, therefore, the mingling of matters, out of harmony, is by no means hurtful to the plan; while it will, of a surety, aid in advancing the great purpose of the Arts. There can be, at all events, no doubt that the work advertised to will be worth the sum subscribed; and as little that from the style of its execution it will be a help to public taste. The series will consist of thirteen etchings; on some of the pages there will be two. The following are the songs selected and the artists by whom they are to be illustrated:—Knight, A.R.A., drinking song, "Let the cannikin clink." *Othello*.—Redgrave, A.R.A., the song of Poor Barbara, "A poor soul sat sighing." *Othello*.—Cope and Stone, 'Youth and Age,' "Crabbed youth and age cannot live together." *Passionate Pilgrim*.—Creswick, A.R.A., "Under the greenwood tree." *As You Like It*.—Townsend and Bell, Ariel's song, "Where the bee sucks." *Tempest*.—Webster, A.R.A., and Creswick, A.R.A., Autolycus's song, "Lawn as white as driven snow." *Winter's Tale*.—Stonehouse and Bell, "Come unto these yellow sands." *Tempest*.—Taylor, Forester's song, "What shall he have that killed the deer?" *As You Like It*.—Horsley: Lady sweet arise, "Hark, hark, the lark."

**IMPROVED "MEDIUMS."**—We direct attention to the advertisement of Mr. Miller, upon this most essential subject. If his improvement be such as it professes to be, it cannot be too extensively known; for it is of incalculable benefit to the artist. If, on the contrary, it be a failure or an error, proper inquiry should be instituted in order to prove its utility. Under no circumstances should it be passed by in silence. In justice to Mr. Miller, we should state that he challenges a minute scrutiny into all he asserts—expressing his willingness to abide by the result of the closest examination that can be made.

## THE ART-UNIONS.

## MEETING OF ARTISTS.

WHATEVER may be the result of "the meeting of Artists" at the Freemasons' Tavern, one fact at least it has established beyond controversy—that ARTISTS CAN ACT TOGETHER AND IN CONCERT! To have proved so much is a great gain to the Profession. They constitute a powerful body—powerful, not alone from their numerical strength, but because of their intelligence, and the high consideration to which they are entitled as occupying a prominent position in society. We rejoice to find them assuming their proper place; it is the prognostic of a new era in the history of British Art; for it affords assurance that they will be hereafter disposed to think and act for themselves, and not to consign their wishes and interests to the charge of a few self-chosen representatives. The meeting referred to was in all respects creditable to them; the proceedings were conducted with system and dignity; strong expression was given to strong feelings, but with a degree of decorum which cannot but add to their weight. In only one instance did energy degenerate into passion. The artists felt they had a duty to discharge, and they did it boldly, firmly, and honourably. If we differ from them, in some respects, as to the views they have taken, we cannot hesitate to say they have acted rightly in the course they have adopted—both with regard to their dissent from the proceedings of the "private" Art-unions, and their declarations of steadfast faith in the principles and proceedings of that SOCIETY which has ever been, and remains, pure from even a suspicion of interested motives. The "Art-Union of London" had a right to expect from the artists a solemn record of their confidence, and they have not been disappointed. We are, as our readers know, among those who advocate the extension of "Art-Unions;" upon each and all of which (without any exception) condemnation has been heaped by a portion of the public press. In truth, serious objections may be, and have been, urged against every one of them; but it appears to us that these objections are overbalanced by the good that has arisen, or will arise, out of them—and that each has some particular recommendation to public favour. A very large proportion of the Artists have joined in condemning "The National Art Union." It was to place this condemnation upon record that the meeting referred to was held; and the result has been to establish, for the present at least, a line of demarcation between its projectors and the profession; for, as if to prevent any after concession, these projectors most unwisely followed up the day's proceedings by the concoction of an advertisement, which the Artists could construe only into a deliberate insult to a large proportion of their members. We lament this occurrence—as baulking, for a time, our hopes of directing the course of this Institution into a just and legitimate channel; for we had expected that certain manifest errors in its plan would have been remedied; that better securities would have been procured for a right fulfilment of its contract; and that the proposal to "borrow," and not "buy" pictures, would have been proved so futile as to lead to a complete change in this essential feature of the project.

We considered, and still consider, that the scheme of the "National Art-Union" presented certain advantages that would lead to present benefit, and a vast future utility, to the Arts. It is, we think, our duty to encourage any design by which the public can be more generally led to become familiar with, and consequently to appreciate, the works of the artist. The appetite once created, there will soon be a choice in the selection of food. If we had believed that this plan was calculated to prejudice the artists of our country, it would not have had from us even the limited and guarded support it has received. We may be permitted to say, that we shall have laboured, during four years, to very little purpose, if we have not left upon the minds of the artists an entire conviction that we could aid in no scheme that was calculated to injure them. We might refer, if it were necessary, to every number of our journal—of which this is the 48th—for proof that one principle has swayed us throughout—a desire to protect the interests, elevate the characters, and extend the fame of British Artists. That we have disturbed the tranquillity of some and

angered a few, is very certain; for, although ever desirous to write kindly and deal generously, we have not thought it meet to resemble the feather which floats in any direction in which the wind may blow. Nor shall we do so now. We have hitherto pursued a very arduous course, with as little yielding either to love or fear as most men; and if we lay down our pen, and consign to other hands the task of catering for the information of the Artist, we shall do so with the proud consciousness of having discharged our duty upon all occasions faithfully and fearlessly—honestly and sincerely rejoicing if a party shall be found to do the work better. We do not for a moment expect that any Artist shall adopt our opinions; but we do expect, and we have a right to expect, that he will give us credit for integrity of purpose, and believe, judging from experience, that we could advocate no project that we considered injurious to the Profession. We are almost equally averse to upholding, even slightly, any establishment that could work evil against "the Art-Union of London;" such humble aid as we could command has been given to that Society from the commencement of our undertaking. They had a right to demand it from any party interested in the welfare of the Arts; for their course has been, at all times, just, fair, and disinterested: they have effected vast good already, and only required a little "prompting" to effect still more. There is nothing that "the National Art-Union" can do, which "the Art-Union of London" may not do: the former will be always an object of suspicion, while with the latter public favour and confidence will continually go. But competition is a stimulus without which there never will be as large an amount of excellence as there might be; and these "private" Art-Unions will unquestionably stir up the "Art-Union of London" to greater activity, and to the avoidance of certain errors. To these errors we need not distinctly advert; communications have been made to us from time to time, which have, perhaps, enabled us to estimate their extent and importance more correctly than our readers can have done; the publication of some of them would have made a few artists look "marvellously small," to adopt a very modified phrase; and have manifested that the process of "money prizes" was liable to as serious objections as the mode of prize pictures—adjudged by a committee—pursued in Scotland and in Ireland; where, if we can credit the statements submitted to us, there have been jobs that would have disgraced the proprietors of "a Little-go." But, constituted as society is, we must accept the evil with the good. In all human Institutions there will be something wrong. We prefer the plan of the Art-Union of London to any other; because, to our thinking, it furnishes the greatest amount of good with the least proportion of evil. We are not, therefore, disposed to cry down "The National Art-Union," "The Polytechnic Art-Union," or any of the score or two of Provincial Art-Unions, although each of them has some manifest fault, which ought to be rectified, and which may be rectified; inasmuch as we believe, that out of each and all of them great good will arise, and that, in the end, the one which is really most worthy, will, like Aaron's Divine rod, "swallow up all the rest." The prospectus of the Polytechnic Art-Union is now before us; it stands directly in the road of the London Art-Union, and for one year, at least, completely blocks it up. For upon what principle can the latter expect to obtain for £60, a series of illustrations to a work, similar in character to that for which the former is about to pay a sum infinitely larger, and which it will produce long before the other can be got ready? The effect of this announcement will be, we presume, either to postpone to an indefinite period the appearance of the work contemplated by "the Art-Union of London," its abandonment altogether, or an arrangement more worthy of the Society and the artists. But to this we can surely have no objection; a far more serious evil may be that part of the plan of "the Polytechnic" which mixes up with pictures "mathematical, astronomical, and all kinds of philosophical apparatus, working and other models to scale, and musical instruments." We copy this paragraph from its prospectus, headed "Extension of the Principle of Art-Unions." And, as surely, there are in the plan of the "National Art-Union" errors so manifest that they *must* be remedied; some of its rules we imagine are even now undergoing re-

vision. It will be our duty to watch it on its career—aiding what is good, and endeavouring to remove what is bad. But to oppose it and other institutions *in toto*, is what we are by no means disposed to do; willing though we are to treat with high consideration and respect the opinion of the profession, which has been, to a large extent and in most unqualified terms, pronounced against it.\*

The great objection against the "National Art-Union" seems to be that the picture prizes will be improperly obtained; that they will be so collected as that artists shall derive little or no benefit from them; and that, consequently, there is no patronage of British Art in the plan. Now this difficulty may be easily obviated. We have reason to believe that it originated from an impression that to exhibit a collection of pictures to be subsequently distributed as prizes throughout the various towns of England, would be a powerful aid in procuring subscribers; but the disadvantage of this procedure is greater than its advantage. Let it be waived; let the projectors of the National Art-Union—having pledged themselves that half their receipts shall be expended as prizes— allot a certain sum for the purchase of proofs of fine prints (to this we see no rational objection), and the remainder to the purchase of pictures, over a fixed value, out of any exhibition-room of the kingdom—Provincial or Metropolitan—within a given period after the prizes are adjudged. This alteration in the prospectus would remove the most serious and valid objection that has been urged against it. Other improvements suggest them-

\* The party who seems to have excited most displeasure in connexion with this subject, is Mr. Moon, the publisher. This gentleman is assumed to have originated the "National Art-Union," and to be either its sole or its principal financial supporter. But the facts are (and we say this advisedly), first, that Mr. Moon did not originate the plan; and next, that he is neither directly nor indirectly connected with the undertaking, further than as having sold to the projectors the plates and proofs advertised by the National Art-Union, and having agreed to become one of their town agents. The plates he sold for the sums previously paid by him for copyrights and engravings, and he is no more a partner in the concern, to derive any pecuniary advantage from its success or failure, than the President of the Royal Academy. We assert so much upon authority, which, to our minds, is incapable of doubt. But, whether the project was or was not his, it was unjust in the artists to forget, that Mr. Moon has been, and is, a most enterprising and liberal publisher, who has supplied to the public many of the noblest and best works that have been issued in Great Britain,—one who has expended nearly £200,000 in producing works of Art, and whose engagements for plates at this moment amount to upwards of £60,000. It is needless to name the prints he has published; we printed a list of 15 in progress a few months ago: it comprised, 'The Christ Blessing Little Children,' 'The Monks by the Way Side,' and 'The Svegliatina,' after Eastlake; 'The Cotter's Saturday Night,' 'The Death of Tippeco Saib,' 'The Queen's First Council,' the 'Napoleon and the Pope,' and the 'Columbus,' after Wilkie; a series 'Deer Stalking in the Highlands,' after Edwin Landseer; 'The Queen Receiving the Sacrament,' and 'The Christening,' after Leslie; the 'Waterloo Banquet,' after Salter, and various other works, to say nothing of that magnificent publication, 'The Holy Land,' by David Roberts. Artists may be perfectly assured, that publishers are necessary to them; and if so, it is above all things important to defend them against injustice. To assert that they are "a despicable body," is unwise, as well as untrue, and reflects but little credit upon the party who so describes them. A letter has been addressed to Mr. Moon by another publisher, Mrs. Parkes, of Golden-square. It is written with much point and ability, but refers chiefly to the "wickedness" of multiplying copies of a print by the villainous process of electrotype; so that what is now sold for 10 or 12 guineas, may be obtained for as many shillings, or less. Such a result might be very prejudicial to publishers, but we suspect it would be far otherwise as regards the public. For our parts, we should fervently rejoice to find that the fact was so, although we have very little hope that it ever will be; inasmuch as we have reason to believe, and our belief approaches very near conviction, that the attempt to multiply prints by electrotype will turn out to be a complete failure. We have made minute inquiries upon this subject, and conversed with two or three persons who have tried the experiment. They assure us, that although the first few impressions taken from an electrotyped plate are as good as the original, they dwindle down by degrees, and, after about 200 impressions, become thoroughly useless. It would occupy too much space at present to describe the process, and explain the causes of this failure, but we shall do both ere long. No doubt, in time, this invention will be so improved as to accomplish the object aimed at; as yet, we more than suspect we are a very long way from a consummation so devoutly to be wished.

selves, to which we may hereafter refer, when we have ascertained the nature of those that are, we understand, actually in progress.

Meanwhile, those who take a broad view of this subject, will see cause for rejoicing. Good often arises out of evil. If neither of the existing Art-Unions be altogether perfect, they must be so improved as to draw nearer and nearer to perfection; and such a result can only occur from attention being directed towards them continually. The public mind is in a state of excitement—at the moment it may be unhealthy—but it will settle down into a state of calm and rational inquiry, the end of which will be a power to appreciate excellence.

We have been led away from the subject chiefly on our minds when we commenced to write these observations—THE PROCEEDINGS AT A MEETING OF ARTISTS HELD AT THE FREEMASONS' TAVERN, on the 17th of December. It was our intention to have printed these proceedings at some length—as well as we could from the awkward and confused reports that have been published in the newspapers. But we have just learned that our purpose is unnecessary, inasmuch as on the day when this journal will be in the hands of the public, a pamphlet will be issued by a committee appointed by the artists, containing a full and accurate report of the meeting, with all the speeches then delivered, including the very able, eloquent, and impressive address with which the accomplished chairman, the Right Hon. Thomas Wyse, M.P., wound up the business of the evening. This pamphlet may be procured by application to the secretary, James Fahey, Esq., York-terrace, Fulham-road.

#### REVIEWS.

**THE VICAR OF WAKEFIELD.** With thirty-two illustrations by WILLIAM MULREADY, R.A. Publisher, VAN VOORST.

No illustrated work of modern times has been brought out in so faultless a manner as this. Generally, in the conduct of a publication some accident occurs to mar it by a few blots. Some portion of its contents will have failed in accomplishing the purposed object; and although there may be much to satisfy, and abundance to gratify, one or two errors deduct largely from the merit of the whole. In this book there is absolutely nothing wrong; no single instance of a mistake; it is the nearest to perfection of any volume that has hitherto issued from the British press. We may first compliment the publisher on the judgment and taste manifested in the department that more exclusively belongs to him—it is beautifully printed on the finest paper; and makes an appearance that strikes at once by its chaste elegance; no attempt having been made to endow it with the "gift of tawdry," suited only to books that are not expected to out-live more than a season.

It is, however, to the part performed by Mr. Mulready and his worthy coadjutor, Mr. Thompson, that we are more especially bound to refer. The illustrations are all drawn upon the wood by the former, and engraved by the latter. When we heard that the accomplished painter was thus occupied, we rejoiced for two reasons; first, because we were assured of a valuable contribution to Art and Literature; and next, because he was setting an example that might be extensively followed. It has been a reproach to our great painters that they have rejected the task of drawing on the wood; and have, therefore, suffered the schools abroad to retain a position—pre-eminent, because they have had few competitors. Recently, indeed, several of our more able artists have come to the rescue. The "Thomson's Seasons" and "The Book of British Ballads,"\* contain some examples that may be compared with the best productions of Germany or France. But in both these cases there are some sad failures; as a whole, neither of them can be described as perfect. Such will be, almost inevitably, the result of a division of labour; the mixture of various styles will be out of har-

\* We have not yet brought this work under review. We shall do so, however, ere long; having postponed it, until we are able to print in the ART-UNION a variety of specimens from the volume. We hope to do this in two or three months; presenting to the reader one example after each of the several artists who have been occupied in producing it. To accomplish our purpose properly we shall publish a separate half sheet.

mony; and yet to intrust the entire to one hand would be, perhaps, to incur a greater peril, unless that hand should be as it is here, in the "Vicar of Wakefield," the hand of a very master.

The thirty-two illustrations of Mr. Mulready are so many full and finished pictures; and are as carefully studied, designed, and finished as if the reputation of the accomplished artist was staked upon each. They must, indeed, collectively, have occupied much thought, time, and labour—more than any publisher can adequately pay for; unless—and this is a very important consideration—the public shall be so cognizant of their true value, and so impressed with their exceeding accuracy and beauty as to appreciate them as they deserve. Upon the result of this EXPERIMENT very much depends; no less than whether the Art of designing on wood is to be an elevated Art in this country, or shall remain in the hands of comparatively inferior artists. We abide the issue, with some hope yet not without some misgiving; for we apprehend the taste of the public is not even yet sufficiently cultivated to distinguish between the gracefully meretricious and the intrinsically meritorious. To have produced such a work is highly honourable to the publisher; and it is creditable to his judgment to have placed the whole of the drawings in the hands of an engraver—that engraver being still the best of the many who work on wood.

To enter into a criticism upon each of these illustrations would be to fill a few pages instead of a column—all the space we can spare to a production of such large merit; yet each would well bear a lengthened and detailed description—beginning with the one that most pleases us; 'Choosing the Wedding Dress,' and ending with that which describes the happy finale:—'the Wedding of the Vicar's Children.'

A more exquisite volume, we repeat, was never issued from the English press: we trust it will be so received by the public as to lead to the production of others similar in character and of equal value.

**INTRODUCTION OF THE ARTS INTO GERMANY BY CHRISTIANITY.** Painted by PHILIP VEIT. Engraved by EDWARD SCHAEFFER. Published by VELTEN, CARLSRUHE, and at the Depot of Mr. H. HERING, Newman-street.

This is an engraving executed after an allegorical fresco, painted by Veit, in the Gallery of Frankfurt, consisting of a principal composition, in which lies the narration, accompanied by figures emblematical of Italy and Germany—one on each side. Veit is deservedly celebrated; and if his works, by their genuine distinctness from all others, limited our considerations to merits entirely their own, many of his compositions would hereafter be among those which are held up as worthy of imitation by all who would aspire to Art in its purest character. German art has countless admirers among ourselves—many are daring enough to go beyond mere admiration, and wed themselves to it for better for worse; but for ourselves our devotion leads us not so far—all-beautiful though it be. If the claims put forth by the German schools were not so strenuously insisted upon by themselves, we should be less scrupulous in weighing their pretensions—they profess a continuation of the Italian frescoes, but there is nothing as yet to warrant their claim to such a revival—a claim to which we could listen the more patiently if the spirit of these schools were an original essence, if the presumed continuation were carried on with a feeling as natively German as it is purely Italian; for, although Raffaele and Michael Angelo were perhaps the greatest men that have ever adorned Art, yet they have not done everything in Art—they do not occupy all the approaches to excellence—ergo, any imitation of them is not advancement, and notwithstanding their every effort in the style which they have adopted, it is still at Rome, where the Germans (as also the rest of the world) like one of the heroes of their own Schiller, can behold unequalled

— die Göttlichen  
Den Gruss des Engels, die Geburt des Herrn,  
Die heilige Mutter, die herabgestiegene  
Dreifaltigkeit, die leuchtende Erklärung.

The engravings before us are executed in the ordinary German line manner; that is, they are characterised by the thinness of a very careful etching, rather than by anything like the fulness and richness of French and English line-engraving.

In the principal part of the work, Religion is represented by a female figure, pointing with one hand to the Scriptures, and holding in the other the symbol of peace—she is looking towards another principal figure in the composition, St. Boniface, who is preaching Christianity to the rude nations of Germany—the most striking effect of whose doctrines is exhibited by an aged bard, whose brows are yet enwreathed with the leaves of the sacred oak, and his harp is broken, and his naturally majestic figure is bowed down in humility and despair. At a little distance, two men are attentively listening to the words of the preacher, as are also a group of youths, and deeply moved by his words a young girl stands near an oak, which a young convert, represented on his knees, has cut down by order of St. Boniface, as symbolical of the prevailing paganism; and near the trunk issues forth a spring of pure water as typical of a new existence. In other parts of the picture is shown the effect of religion, as regards the Arts. Three monks are painted, as if in the meditation of their seclusion, and to them is attributed the fostering care under which arose and flourished painting, Sculpture, and Architecture; also those embellishments of social life in the middle ages—Poetry, Music, and Chivalry, are respectively personified, and assist in perfecting the allegory.

**A SERIES OF VIEWS OF THE MOST PICTURESQUE SCENES IN RICHMONDSHIRE;** from Drawings by J. M. W. TURNER, R.A., and JOHN BUCKLER, Esq., F.S.A. Publishers J. B. NICHOLLS and SON.

We have here, collected into a volume, a series of thirty-two engravings from pictures which some years ago contributed to establish the fame of Turner, and to make reputations for some of our best line engravers. The prints were originally published in Dr. Whitaker's "History of Richmondshire," a work that is standard in our language, but which is of far too expensive a character for readers whose information must be obtained at comparatively small cost. The collection is valuable and interesting; it describes with rare effect the most picturesque scenery of that part of the North Riding of Yorkshire which in old times was the seat of chivalry and the throne of romance; each print is described, and an epitome of the History prefaces the book. It is pleasant to recur to names which, of late, have not been familiar to us; here we renew acquaintance with Pye, Le Keux, Scott, Middiman, the elder Landseer, Milton, and other eminent engravers, few, if any, of whom have been surpassed by their successors.

As a gathering together of rare works of Art, the volume is of great value; and, as a most agreeable treat to all lovers of excellence—both of painting and engraving—it is almost unapproached, even in this age of "improvement."

**WANDERINGS AND EXCURSIONS IN NORTH AND SOUTH WALES.** 2 Vols. By THOMAS ROSCOE, Esq., with fifty engravings, from drawings by Cattermole, Cox, and Creswick, A.R.A. Publishers, Wrightson and Webb, Birmingham; Tilt and Bogue, London.

We had frequent opportunities of noticing this work in its progress. It is now completed, and forms two beautiful and interesting volumes—the first containing "North," and the second "South" Wales. Both are enriched by excellent engravings, from admirable drawings. To the artist they are especially desirable, as famous guides to the most striking scenery of the British Islands, where the student from Nature finds his best materials. But to the general reader they may be a most agreeable and useful acquisition, for the letter-press contains a store of information, which may be resorted to for either improvement or amusement. The work, taken altogether, is unsurpassed in value by any modern publication.

**PORTRAIT OF SIR HENRY POTTINGER, Bart., G.C.B.** Drawn by S. LAURANCE—on Stone by DICKENSON. Publisher, DICKENSON.

This "authorized portrait," from a picture "in the possession of Lady Pottinger," comes in good time. It portrays a fine manly soldier, with the stamp of intellect upon a lofty brow, and a countenance expressive of generosity and firmness. It is calculated to produce confidence in the hero to whom has been confided a most important trust, and will be valuable to thousands who are interested

in the final issue of the war in Asia. The picture has been lithographed in a very meritorious manner; the style is bold and free, and the spirit of the painter has been evidently caught.

**PORTRAIT OF SIR WILLIAM FOLLETT.** Painted by F. H. SAY. Engraved by G. R. WARD. Publisher, M'LEAN.

A good portrait, and a good likeness of one who will be "great hereafter," and who has already gained a professional standing which few men have reached at so early an age. The Solicitor-General is in all respects a remarkable man; happily he is still young. He is destined to play a prominent part on the great theatre of life; and there can be little doubt that much that will rise out of the "big future" will depend upon his energy, integrity, and force of mind. The world has many guarantees that they will be exerted for good. This portrait of him is a desirable acquisition to thousands—not alone of his professional brethren, by whom he is universally respected and esteemed, or of the friends, of whom his amiable disposition has acquired "troops"—but of the public, to whom he is a person of no common interest. His native Devon is proud of him; and his country even now classes him among its "worthies." Mr. Say has copied his expressive and generous countenance with exceeding accuracy; the portrait is one of the best of the day; and it has received ample justice at the hands of the excellent engraver.

**SUNDAY MORNING.** Painted by ALEX. JOHNSTON. Engraved by FREDERICK BROMLEY. Publishers, WELSH and GWYNNE.

A most pleasant print; a sweet reading of an impressive passage in Scottish life; a fine example of Art; and altogether just such a picture as may be coveted by all classes, not alone for its intrinsic merit, nor because of the moral lesson it conveys, but because it is one of those productions of the pencil and the burin which no one can look upon without deriving enjoyment—the highest and most honourable purpose of the Arts. An aged man sits by the side of a rustic table at his cottage door; the book rests upon it, open; his son, a hale and hearty yeoman, leans against the paling, standing, and reads to the small and happy group; the young wife is seated between the husband and the father, a child clings to her arms, and another lies in her lap. The story is told with force and truth; the small episode is touchingly described; the picture is eloquent of simple nature. The various accessories are skillfully introduced. A sheepskin, placed under the feet of the grandsire, speaks of care and forethought in those to whom he is dear; the sentinel dog is at his post; the spire of the village church is seen in the distance; and a swallow is flying to its nestlings in the eave of the comfortable cottage.

The picture has been engraved with considerable ability. It is the work of a young painter, and we accept it as an earnest of his future fame. In a former number of this journal we recorded the death of the senior Bromley, an artist who sustained a high reputation for above half a century: the Frederick Bromley who has produced this plate is his grandson; the family honours are not therefore in danger of being lost. There are parts of this print of which the elder Bromley might have been proud in his best days.

**THE CLANS.** By R. R. M'IAN; with Descriptions by JAMES LOGAN. Publisher, BOSELEY. This work—about to be issued in parts—promises to become one of the most valuable and interesting publications of modern times. It pictures the peculiar costume of each of the Highland clans by a portrait, coloured so as to give due effect to the immense variety of tints upon the tartans. The portraits are painted by a veritable Highlandman—an artist of the true stamp—who is familiar with his subjects, and will immortalize them *con amore*. Two or three specimens only are before us; we shall therefore describe the work more fully next month; these specimens, however, justify us in anticipating a work of no ordinary importance.

**THE IMPERIAL FAMILY BIBLE;** illustrated by a superb Series of Engravings from the Old Masters, and from Original Designs. By JOHN MARTIN. Publishers, BLACKIE and SON, Glasgow.

"The volume" has progressed to its twenty-fourth

part. It is a beautiful as well as a valuable gift to every home where "The Book" is welcomed. The type is large and clear; and the marginal notes are introduced in vast numbers, but without disturbing the text. The prints are all good—some of them of high excellence—and we rejoice to find in recent numbers a few introductions from the illustrations of the German school.

**THE COMIC ALBUM; a Book for every Table.** Publisher, W. S. ORR.

A pleasant brochure for merry Christmas times, when serious thought is little to be recommended. The stories and poems will pass muster very well, although pretending to no originality, and nothing very novel in the way of Art. The book is full of humorous lithographic prints; every page containing two or three; and these might easily provoke a laugh even at a more sober season. The most remarkable part of the volume is its cover, printed in gold and colours, from the press of Vizetelly and Co.

**THE BIJOU ALMANAC.** Published by A. SCHLOSS, Berners-street.

This little book—the butterfly of the annuals—comes again; and is now ushered into the world with the name of Miss Mitford, whose verses are scarcely worthy of her reputation. It is, as most of our readers know, about the size of a filbert—literally  $\frac{3}{4}$  inch by  $\frac{1}{2}$  inch—and contains six portraits "engraved on steel," with poems upon each of the persons here immortalized, and an almanac with as much information as most people require. It is a pretty little toy-book, elegantly done up in a tiny cover of morocco gilt, with a case, and a magnifying glass for the service of those who may think of reading it. It has had the honour to enumerate among its editors ladies so distinguished as Mrs. Norton and poor Miss Landon, who first gave it the advantage of her graceful poetry.

#### TO CORRESPONDENTS.

As advertisements, this month, have occupied a very large proportion of our journal—no less than a *third* of it, instead of, as usual, a *sixth*, we publish, with the present number, an *extra half sheet*; this, of course, is not charged for. It is stamped, in order to avoid any difficulty in its transfer by post.

We have received an answer to our Glasgow correspondent, "Mahistick," which we shall be glad to forward to him.

"An Old Subscriber."—Descriptions of the Prints issued by the London Art-Union will be found in their Report.

It is our intention to give, occasionally, notices of Foreign Living Artists, as we have reason to imagine that they will prove not only an appropriate feature in our journal, but one very acceptable to the majority of our readers.

In answer to a correspondent, we should say, it would be advisable for "A Student in Art," who has commenced a regular course of study late in life, to draw diligently from the antique and living model together, in a private *atelier*, under the direction of a master; and we, therefore, refer our correspondent, for further information, to an article in our paper for October, on "Schools of Art," in which our opinion is expressed. [This reply may be taken by two other correspondents.]

If we understand correctly a subscriber (Ollerton), he has had no experience at all in drawing. We have had opportunities of examining drawings done in the manner he alludes to, but they are generally failures, without some preparatory knowledge of outline; under such circumstances it would be difficult to speak positively in answer to his question. He would ultimately be more satisfied by an inspection of the merits of the different methods.

The memoir of BARKER in our next.

We must postpone the letter on "Crayon Drawing."

As we have some reason to think that occasional articles of a lighter character than those which regard the actual business of life, will be agreeable to many of our readers—as reliefs to more sombre matters—Mrs. S. C. HALL will commence, next month, in this journal, a series of papers under the title of "MEMOIRS OF PICTURES."

We have received the letter dated "Augsburg, Sept. 1842;" but the writer will, perhaps, think that it contains too little concerning Art. We hope to hear from him again.

The article signed "Critic" is scarcely calculated for insertion. Neither is that signed "Junius."

The memoir of the late Mr. John Rhodes, of Leeds, in our next.

J. B. M.—We believe that in all instances the approach of a provincial exhibition has been noticed in our journal—either by advertisement or paragraph, or both. The suggestion of our correspondent is a very good one; we will endeavour to adopt it; but to do so is not easy.

Subscribers will do well to complete their volumes—if they desire to do so—with as little delay as possible. Parts 38, 39, and 40, i. e. for March, April, and May, are out of print. The other numbers may still be procured; but some of these will be soon exhausted.

In One Vol., small 4to., tastefully bound, in imitative vellum, price 31s. 6d.

**THE BOOK OF BRITISH BALLADS.** Edited by S. C. HALL, F.S.A.

London: Jeremiah How, 132, Fleet-street.

On the 1st of February, price Half-a-Crown,

PART I.  
(To be completed in Eight Monthly Parts.)

**MRS. S. C. HALL'S SKETCHES OF IRISH CHARACTER.** Illustrated by the following eminent Artists:—W. H. Brooke, F.S.A.; N. T. Crowley; George Cruikshank; W. Evans, of Eton; J. Franklin; J. Gilbert; W. Harvey; J. R. Herbert, A.R.A.; D. MacLise, R.A.; R. M'lan; Mrs. M'lan; H. M'Manus; A. Nicholl, A.R., H.A.; G. F. Sargent; J. C. Timbrell; J. H. Townsend; C. H. Weigall; and S. West. Engraved on Steel and Wood. This Work will correspond in size and appearance with "Ireland; its Scenery and Character."

London: Jeremiah How, 132, Fleet-street.

This day is published,

**IRELAND: ITS SCENERY AND CHARACTER.**

By Mr. and Mrs. S. C. HALL.

Three vols. Imperial octavo, price 24s. Illustrated by 48 Engravings on Steel; 18 County Maps; and 491 Engravings on Wood.

This work being now completed with the 27th Monthly Part, issued on the 1st of January, 1843, subscribers are requested to complete their volumes without delay.

As an illustrated work it is believed few publications of modern times have been so satisfactorily sustained from its commencement to its close. The best artists have been engaged in its production—the "scenery and character" are, in every instance, pictured from sketches taken on the spot—and the engravings have been executed by the most competent engravers.

The History and Descriptions of Ireland, from the justly popular pens of Mr. and Mrs. S. C. Hall, have obtained the universal approbation of the public press; and the very large circulation which the work has enjoyed, affords the most unequivocal proof of its great and extended popularity.

London: Jeremiah How, Publisher, 132, Fleet-street.

**NEW EDITIONS** have lately been published of Mr. ROSCOE'S WANDERINGS AND EXCURSIONS IN NORTH AND SOUTH WALES. Each volume is embellished with 50 beautiful Steel Plates of the Abbeys, Castles, River and Mountain Scenery, &c., and a new Map. It forms an elegant work for a present, or for the drawing-room table; and no well-selected library can be considered complete without it. Price 25s. cloth extra, or 35s. morocco extra per vol., and either may be had separately.

Tilt and Bogue, Simpkin and Co., and Orr and Co., London; Wrightson and Webb, Birmingham; Wareing Webb, Liverpool.

On the 1st of January, 1843, will appear Part I. of a new and unique Work, entitled,

**THE CLANS;** consisting of highly-coloured Lithographic Plates, representing full-length Figures of Chiefs and other Personages in their respective Costumes; from Original Paintings made expressly for this Work. By R. R. M'IAN, Esq., with Descriptive Letter-press, by JAMES LOGAN, Esq., F.S.A.Sc., Corresponding Mem. Soc. Ant. Normandy, &c. Author of "The Scottish Gaol."

The object of the Publisher, in the production of this Work, is to give accurate representations of the Tartan, Arms, and Insignia peculiar to each of the Scottish Clans, with requisite Descriptions and Historical Notices of each.

It is intended to be published in Parts, each containing Three Coloured Plates, with Letter-press, in a Wrapper, to appear on alternate months, and is expected to be completed in Fifteen Numbers. The size will be imperial quarto, and the price,—

To Subscribers ..... 12s. each Part.

To Non-Subscribers ..... 15s.

A few Copies will be printed on imperial folio, price 21s. each Part.

It is requested that Subscribers will forward their names and addresses to the Publisher as early as possible, as a Printed List of them will be given.

London: Published by W. Bosley, 28 and 29, Silver-street, Golden-square; also, Adam and Charles Black-Edinburgh.

ESTABLISHED 1829.

## THE ART-UNIONS OF GERMANY:

Under the Patronage of  
H.R.H. THE DUKE OF SUSSEX,  
H.R.H. THE DUKE OF CAMBRIDGE,  
AND THE NOBILITY.

BERLIN, DÜSSELDORF, AND DRESDEN.

The price of the Subscription Ticket, in either of the above Associations, will be 20s. each, which will entitle the holder to one copy of the Annual Presentation Engraving, which will be delivered IMMEDIATELY after the drawing, free of duty and carriage, and also the chance of obtaining a work of Art, value from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the Presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 153, Regent-street.

A Prospectus, detailing the plans of management of the German Art-Unions, and explanatory of the advantages afforded to the Subscribers, can be obtained, or forwarded free, upon application to

HENRY HERING, Secretary,  
153, Regent-street,  
Bankers' Union Bank of London.

That independent and interesting Monthly Journal, "The Art-Union," in speaking of the facilities now offered to persons resident in this country of becoming associated with the Art-Unions of Berlin, Düsseldorf, and Dresden, thus says:

"It is proposed to extend the benefits of the Art-Unions of Germany to this country, an enterprise which must cause a considerable circulation of German Engravings among us, and whence can result nothing save improvement."

And in alluding to the Engravings which have been gratuitously presented to the Subscribers, the same Journal adds:

"In 1839, the Art-Union of Düsseldorf presented to subscribers an engraving by T. Felsing, from a picture by Bendeman, entitled 'Girls at the Fountain.' The title, which might admit of a much less refined illustration than exists in this beautiful engraving, is not worthy of the work; for, in the composition, the fountain is a mere accident, the whole force of the theme being settled in the expression of the countenances of two girls, which involves a tale of the heart. The engraving is in line, and in the perfection of that style. In 1840, the same Art-Union presented to its subscribers an engraving by Felsing, from a picture by Köhler, entitled 'Poetry.' The subject is made out by a figure in a sitting position, winged and draped, and writing in a book the inspirations she is invoking. This figure is also in line engraving, and is as much superior to ordinary allegory, as good poetry is to bad. In 1841, this was followed by 'The Queen of Heaven,' engraved by Professor Keller, from a picture by Deger, exhibiting the most exalted feeling for religious painting.

"In 1839 the Berlin Art-Union presented its subscribers with 'Die Lurley,' an engraving by Mandel, from a picture by Carl Begas. The subject is from one of the legends of the Rhine, in which a maiden is described as luring by night, passengers out of their way by the sweetness of her music. The figure is on a cliff supposed to overlook the Rhine, and a traveller is seen ascending the rock. The figure is admirably drawn, and is characterized by much of the beauty of the greatest works. The same Society, in 1837, gave to its subscribers 'Das Trauermde Königspar,' engraved by Lüderitz, from a picture by Lessing, and enforcing the moral, that no 'flesh' is exempt from sorrow—'Das Königspar,' a king and queen are seated lamenting the evils of humanity, from which their high estate cannot secure them.

"Each of those works is of a high standard of Art. We find in them aims to approach the most celebrated works of the Italian school; and it must be confessed that they do excel works to which attach even celebrated names of that school.

"We anticipate the most favourable results from a nearer connexion with schools that have studied so closely the great models."

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS AND CARTON-TOILE OFFICE,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

**CHRONOLOGICAL PICTURES OF ENGLISH HISTORY.** Designed and Lithographed by JOHN GILBERT. Accompanied with a Tabular Descriptive Sheet of Letter-press, and Fac-similes of the Autographs of the Sovereigns and Distinguished Characters. Every part contains Five Plates, and each Plate illustrates a Reign.

"Most capably executed drawings."—Church of England Quarterly.

"An elegant mode of insinuating a knowledge of English history."—*Asiatic Journal*.

London: Rourke and Varty, Educational Depository, York House, 31, Strand.

**TO ARTISTS.—SKELETONS, SKULLS, &c.**—ALEXANDRE, 37, GREAT RUSSELL-STREET, BLOOMSBURY, continues to supply the following Anatomical Preparations:—Skeletons Articulated, from £3 to £6 10s.; Arms and Legs, from 9s. to 12s.; Hands and Feet, 3s. to 5s. A fine collection of Anatomical Plates, plain and coloured, for the use of the Artists at the Academy in Paris, price 3s. 6d. plain, 7s. coloured. These Plates are of the whole-length of the human body.—Skeletons lent on deposit.

## NEWLY INVENTED SKETCHING PENCILS.

BB. Very black for the foreground.

HB. Middle tint.

N. Neutral tint, for distance.

E. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturers', 23, CHURCH-STREET, SPITALFIELDS.

**DIMES AND CO. (LATE WARING AND DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F.** DIMES begs to inform the Profession, that the PARTNERSHIP subsisting between himself and Mr. George Waring has been DISSOLVED by mutual consent, and that in future the Business will be continued under the name of DIMES and CO.

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**RAND'S PATENT COLLAPSIBLE METALLIC TUBES FOR OIL COLOURS.**—Mr. J. Rand, the Inventor and Patentee, and Manufacturer of the Collapsible Metallic Tubes, having thrown them open to the trade, D. and CO. beg to state that they can supply them filled with oil colours in any quantity; also, tubes of Varnishes, M'Guelp, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist,** filled in mahogany or japanned boxes for sketching.

**Whatman's Drawing Paper,** all sizes and thicknesses.

**J. D. H., ditto.**

**Tinted or Academy Paper,** in great variety of tints for chalk or pencil.

**Genuine Cumberland Lead Pencils,** warranted of pure lead.

**Chalks and Crayons** of all descriptions.

**French, Hog, and Sable Hair Brushes** for Oil and Water-Colour Painting.

**Marble Slabs mounted,** prepared for Miniature Painting.

**Drawing Boards, Esels, T Squares,** and every article for Architectural Draughtsmen.

**Drawings and Paintings** lent to copy.

MR. MOON, her Majesty's Printseller and Publisher, has the honour to announce the following  
IMPORTANT WORKS OF ART:

NEARLY READY,

SIR DAVID WILKIE'S GRAND HISTORICAL PICTURE,

REPRESENTING

## THE QUEEN'S FIRST COUNCIL,

ON THE 20th JUNE, 1837.

Expressly painted for Buckingham Palace, by command of her Majesty,

AS A COMPANION TO PARRIS'S CORONATION.

Mr. MOON having received the QUEEN's command to have this Picture engraved, has the honour to announce that Mr. Fox, the eminent engraver, is rapidly bringing this national and interesting work to a conclusion. Mr. Moon requests early application, as the impressions will be delivered in the order of subscription.

Price: Prints, £5 5s. . . . Proofs, £7 7s. . . . Before Letters, £10 10s.

ALSO,

## THE QUEEN RECEIVING THE HOLY SACRAMENT AT HER CORONATION.

This beautiful Work, by C. R. LESLIE, R.A., belongs to her Majesty; and Mr. Moon has been honoured by her Majesty's gracious commands to have it engraved by SAMUEL COUSINS, A.R.A.

The price of the Proofs and Impressions will necessarily bear proportion to the great cost of the production of the Engraving, upon which no expense will be spared; and by Mr. Moon's arrangement with Mr. Cousins, every impression will be delivered through him—a guarantee that they will not be unworthy to display his great talent, and support his distinguished reputation. The price of the impressions from the Engraving of this work, which it is just to reiterate contains nearly Forty Portraits, will be, to Subscribers, Prints, with the Dedication, £12 12s.; Proofs, with the Royal Arms and Title, £15 15s.

ALSO,

## COLUMBUS'S DISCOVERY OF AMERICA.

Painted by Sir D. WILKIE, R.A., and now Engraving by H. T. RYALL, Historical Engraver to her Majesty.

COMPANION TO THE MAID OF SARAGOSSA.

Price: Prints, £3 3s. . . . Proofs, £5 5s. . . . Before Letters, £8 8s.

"A stranger travelling on foot, accompanied by a young boy, stopped one day at the gate of a convent of Franciscan friars, dedicated to Santa Maria de Rabida, and asked of the porter a little bread and water for his child; while receiving this humble refreshment, the guardian of the convent, Friar Juan Perez de Marchena, happening to pass by, was struck with the appearance of the stranger, and observing from his air and accent that he was a foreigner, entered into conversation with him. That stranger was Columbus. The conference which followed, remarkable for opening a brighter prospect in the fortunes of Columbus, forms the subject of the picture; in which he is represented seated at the convent table, with the prior on his right, to whom he is explaining, on a chart, the theory upon which his long contemplated discovery is founded. At his left is his son Diego, with a small Italian greyhound at his feet, supposed to have accompanied them in their voyage from Genoa. At the other side of the picture, resting on the table, is the physician of Palos, Garcia Fernandes, who, from scientific knowledge, approved of the enterprise, and whose testimony has recorded this event. Behind him, with the telescope in his hand, is Martin Alonso Pinzon, one of the most intelligent sea captains of his day, who, though tarnished in his fame by subsequent desertion, concurred in the practicability of his plans, assisted in the outfit of the expedition, and sailed with Columbus."

## ROBERTS'S HOLY LAND, PART VII., *Now Ready.*

PART VIII. WILL CONTAIN THE VIEWS IN BETHLEHEM.

PREPARING FOR PUBLICATION,

A MAGNIFICENT WHOLE-LENGTH PORTRAIT OF HIS GRACE

## THE DUKE OF BUCCLEUCH AND QUEENSBERRY,

&c. &c.

To be engraved by THOMAS LUPTON, from the Picture painted by JOHN WATSON GORDON, R.S.A., A.R.A., for the Nithsdale Agricultural Association.

As no engraved Portrait of his Grace is in existence, every effort will be made to render this publication worthy the patronage of his Grace's numerous friends and admirers.

Price to Subscribers: First Class Proofs, with Autograph, £6 6s. . . . India Proofs, £4 4s. . . . Proofs, £3 3s. . . . Prints, £2 2s.

ALSO,

A FULL-LENGTH PORTRAIT OF THE LATE

## COUNTESS OF BURLINGTON.

Painted by JOHN LUCAS, for his Grace the Duke of Devonshire, K.G., as a companion in size to Sir Thomas Lawrence's full-length Portrait of the Duchess of Sutherland and Child, engraved by SAMUEL COUSINS, A.R.A.

Prints, £2 2s. . . . Proofs, £4 4s. . . . Before Letters, £6 6s.

## BREEZE, A FAVOURITE RETRIEVER.

Painted by E. LANDSEER, R.A., engraved by C. LEWIS, as companion to the 'Distinguished Member of the Humane Society.'

Prints, £1 11s. 6d. . . . Proofs, £2 2s. . . . Proofs before Letters, £4 4s.

## A BARONIAL HALL IN THE OLDEN TIME; OR, OLD ENGLISH HOSPITALITY.

Engraved by the late J. EGAN, from the celebrated Picture by GEORGE CATTERMOLLE, as a companion to 'Bolton Abbey in the Olden Time,' by SAMUEL COUSINS, A.R.A.

This national Work has excited intense interest, from the scene being so truly English. The First Proofs being nearly all sold, early application must be made for the remainder.

Prints, £3 3s. . . . Proofs, £5 5s. . . . Before Letters, £8 8s.

LONDON: F. G. MOON, HER MAJESTY'S PUBLISHER, 20, THREADNEEDLE-STREET.

**GLOBE INSURANCE, Pall-Mall and Cornhill, London.** Established 1808. Edward Goldsmid, Esq., Chairman; William Tite, Esq., F.R.S., Deputy-Chairman; George Carr Glyn, Esq., Treasurer. ## AUDITORS.

H. H. Cannan, Esq. Robert E. Alison, Esq.  
Medical Adviser—Marshall Hall, M.D., F.R.S., L. and R. Secretary—F. Edgell, Esq.

Solicitors—Messrs. Palmer, France, and Palmer.  
Important and salutary improvements have been introduced into the practice of life assurance by this Company. All the advantages peculiar to mutual life assurance, arising from a division amongst the assured of the whole of the mutual profits, and that security and freedom from responsibility which proprietary companies can alone afford, are combined by the constitution of this, the only guaranteed Mutual Society. The rates of premium are somewhat lower than in mutual offices, and for the non-participating, and for those who effect assurances for temporary purposes, or debtor and creditor transactions, tables of premium have been prepared, by which a less immediate payment is required than by any other plan.

By a half premium credit system, one half of the premiums may be retained for the first seven years, and repaid at the convenience of the assured; and by the ascending scale, a greatly diminished rate of premium is required for the first 12 years, combining the advantages of an assurance for the whole duration of life with the economy of a temporary policy.

Specimen of Ascending Table.

Age.	First 3 Years.	Second 3 Years.	Third 3 Years.	Fourth 3 Years.	Remainder of Life.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
10	0 19 1	1 5 6	1 11 11	1 18 4	2 4 9
30	1 6 1	1 14 7	2 2 8	2 10 9	2 18 10
40	1 13 5	2 5 7	2 17 9	3 9 11	4 2 1
50	2 16 3	3 10 10	4 5 5	5 0 0	5 14 7
60	4 8 11	5 17 4	7 5 9	8 14 2	10 2 7

By the Deed of Constitution of the Company, all policies issued by them are declared to be indefeasible and indisputable, unless obtained by fraudulent misrepresentation.

Prospectuses, schedules, and every information requisite to enable parties to effect assurances, will be forwarded free of expense, by the agents or Manager.

ALEX. ROBERTSON, Manager.

### THE LATE BENJAMIN HICK, ESQ.—

A number of the Friends of the late BENJAMIN HICK, Esq., having expressed a desire to possess an Engraving from the admirable Portrait of him, painted by GEORGE PATTEN, Esq., A.R.A., a Committee has been formed with the view of carrying it into execution, and the Picture has been intrusted to Mr. GRUNDY, for the purpose of being immediately placed in the hands of an eminent engraver.

The Portrait is intended to be engraved in the finest style of mezzotint, and will be published for the subscribers at as moderate a price as will cover the cost of the undertaking.

The size of the Plate, including margin, 17 inches high by 13½ inches wide.

The Price to Subscribers will be,  
First Class Proofs, with Autograph (printed under the superintendence of the engraver) £2 2 0  
Plain Proofs .. .. . 1 1 0  
Prints .. .. . 0 10 6

As the Impressions will be delivered strictly according to the order in which they are subscribed for, and NONE PRINTED EXCEPT FOR THE SUBSCRIBERS, those parties desirous of possessing the Portrait are respectfully requested to transmit their names as early as possible to Mr. Grundy, Exchange-street, Manchester; to one of the Members of the Committee; or to Mr. R. Pilkington, Honorary Secretary, Bolton.

## COMMITTEE.

Robert S. Barlow, Esq. .... Bolton.  
Joseph Beckton, Esq. .... Manchester.  
Robert Daglish, Jun., Esq. .... St. Helen's.  
Jonathan Hardcastle, Esq. .... Bolton.  
John Moore, Esq. .... Sharples, near Bolton.

Peter Rothwell, Esq. .... Bolton.  
Thomas Lever Rushton, Esq. Bolton.

### SALE OF AN IMPORTANT AND GENUINE COLLECTION OF PICTURES, DRAWINGS, ENGRAVINGS, BRONZES, &c.

## MANCHESTER.

**MESSRS. THOMAS WINSTANLEY and SONS, of LIVERPOOL,** have the honour to announce that they have received directions from the Executors of the late

**BENJAMIN HICK, ESQ., OF BOLTON,** to SELL by AUCTION, at the EXCHANGE GALLERY, DUCIE-PLACE, MANCHESTER, in the course of the month of FEBRUARY next, the valuable, well-known, and much-admired COLLECTION of the late Proprietor; comprising capital PAINTINGS by celebrated Masters of the Italian, Flemish, Dutch, and British Schools; a tasteful Selection of Modern DRAWINGS in Water-colours; select Proofs of celebrated ENGRAVINGS, after Sir DAVID WILKIE and other Painters; Antiques, Bronzes, Marbles, and other estimable Works of Art, collected by him during a period of thirty years, from the most favourable public and private opportunities, with acknowledged taste and judgment, and at a very liberal expense.

The productions of the Foreign Schools of PAINTING consist of a 'Holy Family,' by RAFFAELLE; a duplicate of the principal Group of the 'Virgin and Child, with the Angel and Magdalen,' by CORRREGGIO, from his celebrated Picture called 'St. Jerome;' and undoubtedly by the hand of that great Master; a magnificent 'Head of Christ,' painted with powerful expression by the masterly hand of ANNIBALE CARRACCI; a Portrait of the 'Painter's Daughter,' by CARLO DOLCI; a brilliant 'View of Dresden,' by CANATELLI; with fine Specimens of the high talents of PARMEGGIANI, SASSO FER-RATO, PAUL VERONESE, CARLO MARRATTI, MURILLO, and GASPARD POUSSIN; a most capital and highly-finished 'Interior, with Figures,' by EGBERT HEMSKIRK the younger, truly valuable for its extraordinary quality and the purity of its preservation; select Specimens of the Works of WOUVERMANS, PAUL POTTER, DAVID TENIERS, BRUWER, GERARD DOW, OSTADE, BACKHUYSEN, PLUTZKE, VERNET, VAN SRYK, and other Masters.

The Selection of MODERN ART, which shows the liberality and good taste with which Mr. Hick patronised the BRITISH SCHOOL, comprises the original finished Sketch of 'John Knox administering the Sacrament at Calder House,' by the late Sir DAVID WILKIE, purchased at the Sale of his Pictures in London; four genuine Landscapes, by RICHARD WILSON; two ditto, by LOUTHBURG; two Pictures by GEORGE MORLAND; a beautiful Landscape, sunset effect, by Sir A. W. CALLCOTT; 'The Letter from Sex,' by KNIGHT; with other pleasing and interesting subjects, by HOWARD, EASTLAKE, LEC, TENANT, JOHN WILSON, STEPHANOFF, SHAYER, POOLE, CARMICHAEL, ZEITNER, BRADLEY, BARKER, the NASMYTHS, the late BENJAMIN WEST, P.R.A., WESTALL, &c. &c.; the 'Rivers of Bliss' and 'Pandemonium,' by JOHN MARTIN; the 'Return of a Greek Armament,' by LINTON; and a Selection from the Works of the late HENRY LIVERSEGE, several of which were painted for Mr. HICK; amongst them will be found 'The Inquiry,' 'Captain Macbeth,' 'The Black Dwarf,' 'The Benediction,' 'Lucy Ashton,' and others.

The WATER-COLOUR DRAWINGS comprise the original Sketch of the 'Presentation of the Keys of Edinburgh to George the Fourth at Holyrood,' by Sir D. WILKIE, with other judiciously selected Specimens of DAVID ROBERTS, DANBY, SEANFIELD, STOTHARD, WESTALL, CATTERMOLE, PROCT, COX, COOPER, AUSTIN, HOLLAND, J. M. WRIGHT, LIVERSEGE, RICHARDSON, VICKERS, STEPHANOFF, NASH, COPELEY, FIELDING, and other eminent artists of the justly-admired English Water-colour Schools.

Amongst the Engravings is a complete set of the well-known and celebrated subjects after Sir DAVID WILKIE, some of them in states of great rarity, and the whole in excellent condition; numerous specimens of the able talent of Doo, Robinson, and other English and Foreign Engravers.

The whole may be viewed three days previous to the Sale. Catalogues may be had at Mr. Grundy's, Exchange-street, Manchester; of Messrs. Winstanley, Paternoster-row, London; at the office of the 'Midland Counties' Herald, Birmingham; at the place of Sale; and of Messrs. Thomas Winstanley and Sons, Church-street, Liverpool.

To prevent intrusion, no person will be admitted to the view or sale without a Catalogue, which will be charged one shilling each.—Due notice will be given of the days of sale.

### NOTICE.—SPLENDID STOCK OF GLASS

and PICTURE FRAMES, the most modern and elegant patterns ever offered to the public, may be had at J. RYAN'S extensive Manufactory, 13 and 14, LONG-ACRE, at prices that will defy competition. Console Tables, Girandoles, Brackets, Cornices, and every article connected with the trade; Fancy Wood Frames of every description, of a superior quality, in great variety. Frames joined in the gold in the first style. A few fine Pictures for Sale.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

### CHIMNEY GLASSES, PICTURE

FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

### CAUTION TO BOOKSELLERS, STATIONERS, AND THE PUBLIC.

**MESSRS. REEVES and SONS, 150, Cheap-side, London, Artists' Colourmen and Drawing Material Manufacturers,** beg to caution their Customers and the Public against a GROSS FRAUD, which they have just discovered is being practised throughout the kingdom by parties travelling AS FROM THEIR HOUSE, and offering for sale BLACK LEAD PENCILS, which they represent to be of Messrs. Reeves and Sons' manufacture. These spurious Pencils are utterly worthless, and will be found to be a great imposition upon the public. In some cases they bear the name of Reeves, in others, Reeves.

Messrs. REEVES and Sons deem this the most immediate mode of cautioning the Public, and of protecting themselves against the consequences of this fraud until they can take other means of detecting and punishing the parties guilty of it.

150, Cheap-side, London.

### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

### REGISTERED 1842.

**REEVES and SONS', 150, CHEAPSIDE, LONDON, New FRESCO PANELS and VITRIFIED FRESCO COLOURS, for FRESCO PAINTING.**

—Messrs. Reeves and Sons beg to announce to the Profession and the Public that they have purchased the exclusive right of Manufacturing and Selling the above Articles from the Patentee, who has succeeded in bringing the same to a perfection equal to those used by the Old Masters. For brilliancy, transparency, and effect, nothing can surpass this sublime part of the Arts; it combines the softness of the Swiss Crayon with the depth of Oil. These Colours may be used with great freedom by first wetting the panel with water, which allows them to be worked very fluid in the first tints, and those that follow the Artist can suit to his own taste, as they can be made to the substance of thin bladder-colours, which gives the painting in the deep shadows an effect surpassing Oil. It is necessary that White should be used, as it gives a firm body and brilliant tone, not to be obtained in any other style of painting. The Colours are permanent and will keep in any climate, and can be used on paper as well as on the New Fresco Panels; they are equally transparent, and for Flower painting closely approach to nature: in Landscape also the aerial effect of reality is obtained. The Colours are free from any unpleasant scent, and a painting may be made superior in tone to oil by the use of water only.

N.B.—The Fresco Panels are made to any size and shape, for ornamenting panels of rooms and ceilings.

## ELEGANT NEW YEAR'S GIFTS.

In imperial 4to., price 25s. half-bound morocco; and 30s. morocco gilt.

**THE ROYAL GALLERY OF PICTURES;** being a Selection of 32 Pictures from her Majesty's Private Collection at Buckingham Palace, and engraved by eminent Artists. With descriptive letter-press by LINNELL.

Price One Guinea and a Half in cloth; 38s. plain morocco; and 48s. morocco elegant: both bound by HAYDAY.

London: Chapman and Hall, 186, Strand.

Now Publishing,

## BY MR. GILBERT, OF SHEFFIELD,

PRINTSELLER AND PUBLISHER TO HIS ROYAL HIGHNESS PRINCE ALBERT.

A most Splendid ENGRAVING by JOHN MARTIN, K.L., from his original Picture of 'THE EVE OF THE DELUGE,' in the possession of his Royal Highness Prince Albert, which is dedicated to his Royal Highness by his express wish. Price to Subscribers:—Proofs before Letters, £3 3s.; Lettered Proofs, £2 2s.; Prints, £1 1s. Impressions may be seen at the West-Riding Art-Union Repository, Fargate, Sheffield; and obtained of all respectable Printers in the Kingdom.

As the Plates will be delivered in the strict order of subscription, an early application will be necessary, to secure the finest impressions.

## OPINIONS OF THE PRESS.

"'The Eve of the Deluge' is bold and massive in its foreground, bright and aerial in its distance, and striking in its general effect."—Morning Herald.

"The print is a worthy conclusion to the series of three, with which the artist originally intended to convey his conceptions of the great flood; the two first, 'The Deluge' and 'The Receding of the Waters,' being well known and highly prized."—Sheffield Iris.

"This is the publication of a provincial publisher, and affords evidence of a liberal and enterprising spirit. It forms an excellent companion to either of the many fine mezzotint prints executed by Mr. Martin, the designer and engraver."—The Art-Union.

"Were it not that the industry of the artist had almost surpassed even the effects of his genius in familiarising to the public the sublimities of his style, this Engraving alone would have secured and justified his claim to the rank which he holds in British Art. 'The Eve of the Deluge' is assuredly worthy of Martin's name and fame, and not less of the patronage of Prince Albert."—Sheffield Mercury.

"This is the finest—because the best sustained, and throughout most consistent—work of its renowned author."—Derbyshire Courier.

"This Engraving is worthy to be the companion of the best that Martin has produced, and we recommend it to the attention of every lover of the fine arts."—Sheffield Independent.

## ADAPTED FOR CHRISTMAS PRESENTS, ETC.

**THE MODERN POETS and ARTISTS of GREAT BRITAIN:** being Selections from the Modern Poets, illustrated by 43 engravings from the first-rate modern artists. Forming the third series of the Book of Gems. Edited by S. C. HALL, Esq., F.S.A. With Original Biographies. 8vo., price One Guinea.

**MISS MITFORD'S OUR VILLAGE;** Sketches of Rural Character and Scenery. With numerous wood-cuts. 3 vols. half-morocco, 24s.

**REDDING'S HISTORY and DESCRIPTION of MODERN WINES.** 2nd edition, with additions, 8vo., with highly-finished wood engravings, by BAXTER, 10s., cloth.

**THE CONDITION and HISTORY of the FINE ARTS in GREAT BRITAIN and IRELAND.** By W. B. SARGENT TAYLOR, Curator of the Living Model Academy, &c. 2 vols. post 8vo., with wood-cuts, price 21s. cloth.

**CUVIER'S ANIMAL KINGDOM.** 16 vols. with 814 engravings. Translated by E. GRIFFITH, F.A.S., and others. Demy 8vo. 12 guineas; royal 8vo. coloured, 25 guineas; demy 4to. India proof, £24. Whittaker and Co., Ave Maria-lane.

Price 4s., elegantly bound; free by Post, 4s. 6d., **WHIST.** By an AMATEUR. With 15 Illustrations, designed by Kenny Meadows, and engraved by Smith and Laiton.

"A vivacious and literate essay upon the game of whist."—Spectator.

"Whist itself—illustrated by the happiest of our illustrators."—Britannia.

Bell and Wood, Fleet-street, London.

**CHRISTMAS OR NEW YEAR'S PRESENTS, FOR THE PRESENT SEASON.**

Now ready, royal 8vo., price £2 2s., handsomely bound, **THE BYRON ANNUAL;** being a New Edition of CHILDE HAROLD'S PILGRIMAGE, with a Portrait and Sixty Vignette Engravings illustrative of particular Scenes and Objects described in the Poem, from Sketches made on the spot by eminent Artists.

Also, just published, £2 2s., richly bound in cloth; or £2 12s. 6d., morocco,

**LOCKHART'S SPANISH BALLADS;** translated with Notes, and embellished in a characteristic but perfectly original manner, with coloured Illuminated Titles, coloured Borders, ornamental and heraldic Letters and Vignettes.

"A more appropriately as well as beautifully embellished volume never was offered to the world. The text throughout is accompanied with heraldic and ornamental embellishments, with views of localities and representations of objects, which present admirable commentary on the stirring stanzas."—Edin. Review.

John Murray, Albemarle-street.

## A BOOK FOR CHRISTMAS PARTIES.

**THE COMIC ALBUM,** in Verse and Prose, with upwards of 300 Illustrations, beautifully printed on tinted papers; and bound in splendid arabesque pattern of colours and gold. Large 4to., price 12s.

"It is a Book to set every table in a roar, and shake the sides of Christmas Parties with laughter."—Spectator.

"This is by far the best of Comic Albums that we have seen. There is such a variety in the book, so many good things of every sort, that the most fastidious will find something to his taste, and the most experienced something new."—Times.

Wm. S. Orr and Co., Paternoster-row.

## BROWN'S COLLAPSIBLE METALLIC

TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

# THE NATIONAL ART-UNION.

TO EXTEND THE INFLUENCE OF BRITISH ART, BY CIRCULATING FINE EXAMPLES OF THE BRITISH SCHOOL OF PAINTING AND ENGRAVING.

Various circumstances have combined to suggest the establishment of an ART-UNION upon a more extended and comprehensive scale than that of the "SOCIETIES" at present in existence, with a view to associate, for one common purpose, persons of similar habits and tastes, however removed by distance; to increase the means of justly appreciating the Fine Arts, and participating in their beneficial influences; and, by circulating Works of unquestionable excellence, to give a right bias and a wise direction to that taste for the beautiful and instructive in Art, which is becoming, not gradually, but rapidly, universal in Great Britain.

The Societies which, within the last few years, have been called into existence in this country, originated, as our readers are aware, with the patrons of Art in Germany. The idea was borrowed first in Scotland, it was introduced thence into London, the spirit spread its influence to Ireland and the English provinces; and several such Institutions are now in operation—all stimulated by one great and honourable motive, but each having some peculiar characteristics, and all acting upon grounds independent one of another.

The vast advantages that arise to a community from a proper cultivation of the Arts, and the salutary enjoyments produced by them, are too obvious, and too generally admitted, to require comment. The astonishing increase of Institutions for their promotion, and of Societies for their encouragement, in this country, has only kept pace with the public sentiment. The spirit of the age, rejecting the less refined pleasures of former times, requires those that are derived from the cultivation of Science, Literature, and the Arts,—because it has been taught to appreciate their value. The aristocracy, of rank or commerce, are deriving their "home enjoyments" from the mind and hand of the Painter; while the taste, and, it may be said, the judgment, formerly confined to the higher, have spread to the middle classes of society, by whom the inferior productions of the graver are now almost invariably rejected. Fortunately, Science has been summoned to the aid of the Arts: the invention of the ELECTROTYPE will, by multiplying, to any extent, the productions of the burin, enable the producer of a fine Print to supply it at the cost, formerly, of the commonest engravings—such Electrotypes copies being, in all respects, as excellent as the originals, of which they are fac-similes; a result that rests upon indubitable authority, and is "established by the proof that it has been found impossible, by most competent judges, to distinguish the one from the other."

The MANAGERS of the "NATIONAL ART UNION" avail themselves of this power to answer the increased demand for ART of unquestionable excellence; and submit their PLAN with confidence to the Public.

In its leading provisions, it resembles THE SOCIETIES now in operation, and with which the Public are already familiar; first, in supplying an impression of a costly Engraving for each Guinea subscribed; and next, in distributing a collection of Works of Art, the productions of British Artists, as PRIZES—the prizes to be appropriated in the usual manner of drawing.

In the "NATIONAL ART-UNION," however, there will be some peculiar features, upon the importance of which, as serious and valuable improvements, its projectors calculate for success.

These they have now to explain:—

WITH REFERENCE TO THE PRINTS TO BE DISTRIBUTED.—ONE FOR EACH GUINEA SUBSCRIBED:—

1st, The Print will be DELIVERED to the Subscriber, at the time his Subscription is paid; thus removing the principal objection to existing Art-Unions, which have delayed the issue of one Print until long after another Print has been due; causing no inconsiderable disappointment and vexation by continual postponements.

2nd, As, at least, THREE OR FOUR Engravings will be submitted to the Subscribers, from which a choice may be made, for each Guinea subscribed,—and, as these Engravings will be varied as to subject and size, the Subscriber will be enabled to select a Print that may be suitable to his taste, and will not be compelled, as in previously existing Societies, to accept a Print, the character of which may not be agreeable to him, or which may not possess sufficient merit as a work of Art. In short, he will ascertain the true worth of the Engraving before he is called upon to become a Subscriber.

3rd, The Prints to be issued by the NATIONAL ART-UNION will be greatly superior to any that have been hitherto published by a Society. They will be all Line Engravings; engraved, in every instance, by the most eminent of British Engravers, from the choicest works of the most famous of our British Painters; and the expenditure in their production will be at least thrice the amount that has been paid by any existing Institution.

WITH REFERENCE TO THE PRIZES FOR SUBSEQUENT DISTRIBUTION AMONG THE SUBSCRIBERS:—

1st, The sum to be expended in the purchase of PRIZES,—Paintings, Drawings, and Proof Impressions of fine Prints,—shall amount to the FULL HALF of the total sum subscribed, exclusive of the Engravings distributed at the time of subscribing; the number of Subscriptions being limited to 25,000; when the whole of the works of Art exhibited will be transferred, as Prizes, to the Subscribers.

[No Painting or Drawing will be selected as a Prize of less value than Twenty-five Guineas: but the smaller prizes will consist of the finest Proofs of rare and costly Prints, which cannot but be considered more desirable acquisitions than inferior Pictures of small price.]

2nd, The plan of drawing the Prizes will be precisely that adopted by the London Art-Union: to take place immediately after the completion of the Subscription List: but under no circumstances will it be delayed later than the 30th June, 1844.

3rd, The Paintings and Drawings shall be procured directly from the Artists,—native Artists only; and, as far as may be practicable, at once from the easel, so as to secure the latest production of the Painter, and to obtain novelty in an Exhibition. The Managers, however, reserve the right of making additions from private sources, when very desirable works may be offered them, or in case difficulties shall arise in procuring a sufficient number of really good works.

[Promises of zealous support and cordial co-operation have already been received from several eminent and distinguished Artists.]

4th, The Pictures so collected, for subsequent distribution as Prizes, will be publicly exhibited, first in London, and afterwards in nearly all the leading towns of the Kingdom; thus extending the fame of the Artist, and improving the public taste by the most certain and most effectual mode.

[While the Subscribers will at once receive a beautiful and valuable Print, they will, also at once, be enabled to test the beauty and value of the Pictures of which they will subsequently become the possessors. The Paintings so brought together will be collected from the studios of the Painters, with regard only to their intrinsic merit, inasmuch as upon their intrinsic merit, and the exclusion of mediocre performances, must largely depend the success of the Institution.]

The advantages thus offered to the Public will be sufficiently obvious. While the Prints that will be issued may challenge competition with any that have ever appeared in this country, either from public or private sources, and will be procured at a cost commensurate with the importance of the undertaking, the objections that have been urged against Art-Union Societies will be in a great degree removed. These objections are twofold; first with reference to the choice of Pictures by "a Committee," and next as regards the arrangement by which a Prizeholder selects for himself. In the one case, it has been asserted that partialities and personal regards have, at times, produced a bias injurious to the Arts generally; and have encouraged some Artists to enhance the prices of Pictures beyond their value, under the assurance of sales; and, in the other case, it is contended that the Arts are prejudiced by allowing incompetent judges to make choice of unworthy Pictures. Both these difficulties will be overcome; inasmuch as the Managers of the "NATIONAL ART-UNION" will be compelled to choose only such Works as are of acknowledged excellence; such only as are calculated to improve the general taste; and such only as will be really worth the value placed upon them. Upon the just and effectual working out of this portion of their Plan, they ground their expectations of success.

The period for drawing the Prizes will be duly announced. It will take place in London, and Subscribers will be invited to attend. The proceedings will be conducted under the superintendence of at least TWELVE of the authorized Town and Country Agents, who will represent the interests of the Subscribers.

PRINTS FOR DELIVERY TO SUBSCRIBERS OF THE YEAR 1843:—

I. ANCIENT ITALY.

II. MODERN ITALY.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY J. T. WILLMORE.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY W. MILLER.

III. & IV. (The Pair to each Subscriber of One Guinea.)

THE LATTICE.—THE MASK. PAINTED BY E. LANDSEER, R.A.; ENGRAVED BY J. H. ROBINSON.

The two first-named are now on the eve of finish by the two eminent Line Engravers, Messrs. WILLMORE and MILLER; the size of each is 2ft. 4in. by 1ft. 9in. The interest and beauty of the subjects have been universally acknowledged; and as Engravings they will be classed among the most successful efforts of modern times. The Pair, after LANDSEER's exquisite Pictures, engraved by J. H. ROBINSON, are partially known; but the extreme delicacy and cost of the Engraving demanded a proportionate charge, which excluded them from the hands of all but a very few. The application of the Electrotypes has justified their introduction into this plan.

The Exhibition in London will take place at the Gallery of the "New Water Colour Society," Pall-Mall, early in January, when the Prints will be ready for distribution to Subscribers.

That this plan originates in private enterprise cannot be treated as an objection; inasmuch as IN THIS COUNTRY SUCH IS THE ORIGIN OF NEARLY EVERY GREAT AND PROSPEROUS NATIONAL UNDERTAKING—which can benefit its projectors only by really benefiting the Public.

OFFICE—26, Soho-square, London.

RICHARD LLOYD, } Secretaries.  
J. L. GRUNDY, }

The following London Agents have been appointed to receive Subscribers' Names, and will have on view Specimens of the above Engravings:—Messrs. A. H. BAILY and Co., 83, Cornhill; Mr. H. BAILEY, 158, New Bond-street; Messrs. FORBES, 41, Piccadilly; Messrs. S. and G. FULLER, Rathbone-place; Mr. SAMUEL HOLLYER, Chancery-lane; Mr. ROBERT JENNINGS, 62, Chesaide; Messrs. LLOYD and Co., Harley-street, Cavendish-square; Mr. J. MITCHELL, 33, Old Bond-street; Mr. F. G. MOON, 20, Threadneedle-street; Mr. T. McLEAN, Haymarket; Mr. WATSON, Vere-street, Cavendish-square.

Country Agents are being appointed, and will be duly announced.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 49.

LONDON: FEBRUARY 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**ARTISTS AND AMATEURS' CONVERSAZIONE.**—The Second Meeting of the Season will be held at the Rooms of the Hon. Sec., No. 6, Pall-Mall, on WEDNESDAY, the 1st of FEBRUARY.

**EXTENSION OF THE PRINCIPLE OF ART-UNIONS. THE ROYAL POLYTECHNIC UNION OF LONDON.**

Subscribers and the Public are respectfully informed that the ETCHINGS illustrative of the SONGS of SHAKESPEARE, by the Etching Club, are now ready for inspection. By the liberality of the members of the Club, the Subscribers will receive Seventeen Etchings instead of the promised number of thirteen.—Subscriptions received by the Honorary Secretary, at 309, Regent-street; and 5, Cavendish-square.

**THE WEST OF ENGLAND ART-UNION.**—The Committee have much pleasure in announcing that the Engraving of 'THE SPRING OF THE VALLEY,' executed for the Society by Mr. RYALL, from Mr. PENLEY's beautiful drawing, is now ready for delivery. Such of the Subscribers as have not yet received their Prints are requested to apply to the Honorary Secretaries without delay.

A limited number of impressions will be offered to the trade for sale, to assist in defraying the great cost necessarily incurred in producing so beautiful an engraving.

Capt. Van Heythuysen. Mr. George Mennie.

Capt. Atkinson. Mr. Edward Perry.

Hon. Sec.  
Mr. EDMUND FRY, 43, Union-street, Plymouth.

Subscription—Half-a-Guinea.

Subscribers for 1843 will receive an Engraving which will fully sustain the high character gained by the issue of 'The Spring of the Valley,' and will also have a chance of obtaining a Prize at the Drawing, which will take place in September.

The Subscription Lists for 1843 are now open.

**LETTERS to an AMATEUR, or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT, and the Means to be employed for their Production, &c. &c.** By ROBERT HENDRIE, Esq.

"These 'Letters' contain many excellent precepts, and would be found by the Amateur a valuable auxiliary."—Art-Union, July 1842.

Published by Simpkin, Marshall, and Co., Stationers' Hall-court; and sold by T. Miller, Artists' Colourman, 56, Long Acre; and Mr. Ackermann, Jun., 191, Regent-street. Price 3s.

**THE CHINESE COLLECTION, Hyde Park-corner.**—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 235 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve, 1s.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR.**—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lamqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**TO ARTISTS.**—The present Exhibition of Paintings of the British Artists, at the Royal Adelaide Gallery will terminate on the last day of February, and the next Exhibition will commence on the first day of March, on which occasion, three Prizes of Twenty Guinea each—1st, For the best Historical Subject in Oil or Water-Colour; 2nd, the best Landscape; 3rd, for the best Specimen of the Genteel Familiar.—No copies will be admitted.—Pictures for exhibition must be sent in on or before the 20th of February. For further particulars, inquire of the Secretary, Mr. J. F. Smith.

Just published,

**THE WATERLOO COURSING MEETING,** including upwards of 70 Portraits, besides 18 of Dogs; painted to order by Mr. RICHARD AUDKILL, and engraved in the finest style of mezzotint by Mr. S. W. REYNOLDS. Size 41 inches long by 23 inches high. Price to Subscribers:—First Class Proofs, £7 7s.; Second Class, £5 5s.; Prints, £3 3s. Thomas Agnew, Manchester; and Ackermann and Co., London.

**THE ART UNION OF LONDON.—'THE SAINT'S DAY.'**—P. GARBANATI, WORKING CARVER and GILDER, 19, St. Martin's-court, St. Martin's-lane, begs respectfully to inform Subscribers he has finished and ready for inspection, a rich, elegant FRAME for the above Engraving, ornamented emblematically expressly for the subject, and gilt in a very superior manner in burnished gold, in imitation of or-molu, with the best plated glass, 27 in. by 22 in., £3 15s.; the same frame, in oil gold and glass, £3 3s.; the same frame, in imitation of old carved oak and glass, £2 15s.; a fancy wood frame, either rosewood, maple, satin wood, or Russian maple, 3 in. moulding, with gilt inside and glass, £1 7s.; a handsome ornamented gilt frame and glass, £2; a gilt bead moulding, frame and glass, 18s. The above prices include mounting of engraving in an accurate manner. A List of the prices, and description of 18 different Frames for the Engravings of the 'Saint's Day,' and the Engravings being issued by the National Art-Union, sent (prepaid) to any part of the kingdom.—Every article connected with Carving and Gilding, Plate Glass, &c., supplied cheaper than by any other house in the kingdom.

**A CASE OF EXTREME DISTRESS.**—Mr. JOHN ROBERT WILDMAN, a Portrait Painter of considerable talents, has been suffering from illness so severe for the last two years, as to render him utterly incapable of pursuing his profession; his means of subsistence are entirely exhausted; he has a young family entirely dependant on him for support, and has had the misfortune recently to lose his wife by sudden death. Subscriptions will be thankfully received, and specimens of his works shown, by Messrs. Welch and Gwynne, 24, St. James's-street, Printsellers to the Royal Family.

Published this day, elegantly bound in ultramarine gilt cloth, price 15s.,

**BURNETT'S ILLUSTRATED EDITION.** Just published, in 4to., price £2 2s., in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s., half morocco, gilt tops.

**SIR JOSHUA REYNOLDS' DISCOURSES,** Delivered to the Students of the Royal Academy. Illustrated by Explanatory Notes and Plates, by JOHN BURNETT, F.R.S., Author of "Hints on Painting." James Carpenter, Old Bond-street.

Published in 4to. price £4 10s. in French boards; and on royal paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNETT, F.R.S.

The parts may be had separate.  
1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.  
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.  
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.  
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the Encyclopedia Britannica—See the article "Drawing." James Carpenter, Old Bond-street.

**MESSRS. HERING and REMINGTON** having been appointed sole Agents in Great Britain for the several Art-Unions of Germany, and also the leading Continental Publishers of Works of Art, have the honour to submit their List of Publications recently issued in the various states of Europe. It comprises the most popular and admirable productions of the respective Schools, and impressions have been selected with exceeding care. The personal inspection of the Artist and Amateur is respectfully invited at the Depot, No. 153, Regent-street, where any production of the foreign burins, either of recent or remote date may, be procured from its authentic source.

Preparing for publication, forming a companion to the Dresden Gallery, price 25s. per Part.

**THE GALLERY OF THE GREAT MASTERS.** This work will consist of Lithographic Drawings from the unpublished paintings of the most celebrated Ancient and Modern Masters in the private collections of the Nobility and Gentry of Great Britain, and care has been taken, that the subjects shall be of an unexceptionable and agreeable character. It will be published in parts of three plates, with accompanying letter-press, and will be executed by HANSTRAENDEL and other eminent German Lithographic Artists. Further particulars of the plan of the work will shortly be given in a prospectus. The subscription list is now open, and an early insertion is necessary to procure the finest impressions.

In imperial folio, Nos. 1 to 27 of the Celebrated Pictures of

**THE ROYAL GALLERY AT DRESDEN.**

Drawn on stone, from the originals, by FRANZ HANSTRAENDEL; with Descriptions of the Pictures, Biographies of the Masters, &c., in French and German.

**THE PICTURE GALLERY OF THE ROYAL MUSEUM, IN BERLIN.** Drawn on stone from the Originals.

In imperial folio, 1 to 4, each containing three prints.

**THE HISTORY of the ARCHITECTURE of the MIDDLE AGES,** containing lithographic drawings of interiors and exteriors of the principal buildings at Nuremberg, Magdeburg, Brunswick, Munster, Aix-la-Chapelle, Worms, &c., and of the ancient towns of Belgium.

**THE ENCYCLOPÆDIA of COSTUME,** consisting of the Costumes from the thirteenth to the seventeenth century, also Armour and Harness. To be published in parts of six highly-finished coloured engravings, and accompanied with letter-press in German and English, price about 3s. per part.

**COSTUMES,** par A. DEVERIA, containing 100 highly-coloured Costumes of various ages—plates separate.

**THE BOOK of GERMAN BALLADS, NATIONAL AIRS, DRINKING SONGS, &c.** Forming

a companion volume to the "Lieder und Bilder," or the Songs of a Painter; illustrated with 30 highly-finished Etchings on Steel by the most eminent Artists of Germany, in the style of Neureuther, Retzsch, and Sonderland.

**LIEDER UND BILDER, Songs of a Painter;** containing 30 highly-finished Etchings. A few copies of this beautiful work have been coloured.

**BILDER UND RANDZEICHNUNGEN,** a selection of German Poems, by the most popular authors, with illustrations designed and etched by Sonderland. First and second Part of Vol. II. now ready. —Vol. I. contains 20 illustrations.

**ALBUM DEUTSCHER KUNSTLER,** Album of German Artists, contains Etchings after the principal Artists.

The Second Number of Vol. II. is now ready. Vol. II. contains 24 Etchings.

**A SET of ENGRAVINGS** illustrating the WALHALLA.

**A TREATISE on FRESCO, ENCAUSTIC and TEMPORA PAINTING.** By EUGENIO LATILLA.

**THE FRESCO PAINTINGS of the Royal Chapel of All Saints, at Munich.** By Professor H. HESS.

**THE GLASS PAINTINGS of the newly-erected Mariähilf Church at Munich,** executed under the directions of Professor H. HESS. Lithographed by F. X. EGERT.

**THE CELESTIAL PALM GARDEN,** Catholic Prayer-book after the old edition. By NAKATENUS, containing Six Illustrations after E. STEINLE. Engraved by Professor KELLER.

The above Engravings separately on India Paper.

**DAS NIBELUNDENLIED;** with Illustrations after BENDEMANN and HUBNER.

**DER NIBELUNGEN NOTH;** with Illustrations by SCHNORR and NEUREUTHER.

**THE INTRODUCTION of the ARTS into GERMANY by CHRISTIANITY, and ITALY and GERMANY;** engraved by ED. SCHAFFER.

**THE ENTRANCE of ALEXANDER the GREAT into BABYLON;** being the subject of a marble frieze in the King of Denmark's Palace of Christiansburg; by THORWALDSEN. 22 plates, folio.

**THE STATUES of the EIGHTEEN PRINCES of the HOUSE of PALATINE,** at the Castle of Heidelberg; engraved in Steel.

**LES ARTS AU MOYEN AGE.**—This magnificent and elaborate Work, the result of laborious study and researches, contains a faithful representation and correct history of the Arts of the middle ages, particularly of those contained in the Roman Palace and at the Hotel de Cluny, in the famous col-

lection of M. du Sommerard. The most celebrated Artists have contributed to this grand undertaking. The Work is composed of 4 vols. in 8vo., and an Atlas, containing 100 Engravings, in 26 Nos. of 4 Engravings in each, highly illuminated. Independent of the Atlas, an Album of the same size is published, consisting of 100 Nos., or 400 Plates, coloured and gilt. The above Work is divided into 10 Series of 40 Plates each, which may be purchased separately.

**L'ART INDUSTRIEL,** par LEON FRECHERE, Architecte-Decorateur; engraved in Line, by V. FRERES.

**L'ORNEMANISTE DES ARTS INDUSTRIELS,** Composé and Lithographie par EUGENE JULIENNE. Nos. 1 to 8. 3 Plates each.

**ORNEMENS DEDIES à S. A. R. la Princesse MARIE,** containing 72 Plates.

**GALERIE AGUARDO** choix des principaux Tableaux de la Galerie de M. le Marquis de las Marismas del Guadalquivir, par C. GAVARD.

**THE JOBSIADE.** This ludicrous account of the "Life, Opinions, and Deeds of Hieronimus Jobs, the Graduate," will be illustrated with Steel Engravings, after Drawings by J. P. HASENCLEVER, in Nos. of 3 Plates in each, the letter-press in German and English.

**GIRLS AT THE FOUNTAIN,** after BENDEMANN, engraved by FELSING:—Going to Church; Captive Israelites; Jeremiah lamenting over Jerusalem.

Bearing the Cross, after Overbeck, engraved by Pfugfelder.

Pastor Bonus, after Overbeck, engraved by Gruner; Pietas Jesu, ditto.

The Death of Joseph, after Overbeck, engraved by Steifensand.

The Saviour's Blessing, after Overbeck, engraved by Prof. Keller; Joseph and Potiphar; Christ Blessing Little Children; John the Baptist Preaching; Italy and Germany; the Head of an Egyptian; Moses and the Daughters of Jethro; Hagar in the Deserts, &c.

**MUSEE des ARMES RARES, ANCIENNES et ORIENTALES de S. M. L'EMPEREUR de toutes les RUSSIES.** Parts 1 to 12.

Works ready and preparing for publication.

Line Engravings and Lithographs.

After Becker, Begas, Bendemann, Cornelius, Deger, Führich, Haach, Hess, Hildebrandt, Hübler, Jordan, Köhler, Krüger, Lessing, Mücke, Neureuther, Overbeck, Plüddemann, Rethel, Schirmer, Schadow, Schnorr, Sohn, Sonderland, Schroeder, Steinbrück, Steinle, Stilke, Veit, Winterhalter; also, Gosse, J. Jacobs, Johannot, Paul de la Roche, Robert, Scheffer, Schopin, Horace Vernet, and others.

**HERING and REMINGTON,**  
153, Regent-street.

NOTES ON BRITISH COSTUME.  
PART THE THIRD.\*

BY FREDERICK W. FAIRHOLT.

## THE PLANTAGENETS.

To attempt to narrate all the varieties of fashion introduced during the reign of Richard II. in the space allotted me is an evident impossibility. The freaks of ever-changing fashion were as varied as the whim and extravagance of the many courtiers who thronged the palace of the king—himself the greatest fop.

His effigy, and that of his queen, Anne of Bohemia, in Westminster Abbey, are remarkable for the costly splendour of their habiliments and their evident accuracy of portraiture. The king's hair, which is ample and flowing, is confined round the temples by a narrow band; his moustachios are trimmed close, as also is his beard, except two small and pendant tufts that hang from each side of the chin. The queen's hair is also confined by a band, and is allowed to flow down the back in great profusion. The exceeding splendour of the dresses are, however, the most remarkable points for consideration. They are embroidered all over with the royal badges and devices, and decorated with rich and elaborate borders. The letters **R** and **A**, his badge of the white hart, crowned and chained, the sun emerging from a cloud, and the broom plant; cover the entire dress. His queen's, still more costly and elaborate, is decorated with her badges of the ostrich, the interlaced band or knot, and the **R**—**A**, joined by a band or chain, and regally crowned. They are much the finest

\* Continued from page 9.

† Or Planta genista, a sprig of which was always worn in the cap of the great ancestor of the family, Geoffroy le Bel, from which circumstance it is said to have derived its name of Plantagenet.

examples we possess of the fashion of embroidering the dress with heraldic insignia.\*

The famous portrait of Richard II., in the Jerusalem Chamber, is another fine example of the usual dress of a monarch, who, with his courtiers, seems to have set no bounds to extravagance in clothing. His dalmatic in this picture is embroidered all over with roses and the letter **R**; his robe is lined with ermine, with a deep collar of the same material covering the shoulders, and fastened round the neck by a band and clasp of the most costly jewelled ornaments. His shoes (like those upon the effigy) are also richly embroidered and set with stones; and his crown, sceptre, and orb, are very elegant and splendid.

There is also an engraving, by Hollar, from a picture at Wilton, of this monarch, in a different but equally gorgeous costume.

The fashion of embroidering the dress with heraldic devices, family badges, or initial letters of the name, and mottoes used by the wearer, became common during this period. The edges were also cut into various shapes, of leaves, &c., and richly decorated with elaborate workmanship, being frequently set with precious stones. The servants of the nobility were also sumptuously attired, and a universal extravagance in dress reigned through the nation. "Every man," says Harding, in his chronicle, "desiring to surpass his fellows in costly clothing of silk, satin, or damask," and with the universal feeling that seems to pervade ancient and modern dandyism, never troubling themselves about the payment for these articles of extravagance. Harding adds, that—

"Cut worke was great both in court and towns,  
Both in men's hoods, and also in their gowns;  
Embroidery and fur and goldsmith's work all new,  
In many a wyse each day they did renew;"

and that no array so rich, costly, and precious was known either before or since.

The reader of English history, during this troublesome period, might imagine that the heroes of chivalry, the knights and warriors of the age, those models of courtesy and bravery, who frequently, upon the battle-field,

"Lay down to rest with corslet laced,  
Pillowed on buckler, cold and hard,"

would at court be exceptions to the general love of effeminate finery. Quite the reverse. The hero

"sheathed in steel,  
With belted sword, and spur on heel,"

leaving the scene of war, or the lists of the tournament, arrayed himself with a softness and luxuriance so perfectly feminine, that the declaration of the satirists of the age, that it really was difficult, if not impossible, to distinguish the sexes if the face was turned aside, becomes strictly true. For proof, take the following illustration, copied from one of the most extraordinary and

\* We are indebted to Mr. Hollis, who has delineated these figures in his "Monumental Effigies," for their restoration. The patterns were concealed by the dirt of ages, having been executed in delicate indentations or series of dots, and their existence doubted, and positively denied, till his patience and perseverance again brought them to light.

valuable manuscripts in the National Collection. It represents a knight and a gentleman in civil costume; and is the first illumination in the vol. marked No. 1319 of the Harleian Collection, which is a metrical history in French of the adventures of Richard II., from the period of his last expedition into Ireland to his death in 1399; and was "composed by a French gentleman of mark, who was in the suite of the said king," and who prevailed on a noble knight of his acquaintance to leave France and join Richard in his wars. The illumination represents the author of the work addressing this knight and proposing the journey. The amplitude and splendour of the dresses, with their sleeves reaching to the ground, and ornamented at the edges by being cut into leaves and other patterns, will at once be noticed. The whole of the illuminations in this beautiful and valuable historic manuscript, the work of an eye-witness of the extraordinary events in our history immortalized by Shakspeare, are by far the finest authority for the costume of this period, and for Shakspeare's drama. With such accuracy are they executed, that the various personages of the narrative may always be traced by feature as well as by dress; and from these miniatures the portraits of the Earl of Northumberland, and others have been enlarged for Harding's "Shakspeare Portraits."\* The whole series, sixteen in number, have been beautifully engraved in the twentieth volume of the "Archæologia," where the poem (to which all our historians have been greatly indebted) is printed entire, with a prose translation.

It must not be imagined that long, wide, and flowing gowms were the only dresses of the fashionables of the period. They were sometimes worn in the opposite extreme, and so short that they did not reach the hips; a fashion loudly complained of as indelicate by the clerical satirists of the times, who, indeed, found much that they might reasonably object to. The figure to the right in the engraving here given, will display this fashion, which looks sufficiently

absurd in conjunction with the wide sleeve of this article of apparel. The three figures in the original manuscript are believed to represent the uncles of Richard II., the Dukes of Lancaster, York, and Gloucester.† It has been carefully traced from the original illumination, and placed upon the wood-block from that tracing, that no possible change of form, however slight, might take place, and warrant a supposition that the ex-

\* An instance of their minute accuracy may be mentioned. Bolingbroke is depicted in a black dress and dark-coloured armour. He was in mourning at this period for the death of his father.

† The MS. is among the Royal Collection, marked 20, B. 6, and is a copy of a letter on the subject of a peace between France and England, written by an aged monk at Paris, and presented by him to Richard, who is depicted as seated on his throne, and receiving the book from the monk, surrounded by the officers of his court and his nobles.

travagance of dress here delineated was in any way caricatured. The hair of these noblemen is bound by jewelled circlets round the forehead; one carries a hat similar to that worn by the central figure. The spreading dark cuff of the sleeve is a peculiarity of this age, as are also the enormously long toes which became so fashionable, and were termed *crackowes*; being so named, says Mr. Planché, from the city of Cracow. Poland and Bohemia, having been incorporated by John, the grandfather of Richard's Queen, and the fashion probably imported from thence. They are compared to "devil's claws," by a contemporary writer, who says, that they were fastened to the knees with chains of gold and silver. But one representation of crackowes thus fastened has been recorded, and in that instance they are secured to the girdle. Smith, in his "Ancient Costume of England," has cited this picture, which he informs us is preserved in the castle of Kielberg, in Swabia, and is a full length portrait of James I. of Scotland; but the chain and ornamental loop hanging round the left leg of one of the figures in the above group, may be one of these fastenings through which the toes were drawn. It is the only approach to it that I am enabled to depict; but the fashion of thus securing the toes, and enabling the wearers to walk without confusion, is well authenticated by contemporary narrators of this inconvenient absurdity.

The *shape* of the ladies' costume continued the same as that before described, except that the long streamers or tippets (as with the men) were discarded, and the dress elaborated with ornamental and heraldic devices, and frequently party-coloured.

The poems of Chaucer—the Shakspeare of the middle ages, and certainly the most original and extraordinary writer that England up to that period had produced,—to whom Spenser so affectionately alludes, as

"Old Dan Geffrey, in whose gentle spright  
The pure well-head of poetry did dwell"—

has, in his immortal "Canterbury Tales," given us the best information connected with the costume of the different grades in English society during this reign.

The young squire was dressed in a short gown with sleeves long and wide, embroidered all over with white and red flowers, and his hair was as carefully curled as if each lock had been laid in a press. His yeoman was clad in a coat and hood of green, with a horn slung across his shoulders by a green baldrick, like a good forester. Under his belt was fixed a sheaf of arrows, tipped with peacock's feathers; a sword and buckler on one side, and a "gay dagger" on the other. In one hand he bore a bow, and upon his arm a gay bracer; while a silver figure of St. Christopher, his patron Saint, ornamented his breast. The merchant had a forked beard, and was arrayed in a party-coloured or motley dress; he wore a hat of Flanders beaver, and his shoes were "clasped fair and fetously." The Frankelien, or country gentleman, is described as wearing at his girdle an anelace and gipclere. The haberdasher, carpenter, weaver, dyer, and tapestry-worker, were clothed in the livery of their various companies; their pouches, girdles, and knives, wrought with silver, and "not with brass." The shipman was habited in a gown of "falding," or coarse cloth, reaching to the knee, a dagger hung under his arm by a lace passing round his neck. The poor ploughman wore a simple tabard, a jacket or sleeveless coat. The miller had a beard as broad as a spade, and wore a white coat and blue hood, with a sword and buckler by his side. The reeve or steward had his beard close shaved, and his hair cut close round the ears and at the top of his head like a priest's; and he wore a long surcoat of "perse," a sky-coloured or bluish gray cloth, which was tucked like a friar's gown about him. He carried a rusty blade by his side.

Of the ladies we may notice the wife of Bath, whose costume may be taken as a good example

of that of the other classes of the commonalty; she wore kerchiefs on her head of fine cloth upon Sundays, that "weighed a pound;" scarlet hose, with moist new shoes. Her travelling dress was a wimple, a hat as broad as a buckler or target, and a mantle. In the course of the Tales many other illustrations of costume will occur; that of the carpenter's wife in the Miller's Tale may be cited as an instance. She wore a girdle "barred all of silk," a white "barne-cloth" or apron, full of gores, or formed perhaps of patchwork. The collar of her shift was embroidered before and behind with black silk, and fastened by a brooch as big as the boss of a buckler. Upon her head she wore a white "volupere," or cap tied with tapes, and a broad silk fillet round her head. At her girdle hung a leather purse ornamented with metal buttons and silk tassels; her shoes were laced high upon her legs.

The Parson's Tale contains some severe allusions to the fashions in general, and details much information in the illustration of their peculiarities, with the reasons for condemning them held by the soberer kind of people.

The ecclesiastical costume is chiefly remarkable for an increase of splendour. The vestments of the clergy were richly embroidered with figures or flowers, and other ornaments of the most elaborate workmanship, and the borders sometimes were set with precious stones; while upon the workmanship of the mitres and crosiers of the clerical dignitaries the art of the goldsmith and jeweller was exhausted in exquisite inventions. The effigy of John de Sheppey, Bishop of

Rochester, who was consecrated to the see in 1352, and died 1360 (engraved in the thirty-fifth volume of the "Archæologia," with an account of its discovery), is a fine example of the clerical splendour of the period. He wears a mitre elaborately wrought and set with jewels. The collar of his chasuble or cope is also richly wrought, and stands up freely round the neck; it has a pattern all over it. The dalmatic is covered with rich florid embroidery. The alb is also embroidered in front with a species of flower arranged like an X, and which may be supposed to represent a Greek cross. His gloves are richly embroidered and jewelled on the back—a mark of high dignity in church and state; and he carries over his left arm the maniple, a narrow strip of embroidered cloth, which originally was a napkin used for wiping any impurities from the sacramental cup,

but which took this form at a very early period; it may be seen in the hand of Stigand, Archbishop of Canterbury, in the cut of the coronation of Harold, in the second part of these notes. He bears a richly-decorated crosier (the head is broken off in the original), the staff of which is enswathed with linen. His shoes are also embroidered, and the bands that ornament them are intended to represent the thongs of the ancient sandals that gave place to them.

The two figures here, copied from brasses, are good illustrations of the ordinary clerical costume. The effigy of Richard Thaseburgh, who died in 1387, in Heylesdon Church, Norfolk, is copied from Cotman's "Monumental Brasses." It is a good example of a priest fully habited for the altar. He wears a chasuble, or cope, with a rich collar, beneath which appears the ends of the stole. The alb is decorated in the front, and an embroidered maniple is upon the left arm. The other effigy is in the church of the Hospital of St. Cross, near Winchester, and represents John de Campden, the grand vicar and confidential friend of the great Wykeham, and who was appointed master of the hospital in 1382. He wears the rochet, the alb, and the stole.

My space warns me of the necessity of doing no more than again referring to "the honour of English tongue"—Chaucer—for much that is curious in the way of information upon this point. The monk in the "Canterbury Pilgrimage" is luxuriously habited; among other expensive articles, are noticed—

"——his sleeves purfled at the hand  
With gris, and that the finest of the land;\*  
And for to fasten his hood under his chin,  
He had of gold ywrought a curious pin."

The parish clerk Absolon, in the Miller's Tale, is richly dressed in red hose, a sky-blue kirtle ornamented with points, or tags, and over all a white surplice, "with Paule's windows carven on his shoes;" that is, they were cut or embroidered like panes of glass, a fashion previously treated of, and of which many examples have occurred in the illustrations to these notes. The ploughman rails at the clergy in unmeasured terms for their almost regal luxuriance.

The various orders of monks that now were established in England were the Benedictines, the earliest introduced into our island having been probably brought in by St. Augustine, but first generally established in the tenth century by

\* Garments thus "purfled," or bordered with costly furs, as "gris," miniver, or ermin, were in great request among the wealthy clergy, who were restrained by clerical ordinances from an imitation of the fashionable freaks and follies of the times; and of which restraint it became necessary frequently to remind them. They therefore indulged themselves in the luxury of the most expensive materials and finest cloth for their ordinary costume, while their official dresses allowed of the most costly and ornamental materials, which were unsparingly adopted.

St. Dunstan. In 1123 the Cistercians or Bernardines were introduced; and in 1180 the Carthusians; in the thirteenth century a formidable rival to the regularly-established monks, appeared in the new religious order of Mendicant Friars. The Dominicans, or Black Friars (also known as preaching friars), and the Franciscans or Grey Friars (also called Cordeliers), were established by the Pope's authority in 1216 and 1223. Of many other orders which soon sprung up in imitation of these, all were eventually suppressed except two—the Carmelites, or White Friars, and the Augustines, also known, as well as the Franciscans, by the name of Grey Friars, from the colour of their cloaks. For the costume of these popular religious orders we must refer the reader to the plates in the last splendid edition of Dugdale's "Monasticon."

The most interesting military class of the earlier period of the Plantagenets were the Knights Templars, a body of men called into existence by the various pilgrimages undertaken to the Holy Land, and elevated into importance by the Crusading mania of Richard I., and other romantic warriors. The dangers that beset a pilgrim on all sides from his first landing in Palestine, and the frequent sacrifices of life to Mahomedan hatred and prejudice, determined nine valiant and pious knights to form themselves into a band for their especial protection, and to bind themselves by a vow to save them harmless during their religious sojourning in that country. Leading a life of piety and chastity, eschewing pomp and riches, and uniting the character of monk and soldier, they attracted the attention of the world; and all moneys sent to them from Christian countries were religiously devoted to the service of the pilgrim and his advantage, while remaining under their protection. Their ultimate wealth, their power, their fall, and the many cruel and unjustifiable proceedings commenced and carried out by jealousy and avarice, ending in their suppression and destruction, in many instances by the cruellest tortures, are matters for the historian to narrate; and which, when read, leave an indelible impression upon the mind of the cruelty that may pass under the name of justice, and be sanctioned by the greatest of the land, when popular clamour is misdirected by designing men, and enforced by appeals to man's worst passions. They were as much the objects of jealousy to their rivals, the more ancient body of Knights Hospitallers, whose more immediate province it was to provide lodgings for poor pilgrims and attend to their wants; but which eventually became a military order, owing to the success of the Templars, and in imitation of them; and the two bodies regarding each other with much hatred, would turn their arms against their rivals, instead of mutual attacks upon "foul Paynims;" and thus the warriors who had sworn to protect all comers and oppose all foes to Christianity, forgetting its first and greatest precept—charity—would strew the field with their brother believers, leaving the "Heathen hounds" they so much despised, sensibly strengthened by their sinful weakness.

The distinction in dress between a Knight Templar and a Knight Hospitaller, consisted in the mantle, which was thrown over the shoulders and hung upon the ground. The Templar's mantle was white, with a red cross upon the left side; the Hospitaller's black, with a white cross in the same position. Good engravings were etched by Hollar, for "Dugdale's Monasticon," of both these dresses, and they may be seen in the last edition of that work.\*

The effigies in the Temple Church, London, which are nine in number, and are known throughout England and elsewhere as the

"Knight Templars," are certainly the finest and most interesting collection of monumental effigies possessed by any one church in the kingdom. As works of Art they are deeply interesting, from the correct idea they give of the state of sculpture at this early period; and they exhibit the military costume as it is said to have been worn at the Crusades, and with the addition then invented to suit the torrid climate in which the "warriors of the Cross" fought. Thus, it is said, that the surcoat, or tunic without sleeves, worn over the iron armour of the knights, was adopted to veil that defence which was apt to heat with the sun to a degree that would render it inconvenient to the wearer. The figure here engraved from one of these effigies, displays this

surcoat hanging lower than the ringed hauberk beneath; it had also the advantage of distinguishing different nations by its colour and form when congregated on the battle plain. The chausses of the knight are also formed with rings set edgewise; which Bohadin, the Secretary of Saladin, speaks of as excellent protections from the arrows of their opponents, which, he declares, stuck upon them without injury to the wearer. "I have seen," says he, "not one or two, but nearly ten sticking upon a soldier." The large shield of the knight is supported by an ornamented strap passing across the shoulder; a similar one crosses the waist towards the right side where the sword hangs. His hands are crossed upon the breast, probably with the same intention that the legs of other effigies of this class are placed in a similar position, to indicate their militant profession of the cross, and are covered by the chain-mail not separated for the fingers; and he wears a plastron de fer, or cap of iron; which is still sometimes in use at this period. The figure is altogether a good illustration of the military costume now worn.

In the helmets the principal changes would appear to have taken place, their heat and inconvenience being modified in various ways, without exactly rendering the wearer less secure; although the necessity for guarding the face from a sword cut, now that the nasal was abandoned, led to the perfect envelopment of the head in the barrel-shaped helmet worn during the reign of Richard I. Some few varieties have been selected in the accompanying engraving. Fig. 1, from an effigy in the Temple Church, shows the hood of chain-mail drawn over and enveloping the head, and which continued in use until the reign of Edward III.; and in some instances it is shown thrown back and lying on the shoulders, in the manner of the cloth hoods. Fig. 2, from the effigy of William Longespée, the natural son of Henry

II. by Rosamond de Clifford (the "Fair Rosamond" of the old writers and ballad-makers), who died in 1226, and is buried in Salisbury Cathedral. His head is in this instance also covered with the hauberk: it takes its shape probably from a cylindrical defence for the head beneath, similar to that upon fig. 4. "There are authorities of the time of Edward I.," says Meyrick, "to show that this under-cap was of steel," the upper one being styled a "coif de mailles." Fig. 3, from an effigy in the Temple Church, gives us the steel helmet, or "chappelle de fer," entirely, like No. 2, covering the mouth and face, except the nose and eyes. Fig. 4, also from the Temple Church, depicts the helmet upon the figure of Geoffry de Magnaville; it is a plain round cap of metal, bearing an unlucky resemblance to an inverted saucepan, and secured by a strap or band of iron beneath the chin. The face, however, has been much injured, and this part is not to be distinctly comprehended. Figs. 5 and 6 are two views of the helmet upon a figure of a Knight Templar in Walkerne Church, Hertfordshire, and are copied from Mr. Hollis's beautiful engraving. They are interesting delineations of the barrel-shaped case for the head now invented, and having the slit in front for the purpose of enabling the wearer to see, and the holes at bottom to allow him to breathe in this most inconvenient case of metal; which also has the addition of a face-guard in the centre, passing for an extra protection before the visual opening. None but those who have placed an antique helmet on the head can form an idea of the hot, confined, and oppressive sensation produced on first putting them on.

The heat and heaviness of this armour occasioned the invention of gamboused or pour-pointed coverings for protection in war, and which are also said to have been invented during the Crusades. They were made of stitched and padded leather or cloth, or quilted and stuffed with wool, and they derived the name of pour-point from the punctures with which they were covered.

John of Salisbury, in the time of Henry II., complains of the effeminacy of the knights, at a period when modern readers of romances founded upon the adventures of the Knights Crusaders fancy nothing but daring and bravery was known. He declares the majority think of war only for display, and condemns their love of finery and personal decoration. Their shields are splendidly decorated, he says, and "if a piece of gold, minium, or any colour of the rainbow should fall from them, their garrulous tongues would make it an everlasting memorial" of their prowess in war. No bad illustration of the gaiety of decoration indulged in by these gentlemen, or of the unchangeableness of human nature in its faults and follies through all times, ancient as well as modern.

In addition to the sword and spear, the warrior occasionally wielded the marte de fer, a weapon combining a hammer and pick, and which did great execution among the armed

\* Sir Walter Scott is not to be depended on for accuracy, when he describes the Templar in "Ivanhoe" as wearing a white mantle, upon which is a black cross of eight points. Such a cross was never worn by either Templar or Hospitaller. The cross they wore resembled that on which the Saviour suffered, the lowest of the four arms being the longest.

knights in breaking or dragging off the rings of the hauberk, and opening a passage for deadly weapons. The heavy mace also split the helmets and head of the wearer with deadly aim; and Richard I. is reported to have used such an implement with fatal certainty during the mis-called "Holy Wars."

The heaviness of chain-mail was considerably relieved by the adoption about the early part of the twelfth century of the Asiatic species formed of rings connected with each other, and so held without being fastened upon the leather garment beneath. Small plates of metal also begin to appear at the elbow and knees, as may be seen in the effigy of William Longespée the younger, in Salisbury Cathedral, who died 1250. The knee-caps were styled *genouillieres*. Various specimens may be seen on several of the effigies engraved by Stothard and Hollis. This adoption of plate increased, until at the latter part of the reign of Edward I., an armed knight presented this appearance.

The original is in Gorleston Church, Suffolk, and has been engraved by Cotman and Stothard, and is the most interesting illustration of the mixture of chain and mail we possess. A hood of chain-mail covers the head and breast, and a hauberk of mail appears beneath the surcoat, which is girdled at the waist, the sword being secured by a belt passing over the hips, and fastened to the scabbard in a peculiar manner that is indicative of this period. He has *roundels* at the bend of the arm, and upon the shoulders, which are sometimes chased and ornamented. The back of the arm to the elbow, and the front from thence to the wrist, is protected by plates of metal strapped over the chain-mail; the elbow being also defended with a cap of mail. The knees are also similarly strengthened, and greaves of plate reach to the ankle. But the most singular novelty is the *ailettes* (or little wings—the literal French word), which appear upon his shoulders; and which remained fashionable until the reign of Edward III., and are visible upon the figure of Sir Geoffrey Luttrell, already engraved. They were emblazoned with the arms of the knight, as may in that instance be seen; but in the one now described are ornamented with the cross of St. George.

The will of Odo de Rossillon, dated 1298, will show us what was considered as the complete equipment of a knight at this period. He bequeaths an entire suit of armour to Lord Peter de Montancelin, "viz. my visored helmet, my

bascinet\*, my pourpoint of cendal silk†, my godbert‡, my gorget§, my gaudichet||, my steel greaves, my thigh coverings and chausses, my great coutel¶, and my little sword."

At this period horses, as well as riders, were armed. When Edward I. went to attack Wallace, he was attended by three thousand knights on horses that were armed in mail, over which was worn the caparison, that had painted or embroidered upon it the arms of the rider.

During the following reign an increased quantity of plate is visible, and small circular plates called *mamelieres*, from their position over the paps, have chains attached that are secured at the opposite end to the helmet, or the handle of the sword or dagger, in order that these necessary articles may not be separated from the wearer in the confusion of the battle-field.

A beautiful example of knightly costume, during the reign of Edward III., is afforded us by the mounted figure of Sir Geoffrey Luttrell, as already given. He is fully arrayed for the tilt or tournament. He wears a bascinet, over which he is about to place the tilting-helmet, given him by the lady who bears his pennon. Upon it is placed a shield with his arms, a similar one being upon the head of the horse, which is enveloped in a covering richly embroidered, and also emblazoned with the coat-armour of the knight. The figure altogether presents us with a singular heraldic display, the very saddle upon which he rides being also ornamented with his arms. In this and the following reigns heraldry was in its glory, and the frequent tournaments called it forth in striking splendour.

During this reign, chain-mail became quite superseded by plate-armour. As an instance, the effigy of Sir Thomas Cawne, in Ightham church, Kent, has been selected from Stothard's "Monumental Effigies;"

and it is a remarkably beautiful example of the (perhaps) most elegant of knightly costumes. He wears a conical helmet or bascinet, to which is attached the camail or tippet of mail, shown on an enlarged scale at Fig. 1, and which is the

\* The bascinet was worn under the helmet, or else served as a helmet, when a visor or guard for the face was attached.

† The quilted hauberk, already described. Cendal silk was the most luxuriously-splendid article of dress worn at this time.

‡ Literally good protection, another name for the hauberk of metal.

§ A defence for the neck.

|| Nearly similar to the haketon, which was worn beneath the hauberk.

¶ From whence the modern word *cutlass* is derived.

peculiar characteristic of the armour of this period and that of Richard II., and is all that is visible, except the gussets of mail at the arm-pits and elbows. His girdle, the pattern of which is seen at Fig. 2, encircles the hips (the sword and dagger being broken off, I have restored them from other specimens), and his japon is emblazoned with his arms. His gloves (see also Fig. 3) are richly ornamented (the separation of gloves of steel into fingers having first been adopted during the reign of Edward I.); his legs are cased in cuisses and greaves, with solerets or over-lapping plates for the feet.

The effigy of Edward the Black Prince, in Canterbury Cathedral, is another fine example of military costume; above which is suspended his tabard, shield, gloves (the gads or gadlings, as the spikes upon the knuckles were termed, being shaped like leopards), scabbard, and tilting-helmet, all of which are engraved in Stothard's "Effigies."

With a notice of the only striking peculiarity displayed in the armour of the reign of Richard II., I take my leave of this long and important period of English history. The visored bascinet

here delineated, is a novelty of a kind that gives a grotesque air to the soldiery of this eventful reign. It may be seen worn by them in the illuminations to the metrical history already referred to, and in a battle scene from Cotton MSS., Claudius, B. 6, engraved in Strutt's "Horda Angel Cynan," vol. 3, pl. 28. Only two of these singular bascinets are known to exist in this country: one in the Tower, the other at Goodrich-court, the seat of Sir S. R. Meyrick, and some three or four have been recorded in Continental collections. Fig. 2 shows the bascinet with the visor raised. The figure beneath (No. 3) is a jousting-helmet used in tilts and tourneys, which was worn as already described over the bascinet, and rested upon the shoulders. It was surmounted by a plume of feathers, or the crest of the wearer, and sometimes a cointoise streamed from its summit; a narrow opening was cut for sight, and holes pierced for breathing. Those in that of Edward the Black Prince take the shape of a coronet. This helmet, also is in the possession of Sir S. R. Meyrick, formerly belonged to Sir R. Pembridge, who died 1375, and was suspended over his monument in Hereford Cathedral.\*

[The next part will carry us through the reign of the houses of York and Lancaster, ending at the death of Richard III., a period that might not be inaptly styled the *Grotesque Era* of British Costume, so fantastic and extravagant were the fashions then in use.]

\* In that portion of these notes published in last month's number of this publication, in the foot-notes, at p. 7, references were given in two instances to "Gough's Sepulchral Monuments;" the name of the author should be Gough, the letters *ow* in my MS. being very pardonably mistaken by the compositor for *ai*. As I had no opportunity of correcting this until it was too late, the reader will be good enough to do so with his pen.

## ART IN CONTINENTAL STATES.

**ITALY.—ROME.—Improvements of the City.**—The commission employed on the improvements of the city have turned their attention to the want of public walks within the city of Rome. To remedy in part this defect, they propose forming a quay along the left bank of the Tiber, behind the street of the Ripetta, to be continued to the Ripetta gate. This walk will command a view of the beautiful distant scenery on the opposite side of the river. Sir John Doyle, now resident here, means to present to government a plan for prolonging the quay to the bridge of St. Angelo, and also a plan of an iron bridge across the Tiber, instead of the old ferry of the Ripetta. There can be no doubt of the great advantage that would be derived from this easier communication between the city and the country. It is said that Prince Borghese intends to repair the interior of his charmingly-situated Pincian villa, the house which, it is said, Raffaele once inhabited. This architectural monument of the sixteenth century is far more interesting than is generally known.

**FLORENCE.—The Duomo.**—The grand Duke has given orders that the "Gran Duomo" of Florence shall be completed under the direction of the Imperial Academy. The dome was begun to be built in 1296, by Arnolfo di Lapo. In the works now to be commenced, the materials to be employed are marbles from the quarries of the two mountains Seravezza and Altissimo, in some respects more beautiful than those of Carrara, and they are those which Michael Angelo made use of.

**LEGNORH.**—Some idea may be formed of the rich treasures of Art now being transported to Copenhagen by Thorwaldsen, to be placed in the museum there, when we mention that the frigate *Thetis*, which cast anchor here in October, has received on board a hundred cases containing works of Thorwaldsen and other precious objects.

**CORSICA.—AJACCIO.—J. Bonaparte.**—Although the will of Cardinal Fesch was not tenable by law, Joseph Bonaparte has fulfilled all its provisions in regard to the works of Art bequeathed to Corsica. The Statue of Napoleon, size of life, as first consul, and a great part of the works of Art of his collection, are left to the capital of Corsica; a hundred pictures to the town of Bastia, where they will be placed in the Royal College; fifty to the town of Corte, where they will be in Paoli's school; one hundred and fifty pictures are to be divided by lot among some other towns of Corsica. The municipalities of Bastia and Corte have voted thanks to the Ex-king, and resolved that the busts of Napoleon, Joseph, and Cardinal Fesch shall be placed with the pictures.

**BOLOGNA.—Exhibition at the Academy of Fine Arts.—Landscapes.**—O. Campedelli, accademian. Among the numerous and beautiful landscapes exhibited, the works of this artist claim the first place. He is perhaps the best painter in this department. He combines the manners of Claude and G. Poussin with a style entirely his own, in representing the grandiose beauties of nature, and in the animals with which he enriches his scenes he has taken Paul Potter as his model. He exhibits this year two large landscapes; one is 'A View of a Castle near Rome, with Sunset.' The effects of air and light among the plants and everywhere are beautiful; but the rays which strike on some ruined walls, and are repeated on the foliage of a majestic tree, forming, as it were, an umbrella beside a torrent, are quite magical. The tree is itself an exquisite illusion. The other landscape, more in the grand poetical style, 'The Vale of Tempe,' is classical. We find ourselves in the depths of the valley; here is Peneus winding in the midst. On the right is Mount Ossa, whose top is lost in the clouds; its summit, broken into points and hollows, prosaic science would prove to result from natural catastrophes; but a poetic mythology reminds us of the thunderbolts of Jove, the punisher of the giants, which made ruins of the immense masses piled up here, and whose homicidal fragments are scattered below, rendering the plain rugged. How furiously that torrent dashes down, with its fringes of foam between these pointed rocks! How beautiful is the vapour raised by the power of the sun from that waterfall, which produces an undulating atmosphere over the Peneus. The aerial and linear perspective are perfect, from valley to hill, and to high mountain; and that sun

which, hidden behind the stoney Ossa, gilds the clouds, and then, spreading itself on the foreground, illuminates the figures of two Grecian travellers, is the acme of poetry, and the soul of the picture. The artist has accomplished a work which, in the grandiose style, will not easily find a rival in modern times.

George Barbieri, academian, exhibits a fresh landscape, the scene 'near Como.' It resembles the style of Sir A. Calcott, which is great praise.

George Buratti, G. Gualandi, D. Longhi, exhibit pleasing landscapes, portraits of agreeable scenes, and executed with much talent.

**Perspective Pictures.**—Professor A. Basoli, academian. This artist is extremely learned in Art. He possesses a library containing many thousand volumes concerning and illustrating the Fine Arts, and he has himself filled some hundred volumes with drawings of the costumes, styles of architecture,—sacred, civil, and military—of every epoch and every country, classified with the greatest accuracy. This learned painter of perspectives and landscapes has spared neither journeys nor expense to attain his objects, and his zeal for his beloved art seems to grow with his years; he this season exhibits many specimens of his rare talents. He has composed a Latin historical alphabet, divided into twenty-six pictures in water-colour. In this fanciful *tour de force*, Professor Basoli has found places, the initials of which correspond to the letters of the alphabet, and with some principal part of the subject also corresponding. The total perspective forms the letter, and it is also contained in some suitable ornaments in the picture. Thus S is Mount Sinai, —the steps to ascend are a principal object in the piece, and along the road are the sepulchres of saints.

It is not easy to calculate the labour of invention, the picturesque learning, the fancy, and fine execution of these twenty-six pictures; but it is in his sixteen large perspectives in oil that his powers are most shown in a masterly style, resembling Panini, but with effects like Canaletti. Thus he represents symbolically Europe, Asia, Africa, and America, with their principal monuments. In Europe is seen, as in a panorama, the ancient Pirææ, with arches, temples of various forms and nations, naumachi, amphitheatres, pharos, &c. In Asia, we have the works of the earliest inhabitants of the globe, and a magnificent Arabian temple of great effect. In Africa, pyramids, sphinxes, &c. The colossi of Memnon in Egypt, of Apollo at Rhodes, of Nebuchadnezzar in Babylon, of the equestrian Domitian at Rome, give occasion to four large pictures, representing each of these cities restored in their respective styles of architecture.

The effects of light, whether of the sun, the moon, or artificial, are also magnificent in the following pictures of interiors. The Temple of Isis and Osiris in Egypt, of Foo in China, of Jove in Olympus, of Diana in Ephesus, and in the great hall of Charlemagne, and in the fantastic palace of the fairy Alcina in Ariosto. Honour and long life to Basoli, a real poet in painting!

**Sculpture.**—In sculpture the number of works exhibited prove the impulse given to this school by Professor Baruzzi, the favourite pupil of Canova. Want of space prevents us noticing many works in this and other departments, spoken of favourably both by public journals and by our own correspondents. We can only mention a highly-finished bust by Putti, in the style of Mino da Fiesole. 'The Oath of Hannibal,' a work full of life, by A. Bertelli.

**Engravings.**—In the school of engraving we must allude to the great improvement carried into it by Professor Guadagnini, and shown in the works of many artists, marvellously well executed; among them L. Paradisi is the leader. Among veteran labourers in the field are the 'Nymph,' after A. Caracci, and 'A Portrait of Guido Reni,' by A. Marchi. Professor Guadagnini has himself exhibited four noble works—'A Portrait of the late Professor Rossaspina,' 'The Judith,' after Allori, 'A Portrait of Rembrandt,' and of the old sculptor Francavilla.

**FRANCE.—PARIS.—Aguado Gallery.**—Amateurs are in expectation of the catalogue of the famous Aguado Gallery. The sale will take place in March. The management of it is in very clever hands.

**BAYONNE.—A Paintress.**—We have pleasure

in announcing that Government have ordered a painting destined to adorn the chapel of the Military Hospital here, to be executed by Mdle. Hélène Feillet. The subject is to be 'St. Louis on the Field of Battle, assisting the Wounded and burying the Dead.' This lady is already known as the paintress of 'The Entrance of the Duke of Orleans into Bayonne.'

**SPAIN.—MADRID.—The Connoisseur Thieves.**—The *Heraldo* announces, that the famed and magnificent picture of 'St. Paul,' by Spagniolletto, has been stolen from the great church of Grenada by some connoisseur thieves, for they left untouched many precious articles, and carried off the painting. The robbery was accomplished by means of ladders.

**Public Monument.**—The foundation-stone of a monument has been laid in Soria, in honour of the defence of Numantia, in the time of the Romans.

**PORTUGAL.—LISBON.—Public Monument.**—The Queen has opened a subscription for the erection of a monument to Don Pedro. It is to be an equestrian statue, placed in some part of the city not yet decided.

**GERMANY.—INNSBRUCH.—The Ferdinand Museum.**—On the 2nd of October the Archduke John laid the foundation-stone of the building, to be called the "Ferdinand Museum."

**HUNGARY.—PEST.—Public Edifice.**—On the 3rd of October the Archduke Palatine laid the foundation-stone of the palace destined for the blind institution.

**RUSSIA.—The Exhibition at St. Petersburg.**—The exhibition of works of Art and industry closed in the month of November. As this exhibition is not an annual one, but occurs only once in three or four years, it excites very great interest; and, whenever the weather permitted, was visited this season by crowds of persons of every class of society. As the state of Art in Russia is less known than in countries more frequently visited, we shall give a more detailed account of this exhibition than usual in regard to most foreign exhibitions.

The halls of the academy is the place of exhibition, and as the objects newly presented are not sufficient to fill them, works seen at former exhibitions are permitted to occupy the less conspicuous positions. This year the number of new works was not very great. Several fine pieces expected from Italy did not arrive in time.

The first saloon is occupied by architectural drawings and models; amongst these there were several very beautiful designs for an imperial residence, for a merchants' hall, and a most interesting work by Kudinoeff, exhibiting the street of tombs in Pompeii restored, and several temples; those also restored. Many models for bas-reliefs were placed in this room; those designed for the still incomplete front of the Isaac's Church; the greater number of these are the work of Professor Vitali. One represents 'The Return of the Emperor Theodosius from the Wars in Barbary,' he is received by his wife and by the High-priest Isaac, who gives him his blessing; in the distance appears the architect of the church, with the model of it in his hands. Another subject is 'The Worship of the Kings from the East.' There is also a model of a bas-relief of very difficult execution, destined for one of the doors of the Isaac's Church. A very interesting model, intended to be cast in metal, is the monument to the Russian historian Karamasius. On the four sides are represented the Muse of History, a bust of the historian, the historian presenting the prospectus of his work to the Emperor Alexander, the historian dying surrounded by his family. The artist is Baron Klot. We ought to notice also a beautiful 'Head of a Madonna,' carved on mammoth's bone, in bas-relief.

Of sacred pictures we can name only the most remarkable. There are 'The Sacred Serpent in the Wilderness,' painted at Rome by Bruni, and sent from thence by the rich Count Anatolius Demidoff a present to the Emperor. It is a picture with great beauties and great defects. The price paid for it was 30,000 roubles of the bank. An 'Assumption of the Madonna,' for the Cathedral of Kasan, by Bruloff. An elevated expression beams in the pensive features of the heaven-ascending Mary; and the group of angels who support her, as well as those in the upper part of the picture, are well composed and full of grace. But the

picture which has excited the greatest interest, from the variety of opinions regarding it, is the work of Haberzettel—'John the Baptist Preaching in the Wilderness.' The divided opinions and partial applause with which this picture has been received here, in the native country of the artist, has been to him a bitter disappointment; for in Italy, the land of classic Art, it excited universal admiration, and attracted so much notice that the Pope visited the artist in his studio on the 13th of June last. Judge, then, of the disappointment of Haberzettel, on sending it, at great expense, to St. Petersburg, to find it there but coldly received. Shall we say it is the exemplification of "Nemo est Propheta in patria sua?" Haberzettel's work is the fruit of long and severe study and true love of his Art, and he finally prepared himself for this great work by making admirable copies of Raffaele's 'Sybils,' the 'Madonna di Foligno,' &c. He is a member of the Academies of San Lucca, at Rome, of Bologna, and of Florence. The defects found with his picture here are, the principal figure of John, a want of arrangement in the groups surrounding him, and the too strong shadows which give a streaky effect to the picture. But there are beauties which all are compelled to acknowledge and admire. The girl sitting on the ground, with her blue eyes fixed with such intense interest on the preacher—the woman quieting her child—the soldier standing near the preacher, and who looks so calmly at him. The expression in every face of anxiety to learn; and here and there one can almost fancy one reads the opinions the individuals are forming. The eye of the observer seems almost to become one among the listening group, so much is there of nature in their attitudes and movements.

Of historical pictures we may especially name a picture by Demidoff, representing a heroic deed in early Russian history, when Prince Michael Wolkonski fought against the Poles, then a victorious and independent people. He is standing alone, surrounded by his fallen soldiers, before the convent of St. Pafnutius, at Worosk, in 1610. He leans on the tomb of the saint, the left arm supporting him round a pillar, while with the right he defends himself. The Abbot appears near, raising the cross to make the slaughter cease. Demidoff shows himself a true artist in this picture, and recalls to mind his earlier work, of which the famous Minius, the Conqueror of Siberia, was the hero. We have, besides, 'Alciades rushing from a Burning Building,' by Kaptoff, and 'Diogenes in his Tub,' by Karisko.

There are several excellent battle-pieces; one especially, by Willibald, is admirable from the manner in which many different groups are combined into one whole. The subject is 'the Emperor Alexander leading on his Guards,' among his suite are introduced the portraits of various remarkable personages. Five good pictures are the work of Sukodolski; one especially attracted all eyes—'An Attack of Bedouins on a Caravan.' Ladurner has some excellent pictures of military life, especially one of Cossacks.

Of pictures *de genre* there were many both by native and foreign artists; one attracted particular attention—a domestic scene, 'A Russian Family on Easter Sunday;' an old man presents an Easter egg to a young girl, and behind is an old woman with a Kulitsch (Easter loaf) in her hand; the heads of the old persons are finely painted. 'A Roman Carnival,' full of life, by Massajedoff; and M. Maller, so celebrated in foreign countries, has here two charming animated pictures, the one called 'the Kiss,' the other 'the Bride.'

Of landscapes, there were many; we may name especially those of Vorobjeff, so well known from his fine views in Palestine; he has here, amongst other pictures, 'A Storm,' admirably painted. There are some carefully-executed views in Italy and Switzerland, by Mdle. Dubowski, Ehruzki, Gaiwasoffki (a native of the Crimea), and others exhibit some excellent landscapes and sea-pieces.

That portrait-painting flourishes here is proved by the large number of works of that class exhibited, and also by the merits of many of the pictures. Bruloff, as usual, distinguishes himself this year, especially by the portraits of Prince Alexander Galitzin, and the Princess Walkonski. The portraits of various personages in the higher circles, by Dusi, Holpein, Budlin, and Schleiser, constantly attracted a circle of admirers.

We shall here conclude our description of the

St. Petersburg Exhibition, which we trust may not prove uninteresting, as giving an idea of the state of a very young school of Art. We ought to mention a work in Mosaic, of 'The Death of Christ,' which was much admired for its execution and expression.

## OBITUARY.

THE REV. E. T. DANIELL.

The decease of this gentleman took place on the 24th of last September, at the house of Mr. Pardie, the British Vice-Consul at Adalia. He was long known as a warm patron of artists, and esteemed for his extensive knowledge of and refined taste in Art. He quitted England with a view to the solution of the problems in sacred topography, relative to the sites of some of the cities spoken of in the "Acts of the Apostles." At Constantinople he met Mr. Fellows, the object of whose mission to the East was the removal of the Xanthian marbles; and having joined the expedition, he embarked on board H.M.S. Beacon, having agreed to charge himself with the geographical department in the contemplated work, the production of their joint labours. In prosecution of his purposes, Mr. Daniell travelled with Mr. Forbes, who was busied with natural history, and made, during his progress, series of most interesting and valuable sketches. Having spent some time in the Turkish dominions, he was about to return home when overtaken by sickness and death.

In June he left Rhodes, with the intention of joining H.M.S. Monarch, which was lying off the mouth of the Xanthus; but, on arriving at Xanthus, the ship had sailed. He then, instead of returning to Rhodes, took the route to Adalia, in company with Mr. Pardie, the Vice-consul at that place, which he reached after much suffering from fever, induced by severe and trying privations from the extreme poverty of the country, which afforded to the traveller scarcely the simplest accommodations with which human nature in the rudest state can be satisfied. To those of the poor inhabitants of the country who fell in his way, his hand was ever extended in charity; but while he was ministering to their wants, he was himself a prey to disease, which was much promoted by the debility consequent on an abstinence from food of almost three entire days. On arriving at Adalia, he took up his residence with Mr. Pardie, under whose kindness and care he became convalescent; but, impatient of repose, he resumed too soon his researches on the borders of Lycia, in an endeavour to clear up some doubts with regard to the geography of that district; but a second attack of fever compelled him to relinquish his excursions and return to Adalia, after having visited Side. A fortnight before his decease, Mr. Daniell dictated a letter, descriptive of his discoveries and observations, and was gradually recovering, when he desired about a week afterwards to be removed on to the terrace in front of the house, where he was suffered to fall into a sleep, from which he awoke with symptoms of the most dangerous kind. From this time he gradually sank, and expired in a week, was interred at Adalia, the funeral service having been read by Mr. Pardie.

He visited the site supposed to be that of Olbia, and afterwards met with ruins among the mountains of Climax, which he supposed were those of Olbia, but found no inscriptions to warrant the supposition. He then revisited the supposed site of Apollonia, but failed to elicit from the inscriptions any sufficient evidence of the fact. He then proceeded to Termessus and other remains which he thought were those of Sylbum, and this was the journey in which he contracted the illness which terminated in his death.

His portfolio contains, we believe, about five hundred drawings, which, considering his learning and artist-like execution, must be of deep importance to all interested, as well in ancient history as in the early state of Art. The loss of this excellent man is lamented by an extensive circle of friends, and by many painters who have received numerous benefits at his hands.

BENJAMIN BARKER.

All who have passed through life with even a moderate share of observation, must have met with instances of the neglect experienced by splendid ability and eminent virtue; and have discovered that, of persons so endowed, it is as often the hard

lot to be overlooked, as it is their good fortune to be distinguished. This is so lamentably frequent as to make it almost matter of certainty that in these countries more individuals of worth and genius have, from time to time, perished unnoticed and in comparative penury, than have been elevated to renown and independence by public patronage.

The subject of this communication, in some measure, offers a case in point. While his respectability as a member of society was undisputed, and his powers as an artist, in his beloved department of landscape, were admitted to be transcendent, his reputation scarcely extended beyond the confined circle of the collectors in the metropolis, or the narrow limits of the place near which he lived, and where his talents were chiefly employed. He was suffered to steal out of this "cold world," with barely a corner in the Obituary, and without so much as a word of eulogy affixed to his name! Let it not, besides, be forgotten that his was no vulgar name; it had been already endeared to the Arts by the superb paintings of his elder brother Thomas, still happily preserved to us, and holding his high station among native masters.

Benjamin Barker delighted in studying the beautiful scenery to be found immediately adjoining Bath, and at a distance of some miles from it; he made oil-paintings of the rarest merit from sketches selected in his excursions, and ultimately published a volume of 48 views, capably executed in aquatinta by Theodore Fielding. These, which have been minutely examined by the writer, are not excelled by any of their class in this country or on the Continent: they are full of graphic truth, and radiant with what may be styled the poetry of Nature. To one familiar with the features traced by the master, their perfect fidelity is not more striking than the delicate feeling with which the aspect of what lay before him has been chosen; and this adorned with chaste effects of light and shadow, and judicious strength of foreground, and often an exhilarating illumination from above, produced by the gloriously variegated skies peculiar to this climate. This is said advisedly: Barker felt all the loveliness, and all the importance to his picture, of the joyous sunbeam, and the fleecy and graceful clouds which belong to morning, midday, and evening in Britain, and which can hardly, or at all, be caught faithfully in other lands.

Such was his felicity, that it has been imagined he composed his picture; but this was not his practice; nor indeed was it necessary. He had discernment to choose well, and was favoured by his subjects, chiefly found near Wick-rocks, Claverton, Midford, Weston, and Hampton-cliffs; yet no one thoroughly acquainted with these enchanting spots will say that he has invented anything, or had any temptation to do so. On the contrary, the fields of his country supplied him, as they did Shakespeare and Milton, with all that poet or painter could require—with scenic richness which the banks of the Rhine, the Loire, and the Arno, would not furnish.

Is it extravagant to ask where, but in enviable Britain could the immortal bards have sung, or Barker have painted what they have bequeathed to us?—

"The Morn in russet mantle clad."

"The bank whereon the wild thyme blows,  
Where oxlip and the nodding violet grows,  
O'er-canopied with luscious woodbine,  
With sweet musk-roses and with eglantine."

"Hedge-row elms and hillocks green:  
Suns rob'd in flames and amber light,  
And clouds in thousand liveries dight;  
Meadows trim, with daisies pied,  
Shallow brooks and rivers wide."

Add, the "tower and battlement" "bosom'd high in tufted trees," the blue smoke of the cottage chimney, the aged oak, the tanned haycock, and the upland hamlet—and we have some of the charms of Barker's truly English pencil.

After a lingering illness, terminating in dropsy, this admirable artist died March 2nd, 1838, aged 62 years, at Totness, in Devonshire, and at the residence of his son-in-law, Captain Wallace.

Bath, Dec. 14.

EDWARD MANGIN.

MR. ROBERT LADBROOKE.

"Died on the 11th of October, at his house on Scoles' Green, Norwich, Mr. Robert Ladbrooke, in the 73rd year of his age. Mr. Ladbrooke was originally apprenticed to Mr. White, an artist who was at once painter, printer, and engraver. The early rudiments of Art he thus imbibed were of small

value; and for some years he worked as a journeyman printer. But his mind led him to higher aspirations; and the pictures he has from time to time sent to our public exhibitions give ample proof of his ability and industry. He was a good judge of pictures, and a good instructor in the art; and, what we record with even greater satisfaction, he was of a cheerful and kindly disposition, beloved by his nearer connexions, and respected by all who had occasion to know him. He entertained the belief that he was the undoubted heir to a baronetcy, but with great good sense he forbore to put forward his claims to a title and a station to the adequate support of which his pecuniary means were insufficient."

To the above, which we copy from the *Norwich Mercury*, may be added, that Mr. Ladbroke was, with his brother-in-law, the late elder Crome, one of the founders of the Norwich Society of Arts, and its School of Painting, by which so much credit has been reflected on their native city. He was much employed in teaching drawing, both in Norwich and the adjacent country; and among his pupils, who stand, or have stood, in high estimation, may be mentioned the late Joseph Stannard, who, though prematurely cut off, attracted the attention and patronage of competent judges, and whose works still maintain high prices. Mr. Ladbroke, about twenty years ago, resigned his duties as a teacher in favour of his sons, but continued till within a few days of his death, ardently to follow the profession to which he was so much attached. With his sketching-box, his almost constant companion, he employed whole days in the study of nature, and how well he succeeded was sufficiently shown in his numerous "Sketches," painted entirely on the spot, dispersed by auction shortly after his death, and which, for *simplicity* and *truth*, have very rarely been surpassed. Mr. Ladbroke was one of the few members of the profession who had the good fortune to secure a competency by his industry and talents, so that his age was free from the pecuniary anxieties that too frequently abridge the earthly career of genius.

Two of the sons of Mr. Ladbroke successfully pursue the profession of their father; the one practising in Norwich, the other in Lynn. Five out of six pictures exhibited by the former in the Norwich exhibition were selected as prizes—a sufficient indication of his talent. The other son has at different times exhibited in London, and his works have been frequently pointed out as conspicuous for merit and value. Both artists are highly respected and esteemed in their respective localities.

WILLIAM HOLLINS, ESQ.

We extract the following memoir from a Birmingham newspaper.—Died in Great Hampton-street, after a few days' illness, in his 80th year, Mr. William Hollins, architect and sculptor, who for nearly three-quarters of a century resided in this town. The deceased was a man of strong natural powers of mind, of uncompromising integrity, and most exemplary in all his relative and social duties. At an early period of life, when knowledge was comparatively locked up from the sons of industry, he boldly forged a key to the temple of knowledge; and by vigorous, unassisted exercise of his master mind, took possession of those stores of information which are rarely attained even when wealth and friendship lend their powerful aid. From an innate diffidence of character, encouraged no doubt by the advice of his favourite author, Vitruvius, and from his having chosen a provincial rather than a metropolitan residence, his rare and varied attainments were never duly appreciated, or even brought into action. His feeling for architecture was strongly imbued with the pure simplicity of the ancient Greeks and Romans. The following are some of his works in this town:—The Public Office and Prison, the Old Birmingham Library, and the Dispensary. He had, however, a more favourable sphere of action for his architectural powers at the far-famed seat of the Earl of Shrewsbury, Alton Towers, which received many features of beauty from his creative mind. The late Empress of Russia offered him a still more extended field for the development of his skill; but a disinclination to leave his native and beloved country induced him to yield up the royal honours, except making the plans for the present Royal Mint, at St. Petersburg. His proficiency in perspective drawing attracted the notice, and obtained the commendation of the great master of that art, Malton; and his miniature wax models were sur-

passed by none. His love of the beautiful and graceful induced him to devote twenty years' study to form a complete code of systematic rules for a mathematically accurate formation of the capital letters in the Roman alphabet, and his able work, entitled "The British Standard of the Capital Letters contained in the Roman Alphabet," has doubtless mainly contributed to that vast improvement which has taken place in the types of this country. The latter years of his life were devoted to introducing a more correct taste into mural monuments, upon which he spared no cost in collecting information from Italy, France, and this country. His numerous productions in this department are impressed with a purity of taste and propriety of character rarely to be met with in a metropolitan studio.

T. C. HOPLAND, ESQ.

With deep regret we record the death of this excellent and accomplished artist; one of the truest of our English landscape painters. We shall next month be in a condition to supply some memoir of his life.

ABRAHAM RAIMBACK.

This eminent engraver, whose works have been famous all over Europe for the last half century, is dead. We shall hope to communicate particulars concerning him in our next.

*Paris.*—M. Villeneuve, the clever and fertile landscape-painter, is dead, at the age of forty-six. France owes to him the first steps, and many after-improvements, in the art of lithography.—The historical painter, Octavious Blanchard, has died of nervous fever, at the early age of twenty-eight. He gained two gold medals at the last exhibition.—The well-known flower paintress, Madame Bruyere, is dead, after a long and painful illness.

*Berlin.*—We ought earlier to have noticed the death of the celebrated medallist, Johann Ludwig Jachtmann; he was born in 1776, at Berlin, and died there on the 3rd of September, 1842. One of his most celebrated works is the medal struck for the festival in honour of Albrecht Durer, held on the 18th of April, 1828. His last works were two medals ordered by the King—the one for Science, and the other for Art.

#### WORKS IN PROGRESS.

[The arrival of "the Season" renders it necessary that we should make a report of works in progress; they are sufficiently numerous, but we regret to find that in the higher department of the art of engraving—line engraving—few accessions of importance are promised; only for the Art-Union, indeed, this branch of the profession would seem to have been deserted. Of prints in preparation, by the several societies—big and little, popular and unpopular—we shall ere long give a detailed account; premising that each and all of them are improving. "Middling" plates are to be succeeded by plates of high merit; engravers of a second or third class will be replaced by engravers of greatest eminence; and this source of enjoyment appears likely to become as faultless as it has hitherto been imperfect. But to this subject we shall recur hereafter. The list of publications expected to issue during the year is long enough in all conscience; and it contains some that will be worthy of all praise. To those who are content with simple facts, without inquiry into their causes and development, it is a matter of blank surprise what becomes of the thousands of prints that annually flit through the shops of publishers,—rest for a brief season in their windows; whence they are thrust, by a new succession on the revolutionary principle, *ola toi que je m'y mette*, and then pass away and are forgotten. The tens of thousands of pounds annually expended in prints alone form a sufficient evidence of the advancement of our tastes. Of the multifarious works in this branch of Art now in course of preparation, we can at present do little more than give the titles; but we trust, as they severally appear, to be enabled to speak at some length of their respective merits.]

We are truly a loyal people, if the continued craving for portraits of the Sovereign be based upon anything like affection. In saying that a sum scarcely less than

\* As an example, we may refer to the West of England Art-Union. This society has recently issued a "new" print—noticed elsewhere—of no great value or importance. It is to be followed by one that will attract subscribers by wholesale. We learn from our Plymouth correspondent, that C. L. Eastlake, Esq., R.A., has kindly consented to furnish his fellow townsmen with a subject for their next engraving; and it is probable that another artist of Devonshire, Samuel Cousins, Esq., A.R.A., will engrave it. This will be a credit and an honour to their native county; we rejoice to record an instance of true patriotism. Surely Devonshire, having contributed so glorious a list of great men to the Arts, ought to be upheld by them.

TWO HUNDRED THOUSAND POUNDS has been expended in portraits of the Queen, we believe that we do not exceed the truth; and yet the public voice seems to be raised in a demand for others, and it is responded to by the cry "They come." The long life of Louis Quatorze was one continued sitting. William the Third was also frequently painted; and, without some inquiry, the *bona-fide* portraits of the Duke of Wellington could not be enumerated. With a few such exceptions, no individual has been so constantly before the world in this way as Queen Victoria; and, with such a commencement, it may fairly be inferred (*Deo volente*) that portraits of this august lady will be multiplied beyond all precedent, since each season is productive of various versions, and all "authentic."

Among the forthcoming portraits of the Queen is that interesting one by E. Landseer, noticed in a former number, and to be published by Messrs. Graves and Co. Winterhalter (who, we believe, is a native of Baden, but settled in Paris under the patronage of King Louis Philippe) has painted three quarter length portraits of her Majesty and her Royal Consort, intended as presents to the French King. These portraits are true in feature and character. It is understood they are to be engraved in Paris by Forster, and will be published by Messrs. Colnaghi and Co., of Cockspur-street. The equestrian portrait of her Majesty, painted by Mr. Grant, and exhibited in 1840, is being engraved by Mr. J. Thomson, who has nearly completed it. Besides being a striking resemblance of the Queen, it will be remembered that this work contains also likenesses of many persons of distinction: it will be published by Mr. McLean in February or March next. There are also ready for publication, by Messrs. Colnaghi and Co., two profiles, one of the Queen and the other of Prince Albert, engraved by Mr. Ryall after Sir W. Ross. These gems are executed on steel, with a feeling and skill which can never be surpassed. Her Majesty and the Prince also honoured Mr. Partridge by sitting for portraits, which were exhibited at the Royal Academy; they are now in course of engraving in line by Mr. G. T. Doo and Mr. J. H. Robinson, and will be completed in about four months. These will be published by Mr. Moon. And at some period of the ensuing season will appear a portrait of Prince Albert, painted by John Lucas, and in progress of engraving in mezzotint by Samuel Cousins, A.R.A. It is intended to accompany Chalon's portrait of her Majesty, and will be published by Mr. Boys. The Prince is also sitting to Mr. Morrison, and the Royal children are in the hands of Mr. Joy.

MESSRS. GRAVES AND WARMSLEY.

HER MAJESTY'S MARRIAGE, painted by Sir George Hayter. This important work, the property of her Majesty, is in the hands of Mr. Wagstaff, who is rapidly forwarding the etching, which it may be understood is a work of time and labour, considering the number of figures of which the composition consists.

THE NAUGHTY BOY, an exquisite little picture by Landseer, is in the hands of Mr. W. Finden. It will very shortly be finished, and will form an admirable companion to 'Little Red Riding Hood.'

The same engraver has commenced a plate in line, after a picture by the late Sir David Wilkie, entitled 'The Highlander's Home,' lately exhibited among his other works at the British Institution. It will form a pendant to Landseer's 'Highland Whisky Still.'

THE MORNING OF THE CHASE, OR HADDON HALL IN THE DAYS OF YORK, a much admired drawing by Mr. Frederick Taylor, is engraving in mezzotint by Mr. Ryall. The work is in an advanced stage, and will be ready for publication about next June.

THE HEROES OF WATERLOO.—Mr. Knight's well-known Waterloo Banquet picture will supply an engraving to be executed by Mr. Lewis. The etching of this work, which is in mezzotint, is in a forward state, but the size of the plate will necessarily require some time for completion.

THE TRIAL OF EFFIE DEANS.—This admirable picture, by Mr. Lauder, was exhibited in 1841 at the Royal Academy. A mezzotint plate is in progress by F. Bromley.

THE DUKE OF BEAUFORT'S DOGS, painted by E. Landseer, R.A., is in course of engraving by T. Landseer. This plate will be in mezzotint, and of the same size as 'Bolton Abbey.' The etching is finished.

PORTRAIT OF MISS ELIZA PEEL, engraving in mezzotint by S. Cousins, A.R.A., after a beautiful portrait by E. Landseer, R.A.—This plate will be published also during the ensuing season.

READING THE FIRST BIBLE IN ST. PAUL'S CATHEDRAL.—This will be a most elaborate line engraving by Robert Graves, A.R.A., from a picture by George Harvey, R.S.A. The etching is in a forward state.

EARL OF LICHFIELD'S SHOOTING PARTY.—This will be remembered as having been painted and exhibited by Mr. Grant. We know of no "shooting print" of very recent publication. It is in mezzotint; the etching is finished, and it will be published about the month of May.

HORSKS DRINKING IN A COURT-YARD.—The picture was painted by E. Landseer, and is in course of engraving in line by J. H. Watt, the engraver of the 'Highland Drovers.' Considering the finished style of this artist in his manner of engraving, the publication of the work cannot take place before the middle of the year 1844.

SIR DAVID WILKIE'S ORIENTAL SKETCHES.—These beautiful reliques of one who has "slept too

soon," are in course of being lithographed by Joseph Nash. They will be tinted after the originals, and will be ready in the course of a month.

**LASSIE HERDING SHEEP.**—The picture was painted by Landseer, and is in the hands of John Burnet, F.R.S., for a mezzotinto plate, which will be very shortly finished.

**AFGHANISTAN.**—A second series of views (many of which are finished,) have been for some time in progress after views taken by Mr. Atkinson and other gentlemen in the scenes of the late operations of the British forces in Afghanistan. They are being executed in lithography by Haghe, and other artists of eminence in that department.

#### MR. MOON.

**THE QUEEN RECEIVING THE HOLY SACRAMENT AT HER CORONATION.**—This, it will be remembered, was painted by C. H. Leslie, R.A.; it is one of the most beautiful of those painted from incidents in the personal history of her Majesty; and will supply an engraving by S. Cousins, A.R.A., which is on the eve of finish.

**THE QUEEN'S FIRST COUNCIL;** a well-known work, by the late Sir David Wilkie, R.A., is in progress of engraving by Charles Fox: the excellence of work is universally acknowledged. The publication, it is expected, will take place in about six months.

**THE WATERLOO BANQUET;** painted by Mr. Salter; and containing portraits of the Duke of Wellington's guests on the anniversary of the 18th of June, is being engraved in line by Mr. Greatbach. The etching of this plate, which is one of the largest we have ever seen, is in a forward state, but nevertheless the work cannot be completed before the year 1844.

**COLUMBUS.**—This will be remembered as one of Wilkie's larger pictures, remarkable for the force and character of its heads. It is in progress of engraving in mezzotinto by Mr. Ryall, and will be ready for publication in April next.

**BREEZE, A FAVOURITE RETRIEVER;** painted by Landseer, and recently exhibited at the Royal Academy, is in the hands of Mr. C. G. Lewis, to be engraved in mezzotinto. The work will be finished in about six or nine months.

**DEER STALKING IN THE HIGHLANDS.**—A series of plates illustrative of this sport are in progress, by Fox, Robinson, &c. &c.; they are after works by Landseer, and will be accompanied by a set of etchings of the same subjects. These engravings are to be in line; some of the plates are in a state of forwardness.

**NAFOLKON AND THE POPE.**—This admirable work, so generally pronounced to be the best of Wilkie's larger pictures, will furnish a line engraving, to be executed by Mr. J. H. Robinson, who has sent in the first etching.

**THE LATE COUNTESS OF BURLINGTON;** a portrait painted by Lucas, and engraved by M'Innes, is on the eve of publication.

**SIR DAVID BAIRD DISCOVERING THE BODY OF TIPPOO SAIB.**—A well-known work of the late Sir David Wilkie, and painted shortly before his departure for the East, is in progress of engraving by John Burnet, F.R.S., whose labours thereon will be concluded in a few months.

**VISCOUNT ARBUTHNOT;** a portrait by Sir David Wilkie. The engraving of this work was commenced in mezzotinto, by the late J. Egan, and after his decease it was transferred to Mr. Wagstaff, who, after having revised the plate, is bringing it forward in his own manner.

**LORD LYNDEHURST,** a half-length portrait by Sir W. C. Ross, A.R.A. This work was originally painted in miniature, but, for the purpose of being engraved, a drawing was made by Sir W. Ross on a larger scale; it will be executed by Mr. Ryall, in mezzotinto.

**LA SVEGLIARINA;** a charming picture by Eastlake, is in progress by J. H. Watt. The engraving will be in line, and is already in an advanced state.

**EQUESTRIAN PORTRAIT OF THE DUKE OF BUCCHLEUCH AND QUEENSBURY;** painted by John Watson Gordon, A.R.A., R.S.A.; and in course of engraving by T. Lupton.

**CHRIST BLESSING LITTLE CHILDREN.**—This picture, by Eastlake, is in the hands of J. H. Watt, to be engraved in line. This work will be similar in size to the plate from Mr. Eastlake's celebrated picture, 'The Pilgrims.'

**PORTRAITS OF PRINCESS NICHOLAS ESTERHAZY AND LADY CLEMENTINE VILLIERS;** painted by Sir George Hayter, and engraved in mezzotinto by W. O. Burgess; will be ready in the course of the ensuing season.

#### MR. McLEAN.

**HER MAJESTY'S LOVE BIRDS;** in mezzotinto, by F. C. Lewis, after a picture by Landseer, in the Royal Collection: this plate will be ready early in the season.

**Eos,** a favourite greyhound of H.R.H. Prince Albert; painted by Edwin Landseer, R.A., and engraved by S. Landseer. The picture will be remembered as having been exhibited last year at the Royal Academy.

**HOMES! SWEET HOMES!**—The picture, by Landseer, was one of the gems of the last exhibition at the British Institution. The plate is in the hands of Mr. B. P. Gibbons, and is in an advanced state.

**THE HIGHLAND SHEPHERD'S HOME;** painted also by Landseer, and in course of being engraved by Mr. B. P. Gibbons. This work is in line, and is advancing towards completion.

The famous picture by Edwin Landseer, of **THE COURT OF LAW**, in which the Attorneys, &c., are really dogs, is also on the eve of finish.

**THE HERO AND HIS HORSE;** engraved by Mr. Lupton, after a large picture by Mr. Haydon, exhibited last year at the British Institution, and painted for St. George's Hall, Liverpool. This plate is almost finished; it is of considerable magnitude, being 30 inches by 25.

Another series of **OLD ENGLISH MANSIONS**, by Mr. Nash, is also in progress.

#### MR. BOYS.

**CANTERBURY PILGRIMS SETTING OUT FROM THE TABARD, SOUTHWARK.**—This picture, the work of Edward Corbould, will be remembered as having been one of the best in the water-colour gallery in which it was exhibited. It is being engraved by C. E. Wagstaff, and will be ready in April.

**OXFORD.**—Twenty-six views of the Colleges, Chapels, and Gardens of Oxford are in course of execution, in lithography, by William Gauci, after drawings made expressly by W. A. Delamotte. It will correspond in style and size with 'London as it is,' and will be ready in a few weeks.

A mezzotinto engraving is in progress, after the beautiful drawing by Miss Setchell, exhibited at the new water-colour galleries last year. S. Bellin is the engraver, and he will complete the work about February or March.

#### MESSRS. COLNAGHI AND PUCKLE.

**THE PRINCESS ROYAL.**—A full-length portrait, engraved by Mr. Lewis, after a drawing by Sir George Hayter. This work is now ready.

**HER MAJESTY'S FAVOURITE DOGS AND PARROT,** engraved in mezzotinto on steel by Mr. F. Bacon, from a picture by Landseer, exhibited at the Royal Academy in 1838, and now in the Royal Collection.

**THE ILLUMINATED HISTORY OF THE EGLINTON TOURNAMENT.**—The drawings for this work were made expressly on the spot on the occasion of jousting at Eglinton Castle. It is executed in lithograph, and will illustrate the costumes and ceremonies of the processions, lists, and festive assemblies.

**THE BEST PICTURES OF THE GREAT MASTERS.**—This work appears in numbers, several of which are already before the public, wherein ample justice is done to the great names which attach to the original works. Among the plates in progress are many after very celebrated productions.

**THE SCENERY OF THE PYRENEES.**—This work is now ready; it is executed in lithography by Haghe, and other artists distinguished in that branch of Art, after drawings made by Mr. Oliver.

Messrs. Ackermann and Co., 96, Strand, are about to publish 'Travels in the Interior of North America, by Maximilian Prince of Wied.'—The work will appear in one volume quarto, and will be accompanied by 81 coloured plates, engravings on wood, &c. Among the plates are many very characteristic portraits of Indian warriors and chiefs, conveying ideas of the American Indians, much more correct than can be gathered from any written descriptions. This work is almost ready.

A most spirited country publisher, Mr. Agnew, of Manchester, has purchased the copyright of Herbert's historical picture, 'The Introduction of Christianity into Britain.' Mr. F. C. Lewis is engraving it in mezzotinto; the etching is advanced, and in the hands of an artist so skilful, it cannot be doubted that ample justice will be done to the work.

'Slave-dealing on the Gold Coast.'—A picture by Biard, exhibited two years ago at the Royal Academy, is in the hands of Mr. Wagstaff. The etching will appear about the same time as that of 'Her Majesty's Marriage.' This plate will be the property of the gentleman to whom the picture belongs.

Messrs. Welsh and Gwynne are about to publish a line engraving of the Duke Wellington, by Greatbach, from a painting by W. Salter.

Mr. Hill, the enterprising publisher, of Edinburgh, announces an engraving in line, by F. Bacon, from the fine and interesting picture by Duncan, exhibited at the Royal Academy, where it won golden opinions—'Prince Charles Stuart entering Edinburgh.'

Mr. Gilbert, of Sheffield, has placed in the hands of Mr. Edward Finden, a painting of 'Cattle Reposing,' from the accomplished pencil of Sidney Cooper.

#### "COPYRIGHT!"

No man can cast his eye over the evidence offered to the House of Commons by a certain class of witnesses, on the subject of the Protection of the Copyright of Designs, without being amused at the extravagant effrontery of such of them as are interested in maintaining the *status quo*. It will be remembered that a petition was brought forward against the grant of any extension of the copyright, in which the petitioners, adopting for their motto the well-known "good old rule"—

"That they should take who have the power,  
And they should keep who can"

took a frank and free-trading view of the Copyright question; whence we learn that, be the labour and cost what they may, a proprietor must expect

to have his patterns immediately pirated, and his goods undersold in the market.

It is a principle with those who have desperately opposed this bill, that there are two classes of merchants—those who are so desirous of improvement in their designs, that they spare no reasonable expenditure in realizing their object; and those whose trade subsists entirely in the piracy of designs. Dealings, enormously unprincipled, often wear the mask of the utmost simplicity of character, a qualification which the latter class seem to lay claim to, when they *naively* tell us it is just that one man shall incur a heavy expense in the production of a tasteful novelty, which another shall immediately counterfeit, and sell at a rate that must be ruinous to the originator. It is not sufficient that the inventor and printer of a design be known in the market as the legalized proprietor; for of what value to him is such distinction, if his property be liable to pass at once into other hands? It is not sufficient that a patentee of expensive designs be merely the first in the market with such designs, for they are copied and circulated by pirating houses long before he can be repaid the cost of production. In the face of such a declaration as this, it is not surprising that France has maintained an ascendancy in designs and patterns: it is only surprising that, with all their advantages, our fair-dealing manufacturers have been at all able to keep the continental markets open with anything beyond the coarsest and commonest prints.

One of the witnesses, an opponent of extension of copyright, volunteered to assist the committee in their inquiries. In page 12 of his book, Mr. Brace says of him:—"He was boroughreeve of Manchester, and described himself as having been engaged upwards of thirty years in printing calicoes, and the sole proprietor of an extensive concern for that purpose. A few of the minutes from the evidence of this witness will exhibit the extent of the crying evil. 'Q. Have you been in the habit of copying the designs of other parties? A. I have.—Q. Have you done it extensively? A. Pretty well, formerly; not within the last eight or ten years.—Q. Before the last eight or ten years, did you do it extensively? A. I did as many as I found to answer my purpose; and I think a fair quantity I did.—Q. Did you do it during the existence of legal copyright. A. Yes.—Q. Did you derive profit from it? A. Yes, sometimes; and sometimes loss; but more profit than loss. \*\*.—Q. You say that you sold the patterns so copied cheaper than the original designers sold them. Was your work equally good with the work produced by the original designers? A. It might or might not be. Q. Generally speaking, have your engravers, who copied those patterns, executed as fair work and in as expensive a manner as the original designer? A. I always think my work as good when I imitate a pattern, and I think generally as good as theirs.' In the two following ingenious replies, the 'simple plan' is described in no less simple language. 'Q. In those cases which you now speak of, were the copies of a good execution, and printed upon as good cloth as the originals from which you took them? A. Generally speaking, they were upon *inferior cloth*. My work was upon the average as good as theirs.—Q. May not that account for your selling them at a cheaper rate, without any disposition upon your part to be content with smaller profits than other men? A. It was not worth my while copying them unless I got a good price for them, and plenty of room for me to slip under also. They got a good profit, and I got a good profit.'"

In this open-hearted evidence these witnesses declare it their opinion that no law can protect patterns, and that they do *not wish for any law that would protect them*. They acknowledge their practices to be infringements of the law, and state that their impunity lies in the unwillingness of the parties injured to have recourse to legal proceedings, from an impression that they (the pirates) would "fight them." They admit, in unqualified terms, that their manner of doing business is a source of deep injury to the proprietors and originators of designs; and that they never consider their proceedings on the side of equity or justice, but on that of policy. This is, with a variation of circumstances, the same principle that brings men to Newgate. In the evidence delivered on the other side, that is in favour of the bill, by persons expending large

sums in the composition of designs, it is stated that by the nefarious system of copying, their trade is ruined.

In their petition the copyists represented themselves as "a very considerable majority of those engaged in the trade in Manchester and its district." This is palpably untrue, as we shall show. There are in Manchester 98 houses, 14 of which in the extension question remain neutral; of the remaining 84, 43 are in favour of the bill; and the remaining 36 are opposed to it. Distributed throughout the United Kingdom there are 81 firms, and these declare themselves unanimously in favour of the bill; and with respect to the amount of the production of the copyist, it is but one-fourth of the amount of the aggregate, instead of being more than double that of the extensionists.

An absurd and groundless impression has existed in this country, that we cannot compete with the French in beauty of design, because we are not possessed of faculties and tastes available for the production of the best character of design for manufacture; such a proposition is so senseless as to place it beyond all serious consideration. Want of sufficient protection is the sole cause of our inferiority to the French in design.

Let us briefly review the legislative enactments of both countries on this subject. In the year 1787 the Parliament of Great Britain passed an act for the encouragement of the arts of designing and printing linens, cottons, &c. &c., by vesting the properties thereof in the designers or publishers for a limited time, which was *two months*. This act was only temporary; but in the year 1794 it was made perpetual, and extended the protection of designs to three months, a period extended only by the act recently passed, which came into operation on the first of last month. Many important fabrics were excluded from the benefit of this law, for cotton and other similar manufactures are not those alone which, in their extensive use, depend upon the embellishment of design. Even silks had no protection, nor had woollens nor metals; and glass, than which nothing is more susceptible of tasteful design, was not comprehended in the act.

In the foreign market the French are supported in their competition with our manufacturers only by the beauty of their designs; but for the countenance extended by their legislature to copyright property, they would be destitute of pretension to foreign trade: and by inquiring upon what basis they have formed this trade, we find that in 1737 designs in manufactures were effectually protected by law. In the year 1744 another law on the same subject was promulgated; and both of these referred principally to the trade in silks of the city of Lyons, which, at that time, was the chief seat of this manufacture in France. The latter law remained unchanged during forty-three years; after which, in the year 1787, the silk trade of the entire kingdom received the same protection which had been extended to that of Lyons only. Again, in the year 1793, further provisions were made, and all the products of industrial art were comprehended in its operation. In the year 1806 were established the tribunals called *Conseils de Prud'hommes*, to which were referred all questions of piracy of designs; and since the last-named period the subject has, in its incidental relations on two or more occasions, occupied the attention of the French Legislature; hence, and from no other cause, has arisen the superiority of the French in their designs.

This law secures to an artist or his employer a copyright for any discretionary period. The payment of ten francs secures the copyright for life, or a period of from one to ten years may be secured by the payment of one franc per year for the number of years claimed, under the prohibition of piracy, and where copyright is unlimited, the result is a rapid increase of trade, insomuch that French printed goods are sought for in every capital of the old and new world; hence the value of this strong feeling for the beautiful in manufacture consists in its having created a trade for which the country does not enjoy the advantages possessed by England; the manufactures therefore of France are produced at a greater cost, but the elegance of the patterns covers this: we therefore arrive at the conclusion, that a French trade never could have arisen unless something superior to the English manufacture had been offered; that the English productions are inferior to the similar manufac-

tures of France only in consequence of the absence of an effectual protection.

In Fine Art the French law protects sculpture, painting, designs, and engravings; and the English law extends to designs, prints, engravings, models, casts, &c., but painting is overlooked, although we conceive that English artists suffer more from plagiarism and forgery than those of any other nation. To affix the signature of an artist to a painting for the purpose of sale, is as much an act of forgery as the unauthorized use of a name to a cheque or bill. The practices of imitating style, copying and forging initials and signatures, are not confined to the works of old masters, but the works of living artists are extensively copied and imitated, and such copies and imitations are sold by honest dealers as original pictures; so long, therefore, as artists are liable to be thus injured is our law of copyright inefficient. We see continually patterns after the most beautiful engravings exhibited in the shop windows for sale to be wrought in Berlin wool; the same prints we find copied on Birmingham tea-trays and other similar manufactures; and, however inconsiderable to indifferent persons such abuses may seem, they cannot be regarded without mortification by the artist. It is not men of the highest reputation who might have to complain of the omission of pictures among the scheduled items of the act; those who are most liable to injury from the impositions of picture-makers and dealers are the rising members of our school, persons whose works do not command high prices; and it is they who can least afford to be injured by the impositions of copyists and the less reputable classes of dealers.

Much dull mirth has been excited in France, by the observations of certain of the members of the Chamber of Deputies on the subject of the taste of the English in matters of design; and we cannot quit the subject without alluding to one or two truths, a knowledge of which might be as useful to the Deputies themselves as to those who have taken their tone from them. We do not frequently see, among ourselves, that style of history painted by Delaroche, Vernet, Deveria, &c., and hanging on the walls of the Luxembourg, because there is no taste among us for modern pictures so large; if there were, one year would produce a hundred equal to these. Art in France may be said to date its growth from the time of Francis the First; but very many years have not elapsed since members of the earliest (so called) English school died. For upwards of a century designs in manufactures have received in France the most effectual protection, while in England, without going further than the Parliamentary evidence, we find them common property until September, in the year of grace 1842; and of our possessing the taste for the beautiful in design, without the faculty of realizing such an absurdity cannot be entertained for a moment. "I pri'thee, no more on't, Hal, an thou lovest me."

These remarks have been suggested by a small and cheap publication, entitled "Observations on Extension of Copyright of Designs," by George Brace. Mr. Brace's little book contains the act, together with much information highly valuable to all persons interested in the question of copyrights; a question to which, as it more immediately affects the artists, we shall again and again have occasion to refer.

#### CORRESPONDENCE.

##### CHALK DRAWING.

SIR,—The few remarks which I am about to offer on Chalk Drawing, if not unworthy of a place in your excellent journal, may be found useful, at least to those who are unacquainted with the proper method of working in this delightful branch of Art, and desirous of imitating those beautiful examples of French skill now so abundant. I should in the first place recommend the best hand-made crayon or chalk paper; machine-made will not be found so well adapted to the method about to be laid down, as it is much softer in the texture, and consequently will not bear the same proportion of work. Let the chalk used be French, No. 1; No. 2 will only be required in the dark finishing touches. I say French, because it makes clearer work than Italian, is less liable to rub, and will come near the French style of lithographing: the latter is very good for sketching. The subject being carefully drawn in delicate out-

line—the chalk well-sharpened to a point, a preparation or ground is laid, commencing lightly, and gradually working up the form and shadows to the strength required with a perfectly even tint, as if it were to be finished in this manner alone, without the addition of lines: this must be done very carefully, as the beauty of the drawing when finished will depend much upon the quietness of the ground. When this is done, the drawing must be hatched in the manner of a line engraving, taking care that the direction of the lines fully express the form. White chalk can then be used with much effect in the principal lights, and hatched in the same way, leaving the ground of the paper for the half tint.

It will be observed, that the ground laid in the manner described is usually done by rubbing in with the stump; a quick way of working, but one I cannot recommend, unless in hurried sketching, as it always presents a somewhat muddled and sooty look, at least in drawings having pretensions to finish.

Yours, &c., PORT-CRAYON.

#### GERMAN ART.

London, Jan. 16, 1843.

SIR,—In all controversies in Art or Literature, let no man misquote his adversary; because, if it be intentional, it is extremely unprincipled, and if it be carelessness, it is extremely ignorant. The petty bubble of immortality lasts only till the opportunity of explanation occurs, and the damage done to the soundest arguments, by an appearance of either want of principle or want of care, is so lasting that all confidence must inevitably be withdrawn.

A correspondent under the signature of "I," in your last number, asserts that I said "German Art was copper surfaces on gilt surfaces"—and "such like trash," adds he; the trash is not mine but his; as I never uttered such inconceivable nonsense. I said "copper faces on gilt surfaces;" and who, that has seen the hideous want of cool tints in German flesh placed on a gilt back-ground, will not recognise the truth of the remark? If any of your readers saw the oil copy from Hess's Fresco at Mr. Seignier's, of 'Christ Blessing Children' (without going to Munich), they may convince themselves.

I did not say, either, the English travelled 16 miles an hour in Germany; I alluded to it as a general habit of the travelling English, who drive along as fast as they can, nobody knows why, and pick up nothing but contempt for their own country. Your correspondent is indignant, I accused the Germans of a desire to monopolize the House of Lords, as if the suspicion were unfounded. Will he dare to assert they have not already complained they have not been sent for? Because, to my certain knowledge, they have done so within a very few months. As to his insinuation that I wish to dispose of the employment, it is beneath reply; and if I had a hankering in that direction, there is nothing very criminal: at least I am an Englishman, have been 39 years in the field, planned and designed a series of grand works for the old House of Lords in 1810, laid them before the Ministers 1822, again before Lord Grey 1833, and before Lord Melbourne 1836; and when the old House was burnt, again revised and fitted them for the new, sent a petition and plan to the Duke, who desired me to forward them to Lord Rosslyn, for, as Lord-President, he would be chairman of the Building Committee. Lord Morpeth brought the petition into the House, which was printed, and proposed it be carried up to the Building Committee, which was seconded by Mr. Duncombe, and sent up, by vote of the House, to the committee, as Lord Rosslyn and the Duke desired.

At any rate, a man who has been 39 years an historical painter, (you will admit of some of pretensions, if only on the score of perseverance,)—who educated Eastlake, the Landseers, Prentice, Bewick, Harvey, Lance, Chatfield, and others, who are an honour to the school—who, out of these 39 years, has been 32 years without commission or order, and has yet kept his ground, however overwhelmed at times; who has never left the country, but stuck to it and kept alive the public feeling, and did not run away to Italy, saying, it "would never do," and then hurry home again, when there was a prospect "it would do," affecting the most disinterested enthusiasm; you, Sir, will not deny there is nothing abominably wicked, or egotistical, or presuming, if he be guilty certainly of the hope of not being

omitted, even if employed to grind the colours, which he undoubtedly would not hesitate to do, should the decorations of the Houses depend on his consent so to act; for he is convinced, on the judicious management of this opportunity depend entirely the honour and repute of Britain.

In conclusion, I beg to say, I will reply to anonymous correspondents no more.

Any gentleman who puts his name, and gives his reasons for not agreeing with me on the Germans, I shall be happy to answer; but I am not bound, when I always put my own name, to pay any attention to those who are ashamed of theirs.

Yours, &c. B. R. HAYDON.

P.S.—Your remark that Overbeck's cartoon looked as if for the chisel, is capital; their cartoons look as if made for the chisel, and their frescoes as if executed with one.

#### THE CARTOONS.

SIR,—As the approaching trial of skill in producing the Cartoons will not only affect the character and prospects of artists individually, but must also throw either a shadow or a brightness on Old England herself, it is much to be desired that the wished-for result should, as far as possible, be made certain, so as to do honour to both, and that her talented sons should not, through misunderstandings, doubts, and fears, be prevented from standing forward to uphold their country's glory, and their own; nevertheless, many do hesitate, merely, perhaps, from a want of seeing their way clearly in some trivial matters, which might, I presume, be readily explained through the medium of your journal; and thus some of the waverers be induced to assist in the good cause. It is but just that every one should tempt fortune with equal hope, that each should know he is travelling the right road, even though he cannot get on quite so fast as others; and that none should enter the lists at a disadvantage, because he may not happen to know precisely how far he may swerve from the line chalked out for him. Allow me, therefore, to encroach on your ever ready willingness to assist artists, and suggest your troubling C. L. Eastlake, Esq., with the following questions, for I feel assured that his usual urbanity and condescension will not (seeing no impropriety in them) suffer you to remain long waiting an answer.

Must the drawings be on paper, or will a prepared canvass be considered a cartoon?

Will red chalk on the lips and cheeks be a bar to admission of the drawing?

Is it to be understood that the drawings are to be sent in rolled up, or upon a stretcher?

Will all the contributions be exhibited, as were the designs for the Houses of Parliament?

Will the judges' names be ultimately made public?

On the last of these questions I am tempted to offer some remark, as I consider this point being settled of more consequence than either, or all, of the others together. If left doubtful, what artist of high standing will risk his reputation, or employ his time in such an undertaking? or where shall we find the younger aspirant for fame with sufficient courage and confidence for such an occasion? Believe me they will both desert the cause; they will keep out of court, an equity one though it be; the consequence will be a failure complete as regards what can be done in high Art here; and the good people on the other side of the water will ever after quote "the Commission" to prove that the English cannot draw. Yours, &c., VIGILANS.

As the queries put by our correspondent may occur to others, and as it is above all things necessary that competitors should have no doubts concerning the regulations by which they are to abide, we thought it desirable to communicate with Mr. Eastlake on the subject; and, in printing his answer, we furnish the safest and most satisfactory reply.

13, Upper Fitzroy-street, Jan. 9, 1843.

SIR,—I have the honour to acknowledge the receipt of your letter of the 7th inst., inclosing a paper signed "Vigilans," and have to observe in reply, that I do not think myself authorized to answer anonymous applications. But if your correspondent will write to me, giving his real name and address, he will receive an immediate answer.

To the Editor of the Art-Union. Yours, &c. C. L. EASTLAKE.

#### THE CHURCH OF ST. MARY, REDCLIFFE, BRISTOL.

In our last number we reprinted—by permission of Mr. Britton—an engraved view of "the nave," &c., of this most beautiful, interesting, and venerable edifice. We now publish "a view from the south-east, with the spire—as proposed to be restored." That it will be "restored," we cannot doubt; the required sum is a mere trifle compared to the wealth scattered among those who can value the sacred edifice—because of its important associations, the conspicuous place it occupies in history, and the hallowed purpose to which it is devoted. But there are thousands who will appreciate its utility as a work of Art;—in a style to which happily we are rapidly returning, and which puts to shame the modern churches, which are, for the most part, utterly out of keeping with their sacred character. The following is the most essential of the "CONDITIONS ON WHICH SUBSCRIPTIONS ARE RECEIVED."—That as soon as the sum of £7000 is subscribed, a general meeting of the subscribers of or above £10, shall, under the direction of the committee of vestry, be convened by the churchwardens of St. Mary, Redcliffe, by printed circular and advertisement in each of the Bristol newspapers, by the majority at which meeting six contributors of not less than £50 each shall be added to the present committee, and before which meeting shall be laid plans, specifications, and estimates of such portions of the work, whether of repair, restoration, or both, as the committee, under the advice of the architects or otherwise, may then deem safe and practicable to be executed; and the majority of such meeting shall be empowered to determine, whether such work, or any portion thereof, shall be undertaken, and to authorize the necessary contracts for the same; and that until such meeting shall so determine, no contract for any part of the objects proposed shall be entered into."

The general style of architecture, and the ornamental details of the church above indicated, are replete with beauty, and present to the eye of the tasteful and intelligent observer a series of exquisite subjects for study and contemplation, as viewed from different points. The view from the south-east, as shown in the annexed woodcut, represents the tall and narrow south transept, with its aisles, windows, highly-enriched flying and attached buttresses, perforated parapets, and puffed pinnacles; the south porch, of two stories, and newly-designed staircase turret, the flying buttresses and clerestory windows of the nave, with the bold crocketed pinnacle, which surmounts the stairs at the south-west angle: rising above the west end of the northern aisle are seen the upper or belfry story of the noble tower, with its richly-adorned panels, boss-enriched mouldings, and perforated parapet; the bold and finely-proportioned octagonal pinnacles at the angles of the tower; and rising from among them the lofty graceful spire, crowning and adorning the whole. Of this last splendid and heaven-pointing architectural member of a Christian edifice, there are numerous examples, both in England and on the Continent, which are now admired as they deserve to be admired: but, however meritorious and beautiful may be the spires of Strasburg, Salisbury, Freyburg, Lichfield, Norwich, Louth, or others of less note, Redcliffe Spire, in form and detail, as indicated by its existing portion, and as it is susceptible of being rendered, with the tower, its legitimate base, may challenge a comparison with them all.

## LIVING AND RECENT FOREIGN ARTISTS.

## No. 1.—INGRES.

"*Pourquoi debuter par M. Ingres?*"—Such is the question which the author of the biographical sketch of him in the "*Contemporaines Illustres*," supposes likely to be put by his readers, and which, we think, not unlikely to be addressed to ourselves. Why do we take Ingres for our very first subject of this kind? To be ingenuous, because it so pleases and so suits us; for we have just been perusing the character given of him and his works by the *soi-disant* "*Homme de Rien*," in the "*Contemporaines*." In that work, we should observe, the *illustres* are illustrated in more ways than one—by the pencil as well as the pen; and we must say that M. Ingres has not the most prepossessing countenance. Though it is a sufficiently good-looking one as to the mere features, there is something not only cold and forbidding in it, but rather ordinary also. However, we do not suppose it is a *daguerreotypied* portrait, and the likeness, if not an unfaithful, may be anything but a favourable one, although it corresponds with the reservedness of disposition and manner imputed to him.—To begin to say something more to the purpose: M. Ingres claims notice as being one of the heads of the present French school, or rather as the head of a school apart, which sets up Raffaele as its standard, while that of M. Delacroix hoists the banner of Rubens. Between these "*Raffaellists*" and "*Rubenists*," there is another school, of which Delaroche may be considered the leader, and which aims at a sort of *juste milieu* in Art—apt at times to degenerate into mediocrity. Besides these, there is, as the "*Homme de Rien*" remarks, another class, who, regardless of schools, distinguish themselves by a species of universal dexterity and *cleverness*. They have an aptitude for all sorts of subjects, for history, *tableaux de genre*, landscape, portrait. Abjuring the pedantry of fixed systems, they accommodate themselves to every one in turn, as far as suits their purpose. To make use of an expression more significant than elegant—all is fish that comes to their net. Their aim is not so much glory, as popularity; and in obtaining that, some of these "*improvisatori* artists" have been sufficiently successful, and not the least is the eminently clever Horace Vernet, who is, in fact, their Corypheus. Great therefore is the distance between Horace and Auguste. But we must not forget that it is the latter of whom we profess to speak.

Jean Auguste Dominique Ingres was born, according to some accounts, in 1780, to others, in 1781; the difference is not a very important one, and certainly less than that between Paris and Montauban,—both which places are respectively mentioned as that of his birth. The "*Contemporaines*" makes it to be the latter, and says, that though his father was a painter himself, and a tolerably clever one, he was anxious that Jean Auguste should pursue music as his profession. Study it he did, and is still no mean proficient in it, but he had determined within himself to become a great painter. At length his impatience prevailed, and at the age of sixteen he was permitted, by his father, to set out for Paris, and was admitted as pupil into the *atelier* of David—the artist whose fame had so worked upon his youthful imagination. But a couple of years greatly abated his enthusiasm, or if not exactly his enthusiasm for Art, his admiration of his instructor in it. The cold abstractions and classical affectations of David ceased to charm his pupil, who not only withdrew his homage from them, but did not scruple to express his opinion; for he had become aware that unless Nature be carefully studied also, Art becomes little better than artifice and artificialness. Rome and Raffaele now became as much the objects of his desire, as Paris and David had been before. In the meanwhile he had much to encourage him; for in 1800 he obtained the second, and, in the following year, the first great prize in painting, the subject chosen by him on that occasion being "*Achilles receiving the Ambassadors from Agamemnon*"—which picture is now at the Musée des Beaux Arts.

After this period his biographers seem to be at fault, and unable to trace his course clearly, for they only leave us to conjecture that, whatever time might intervene, he next visited Italy, and there, with re-awakened enthusiasm, studied the works of Perugino and Raffaele, and in them he

found a vital charm and a mental power, the want of which he had so sensibly felt in nearly all he had before seen. Upon such models he formed his taste and his principles; and he has since inflexibly adhered to them, without regard to the criticism of the day; but at the same time it must be confessed with more of perseverance than of advancement in them, and without any very visible improvement upon some of his earlier works.

Among those which he produced from 1805 to 1813 are "*Edipus and the Sphinx*," "*Jupiter and Thetis*," "*Virgil reading the Æneid to Augustus*," "*The Triumph of Romulus*," "*Ossian's Dream*," and "*The Pope officiating in the Capella Sistina*." He also practised portrait-painting, and in 1806 executed a fine one of Napoleon, for the Corps Legislatif. In this branch of the Art he produced a revolution, at least as far as his own example went, for, rejecting all that pretension with which others paraded their sitters to view, he endeavoured to restore portraiture to nature, and to impart to it a higher intellectual value, aiming chiefly at truthfulness of physiognomy and characteristic expression.

In 1813 he married, at Rome, a lady related to a French family, who had settled there, and there he and his wife remained until 1824. This period of his life was to the artist one of difficulties and struggles, and, in order to provide the means of support, he was obliged to employ his pencil upon ungrateful tasks; nevertheless, in the midst of them he conceived and executed some of his most genial and celebrated works: "*The Vow of Louis XIII.*," "*Raffaele and La Fornarina*," "*Christ Delivering the Keys to St. Peter*" (for the Church Trinità di Monte, at Rome); "*Francesca di Rimini*," "*The Entry of the Dauphin Charles V. into Paris*," and "*The Death of Lionardo da Vinci*." On returning to his native country, Ingres found that the public taste had undergone a complete change: if not entirely exploded, David's manner was no longer in the ascendant: his statue-like figures, once extolled for their classical correctness, had fallen into discredit, and been pronounced lifeless and soulless. A sudden rebound had been made towards the other extreme: the colouring and the pomp of the Venetian and Flemish schools, with all their seductive witchery, were now the fashion, and mere effect and truth of imitation were aimed at as the most desirable qualities in Art. With this materialism, the spiritualism which guided Ingres strongly contrasted. Nevertheless, his "*Vow of Louis XIII.*" made a considerable impression upon the public, and the favourable opinion the artist then obtained was confirmed, two years afterwards, by his "*Apotheosis of Homer*," painted by him on the ceiling of the Hall of Grecian Antiquities, in the Louvre, a work which combines the plastic beauty of ancient, with some of the highest qualities of modern Art. Still, though the public were liberal with their applause, and the Institute welcomed him as one who would reflect honour upon their body, he had to endure censure also. The colourists and their partisans, not content with attacking him on his weak side, and reproaching him for the prevailing greyness of his tones, went so far as to term him a mere secondhand Raffaele, and no better than a servile copyist of that great master; than which nothing can be more unjust, for instead of copying him he has endeavoured to carry on his principles, and has, in consequence, not adhered to them so closely as he ought.

His "*Martyrdom of St. Symphonien*," exhibited in 1834, was not very successful with the public; for, while there was in it what was fairly open to the objections of criticism—nor did his enemies fail to take advantage of it—its merits were of a kind too exalted to be recognised by every one, or to make themselves felt without some degree of study and reflection. The poetic intensity and dramatic energy of this composition were appreciated by comparatively few; nevertheless, justice was done to it by one critic, and not the least able or least scrupulous.—M. Lenormant, who, amongst other things, says, "I must own, that no modern production of the Art has struck me more by the simplicity and truth of the gestures and expression of the figures. From the sublime feeling which animates those of the martyr and his mother, to the astonishment of the priest, who stands petrified at their intrepidity, and to the cool indifference of the proconsul, who, feeling neither compassion nor anger, merely executes his duty as magistrate

and soldier. This last figure alone would have made the reputation of any other painter; or, I might rather ask, how many painters have we who are capable of producing such a figure, and of accomplishing, by means apparently so simple an equally powerful result?" Instead of honestly owning that they were unable to comprehend and enter into all the artist's feelings and ideas; or of suspecting their own incompetence, the public attacked him with rude criticism—treatment which Ingres was not of a disposition to brook. In the following year (1835) he had an opportunity of quitting with honour his residence among a people who so ill appreciated his talents, being offered the appointment of Director of the French Academy at Rome, as successor to Horace Vernet—which invitation was eagerly accepted by him; and at Rome he has ever since resided, till about a year and a half ago, when he again returned to France.

To greatness of talent, Ingres adds greatness of mind and nobleness of character. His disinterested love of the art he pursues proves that he is of the sterling metal out of which the true artist is shaped. Had he condescended to work for paymasters, he might have accumulated great wealth; as it is, he is poor—poor at least in the worldly meaning of the term—but in himself richer than many of those whom the world accounts the richest, and honours accordingly.

## SOCIETIES IN CONNEXION WITH ART.

GRAPHIC SOCIETY.—At the latest meeting of the Graphic Society was exhibited a series of sketches by William Cowen, Esq., the merit of which, as works of Art, have been rarely surpassed, but which possess also vast interest as depicting scenery hitherto almost concealed from the eyes of Europe. The Island of Corsica has been long guarded with jealous care; and every possible difficulty has been placed in the way of examining it. The authorities have looked upon travellers as spies; and an artist, who thought to carry away any of its remarkable features, was in nearly as much danger as a rich trader among banditti. Knowing this, and being much surprised that Mr. Cowen should have furnished his portfolio in spite of obstacles, the very contemplation of which suffice to terrify us home-loving professors of the pencil or pen, we applied to that gentleman for some information concerning his tour; he has kindly obliged us with the following particulars, which cannot fail to interest our readers. We print his notes exactly as he has given them to us: it will be perceived they form a simple narrative, not the less exciting because there is no effort to produce excitement or to work up a display.

From Toulon we took our passage on the 5th of September, 1840, for Ajaccio: the voyage was stormy till we came within sight of the port, and then a splendid prospect was presented to us. On our arrival at the Quay of Ajaccio, our sailors vociferated "*Inghesi!*" instantly several small boats appeared full of porters. A scuffle ensued who should convey our luggage to the inn. This was the cause of a quarrel, very soon settled, however, by one of the most desperate among them drawing a large clasp knife, and in a menacing attitude, threatening to pass it across the throat of one of the other party! The spacious staircase which led to our rooms were filthy in the extreme, and the latter did not appear to have been occupied for many months, for black beetles covered the chambers, the crimson curtains of the windows were trellised with cobwebs, and the couch fell in pieces the moment my sea-sick sister lay upon it! I made known at the office of the Prefecture of the Police the object of my journey, and was treated with respect; though, from the day following to the termination of my journey, I was not only considered as a British spy, but was often told there was no doubt about it; and in no instance do I remember taking a sketch without having one or more of those "*gentry*" watching me. On the morning of our departure from Ajaccio, the captain of the police, with the man whom I had previously found behind the granite rock of Bonaparte's grotto, seized my portfolio, and took it to the Prefecture, but as I made a heavy charge against this intrusion it was soon returned. Even at Bastia, the captain of the police followed us into a private house, where I was sketching a fine view of the bay; and although this scoundrel appeared good-natured and civil, he was so determined to have me in his power, that when I inquired at the police-office for my passport, they insultingly told me they knew nothing respecting it, and treated my inquiries with contempt. Here I was in a fine quandary, for the only packet that would leave the port for Leghorn, for some time, was ordered to sail several days sooner than usual for the express purpose of

driving us out of the island. After much trouble, I found my passport in the pocket of my pseudo-friend, the captain of the police. This fellow threatened my landlord with his vengeance, for allowing me to make a sketch out of one of his chamber windows. The history of my sketches at Ajaccio is as follows:—"Two interiors of the House of Napoleon: one exterior, including the three Acacias which were planted by Bonaparte; and another including a Perspective View of the Street; two of the Granite Rock in which is the Grotto where juvenile Napoleon used to sit and study; two of the Bay, one of which includes the Tower where Bonaparte first commenced his military career; and one including a Picturesque Chapel with a splendid background on the Road to Corte. Near this place a parent shot his own son for assisting a deserter to escape, and receiving five louis d'or for his reward. When the father was remonstrated with, he replied, "Very well, will you approve the conduct of a Corsican who has dishonoured his family and his country?" He returned to his house, and untying the cords which bound his unhappy son, with horrible silence ordered his family to follow! When arrived at the place where the deserter had been secreted, he ordered his son to kneel and repeat his final prayer! and, horrible to relate, in the presence of the afflicted mother, brothers, and sisters, the echo of the neighbouring mountains told them his son ceased to exist! He threw the five louis upon the corpse, saying, "There, take the price of thy crime!" This occurred at the time the Genoese had possession of Corsica. Previous to our arrival there had not been rain for six months—no unusual circumstance. The cypress, arbutus, cactus, myrtle, daphne, and clematis, grow wild in great number near Ajaccio.

Corte.—We proceeded on our journey for Bastia in the small post-coach. The road soon rose among the mountains, and, being zigzag, we had several narrow escapes, especially at one point, when our driver (who sat with the guard), Jehu like, drove furiously; my sister was at the moment holding her head out of the coach, when suddenly we heard the cry, "St. Antonio!" The driver and guard were sent headlong over the horses' heads, and they (the horses) were seen laid prostrate upon the ground, and ourselves, with the carriage, were suspended over a terrible precipice! What admirable instinct the poor horses showed, for the moment they saw the danger, they threw themselves upon their haunches, having their forefeet sunk deep in the ground.

From Ajaccio to Corte the road lay through a fine wild country, some part of which was well wooded with splendid timber, which supplied Sardinia and Corsica with wood for ship-building, also France with her masts for ships of war. A little after midnight we came in contact with the return mail from Corte to Ajaccio, in a narrow defile, and our coach being on the river side, we were extricated with some difficulty from our perilous situation. We entered Corte about three o'clock a.m., and being perfectly dark, I asked a fellow passenger to show me an inn. He took me to a large house with the door and staircase quite open, and as I was literally led by the hand (after some knocking the door opened), "Behold an Englishman!" said my guide. Thus I was left for a few moments, when lo! with the lamp, I beheld a number of persons laid on benches, chairs, and tables! "Have you a couple of bed-rooms?" I inquired. "No, we have none at all, for to-night you may sit here, and we will retire till morning's dawn." I returned for my sister. How she exclaimed, when she saw her quarters! Here we fared pretty well, so far as mere food was concerned; but our cook was a dirty Florentine, and, I believe, never either slept in a bed, and what is perhaps worse, I think never washed himself. I called upon the commandant of the castle, and asked permission to sketch. He answered by reading me a lecture out of the code of military law, wherein so to do was expressly forbidden, especially to foreigners. After a long conversation, and almost a positive refusal of my question being satisfactorily answered, the captain of the police came into the room. With his assistance, and the ladies of the castle, I was allowed to take a few sketches, and the good wife of the commandant whispered in my ear, if any trouble should occur to me I might rely upon her best means to serve me. Happily for me I had received this promise, for when I was about leaving my inn to take the last sketch, a knock at the door announced a tall policeman (about six feet two inches), with two other attendants, desiring me to walk up to the castle with all my portfolio sketches. When we were in front of the castle gates, and on the other side, exactly opposite the late General Paoli's house (now a school endowed by him) some idle vagabonds shouted to see an Englishman in custody. Here I begged for half-an-hour's grace, for the purpose of taking my last sketch. It was granted, and two soldiers followed in the rear. In twenty minutes I made a tinted sketch of the ruins of a convent and fine back-ground mountains. Well, to the castle I was marched. The instant I arrived I demanded to see the lady of the commandant (Baron) Mariani. "Now, Madame," cried I, "I am come to claim your protection—I am really a prisoner in the castle!" "Indeed, you shall find me a true friend—wait a moment." She then retired, and shortly returned: "Descend the steps to the guard-room, the captain of the police will see you." The commandant would not make his appearance. To shorten my tale, I was finally acquitted without sleeping in the castle. On my first visit to the castle, the Governor showed me a hat, which Bonaparte wore at the battle of Austerlitz,

which I sketched. It had a piece cut off, which (true Frenchman like) he said was done by an Englishman. He (the Governor) wrote in my sketch-book, under the drawing of the hat, "Ce chapeau fut demandé, en 1831, par S. A., C. le Prince de Joinville." On our way to Bastia (from Corte) we had a bacon breakfast in a miserable hovel—it had no chimney or windows, the smoke passed out of the door—the bread was tolerable at Bastia. This is an interesting town. The foreground rock in my sketch of the port is a perfect resemblance of an animal with a long tail, of which M. Valéry remarks—"A l'entrée du port est un noir rocher tacheté de lichens blancs et de mousse, ayant la forme d'un lion et appelé par les marins *il leone*. Ce monument de la nature me paraît merveilleusement analogue au caractère du peuple corse, et digne d'annoncer l'île qui a vu naître Napoléon." And there are several of these sort of natural curiosities in Corsica. Our consul desired us by no means to leave our inn for the packet without his protection, intimating that the troublesome police would probably annoy us. When he saw us on board the little St. Pietro, he observed we had escaped one danger, he feared, to meet with a greater, that of a terribly foreboding element. As night was fast approaching, our prospects looked blank indeed. Our worthy consul's kind attention and good will was such as ever to claim our esteem and regard. A solitary traveller and ourselves were the only cabin passengers; indeed half a dozen persons would have filled the cabin entirely. The little St. Pietro carried us safe to Leghorn (Livorno); but on its return the vessel and all its passengers were lost in that storm which had been hanging over us!

In Italy several almost fatal accidents happened to us, and several times we were robbed, &c., might make a longer tale, but this is not necessary. I must even now offer my apology for having written this so hastily and incorrectly.

The sketches are, as we have intimated, not only interesting in the highest degree, from their novelty, as picturing scenery with which we have been hitherto unacquainted—they are of the finest character as works of Art; and we trust that, in some shape or other, they may be multiplied so as to afford information and enjoyment to thousands. They are, indeed, the only authentic records of scenes rendered historical by the early career of the most wonderful man of his age. Mr. Cowen has added a valuable contribution to the story of Bonaparte's career.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—At the meeting on January 9, C. Barry, Esq., V.P., in the chair, the first paper which was read was "A New Mode of Constructing the Flues of Chimneys," by Mr. Moon; according to which it is proposed to make them circular, and of no more than from 8 to 14 inches in diameter, which dimensions, it is stated, will be quite sufficient, now that the old and inconvenient mode of cleaning chimneys by sweeping-boys is abolished. Several small models were exhibited by the inventor; but what he proposes is of such a nature, that it requires to be tested by actual use and experience. May it not be found, for instance, that such flues would require cleansing much oftener than our present chimneys? which would, of course, be a rather serious objection. On the other hand, should they be found to answer, and, in getting rid of old inconveniences, not to be attended with fresh ones, such flues will doubtless be a very great improvement, as they might be carried up even through partition walls. The next paper was "A Description of the Testimonial or Obelisk, erected at Lymington to the late Sir Harry Burrard Neale," which is constructed of Dartmoor granite, and is 76 feet high, on a pedestal 18 feet high. The cost was under £1400, a most prodigious difference from what will be that of the column in Trafalgar-square. This communication was from Mr. Draper, architect, of Chichester; and it could be wished that more papers of the kind were transmitted to the Institute. Were architects invited to send in reports on works they have executed, a valuable collection of documents would in time be formed, and many of them might be found worth publishing in the Institute's "Transactions." At any rate, they would be preserved, and would prove a series of interesting and useful architectural records. The last paper was "Illustrations of the Mode of Striking Gothic Tracery," by Mr. R. W. Billings, and was intended to show how an almost endless number of patterns might be produced by merely striking curves from centres systematically arranged. To a certain extent the principle may be found useful in practice, particularly for mere mechanical patterns, such as those of carpets—of which kind was a carpet laid down at Dalkeith during the Queen's visit; yet, it may be questioned if it be not too

much of a mere *kaleidoscope* process to be altogether suitable for genuine architectural design, otherwise than as suggesting hints.

ARTISTS AND AMATEURS' CONVERSAZIONE.—The first meeting of the season was held on the first Wednesday of the month, in the rooms of the honorary secretary, 6, Pall-mall. The evening was a very gratifying one; and the advantages of the change from a tavern to a well-lit and spacious "gallery," decorated with works of Art, were felt and appreciated by all who participated in the enjoyments incident to so beneficial a "removal." The large painting of Sir George Hayter—"The Royal Marriage"—was placed for the occasion; and a large supply of sketches and drawings was provided for the members.

THE AMICABLE SOCIETY.—We have received three or four letters, containing queries in reference to the "Amicable Society" (the Junior Artists' Annuity Fund), and have applied to the secretary, C. E. WASTAFF, Esq., to answer them. He requests us to say, he will feel happy to communicate with any artist who will write to him on the subject. His address is, 30, Argyle-street, New-road. From our own knowledge of the society, we do not hesitate to recommend it in the strongest terms. It is the duty of every prudent person, who thinks of the misery that illness or death may entail upon his family, to associate himself with it. There are hundreds who are not "qualified" to become members of the Artists' Fund, who may at once enter the Amicable Society. There is no restriction which excludes parties living in the country or in Ireland.

#### ART IN THE PROVINCES.

NEWCASTLE-ON-TYNE.—The exhibition of works of Art in this town closed on the 8th of December. The following is a list of pictures disposed of as prizes in the Art-Union:—"Study in Knowle Park," by J. Radford, London; "Landscape," by E. Fair, Newcastle; "Burleigh Castle," by Robert Train, North Leith; "Cullercoats Fisher Girl," by J. H. Mole, Newcastle; "The Evening Walk," by Mrs. E. W. Salter, London; "Landscape," by Thomas Baker, Leamington; "In the Village of Langton, Lincolnshire," by T. M. Richardson, jun., Newcastle; "Partridges," by W. Fowler, London.

PLYMOUTH.—WEST OF ENGLAND ART-UNION.—We have elsewhere referred to the future prospects of this society. It is yet in its infancy, and has done but little. The subscription was only half a guinea, and the subscribers numbered no more than 306. Still, the good work has been commenced, and we have no doubt that great achievements will grow out of it. We select the following passage, from an extremely sensible and well-written Report:—"Public feeling has been awakened in the West; that feeling is rapidly extending, and the Committee entertain a confident conviction that the West of England Art-Union is destined, at no distant period, to occupy a most honourable position among those institutions which have for their object the diffusion of a general taste for works of Art, and the encouragement and support of native genius. They invite to their assistance every lover of the Arts, every well-wisher to his native country; and they venture to anticipate, with confidence, a cordial co-operation from every part of the three counties, whilst the result of their first year's efforts has taught them also to expect a large amount of generous support from other parts of the country."

NORTHERN IRISH ART-UNION.—The results of the first experiment in Belfast—the great northern capital of Ireland, and the most flourishing of its towns—are not altogether satisfactory. The exhibition consisted of above 400 works; the private sales amounted to £343; the Art-Union subscriptions to £242, and the receipts, from visitors, to £98. But the expenses of freight, packing, &c., extended to the large sum of £270; leaving, therefore, to the directors of the Art-Union only a sum of £72 to expend in purchases. The prize-holders, however, added £52. The selections they made consequently were distributed—to what they call "fortunate subscribers"—in pictures, which vary from £3 to £20; the majority being of the price of £5. The following is a list of the "Prizes!"

"Landscape," by J. Tennant; "Landscape," by J. W. Allen; "Composition," by W. H. Maguire; "Moonlight," by J. Hawksett; "Landscape," by W. Cranbrook; "The Trumpeter," by J. Cook; "Meeting of the Waters," by Nicholl; "Glen Scene," by G. A. Fripp; "Repose," by J. Fussell, sen.; "Prussian Brig," by S. Walters; "View on the Thames," by C. D. Smith. The following pictures were purchased by private sales:—"Scene on the Island of Arran," H. McCulloch; "Distant View of Blackwall," J. Tennant; "Nelly Clary dressing for the pattern" (from a story by Mrs. S. C. Hall), J. Clater; "Sleigh and Red Deer," C. Hancock; "Lane Scene in Devonshire," H. Jutsum; "The Tired Labourer," T. F. Marshall; "Winter," J. F. Gilbert; "View on the Thames," J. Tennant; "Gipsies," J. Bateman; "View on the Lagan," H. Frazer, R.I.A.; "Bolton Park," A. Vickers; "Bakewell," A. Vickers; "View on the Thames," J. Dujardin.

The committee add, that, "From the experience which they have now gained, they have no doubt they will in future be enabled to get up even more attractive exhibitions, at a very considerable reduction of expenditure, so as to have it in their power to devote the whole sum subscribed, and even a part of the receipts from visitors, to the subscription sale."

Belfast ought to aid the Arts, and is well able to do so. We cannot avoid thinking that there must have been some grievous mismanagement, or the returns would have been very different.

**IRELAND.—DUBLIN.**—The exhibition of the Royal Hibernian Academy is advertised to be opened on the 1st of May. Pictures must be received in Dublin on or before the 20th of April. We trust, that this announcement will be borne in mind by artists. We perceive, by the address of Mr. Stuart Blacker, in reference to the Irish Art-Union, that he calculates on receiving this year £6000; between £4000 and £5000 of which will have to be expended in purchasing pictures out of this exhibition. Last year, every picture approaching to merit was bought; and when no more decent works remained, the committee were obliged to buy some that were unworthy to be hung in a pot-house. And why? Simply because they were compelled by their contract with their subscribers to lay out all the money collected. We shall grieve if this evil is to occur again; it can only be prevented by taking care that the supply shall be equal to the demand; if our best London artists will contribute, they will preserve the committee from a degradation, and the Arts from being despised, while they will improve the taste of the Irish public, and doubtless the professional character of the Royal Hibernian Academy. We are full sure that no really meritorious picture that may be sent to Dublin will be permitted to come back. And we hope that from this fair competition artists will not be discouraged, because they have received no formal invitation to contribute. Such invitations we have reason to know will be very limited. The expense of carriage to Dublin is not great; steam-boats voyage weekly from the Tower-stairs. The Royal Hibernian Academy have not done us the honour to communicate with the artists through our columns, where they knew full well their advertisement would be seen by all who are interested in perusing it. We have no notion, however, of permitting the artists to remain in ignorance on the subject.

**THE ROYAL IRISH ART-UNION.**—At a late meeting of the General Committee of the Society, after a very favourable statement of the progressive increase of the funds, being, in three years, upon the total comparative amount received for the Art-Union of London, £2541; Scotland, £4070; Ireland, £7468; the following report from the Committee of Selection, relative to the drawing of 'Minerva and the Muses,' was submitted. We notice this as indicative of the utility of an active and persevering system of management, being aware that to ascertain the facts, detailed inquiries were purposely made at Rome; and subsequently confirmed by the most extensive investigation in Dublin and elsewhere.

*The Drawing of 'Minerva and the Muses.'*—The Committee of Selection presented the following statement, with reference to the above drawing, which was purchased from Signor Ratti at the last exhibition:—"A strong suspicion having arisen in the minds of the committee as to the originality of the work, Signor Ratti was communicated with on the subject, and informed that our rules precluded the purchase unless a work was the *bona-fide* production and property of the artist in whose name it was entered for exhibition. Although Signor Ratti asserted in the strongest manner that it was his own production, the committee had so strong a misgiving as to reduce the amount awarded from £50 to £25, and continued their inquiries on the subject. They had been lately enabled to forward to Signor Ratti the name of the real painter, which was Consoni; the name of the purchaser of the work for which this was a preparatory drawing; the price paid for the same, with the names of three gentlemen who were ready to depose to these facts. Signor Ratti had replied by acknowledging that the picture was by Consoni, and trying to palliate the assumption of his name by saying that Consoni was a friend, that he acted so with a view to his interest, and had sent him the money all but £5, retained for frame and carriage of the picture. The committee thought it was due to themselves to show that they had spared no exertions to rectify the error into which they had been led, and hoped that steps would be taken to prevent such an occurrence in future."

It was unanimously resolved that the name of Auguste Ratti be erased from the list of artists whose works were purchased by this Society, and that of Nicolo Consoni be inserted in its place, and that a note explanatory of the change be added thereto.

That a copy of this statement and Signor Ratti's letter be respectfully forwarded to the Royal Hibernian Academy, with the view of obtaining through them the assistance of the artists generally in preventing the reception of works of Art for sale at the exhibition which are not the *bona-fide* productions and property of the artists in whose names they are entered, and in publicly exposing any one who infringes so salutary a regulation.

That the Selection Committee be requested to continue their inquiries until they are satisfied that the amount stated had been actually handed over to Signor Consoni.

## VARIETIES.

**THE ROYAL ACADEMY.**—One of the most frequent, although the most groundless, of the charges against the Royal Academy is, that admission into the body is obtained by previous acquaintance with its members; that indeed, "boosing," such as Sir Archy Mac Sycophant recommends, is as necessary a qualification as painting. As in most other cases this is a calumny not easy to be refuted; and sometimes the shadow of proof is supplied by the fact, that the candidate is intimate, as he ought to be, with the majority of those with whom he is ambitious of associating; for if his talents be of a high order, it follows necessarily that he is the familiar acquaintance of men of equal talents, of similar pursuits. It is notorious that Eastlake was elected while in Rome; that Gibson was chosen while he was also a resident there; and that a score of instances equally to the point might be quoted; still the assertion is made, and by persons who know the falsehood of what they utter, both privately and publicly, that the Academicians require a sort of canvass previous to election. There are few Associates who have not been subjected to this charge—in the teeth of their own indignant denial. It is not often however that a case occurs so strong as that which is one of the latest—the election of Mr. M'Dowall as an associate. That gentleman had not, we are assured, upon indisputable authority, a single acquaintance among the Academy, and had never exchanged a word with any one of its members. His appointment did him honour, and it conferred equal honour upon the Academy; he is an artist of high genius—self-taught and self-elevated—and was, until within the past year—indeed until the eve of the day of his election, when he achieved fame by his own unaided talents, working in obscurity, and

"No revenue had  
But his good spirits,"

supported by the mightiest of all sustaining powers—a consciousness of intellectual strength. The Academy knew nothing of the man, but they saw what he had done; the attention of individual members was drawn to his works by another great artist—his countryman; and he was elected without the Academy being aware of anything concerning him, but his name and his deserts. From penury—honourable penury—this fine artist has been raised to sudden eminence; his powers are not greater, perhaps, than they were a year ago, but *they are known*. The grand barrier to success has been removed, and assuredly Mr. M'Dowall is destined to occupy a high place among the worthies of his age and country. We should not have been entitled to say so much concerning the career of this artist, but that some particulars relative to it have been made public by his fellow-townsmen, Emerson Tennent, Esq., M.P.

**THE THREE STATUES.**—A letter has been published under this title, addressed "without permission" to Sir Robert Peel. It is, at best, a piece of gross impertinence, written in singularly bad taste, and in a spirit calculated to do mischief. It refers to the selection of Messrs. M'Dowall, Kirk, and Steel, as sculptors to execute the three statues recently commissioned by Government. However opinions may differ concerning the choice, there can be but one as to the considerate kindness and generosity manifested by the Premier; and it is only the future that can prove either its wisdom or impolicy. The writer considers one of the three—Mr. M'Dowall—"an artist of no ordinary merit;" but two or three years ago he could not have described him even in terms so qualified; who shall say that two or three years hence, the compliment will not be equally merited by Messrs. Steel and Kirk. What is genius without opportunity? A diamond in the mine. In sculpture it is especially difficult to make way without help—to procure even the block from the quarry requires a sum that, to a

"poor" artist, seems a fortune. We are continually calling out for aid to young talent, and protesting against giving assistance where it is not needed; yet now barks one of the many puppies who are to be found perpetually snapping at the heels of those who are marching to the succour of struggling genius. Just the same sort of cur-ish exasperation was manifested when a comparatively obscure soldier, named Wellesley, was promoted to command the British army in the Peninsula. It is not very likely that Sir R. Peel will see the silly and insolent letter that has been addressed to him; if he should, he will easily perceive and appreciate the motives that sent it to the press.

**ISLINGTON AND NORTH LONDON ART-UNION.**—The pictures selected by the prizeholders in this Association were exhibited during the 11th, 12th, 13th, and 14th of January, at the Islington Literary and Scientific Institution. The subscription to the Islington Art-Union is half a guinea per annum, the whole proceeds of which, deducting necessary expenses, are devoted to the purchase of pictures, no engraving being given to the members. The amount subscribed was £239, the sum allotted for prizes £197. The following are the names of the pictures selected:—"The Dairyman's Daughter," Shayer, £50; "The Orphan's Friend," Dawe, £20; "Hastings," Clint, £15; "Derwent-water," C. Fielding, £15; "Winter," A. H. Taylor, £10 10s.; "Gale, after Trafalgar," Huggins, £10 10s.; "Scene from Heart of Mid-Lothian," Walmsley, £10; "Landscape," Shepherd, £5; "Slaughtered Sire," Kearney, £5; "Scene from Ivanhoe," Gompertz, £5. The remainder of the selections consist of proofs of Paris's 'Coronation' and 'Bolton Abbey,' with the exception of one, which is a cameo.

**THE NATIONAL ART UNION.**—We last month tendered our advice to this Society—if the term may be used—to abandon the project of exhibiting pictures to be afterwards distributed as prizes, and to adopt the more safe and simple plan of permitting the prizeholders to select for themselves. We are glad to find that this suggestion has been adopted. A new circular has been sent to us, from which we select the following paragraph:—

"The pictures which are to be purchased with the amount of the prizes distributed by the Institution, may be purchased, at the option of the prize-holder, from any accredited artists' exhibition in the United Kingdom within twelve months after the prizes have been declared. Thus the prize-holder will avoid the necessity of a journey to London, or the only alternative of selecting his picture by deputy."

This will be considered by the artists generally as satisfactory; it may open a door to some evils, but so does every other plan that has been, or can be devised. There is another important feature introduced in the new prospectus:—

"Any prize-holder of two hundred pounds and upwards, who cannot select a picture to his taste from the exhibitions, will have the privilege of giving a commission to any artist of his own selection, subject to the approval of a majority of the committee. This arrangement will avoid the difficulty of which there has been a universal complaint, inasmuch as in nearly every instance, pictures of the highest merit are purchased previous to exhibition."

We think this a decided improvement, and earnestly press upon other institutions the policy of pursuing the same course. The sanction of a Committee would afford sufficient security against an improper selection, and the prize-holder might obtain a picture that would be really an acquisition. We shall rejoice if this abandonment of the objectionable portion of their "plan," on the part of the proprietors of the National Art Union—made, we presume, with that view—shall have the effect of allaying a hostile spirit between them and a large number of artists. The artists have, we humbly think, carried their hostility much too far; they should have been contented with expressing their dissent from the new system, and their confidence in the old; in memorializing the Prince Albert to change his mind, they acted, to say the least, indiscreetly, and they ought not to have been surprised at finding it was of no avail.

**WILSON'S PORTRAIT OF HAMILTON.**—A singularly interesting painting is in the possession of John Britton, Esq., F.S.A. It is a fine spirited and faithful portrait of his friend and fellow-student, Mortimer, by Richard Wilson, R.A. Mr. Britton has published a lithographic copy of it, accompanied by some remarks on the personal character of the two artists, written in a peculiarly graceful and forcible style, and bringing, by a few effective touches, the two great men actually before us. The picture, from the interest of the subject as well as from its merit as a work of Art, is one that should be found in the national depository, where, unhappily, there are so few of the productions that give a name to our country.

**ELECTROTYPED PLATES.**—A variety of contradictory rumours are afloat concerning the chances of obtaining plates by the new process; some considering the results to be safe, and others maintaining that, at present, at least, there is no likelihood of a successful issue. At all events, the question will be determined within a few weeks; for the plate of the London Art-Union, and one of the plates of the National Art-Union are now undergoing actual trial. We have still serious doubts as to the end, of which we see only the beginning. At this moment we have before us a plate produced on this principle—a small and roughly executed plate, however. It yielded only 200 impressions, and was then rejected as worthless. However, we may "suspend our admiration yet awhile;" for a short time must inevitably place the matter beyond speculation.

**THE ENGLISH ARTISTS IN ROME**—met together on the 31st December, "to see the old year out." Mr. Freeborn, the banker and British consul, was in the chair; and the party and their friends had a merry night of it. The dinner took place at the Hotel D'Angleterre, recently built. Our informant adds that, "Gibson is engaged on a portrait statue of Mrs. Murray; Wyatt is finishing his statue of Penelope for the Queen; Macdonald is busy with busts of Lord and Lady Winchelsea; Cornick's portfolio is being replenished with illustrations of the Forum; and Penry Williams is painting a portrait for Lady Davy. A number of cartoons are also in progress for England, on which Bostock, Furze, Wright, Redford, Sutter, Messen, &c., are employed."

**THE TEMPLE CHURCH.**—Just now this building is the lion of the day with architects and artists; nor undeservedly so, since it well merits to be examined and studied by them, on account of its decoration generally, and of that more especially derived from the application of *polychromy*, which, although not altogether without precedent in this country, a few specimens of the kind being to be met with in some of our ancient village churches, may be said to be quite new to the public. From what we had heard, previously to visiting the building, we were rather apprehensive that the effect would be somewhat too "showy"; therefore, if not objectionable in itself, so far incongruous both with the style of the architecture and the sacred character of the edifice. Instead of such being the case, the embellishment of the vaulted roof has been conducted with so much taste, that the degree of richness which might else have become gaudiness, if not vulgarity, is tempered down to sobriety. Even the circumstance of such decoration being continued throughout tends to produce simplicity. Brilliant, too, as is the stained glass in the windows at the east end, their effect is not glaring, though certainly glowing with gemlike radiance. In matters of this kind Mr. Williment has put us again into the right track, by treating windows as mere decoration, without attempting to convert them into pictures, as was done in St. George's Chapel, Windsor, where two windows at the west end of the nave were completely stripped of their architectural character, and rendered positive eyesores in the exterior, in order to be filled up with what are no

better than gaudy "transparencies," after designs by West. The only objection we have to make in regard to those in the Temple Church is, that in the centre one the purple and blue tints occupy too much of the pattern and surface. It is, we presume, intended to fill, in course of time, all the other windows with stained glass, like the one on the south side, and facing the organ recess, which is of different character from those at the altar end of the church, and better adapted for the style of glazing generally. At present there is only one painted window in the clerestory of the circular vestibule (now thrown open to the body of the church), which, therefore, as viewed from the latter, looks rather cold in comparison, and to stand in need of colour. A very great improvement would it be could the blocked-up rose-window there, over the entrance, be again opened and filled with stained glass; and where so much has been done, without regard to expense, it is to be regretted that pecuniary considerations should deter from securing what would be so valuable in effect. Somewhat too much, on the contrary, has been done in regard to decorating the altar, which is not only a little too finical in design, but too florid in embellishment. Being painted with a pattern of bright colours on a white or cream coloured ground, the altar-railing looks too much like china or enamel. Besides which, the whole of this altar is too ambitiously ornate, in comparison with the "seats," or low open pews, which appear as much too stinted in, as the other has been overdone with, ornament. One thing decidedly against them is their colour, a fault that might easily be corrected—not by painting, but by washing the wood with lime-water, then rubbing it with oil, and finally polishing it up by hand, which would bring out the graining, and give a fine deep tone to the oak. It may be said these are but minor matters; true; yet very much frequently depends upon minor matters; nor is it a trivial one, when, from want of due attention to trifles, the effect that is in itself important happens to be more or less marred. However, if not perfectly satisfactory in every respect, the Temple Church is a work highly creditable both to the artists employed upon it, and to those by whom they were employed.

**NEW ROYAL EXCHANGE.**—Though sculpture, or rather the expense of it, was made an objection to Mr. Donaldson's design for the Exchange, it is now not only determined that the pediment of the portico shall be so enriched, but the design has been ultimately fixed upon. Only three sculptors were invited or admitted to compete, viz., Joseph, Watson, and Westmacott (the successful one); consequently the task of decision, as far as its labour depends upon the number of drawings to be inspected, was considerably abridged. Still we think there was what looks like precipitation or something worse, when it is known that the decision was made at once on the day following that on which the designs were sent in. This was certainly doing business with despatch, and as if to make up for the protracted dilatoriness attending the two competitions for the edifice itself; still we think it would have shown more judgment on the part of the committee had they taken a little more time, and submitted the designs to the opinion of those more competent than themselves to decide in what are purely questions of Art. Even those best qualified to judge could hardly give their verdict on such an occasion so peremptorily and off-hand, and after only hearing each artist explaining the mere meaning of his own subject. At any rate, the designs themselves might have been left open to public inspection for a certain time, if only because it would have shown that the committee had full confidence in their own judgment, and were not at all afraid of its being called in question by others. The successful candidate was Richard Westmacott, jun., R.A.—an artist of unquestionable ability, at all events.

**NEWSPAPER CRITICISM.**—We quote from

the *Observer* of the 22nd January the following example of the mode in which newspaper critics are permitted to deal with a momentous subject. The observations of so silly or malicious a scribbler call for no serious comment; but that we know, if a falsehood be repeated a hundred times, and in a hundred different ways, there will be many to receive it as a truth. The writer of the paragraph in question is referring to the recent judgment of Chief Justice Denman on the appeal of the Royal Academy against the rate for relief of the poor. "Is it right," he asks, "that a shilling should be exacted from every person for the inspection of a number of *bad paintings*, placed in most conspicuous and commanding situations, and the fruitless endeavour to enjoy the gratification of examining the few good ones, which are *carefully hung in the most unfavourable lights*?"

**ROYAL ACADEMY APPEAL.**—A judgment of some importance was delivered on the 18th of January, by Chief Justice Denman, in the Court of Queen's Bench. The question was, whether the Royal Academy were liable to be rated to the relief of the poor of the parish of St. Martin, in respect of the rooms used by them at the National Gallery, Trafalgar-square. His lordship said, that if a party had the use of premises as a mere servant of the Crown, and in no other character, and had no beneficial occupation resulting to himself from that use, then he was not rateable; and if the occupation here was only one of public property for public purposes, and without private benefit, the case must be treated as falling within the principle of exemption. Now, as this society had been instituted by George III., in 1768, for the express purpose of improving the arts of painting and sculpture in this country; as the premises were the property of the Crown, as the officers were either appointed by, or subject to the approval of, the Sovereign; as the treasurer was appointed by the Crown, and his receipts were subjected to the audit of the Keeper of the Privy Purse; as the society had been placed in these rooms by the Crown; as it had no lease; and as the Crown might, at any moment, resume possession, the defendants might well be considered the agents of the Crown for the furtherance of objects which were of a public and national kind, and the Court was therefore of opinion that no private occupation could be proved, and, consequently that the rate could not be supported.

**COLOURS ON ANCIENT MARBLES.**—In 1836 a Committee was appointed by the Institute of Architects to examine whether any evidences of colour remained on the Elgin marbles, and their Report was published in the last part of the Transactions. During the past month (January) some members of this Committee, namely: Mr. W. R. Hamilton, Sir R. Westmacott, Mr. E. Hawkins, Mr. Fowler, Mr. Bailey, Mr. Angell, Mr. Scoles, and Mr. Donaldson, met at the British Museum to examine the marbles recently discovered by Mr. C. Fellows amongst the ruins of Xanthus, an ancient city of Lycia, in Asia Minor. The tomb of the Harpy, from which one of the principal friezes came, situated on the slope of a hill, consisted of a square shaft in one block 17 feet high, and weighing about 80 tons. The shaft, which rested upon a base or plinth, rising six feet from the ground on one side, and on the other rising but little above the present level of the earth, was surmounted by the bas-relief in question; the opposite sides of the relief being respectively eight feet four and half and seven feet six inches long, making a total length of thirty-one feet nine inches. Mr. Fellows considers the subject of the sculptures to represent the legend of the daughters of King Pandareus carried away by the Harpies. There are also five figures seated on chairs, which are evidently intended to be represented as made of bronze. On these chairs there are perceptible traces of a brownish tint approaching to red, showing that the ornament was indicated by colour, even without the outline being carved.

The figures were about one and half inch in relief, and in many parts there are patches of blue colour on the ground, particularly on the under cutting of the hair—and especially where the recesses are protected by the overhanging band of the frieze, forming the top of the blocks. A portion of this blue colour has been analyzed by Dr. Faraday, and found to be a mixture of wax, with a pulverized blue smalt coloured by cobalt: the smalt being in rather coarse patches, when the wax is charred away each piece is seen by a moderate magnifier as a small fragment of glass. On referring to an analysis of Egyptian blue colour by Dr. Ure, a great analogy appears, as in the Egyptian specimen the blue fragment was a pulverulent blue glass. Some remains of a bright crimson colour were collected from the edge of the crest of a helmet, but have not yet been analyzed. Some brown colour was examined by Dr. Faraday, and found to consist of a ferruginous substance and a calcareous matter, without any wax or resin. One the whole, it seemed clear to the Committee that the ground throughout had been painted blue so as to give relief to the figures. Some other parts have also been coloured, but to what extent cannot be said, in consequence of the rough state of the surface of the marbles. The character of the sculpture denotes a very remote period of Art, and it is to a certain degree rude; but the forms and embellishments of the bronze chairs are extremely refined, and betoken a class of Art not unlike that of the triple temple in the Acropolis of Athens.

THE NELSON COLUMN—has now attained its full height, with the exception of the abacus: the bell, or core, of the capital is formed, and a considerable portion of the foliage of it is cast in bronze: three months, perhaps, will finish it. Before it be too late, however, we would draw public attention to an alteration which is about to be made in the design of the capital, in the hope that it may be prevented. As originally arranged and estimated for, a full-sized figure of Victory, winged, occupied the centre of each face of the capital, and served to render it more than commonly elegant, and, in some degree, original. Contributions not flowing in, the committee have resolved, unwisely as we think, to omit this feature of the design, and to reduce the capital to that of an ordinary Corinthian column. The saving effected cannot amount to more than three or four hundred pounds; and it does really seem a pity that the good effect of a monument which is probably to last for centuries, should be interfered with for so trifling a sum. We were strongly averse to the employment of a column in this particular case, and considered the choice made by the committee was exceedingly injudicious; but since it is erected, all that can be done is, to see that no endeavours be spared to render it as satisfactory as possible.

AT THE HOUSES OF PARLIAMENT—the first stone of the Victoria Tower has been laid, without the presence of the Queen or Prince! This departure from old customs in so important a structure is to be regretted. Probably, however, the ceremony may be reserved for the commencement of some other portion of the building. We hope it is so. The Victoria Tower, it may be mentioned, promises to be the most striking example of modern Gothic in the whole world. It will be 70 feet square, and 300 feet high, covered externally with elaborate sculpture,—perhaps a little too elaborate for this metropolis, where every building becomes so speedily blackened as it does. Several stone buildings in town have been lately painted. That a necessity for this step should exist is to be regretted, as it has the effect of lessening the character of the edifice.

MR. HERING has opened his dépôt for the sale of foreign works of Art, at No. 153, Regent-street. Those who are interested in the subject—a subject of growing importance—will do well to visit this establishment, where they

may examine all the best productions supplied by the several states of Europe—from the shilling part of some minor publication up to the costliest prints and volumes. While we are far from admitting the super-human excellence which some persons assign to the productions of the continent, it may be readily yielded, that the works produced in Germany and France may be very useful to the British artist, who will do wisely to consult them often. We rejoice, therefore, that a place is now established where they will be all collected, and trust that this circumstance will be, as it surely may be, of advantage to the English public. Mr. Hering is himself a man of judgment and taste, and we can have no doubt, will so devote his energies that an interchange of labours may be of value to both countries. Hitherto, it should be remembered, we have been enabled to know very little of foreign productions of the burin—our publishers, most of them at all events—have set their faces against their introduction into England; or, when obtained, they were kept for the exclusive enjoyment of the few by whom they were appreciated. Now, we shall have them *all*, to be examined by *all*; and by their own merits they will be judged. One great and most important improvement may follow their extensive introduction—they may help to elevate the popular mind, so that the historical works of our own great artists may meet with more general appreciation. If our own publishers will not, the Germans *will* supply us with works of loftier aim than portraits of dogs, birds, and monkeys, admirable and incomparable in their way, but which leave the mind as bare and empty as they find it. We need things to *think over*—and these we certainly get from Germany. It augurs well for the Arts, that a publisher considers it no hazard—or at least but a small one—to establish a dépôt for the exclusive reception and circulation of continental prints.

A NEW INKSTAND has been invented by Mr. Perry—to whom authors are so largely indebted for the many facilities he has placed at their command. It is a vast improvement upon everything of the kind that has been yet produced. The principal advantages consist in the supply of a given quantity of ink—never either more or less—the keeping the ink always pure, by rendering it impossible to contract dust, and the cleanliness incidental to its use. We have it in use at this moment, and find it so desirable that probably we shall never write without it. We are therefore bound to give our cordial approval of the patent, and to confirm the statement of the patentee—that “this inkstand will be found invaluable in keeping the ink always clear and fit for use in every climate. It is of a cylindrical form, with a gravitating action, adjusted so as to supply the dipping cup with ink, which can be returned into the cylinder when not in use. Economy, cleanliness, and usefulness are secured by it, and it cannot get out of order.”

M. RICHTER, an artist of Germany, has invented a mode by which he professes to teach a person altogether ignorant of drawing, “in one lesson,” the art of copying any object that may be placed before him. We are at all times suspicious of short cuts to knowledge. Ability is not to be obtained by a hop, step, and jump. That which is to be procured easily is rarely valued, and seldom worthy of value. Yet it cannot be denied, that of late years science has removed a vast number of difficulties out of the way of those who would attain excellence; and while we ought not to be too credulous, we should not be too sceptical, when that which assumes to be an improvement is submitted us. The plan of M. Richter is undoubtedly ingenious; the principal media are glass and a peculiar kind of ink—farther than this it would not be fair in us to state, as he designs to turn his skill to account. For copying specimens in ornithology, botany, coins, and so forth, the method is unquestionably good; it secures external forms with singular precision, and affords remarkable facility in the power to

enlarge or diminish the objects to be copied. Indeed, its advantages may be justly described as far more extensive; for it enables the copyist to preserve accurate memoranda of scenery, houses, and things remote or near, and particularly outlines of the person or face, and of animals, large or small. It may be, consequently, very useful to travellers, who desire to bring from foreign countries sufficiently minute pictures of places, people, or things they have seen, without reference to artistic skill—from which, however, competent artists may subsequently make proper pictures. The machinery—if so it may be termed—is remarkably simple, and may all fit into a tolerably-sized note-book; and the “lesson” consists of little more than five minutes of information. Those who are curious in such matters—or who may find such a method useful—will do well to consult Mr. Richter, at 21, King-street, Portman-square, and judge for themselves, whether the application of his plan will answer the required purpose.

PROFESSOR COCKERELL'S LECTURES.—These commenced upon the 12th inst., and at present three only have been delivered. We propose to review the course in our next number, and to notice the leading points of interest.

CARY'S HYDRO-OXYGEN MICROSCOPE.—The extraordinary powers of this microscope are exhibited at the Polytechnic Institution on a variety of subjects, selected principally from among the most minute members of the animal world. The lowest magnifying power presents an object at twelve thousand times the natural size; and its utmost range extends, we are assured, to a reflected magnitude of seventy-four millions of times the natural size. The first object shown was the *exuvie* or cast skin of a spider, which, from its transparency, was admirably adapted for exhibition. The substance resembled tortoise-shell, but was of a grey colour; the head was perfect, with its powerful forceps for seizing prey, and the apparatus for the injection of the poison. A parasitical scarabæus, found upon the tortoise, was shown, and also varieties of the *larvæ* of insects in the water wherein they were found, and which, although so minute, were displayed, at a very moderate power of the instrument, many feet in length. The *larvæ* of the gnat were especially remarkable, not less for their great activity than their hideous shape, reminding the spectator of the monsters of fabulous history; these were followed by the adult insect, a much more elegant and attractive object. The *formica nigra*, or common black ant, was magnified into a formidable grinding apparatus, to which even stone is said to yield. Among the aqueous curiosities was the water-bog, which, although of a heavy and sluggish form, threw itself with great rapidity and determination on others of its species, whether in sport or spite must be determined by lengthened observation. At the extreme power of the microscope a human hair is magnified to a diameter which would be incredible, were it not that the spectator is invited to the proof. This microscope is now one of the greatest attractions of the Polytechnic Institution; its developments are matter of wonder to the common observer, and deeply important to the naturalist, who, by such means, is enabled to examine the minutest animal structure, and survey with accuracy these departments of the economy of nature, which without such aid must have remained mere subjects of conjecture.

MODEL OF ST. PETER'S, AT ROME.—A model of St. Peter's, of rare and surpassing workmanship, is now exhibited at 121, Pall Mall. It is the work of Signor Andrea Gambassini, a native of Leghorn, who has been employed 14 years in its construction. It has been reduced by a scale of 1 to 100, and measures in length 21 ft., and in height 6 ft. 4 in. Considered merely as an exterior, it would yet be one of the most extraordinary works of its kind that have ever been

produced; but when the model is opened, and the spectator beholds an interior, containing every picture, pillar, ornament, and moulding, studiously copied from the vast temple itself, he is overcome with surprise at such an example of united skill and perseverance. The whole is executed in maple, coloured woods, and ivory; of the last material the statues are formed. The mosaic pavement is copied in woods resembling the marbles in colour; but the mosaic altarpieces are painted in oil upon copper, with the most elaborate minuteness of finish, the whole of which are seen, on the model being opened, by means of light thrown into it from a small mirror. The interior is marked by the same care and finish that distinguishes the exterior: the paintings, the columns, the mosaic pavements, and the richly-gilded fretwork ceiling are all imitated with marvellous exactitude. To all who may not be enabled to visit Rome, this model will convey a more perfect idea of St. Peter's than any written description; and all who have seen the architectural wonder will be much gratified in seeing so perfect a miniature reproduction of it.

**KING'S COLLEGE, LONDON.**—It is intended to appoint a professor of drawing to this College, and artists have been invited to give in their names as candidates. It is to be hoped that the result of the election, be it declared when it may, will show that an acquisition has been made to the institution; for, on looking round among public schools, there are to be found among persons holding similar appointments but a few who have in anywise distinguished themselves. We know not what the regulated duties of this new appointment may be, but we know well what they ought to be; and as such, that their efficient discharge could only be accomplished by an artist of ability and experience.

**CASE OF DISTRESS.**—We direct attention to one of those sad cases of distress, which occur far too frequently; but intelligence of which does not often reach the public ear, so that the call may be responded to. We refer to the grievous position in which illness and poverty have placed an excellent portrait-painter. We are with familiar his works, and can bear testimony to their valuable qualities. He has not, however, been in the way of making, and consequently not of saving money, by his professional labours; the greater number of his works having been painted for those religious magazines, where to lessen expenditure is a leading object. We sincerely hope that this appeal may be the means of obtaining for him some relief. God knows it is much needed.

**SALE OF THE LATE MR. HICK'S PICTURES.**—We direct attention to an advertisement, announcing the day on which this valuable collection will be disposed of. They are of rare excellence; have been gathered with judgment and taste; and comprise specimens of several of our leading British artists. The competition, we believe, will be great; but this is not the time for works of Art to bring high prices in Manchester.

**FRAME FOR THE 'SAINT'S DAY.'**—A very elegant frame has been designed expressly for 'the Saints' Day'—the print about to be issued by the London Art-Union—by Mr. Garbanati, of St. Martin's-court. It is of excellent workmanship, and very chaste in design; the ground-work being of the Elizabethan era, and the ornaments being suggested by the subject—giving bread to the aged poor. The frames are made both in gilt and in imitation oak; and, considering the elaborate character of the work, are produced at a reasonable cost. Some of our readers, who will be, ere long, in possession of the print, will do well to examine it, and ascertain if it be suitable to their tastes.

## REVIEWS.

**MARTIN CHUZZLEWIT, &C. By CHARLES DICKENS.** Publishers, CHAPMAN and HALL.

"THE SEASON!" There is something joyous and hopeful almost to magic in these two small words—"The Season"—telling of the passing away of winter, the coming of sunshine and flowers, of festivity, of occupation and its happiness, of labour and of prosperity!

The heavy shutters in our gloomy squares are removing, the plate glass has been cleaned, the curtains are unfolded, and white draperies impart a fresh and cheerful aspect to the sombre and aristocratic windows—out of which nobody ever looks. Although the grass in the midst of the squares still sends up a damp hazy vapour, there is a swelling of buds, and a partial imprudent bursting forth of green, half-formed sickly leaves among occasional trees and stunted evergreens, which dwellers in the dim city consider specimens of country vegetation. The clear frosty sound of the cantering horse, the rolling carriage, or the dashing cab, is succeeded by a soft splashy noise, intimating that the crisped mud is in a rapid state of decomposition; the sparrow chatters, as it is recorded he did eighteen hundred years ago, upon "the house-top," and is as busy with straws as his more intelligent neighbours. The postman does not get on as fast as he used to do in the very cold weather; it is heavier walking; besides, since "the season" began, he has a larger number of letters to deliver. There is a great stir in Long Acre among the coach-builders; and instead of grouping round the fires, the "club-men," particularly the "old members" at the "Oriental," the "United Service," and "Brookes's," read at the windows.

The milliners are reviving: some of their underlings—poor faded girls who have subsisted, they could hardly themselves tell how, since last "season"—have met with a hopeful answer when they last called to inquire for work—"Nothing this week, but we may want you next; we must have fresh hands;" and her heart palpitates (starvation has not left it strength to beat), and she returns to her garret, the shadow of a smile on her pale face, looks up her faded and worn out fineries, brushes out her long, damp, silken hair, and arranges it like the dolls in the Arcade, that she may look "something" amongst the "constant hands," and consequently smart dressers, at the "Magasin" of Madame—. How the shop windows dazzle the eyes, ay, and the understandings of the pedestrians, there are assembled all the novelties of "the season," which are grouped so as to display their tones and tints to the best advantage. Look through the street grating of this splendid shop, you know it admits light to the kitchen—do you see nothing? Ah! now you have caught a glimpse of what helps to make the poor servants "season;" a cracked jug contains a bunch of wallflower, placed on the window-sill, of what you would be a dungeon, "for air;" that was a present from the greengrocer; but beside it is a more cherished object, a tuft of primroses surrounded by their broad wrinkled leaves, that fall over a garden-pot newly red-leaved—that tuft she dug up from her mother's little garden, when she was out at Christmas for a holiday—and she waters and tends it, and, for aught we know, would weep over it, if she had time! A close observer of things, well knows that not the roll of carriages, nor the Opera announcements, no, nor even the pealing thunder of the artillery proclaiming when our right royal queenly Queen meets the nobles of her land—not all these, and scores of other sights and sounds, tell more truly that "the season" is come, than does the bunch of flowers in the kitchen window, or the bird-cage tricked out with a yellow cabbage-leaf, or a bunch of limp groundsel, dangling from a rusty nail close to the waterbutts, where birds live, and sing, and die, to be succeeded by others who have the same destinies.

So much for out-door indications. Within, every house, from the palace to the suburban "cottage," is affected by "the season." At this particular time the aristocracy long ago, were described by novelists as lounging upon sofas, and conversing only of the Court, Almack's, and the Opera; their ideas revolving, like the fly on the chariot-wheel, within their own circle; the middle classes, as thinking of the park, the last new play, and the affairs of the nation; and the "lower order," according to the

same authority, armed to the teeth with discontents, and full of wickedness as of poverty.

Of late we have become more inquiring for ourselves, and have discovered that the aristocracy are actuated pretty much by the same feelings, though not exactly the same sympathies, as the strong middle class; that great and mighty hearts are found amongst the poor, who endure much and patiently; and that the "season" for assembling Lords as well as Commons draws more closely together those great links in the chain of society,—dangerous to unfasten lest they should be misplaced. Within those windowed walls—that have so dark and dingy an exterior—there are influences and talents in existence which the street-loiterer little dreams of—artists and authors, workers in the fine gold of intellect, alive with all their attendant hosts of newborn thoughts. The impetus given to Art is much talked of and more felt: the pale student—whose imagination had been forced to cabin and confine its flights so that, to procure mere food for his wearied body, he painted and toiled, the plaything of time instead of the hero of eternity, now stretches his broad canvas beneath the banner of a new found hope, nobly resolved to hug his crust and drain his cup of water rather than not wrestle for a prize—a glorious prize!—an IMMORTALITY—in the great senate-house of his own mighty country. He dreams no incipient dream, but in broad daylight of "the season" calls forth the living models from their dens, and from the treasure-house of a long pent up, though not mildewed mind, produces THE CARTOON.

The new year came in cheerfully; with the old one passed away our dangers and disasters; lusty and fearless, Britain struck home; and the public mind, eased of much anxiety, has leisure to enjoy whatever the fast coming "season" may provide for its nurture and amusement. Last season the book world, so essential to our happiness, suffered under a sort of literary paralysis; "the serials" dragged on, wanting their KING, for "Boz" was galloping through the States, running foul of many disagreeables, which his grateful sense of the overgorging attentions by which he was suffocated, prevented his taking to pieces in the unceremonious manner he does the faults and foibles of his own beloved country. But HE is with us again *this* "season," giving our season double joy, for which we are thankful—HE, who has by the power of his single pen roused thoughts within our minds, and feelings in our hearts, which but for him would never have been awakened! Mighty in his youth! read in the deep and holy knowledge of human sympathies, skilled in drawing forth the best feelings from his readers, without exhibiting his own, and awakening mirthful ideas that leave no sting behind; his very satire is written with the feather of a seraph's wing; and when you close "the number" you feel how much happiness and many experiences his observation has bequeathed you. How pleasant it is to feel that this "season," so surely as the month comes round, so surely will Dickens come, not with a *rechaufé*, of old tales, and the fag end of a jest-book to serve for wit, but pouring forth character and incident, with a truth, a fervour, a variety, and, above all, a *nature* which is invigorating and informing,—and all from the treasure-house of his teeming mind. He is no churl of the true feelings of humanity; no spinner out of ideas into long sentences; he sees at once the length, and breadth, and depth of his characters, who never do or say anything, but what they would have done and said under the circumstances, if you and they had been companions all their lives. Is it possible they have not been so? Are not all whom he has ushered into the world, of our acquaintance? Mr. Pickwick has certainly sat in that chair—Sam Weller knock'd at that door—Dolly Varden, exactly as Frith painted her, admired her bracelet as she tripped through your wood; you cannot take a walk through the green lanes of Kensington without meeting Dolly Varden; every parish beadle has been turned by his pen into a Bumble; pale-faced Olivers meet you with matches in their hands, and cast their imploring eyes in a way that sends your hand to your pocket, with the exclamation, "How like Oliver Twist!" How many boys have been saved from the clutches of a Squeers by the exposition of Do-the-boys-Hall; and it is impossible to have observed the *under current*

of society without recognising, as he moves along the surface, at least one Mr. Chester. Madame Mantalini are reflected from the *Physiques* of half-a-dozen show-rooms, where you are fashionably victimized it may be once a quarter. Smike is more rare to meet with, but not the less natural—a creature whose mind and heart is crushed within him, too crushed ever to expand—though they retain both feeling and vitality—those who have read, can never forget Smike; Mrs. Keely burnt the character into the hearts of all who saw Nicholas Nickleby at the Adelphi, where poor Yates realized what Dickens wrote. You never see a raven, no, nor a black bird of any kind, without calling it Grip—nor a dark-faced man, with a scowling brow and a stout stick in his hand, without fancying he must be the father of Barnaby Rudge; Barnaby himself, so brave in intent, so timid in performance, so sensitive, so affectionate, so cherished—his mind obscured, but not extinguished, breaking out at times with such deep pathos—and poor Nell—they are too holy to be even thought of every day; in the dim twilight of a summer evening—"the gloaming," as the Scotch so musically call it—when all around is still, and the evening flowers send up their incense to the Almighty; then, in that calm and gentle hour, when the spirit, subdued as regards the cares and anxieties of this world, mounts more freely to the contemplation of sacred things—then, stealing across that oriel window, a shadow hardly palpable, and so transparent that you can see the moon and the winking stars beyond, passes—the embodied memory of little Nell—the true, pure, simple child—a manifestation of grace and mercy. Sweet Nell!—and there are many such abroad, who make a light in this dark world—silent, gentle creatures, performing the hard duties of life without feeling their hardness, because their innate faith leads them by the *Star in the East* till their way be ended. It is a remarkable feature in Dickens's writings, that while they make you more deeply acquainted with human nature, they increase your love of your own kind. His is no pale and wan philosophy, passing its existence in silence and solitude, developing itself in sounds and theories, and too refined or too lazy for action. It is a fresh and healthy spirit, manly and firm, seeing, and wrestling with every evil it comes near—breasting the breeze, and looking even the lightning in the face. The regret with which he depicts evil is evinced by the haste he is in to develop good; and after a little see-sawing between them, the scale invariably turns so as to render you satisfied with the dispensations of Providence, and, convinced of their wisdom. Retributive justice tolls above the fitting murkiness that suffocates the demon Quilp; and who would recall little Nell from the companionship of angels?

But all readers know this—all! and we should hope will never forget it. Those who have not yet made the acquaintance of Martin Chuzzlewit will find, in every page which follows the introduction, that our original "Boz" has taken the field again, keeping, like a good general, his 'vantage ground, marshaling his new and vigorous troops, so as to secure a successful campaign, with the certainty, that if he be but true to himself, he will exist as long as the English language (for he is untranslatable) will endure. Perhaps no author ever suggested so many pictures as Charles Dickens; his thoughts are pictures, and pictorially arrayed—he is a wonderful historical painter. Not so great in his landscapes as in his figure subjects, though some of the former are good, particularly when "in motion"—witness, in the second chapter of Martin Chuzzlewit—(the introduction is nothing)—the description of the wind, which played such merry pranks at the smith's forge with the blue dragon, the leaves, the sawdust, and the unfortunate Mr. Pecksniff, after which it rushed out to sea with "other winds similarly disposed, and made a night of it." "Phiz" has ably seconded his originator. The interview between the Pecksniffs and Tom—dear Tom Pinch! is inimitable. One word about this man Pinch. Never was any thing more true, or more beautiful because true, than the outline of Tom's character—a creature, thinking no evil, and rejoicing so completely in good, that he will not look into darkness while there is a ray of light that his eyes can drink in—a most sweet kernel, cased in a rugged shell—yielding and docile, firm only in the truth of his own mind, which has not the power to un-

derstand wickedness—you see at once, expressed in a few unaffected sentences, the man's whole nature, his position in the Pecksniff family, and the value his acquirements are to the person who sneers him down. Tom Pinch is, in fact, the ground-plan of an angel; and if "Boz" suffers a hair of his head to be injured, let him look to it—that's all! We wish he had not made Pecksniff an architect; he might, we think, have worked out the "Premium" Abuse with other tools; for we know ten Pecksniffs in various professions: it is not, however, the MAN, but the CAUSE, he deals with. The story, like everything Mr. Dickens writes, must be read through, if once commenced; for the characters are well placed and firmly planted, and interest you at once; their progress must be watched, and will be illustrated. The old misanthrope is already a picture, relieved by one of the author's Shakesperian women; but we have said a great deal where we need not have written a line; "the season" and its motives, and influences, and actions advance; and we hail it, and bless it on its way.

**SOUVENIR OF THE BAL COSTUME, &c.** Drawn by COKE SMYTH. Published by DOMINIC COLNAGHI and Co. Lithographed by HULLMANDEL.

We have already had occasion to speak of the drawings made by Mr. Smyth for this work; they were, it may be remembered, exhibited some time since by Messrs. Colnaghi; and, independently of their artist-like feeling, were highly interesting, as having been sketched by permission of the distinguished wearers of the costumes themselves, who honoured the artist (we may say) by standing to him: hence many of the drawings are admirable portraits. The publication of this work is, for many reasons, acceptable. Our early Art, in its defective state, has left us only imperfect and scattered memorials, which, though they be warranty enough for the antiquarian, are but meagre authorities for the painter, inasmuch as if he copy them too closely, it is probable that his work will have much of the poverty of the prototype—a circumstance of continual occurrence. That our artists are surpassed by the French in depicting costume is incontrovertible; but this is a merit not arising so much from any superior antiquarian research or intelligence upon their particular part, as from national habit and temperament generally: for it is sufficiently known that, at a certain period of the year, masquerading festivals prevail throughout France: with all, therefore, who are desirous of making a creditable appearance on such occasions, some care is indispensable; thus the French artist has continually before him in the life that for which our own painters are compelled to have recourse to ancient monuments.

For a display of magnificent and varied costume, perhaps no English reign could have been more happily selected than that of Edward III., in whose time a remarkable change was brought about, not less in the military than in the civil habit. The dress of the monarch himself was very simple, as will be presently seen in the description of that worn by H.R.H. Prince Albert, who assumed the character; but the state attire of the nobles was by no means so unpretending.

There are four parts of this work before us, containing, besides drawings of her Majesty and her royal consort, also others of the Duchesses of Sutherland and Buccleuch, Lady Portman, and Viscountess Jocelyn, Earls de la Warr, Liverpool, and Jersey, the Hon. Miss Liddell, Hon. Miss Devereux, &c. &c. The dress worn by her Majesty is, with a slight difference, copied from the monument of Queen Philippa in Westminster Abbey, and consists of a crimson velvet kirtle or gown, laced up the front, and deeply bordered with ermine at the bottom; over this is the particular garment worn at this period, resembling a long spencer, the ancient name of which, we believe, is not known; this is of blue and gold brocade, bordered with ermine. The crown upon the effigies of Queen Philippa has been broken, but that worn by her Majesty was of graven gold, and constructed according to contemporary authority: it is valued at £20,000. A flowing mantle of silver brocade perfected this magnificent state habit.

The costume of the prince was copied from the effigies of Edward, in Westminster Abbey. The crown, as in the case of Queen Philippa, has disappeared; but that worn by his Royal Highness

is from the authorities of the time. The tunic is of gold and blue brocade, and reaches nearly to the ankles; it has an opening in front, to the height of the knee, bordered with jewels, and through this are seen the hose, which are scarlet, with shoes of the same colour. From the shoulders flows a magnificent mantle descending to the heels; it is composed of scarlet velvet, lined with ermine, and confined across the breast by a broad band, studded with precious stones.

The knights and ladies of the court were all habited nearly in accordance with the costume of the time; the former being remarkable for the richness of their *cotes-hardies*, and the latter for the elegance of their gemmed and furred surcoats. The work seems to have been produced at a considerable cost, and will not only serve hereafter as an agreeable reminiscence of the fête to all who partook in it, but also as valuable authority for the varied styles of attire, which it describes.

**VIEWS OF FIVE CHURCHES IN THE VICINITY OF LONDON.** Drawn by H. A. GILLMAN. Lithographed by W. L. WALTON. Publishers, COLNAGHI and PUCKLE.

This assemblage of interesting structures is a valuable acquisition to the antiquary as well as to the lover of Art; and, moreover, cannot fail to find favour with the public generally—for it depicts with great fidelity and fine artistic effect the venerable structures with which are linked so many pleasing and painful associations. The five are contained on one sheet—an agreeable novelty; each print is small, but sufficiently large to supply an accurate idea of the character and peculiarities of the edifice. The 1st is 'St. Mary's, Finchley'; the 2nd, 'St. James's, Muswell Hill'; the 3rd, 'St. Michael's, Highgate'; the 4th, 'Highgate Old Chapel'; the 5th, 'St. Mary's, Hornsey.' There is much delicacy combined with considerable force in the style; every minute portion of the building is pictured, but without impairing the effect of the whole. Mr. Gillman has evidently laboured at his task *con amore*; he has studied his subjects long and with accuracy; displaying much industry and perseverance as well as fine feeling for Art, and sound taste in selecting the most striking points of view. He has been fortunate also in having his drawings placed in good hands, Mr. Walton having done them ample justice. In the Old Chapel at Highgate—one of the series—that great master spirit of the age, Coleridge, lies buried. We should say, that his mortal remains lie interred in a vault beside it; for the chapel is now gone, although the vault, with its glorious deposit, still endures. The name of Coleridge is so intimately associated with the name of Gillman, that the print has an interest deeper than that which it excites as a work of Art.

**THE SCIENCE OF DRAWING SIMPLIFIED; OR, THE ELEMENTS OF FORM DEMONSTRATED BY MODELS.** By B. WATERHOUSE HAWKINS. Publishers, SMITH, ELDER, and Co.

This pamphlet accompanies a series of models, intended to teach drawing, and designed to illustrate the properties of geometrical forms, so as to instruct the learner "in estimating the proportions and relative quantities of different shapes." The box of models "contains six cubes"—we quote from the explanatory book:—

"Each one composed of a number of pieces, forming other geometrical solids; the whole being susceptible of numerous combinations, forming a variety of architectural structures, such as churches with steeples and domes, houses with gabled roofs, bridges, or viaducts, niches, or alcoves, &c. &c. The cube, or solid square, every one of its six sides being equal, has been chosen as being the simplest of the geometrical solids, and the archetype, or parent, of other forms, since its quantity includes that of each of the other geometrical solids; for instance, out of a cube could be cut either of the other geometric forms, each of them equal in diameter with the cube from which they were cut. The pieces, separate or combined, exemplify that the elements of all form are but two, namely, flat and rounded, and are representable by straight or curved lines. Cube A is composed of eight small cubes, showing that this form admits of subdivision into its own form without waste. Cube B is subdivided into a number of pieces of various angular forms, including the prism, wedge, rhomboid, and parallelopipedon, which exemplify the peculiar properties of angular solids in combination. Cube C exhibits the cube *évidée*, or hollow cube, containing an octagon and four prisms. These three cubes are exclusively composed of rectilinear forms. Cube D consists of several pieces, out of which may be formed five pyramids, and a cone with its sections; four of the pyramids are quadrilateral, the fifth is triangular, every

one of its four sides being equal, two only of the four quadrilateral pyramids having the apex in the centre of the base. The pyramidal form is the most beautiful composition of straight lines; the cone, which is a pyramid with circular sides and base, is contained within the square-based pyramid, as the sphere within the cube, and the circle within the square. Cube E contains a perfect sphere, divided into two parts, or hemispheres, one of them solid, the other hollow; the latter enclosing a figure, which may be called a reflected cone: the hollow of the cube is a reflection of the sphere it contains. Cube F contains a cylinder; this is a simple combination of the two elements describable by a curve and straight line, which are more beautifully united in the cone; the cylinder is divided both perpendicularly and horizontally, the cubic exterior exhibiting the true form of a semicircular arch."

Our space will not permit us, at present, to enter into the arguments by which Mr. Hawkins supports his view, that the use of these models "will enable persons to acquire the power of drawing more readily than they would by any other means." The subject, however, is one of considerable importance, and we may ere long bring it under detailed review. The ingenuity and industry displayed by Mr. Hawkins entitle him to high respect; and those who may differ from him as to the conclusions he draws will at least concede to him the merit of integrity.

**PRELIMINARY DISCOURSE**; pronounced before the University College of London. By THOMAS LEVERTON DONALDSON, Professor of Architecture. London. 1842.

The increase of Architectural Professorships augurs well for the Art, and seems to promise the more general diffusion of a taste for it as a liberal and elegant study. That such taste is now actually spreading, is a circumstance pointedly alluded to by the Professor at University College, and as one rather for congratulation than the contrary: which gives us all the greater satisfaction, because another architect has just put forth very opposite opinions, attempting to bring all amateurship into discredit, and to throw ridicule upon "literary idlers" at the Universities, and other volunteer students and writers. Unless it proceeds from narrow-minded jealousy, we know not to what to attribute such violent enmity against a class of persons who, at least, show the interest they take in the subject, and the importance they attach to it. It cannot be said that they trespass too far upon the grounds of those belonging to the profession, because very few of the latter write upon their Art at all; therefore the endeavour to deter others from doing so betrays a very ungenerous "dog-in-the-manger" feeling. To stigmatise an entire class as presumptuous and incompetent, because some belonging to it may not have shown themselves altogether qualified for the tasks they have undertaken, is no less absurd than it is unjust. Besides, whatever ill-consequences, if any, may at present attend the influence of opinion so acquired by non-professional architectural writers, that influence, unless where supported by merit, must decline in proportion as the study becomes more generally diffused, and the public better able to judge for themselves, and able to discriminate between sound criticism and the empty pretension to it.

Without a taste for, and some acquaintance with architecture, half the enjoyment and instruction to be derived from travelling is lost. Those who are destitute of such previous qualification are in manner blind, and might, therefore, as well remain at home, except indeed that there is a chance of their catching a taste for the Art, and its afterwards growing upon them. Whether they be travellers or not, almost all well-educated persons have occasion to understand something of architecture in its connexion with history and archaeology. But we need not further insist upon the advantages attending the study of the historical and æsthetical part of the Art, for even if not before perceived, they become obvious as soon as they are hinted at.

Mr. Donaldson's lecture is an agreeable, though only a general introductory sketch; in its printed form, however, it acquires additional value from the notes accompanying the original text. There is, however, what strikes us as being a most singular, if not important omission, for most singular it is that notwithstanding he expresses himself so favourably in regard to the recent architecture of the metropolis, he did not embrace the opportunity of paying a compliment to the College by referring to the façade of their own building, with its noble

portico and dome, as being an admirable study for the pupils, and a very superior piece of design.

**THE SPRING OF THE VALLEY.** Painted by A. PENLEY, Esq.; engraved by H. T. RYALL.

Published for the Members of the West of England Art-Union, by EDMUND FRY, Plymouth. This is a pretty and pleasing print, representing a young girl in her first youth, filling her pitcher from "the spring of the valley." It may not fully content the critic; but it will afford enjoyment to many. Ample justice has been rendered to the picture by the accomplished engraver, Mr. Ryall. As we have elsewhere remarked, this is but the prelude to higher achievements on the part of the West of England Art-Union. It is very satisfactory as a commencement, and fully worth the sum subscribed to obtain it.

**THE XANTHIAN MARBLES**; their Acquisition and Transmission to England. Published by JOHN MURRAY.

A most interesting publication, written with the modesty inseparable from true talent. It supplies us, however, with sufficient evidence of the difficulties which Mr. Fellows had to surmount in securing these treasures for his country; many of these difficulties ought not to have been left in his way. It is unfortunately too much the habit of our country to do things by halves. If we have obtained some accession of wealth by the persevering efforts of this enlightened and enterprising traveller, it is grievous to know that we have postponed the acquisition of more, which a very little sacrifice might have secured for us. The country cannot be too grateful to Mr. Fellows; and future artists will reverence his name. He has enabled them to learn valuable lessons out of "old stones" that formed dens for wolves in a desert once peopled by men of mighty minds. The history of their discovery, and happily, recovery, is highly interesting; we shall no doubt have to quote from it when called upon to notice the treasures which are now our own; and which will ere long associate with the imperishable works which have given immortality to the name of "Elgin."

**THE PRISM OF THOUGHT.** By the Baroness CALABRELLA. Publishers, LONGMAN and Co.

A peculiarly elegant little volume, embellished with borders and initial letters in colours and gold, wrought with much skill, and producing a very striking effect. To the printers much credit must be assigned; they have indeed a right to claim the largest share of merit in the production; and it is only just that we print their names, "Robson, Levey, and Franklin, Great New-street, Fetter-lane." The arrangements are all in good taste and in perfect harmony. The letter-press contents of the graceful and enticing book consist of Aphorisms, written by the Baroness Calabrella. They are wise and good, and inculcate virtue in a manner that makes the lessons conveyed easy of remembrance and very impressive. There is little effort at novelty; they are simple truths arrayed in simple dresses; but they are such as may be, and often are, passed by unheeded; although every one of them may be worked out into a folio without adding an iota to its influence.

**THE OMNIGRAPH ATLAS.** Published by SMITH, ELDER, and Co.

This work is produced by the patent machinery of Mr. Becker, to which we made reference some months ago. The maps are remarkably clean, clear, and neat; the names of places are inserted with far more than usual distinctness; and the use of Italic letters is completely avoided. The method of engraving is a vast improvement upon the old system. The mountains are put in, and the shadows are given with singular evenness and uniformity. Indeed, if we compare this collection of maps with any older atlas, the advantages are so apparent as to lead to the conclusion that Mr. Becker's plan will become universal.

**COMPANION TO THE BRITISH ALMANAC.** Publisher, CHARLES KNIGHT.

We need not repeat, in other words, the general character which we gave of this publication last year; that is, of that portion of it which recommends it to our notice; nor have we anything to add to what we then said, except it be to remark that more space than at present might very

well be allowed for the section on "Public Improvements," since that is certainly the most popular feature in the "Companion;" and has no doubt served the cause of architecture, by calling attention to it, and by familiarizing the general reader, in some measure, with the subject.

"General Improvements" come in for notice first; but under that head there is nothing of particular importance, though one or two things there mentioned anticipatorily as projects likely to be carried into execution, seem, if fairly treated, to promise fair. One of them is a building for new Law Courts, adjoining Guildhall; and, should it be erected, we hope that something will be done to the front of Guildhall itself, which might be, by merely recasing it, adapting a new design to the apertures of the present one. As it is, the only thing that reconciles us to that barbarous production is, that it serves to show what a stride we have since taken in the study of Gothic architecture, for Guildhall and the new Houses of Parliament are the antipodes of each other. Among other architectural *outré*, a building for a new Hall and Library, at Lincoln's-inn; and a second Conservative Club-house are spoken of. For the first-mentioned, Mr. Hardwick is to be employed as the architect, and the work, we believe, will very shortly be commenced; the other, Mr. S. Smirke and Mr. Basevi, conjointly. Among schemes, which, if neither abandoned nor forgotten, have been delayed much longer than was to be anticipated, we may here mention the rebuilding Bridgewater House, the town residence of Lord Francis Egerton, according to the design exhibited by Mr. Barry, in 1841; and which, as the former has been taken down nearly two years, might, by this time, have begun to show itself very plainly.

Many as are the new churches enumerated in the "Companion," there are only two structures of that class which have there obtained specific notice to any extent, viz., Wilton Church, near Salisbury, and the one now building in Broadway, Westminster, both of which are illustrated by wood-cuts. While the first has certainly novelty of style (Lombardic) to recommend it, except to those who may for that very reason object to it, it has much also that is striking and piquant in composition, for which it is mainly indebted to its campanile, connected with the body of the edifice by a small arcade or cloister. The principal front appears rather rich in design; but the cut itself is necessarily so small, that the details cannot fairly be judged of. According to the accompanying description, however, the interior will be of far richer character than the exterior, and will have neither galleries nor pews to interfere with architectural effect. Although very different in its style, it being Gothic, Mr. Poynter's church will also have what may be termed a campanile, as its lofty tower and spire will not be incorporated with, but merely attached to, the building at its north west angle.

The new Wesleyan College, or Theological Institution, as it is to be called, at Richmond, is certainly not deficient in collegiate character, but, in point of design, is highly creditable to its architect, Mr. Trimen, who, it seems, gained the building by competition. The Sun Fire-office is spoken of with commendation, not, indeed, wholly unqualified, as is likewise another work of Mr. Cockerell's, the interior of the new Public Libraries at Cambridge. The new County Courts, in the same town, by Messrs. Wyatt, the architects of the Wilton Church, is also described as a very handsome piece of architecture, which, in fact, the woodcut given of it shows it to be. A similar illustration shows the Brunswick Buildings, at Liverpool, to be a design of very considerable merit in the Italian *palazzo* style, marked by extreme simplicity in composition, and by ornateness and finish in its details.

**PORTRAIT OF THE MARQUIS OF WELLESLEY.** Painted by Sir T. LAWRENCE, P.R.A. Engraved by S. COUSINS, A.R.A. Publishers, WELSH and GWYNNE.

We rejoice to retain so worthy a memorial of one of the most accomplished noblemen of modern times; a man who owed far less to the accident of birth than to that high intellect and lofty genius which raised him so much above his fellows, and gave him fame as a statesman equal to that of his great brother as a soldier. How much Great Britain has to thank Lord Wellesley for her power,

wealth and freedom, future historians will tell. He combined the rarest qualities; honesty ruled them all; and, amid the state cares to which his early and late manhood were devoted, he did not neglect to cultivate the graces that give life a charm. He was a scholar, "and a ripe and good one;" and has left a small but precious legacy of literature to mankind. This is an exquisite portrait, taken in his vigour; one of the triumphs of the late President, most beautifully copied by the burin of Samuel Cousins.

**DOLLY VARDEN.** Painted by W. P. FRITH, Engraved by C. E. WAGSTAFF. Publisher. J. MITCHELL.

This is, we believe, the first engraving from the works of one of the most promising painters of the age and country. It will not be the last. Mr. Frith is destined to occupy a very prominent station in the profession of which he is already one of the ornaments. It is to the credit of the publisher that he has been the earliest of his class to appreciate the merits of the artist and to extend a knowledge of them by means of the engraver. In the choice of this engraver too he has manifested judgment and taste. Mr. Wagstaff has felt the subject, and has worthily performed his task. We have here the very embodiment of one of the happiest creations of genius. The heart goes with the merry coquette, whom Mr. Dickens has so capably pictured; it represents Dolly in the wood, admiring the bracelet and her own pretty arm—whence she turns around and about in every possible direction. As a work of Art, it is altogether excellent; and as a most pleasant and agreeable print, it will be desired by thousands, who can receive enjoyment from the combined abilities of the author and the artist.

**THE WATERLOO COURSING MEETING.** Painted by RICHARD ANSDALL. Engraved by S. W. REYNOLDS. Published by THOMAS AGNEW, Manchester.

This publication reflects the highest credit upon the enterprising publisher, who has been bold enough to issue so large and costly a work in a provincial town. We have never inspected a more satisfactory specimen of the class of "Sporting Prints." The grouping is admirable, and in excellent taste, although it has been necessary, as usual in such cases, to give prominence to a few prominent personages who have not formed the most advantageous "sitters" for the artist. The portraits appear to be all good likenesses—and there are no less than seventy-three of them, with eighteen horses; the gentlemen and their steeds being greatly distinguished on "the turf." The Waterloo coursing meeting is an event of vast magnitude in the north of England. A memorial of it is here worthily preserved. The artist has shown excellent judgment and matured skill; he has contrived to render his picture interesting, even to the indifferent spectator, and has produced a work of Art of very considerable merit.

#### THE POLYTECHNIC ETCHINGS.

On the eve of "going to press" we received a copy of this work. It is exceedingly beautiful—one of the most beautiful volumes, indeed, that has ever been laid before us; and we should not do justice either to our readers or the eminent artists who have produced it, if we failed to recommend it in the strongest terms. If we understand rightly, it is to be issued by "the Polytechnic Union," at the price of one guinea, and the subscriber is also entitled to a chance of certain prizes. There will be no second opinion as to the publication being fully worth the guinea subscribed. We shall hope to do justice to it next month.

#### TO CORRESPONDENTS.

A respected correspondent requests us to state, that the "Freemasons of the Church" seem to overlook the fact that there is such a body, chartered for the advancement of architecture, including the great bulk of the profession, and well known throughout the Continent. Independently of this fact, which would seem to show the ground was already occupied, the "Freemasons" have sought ridicule by the creation of a number of extraordinary appointments, in "words of learned length and thundering sound," and have laid up for themselves annoyance, by printing names in their list without permission of their owners, or even

the probability that they will allow them to remain there. If this association is formed by opponents of the Institute (which we can hardly imagine), the Institute itself could not have suggested to them any course of proceeding more likely to render the scheme important than that which they have adopted.

In answer to a very discourteous letter, signed "W.," relative to the Manchester exhibition, we have to say, that no remark in our journal led to the inference that the Art-Union Committee were to be condemned, "because they did not buy all the pictures by Manchester artists;" neither did we assert, that "all the pictures were the very refuse of Suffolk-street." We said, or ought to have said, that a fair spirit is not manifested, either in the selection or subsequent distribution of the works annually collected at Manchester, and the evil ought to be inquired into.

A correspondent calls our attention to a "fact," that several royal gifts from the King of France, designed for artists, have fallen into the hands of the publishers of their works. He complains loudly of this "mistake." The noble and generous liberality of Louis Philippe, a king indeed, and one of the greatest and best monarchs that ever ruled a nation, has, according to our authority, "set publishers and speculators 'a thinking' to grasp even this honourable profit arising from a work; and now an inundation of new works are about to be poured into foreign courts, sent from these worthies for presentation, in the hopes of receiving the rewards due to the artists and artists only,—leaving to the latter the naked reputation of having earned them, 'Vox et preterea nihil.'" The following passage concludes the letter:—"Now, sir, from your circulation abroad, and your now acknowledged bearing with you of the voice of the English artists, 'lift up your voice, cry aloud, spare not,' and proclaim to the foreign states the league which is forming; so that, when presenting itself, the pure gold may be sifted or washed from the worthless sand; otherwise, the true artists will shortly become despoiled of that solacing encouragement, from time to time accorded to us by foreign courts, but which is denied to us at home."

"A Young Architect" asks us, what we can point out or recommend as the best works containing plans, elevations, &c., and descriptions of public buildings at Munich, Berlin, and elsewhere in Germany. The collection of Kleuze's Entwürfe comprises many, though not all, of the buildings erected by him at Munich; and the similar, but far more extensive work, by Schinkel, includes, in like manner, the principal ones with which he ornamented Berlin. In both these publications, the subjects are illustrated more copiously than usual, there being, in many instances, perspective views, both interior and exterior, and plates of detail, in addition to other drawings. Moller and Heger's work contains the Rotunda at Darmstadt, the Theatre at Mainz, and other structures erected by them; and Ottner has likewise published some of his buildings, but we do not know of, nor do we believe there yet exists any collection or selection of the principal edifices by different architects, illustrative of the architecture of any one city; a circumstance much to be regretted, because Munich alone would afford many interesting studies and examples besides those by Kleuze; several, for instance, by Garner, Zübländer, Ohlmüller, and other talented men. Förster's "Bauzeitung" occasionally gives an account of some building of note, with plans, elevations, &c., more or less numerous, but such subjects are introduced only at considerable intervals, and not above a dozen or so have appeared since the commencement of that work, in 1836.

The memoir of the late Mr. John Rhodes, of Leeds, will be given in our next.

Our answer to the inquiry concerning the London Art-Union next month. So also respecting "Howlett's Perspective".

#### NEWLY INVENTED SKETCHING PENCILS.

BB. Very black for the foreground.  
HB. Middle tint.  
N. Neutral tint, for distance.

K. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturers', 23, CHURCH-STREET, SPITALFIELDS.

**A PRACTICAL ARCHITECT**, who is extensively engaged in the Design and Execution of Internal Decoration, is in want of an Out-door PUPIL, who has a taste for drawing; and would prefer the son of those practically engaged in building, decorating, or furnishing. Moderate Premium, according to usefulness.—Address to S. Benson's, 9, Parliament-street.

**ARTIST'S STUDIO, or, COMMITTEE ROOM.**—To be LET, at 13, Bruton-street, Berkeley-square, a very spacious and lofty ROOM, on the ground-floor, well lighted for an Artist, or for other purposes where good light and space are required; also, a Room adjoining, with a private water-closet. It has a distinct entrance from the vestibule, and are enclosed by mahogany folding-doors. Rent, £120 per annum. Particulars and cards to view may be obtained of Mr. Cox, Surveyor, &c., 106, New-Broad-street.

**IMPORTANT TO THE FINE ARTS.**—A NEW PERMANENT WHITE for OIL PAINTING! which, besides its durability, mixes freely with all other colours, without injury to, or being injured by them; and preserves a brilliancy and purity of tint that nothing at present can equal. It also possesses the same qualities as a water colour, and, with the exception of white lead, has more body than any other composition of the kind.

Prepared by GEO. ROWNEY and CO., SUPERFINE COLOUR MANUFACTURERS, &c., to ARTISTS, No. 51, RATHBONE-PLACE.

Also, Colours prepared for Sketching from Nature, called Aqueous Colours, which has all the effect of Oil Painting, but is used only with water, either on paper, mill-board, or canvass.

JUST PUBLISHED, BY SMITH, ELDER, AND CO., 65, CORNHILL.

In large 4to., full coloured, and neatly bound, price 18s.,

**BECKER'S OMNIGRAPH ATLAS of MODERN GEOGRAPHY**; compiled from the latest and most authentic sources, and including all the recent Geographical and Nautical Discoveries throughout the World.

"The new and very beautiful mode of producing Maps by means of the Patent Omnigraph, is so superior to the old style of engraving, that it cannot fail of commanding a decided preference, independent of its very moderate price. The letters in every word, whether large or small, are so uniform in size, so beautifully distinct, and stand out in such high relief, that the eye is never wearied as in the old maps, by tracing their contents, or finding the places required; desiderata of so much consequence, that this New Omnigraph Atlas must soon find a place, not only in every school, but in every library in the Kingdom."—London Review.

Recently published, in two thick volumes, demy 8vo., cloth, price 34s., with numerous Illustrations.

**THE MODERN HISTORY and CONDITION of EGYPT**; its Climate, Diseases, and Capabilities. Comprising the proceedings of Mohammed Ali Pascha, from 1801 to 1842; with Illustrations of Scripture History, the Fulfillment of Prophecy, and the Progress of Civilisation in the East. By W. HOLY YATES, M.D., &c. &c.

In two volumes, demy 8vo., price 32s., cloth, with a large Map, by Arrowsmith, and illustrated with Plates.

**NOTES and OBSERVATIONS on the IONIAN ISLANDS and MALTA**, with some Remarks on Constantinople and Turkey; and on the system of Quarantine, as at present conducted. By JOHN DAVY, M.D., F.R.S.S., L. and E., Inspector-General of Army Hospitals, &c.

"Dr. Davy's work deserves to be bought as well as perused, so carefully, completely, and expensively has it been got up. We hope that the consciousness of having discharged such an important duty will not be the only result of his long labour, but that the work will be as remunerative as it ought to be."—Westminster Review.

New edition, demy 8vo., revised throughout, price 12s., cloth, with many Additions and Corrections by the Author, and illustrated with Plates.

**THE NATURE and PROPERTIES of the SUGAR CANE**; with Practical Directions for the Improvement of its Culture, and the Manufacture of its Products. To which is added, an additional Chapter on the Manufacture of Sugar from the Beet-root. By GEORGE RICHARDSON PORTER, F.R.S., Corresponding Member of the Institute of France.

London: Smith, Elder, and Co., 65, Cornhill.

**POOLCOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

TO BE PUBLISHED EARLY IN THE SEASON.

## SWITZERLAND,

Consisting of Twenty-Seven Subjects and Descriptive Letter-Press, Scenes, Incidents of Travel, and Picturesque Costumes, principally in the Bernese Oberland.  
DRAWN FROM NATURE, AND ON STONE, BY GEORGE BARNARD.

WITH ALL THE LATEST IMPROVEMENTS IN LITHOGRAPHY AND DOUBLE TINTS, TO REPRESENT THE GLACIERS, &c.

The Views are executed by Mr. BARNARD on Stone, in many instances with Two Tints and Raised Lights; one tint to represent the blue Glaciers and distance, the other, the warm and rich foreground.

**AN ENCYCLOPÆDIA of ARCHITECTURE**, Historical, Theoretical and Practical. By J. GWILT.

"This elaborate and learned work constitutes a complete body of architecture. The vast mass of matter is admirably arranged, put into a condensed and clear form, and illustrated with woodcuts that of themselves are valuable examples independently of the text. Mr. Gwilt is eminently qualified for this laborious task, which he has executed with ability, and *con amore*."—Spectator.

London: Longman, Brown, Green, and Longmans.

WILLIAM MULREADY, R.A.

Square 8vo., price One Guinea, or 36s. morocco,

**THE VICAR of WAKEFIELD.**

With Thirty-two Illustrations, by WILLIAM MULREADY, R.A. The whole engraved by John Thompson. Published December 20th.

"It is the nearest to perfection of any volume that has hitherto issued from the British press."—Art-Union January 1843.

"One of the most beautiful editions of any standard author that has appeared for many years, and decidedly the best which has ever been published of this deservedly popular English classic."—United Service Gazette, January 7, 1843.

John Van Voorst, 1, Paternoster-row.

TO PAINTERS IN WATER COLOURS.

Just Published, price 1s.,

**THE HAND-BOOK of WATER COLOURS**

By WM. WINSON and H. C. NEWTON, Artists Colour-makers to the Queen. Being a brief treatise on their qualities and effects when employed in Painting, with some account of the general nature of Colours: of Colours obtained from the mineral world—of pigments from the animal world—of vegetable Colours—on the choice of Colours for use. Together with a

DESCRIPTIVE LIST

of all the Cake Water Colours now in use—Seventy-six in number: of Blues, 10; of Reds, 15; of Yellows, 14; of Purples, 3; of Browns, 13; of Greens, 8; of Orange, 2; of Neutrals and Blacks, 6; and Whites, 3.

Detailing the peculiar qualities of each, and its value in combination.

Tilt and Bogue, Fleet-street.

NEW AND ORIGINAL WORK ON HISTORY,  
PUBLISHED BY THOMAS VARTY, 31, STRAND,  
(LATE ROAKE AND VARTY.)

## CHRONOLOGICAL PICTURES OF ENGLISH HISTORY,

DESIGNED AND LITHOGRAPHED BY JOHN GILBERT,

The literary portion of the work by ELIZA CARTWRIGHT.

Now publishing, Part IV., with Fac-Similes of the Autographs of the Sovereigns and distinguished Characters, accompanied with a Tabular Descriptive Sheet of Letter-Press, carefully compiled.

"The second part of the Chronological Pictures of English History makes us aware that artistic talent of no ordinary kind is engaged in teaching the young through the eye."—Athenæum.

"Most capably executed drawings."—Church of England Quarterly.

"We have no hesitation in at once asserting, that no work that has hitherto appeared to aid the study of British History, can at all compare with it."—Literary Advertiser.

"An elegant mode of insinuating a knowledge of English History."—Asiatic Journal.

"One of the best helps to the study of English History, and the most elegant pictorial illustration of the kind that we have seen."—Churchman.

"They are in the first style of art."—Dublin Standard.

"The Tabular Sheet embraces much valuable information."—Polytechnic Journal.

Size, Imperial folio, each Part containing Five Plates, beautifully tinted, in a Wrapper, price 7s. 6d.—Each Plate illustrates a Reign.

Frames joined in the gold in the first style. A few fine Pictures for Sale.

**SALE OF AN IMPORTANT AND GENUINE COLLECTION OF PICTURES, DRAWINGS, ENGRAVINGS, &c.**

**MANCHESTER.**

**MESSRS. T. WINSTANLEY and SONS,** of LIVERPOOL, have the honour to announce that they have received directions from the Executors of the late

**BENJAMIN HICK, ESQ., OF BOLTON,**

to **SELL BY AUCTION,** at the **EXCHANGE GALLERY, DUCIE-PLACE, MANCHESTER,** on **TUESDAY, the 21st FEBRUARY,** and three following days, at **Half-past Ten o'Clock** each day, the valuable, well-known, and much-admired **COLLECTION** of the late Proprietor; comprising capital **PAINTINGS** by celebrated Masters of the Italian, Flemish, Dutch, and British Schools; a tasteful Selection of Modern **DRAWINGS** in Water-colours; select Proofs of celebrated **ENGRAVINGS,** after Sir **DAVID WILKIE** and other Painters, collected during a period of thirty years, from the most favourable public and private opportunities, with acknowledged taste and judgment, and at a very liberal expense.

The productions of the Foreign Schools of **PAINTING** consist of a 'Holy Family,' by **RAFFAELLE**; a duplicate of the principal Group of the 'Virgin and Child, with the Magdalen,' from his celebrated Picture called 'St. Jerome,' and undoubted by the hand of that great Master, **CORREGGIO**, a magnificent 'Head of Christ,' painted with powerful expression by the masterly pencil of **ANNIBALE CARRACCI**; a Portrait of the 'Painter's Daughter,' by **CARLO DOLCI**; a brilliant 'View of Dresden,' by **CANALETTO**; with fine Specimens of the high talents of **PARMEGGIANI, SASSO FERRATO, PAUL VERONESE, CARLO MARRATTI, MURILLO, and GASPARD FOUSSIN**; a most capital and highly-finished 'Interior, with Figures,' by **EGBERT HEMSKIRK** the younger, truly valuable for its extraordinary quality and the purity of its preservation; select Specimens of the Works of **VOUYERMANS, PAUL POTTER, DAVID TENIERS, BRAWER, GERARD DOW, OSTADE, BACKHUYSEN, PLATZER, VERNET, VAN STRY,** and other Masters.

The Selection of **MODERN ART,** which shows the liberality and good taste with which Mr. Hick patronised the **BRITISH SCHOOL,** comprises the original finished Sketch of 'John Knox administering the Sacrament at Calder House,' by the late Sir **DAVID WILKIE**, purchased at the Sale of his Pictures in London; four genuine Landscapes, by **RICHARD WILSON**; twoditto, by **LOUTHERBOURG**; two Pictures by **GEORGE MORLAND**; a beautiful Landscape, sunset effect, by Sir **A. W. CALLCOTT**; 'The Letter from Sea,' by **KNIGHT**; with other pleasing and interesting subjects, by **HOWARD, EASTLAKE, LEE, TENANT, JOHN WILSON, STEPHANOFF, SHAYER, POOLE, CARMICHAEL, ZEITNER, BRADLEY, BARKER, the NASMYTHS, the late BENJAMIN WEST, P.R.A., WESTALL, &c. &c.**; the 'Rivers of Bliss' and 'Pandemonium,' by **JOHN MARTIN**; the 'Return of a Greek Armament,' by **LINTON**; and a Selection from the Works of the late **HENRY LIVERSEGE**, several of which were painted for Mr. Hick; amongst them will be found 'The Inquiry,' 'Captain Macheath,' 'The Black Dwarf,' 'The Benediction,' 'Lucy Ashton,' and others.

The **WATER-COLOUR DRAWINGS** comprise the original Sketch of the 'Presentation of the Keys of Edinburgh to George the Fourth at Holyrood,' by Sir **D. WILKIE**, with other judiciously selected Specimens of **DAVID ROBERTS, DANBY, SPANFIELD, STOTHARD, WESTALL, CATERMOLLE, PROUT, COX, COOPER, AUSTIN, HOLLAND, J. M. WRIGHT, LIVERSEGE, RICHARDSON, VICKERS, STEPHANOFF, NASH, COPLEY FIELDING,** and other eminent artists of the justly-admired English Water-colour School.

Amongst the Engravings is a complete set of the well-known and celebrated subjects after Sir **DAVID WILKIE**, some of them in states of great rarity, and the whole in excellent condition; numerous specimens of the able talent of **Doo, Robinson,** and other English and Foreign Engravers.

The whole may be viewed three days previous to the Sale. Catalogues may be had at Mr. Grundy's, Exchange-street, Manchester; of Messrs. Winstanley, Paternoster-row, London; at the office of the "Midland Counties' Herald," Birmingham; at the place of Sale; and of Messrs. T. Winstanley and Sons, Church-street, Liverpool.

To prevent intrusion, no person will be admitted to the view or sale without a Catalogue, which will be charged one shilling each.

**TO ARTISTS.—SKELETONS, SKULLS, &c.—ALEXANDRE, 37, GREAT RUSSELL-STREET, BLOOMSBURY,** continues to supply the following Anatomical Preparations:—Skeletons Articulated, from £2 to £6 10s.; Arms and Legs, from 9s. to 12s.; Hands and Feet, 3s. to 5s. A fine collection of Anatomical Plates, plain and coloured, for the use of the Artists at the Academy in Paris, price 3s. 6d. plain, 7s. coloured. These Plates are of the whole-length of the human body.—Skeletons lent on deposit.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET,** Manufacturer of **OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES,** of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**PAINTING IN OIL.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by **Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.**

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**DIMES AND CO. (LATE WARING AND DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F** DIMES begs to inform the Profession, that the **PARTNERSHIP** subsisting between himself and Mr. George Waring has been **DISSOLVED** by mutual consent, and that in future the Business will be continued under the name of **DIMES AND CO.**

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**RAND'S PATENT COLLAPSIBLE METALLIC TUBES FOR OIL COLOURS.**—Mr. J. Rand, the Inventor and Patentee, and Manufacturer of the Collapsible Metallic Tubes, having thrown them open to the trade, D. and Co. beg to state that they can supply them filled with oil colours in any quantity; also, tubes of Varnishes, M'Guelp, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist,** filled in mahogany or japanned boxes for sketching.

**Whatman's Drawing Paper,** all sizes and thicknesses. J. D. H., ditto.

**Tinted or Academy Paper,** in great variety of tints for chalk or pencil.

**Genuine Cumberland Lead Pencils,** warranted of pure lead.

**Chalks and Crayons** of all descriptions.

**French, Hog, and Sable Hair Brushes** for Oil and Water-Colour Painting.

**Marble Slabs mounted,** prepared for Miniature Painting.

**Drawing Boards, Esels, T Squares,** and every article for Architectural Draughtsmen.

**Drawings and Paintings** lent to copy.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with **PICTURE FRAMES,** of the very best manufacture, at prices never hitherto attempted.

A **LARGE SHEET OF DRAWINGS,** representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS, and every department of CARVING and GILDING,** of superior quality, supplied cheaper than by any other manufacturer, by **P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.**—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE, 25, PALL MALL, LONDON.**

Capital £500,000.

**DEPARTMENT OF MEDICAL STATISTICS.**

**WILLIAM FARR, Esq., General Register Office.**

**ACTUARY.**

**F. G. P. NEISON, Esq.**

**THIS OFFICE** is provided with very accurately constructed Tables, by which it can Assure **UN SOUND Lives** on Equitable Terms.

The **Extra Premium** discontinued on restoration of the Assured to permanent Health.

A portion of the **Extra Premium** may remain as a Debt on the Policy.

**Survivorship Assurances** where the Life in expectation suffers from Disease, effected at **Cheaper Rates** than at any other Office.

Similar Tables enable the Society to grant **INCREASED ANNUITIES** on **Unsound Lives**—the amount varying with the particular Disease.

Members of **Consumptive Families** Assured at **Equitable Rates.**

**HEALTHY LIVES** are Assured on **Lower Terms** than at most other Offices.

MESSRS. HENRY GRAVES AND COMPANY,

Her Majesty's Printsellers and Publishers in Ordinary,

Have the honour to announce that they have now ready,

THE MAGNIFICENT ENGRAVING, FROM THE GRAND HISTORICAL PICTURE OF

## HER MAJESTY'S CORONATION,

Painted by her Majesty's command, by Sir GEORGE HAYTER, M.A.S.L., her Majesty's Principal Painter in Ordinary,  
and Engraved in the finest style of Art, by H. T. RYALL, Esq., her Majesty's Historical and Portrait Engraver.

Any attempt at description of this grand and noble work must be very imperfect; but the Publishers beg to state, that the **SPLENDID ENGRAVING** which they have the honour of publishing, will enable all the admiring Patrons of Art to possess this, the only Authentic Memorial of  
**THE MOST INTERESTING EVENTS IN HER MAJESTY'S REIGN.**

Price: Proofs before Letters, £12 12s. .... Proofs (now ready), £8 8s.

LONDON: HENRY GRAVES AND COMPANY, PRINTSELLERS AND PUBLISHERS, BY SPECIAL APPOINTMENT, TO  
 HER MAJESTY AND HIS ROYAL HIGHNESS PRINCE ALBERT, No. 6, PALL-MALL.

**BRIGHT'S DRAWING-BOOK ON LANDSCAPE.**  
 This day is published, in Eight Numbers, at 1s., or in boards, price 9s.,

**BRIGHT'S DRAWING-BOOK ON LANDSCAPE,** in a series of 32 Studies.

Published by S. and J. Fuller, 34, Rathbone-place, where is also made and sold Bright's superior Coloured Crayons, for Landscape Painting, so justly admired in his beautiful Crayon Drawings, and so much approved; also, a new article, called **VOLATILE FIXER**, a preparation to fix and secure Crayon and Chalk Drawings, to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d. each.—S. and J. Fuller particularly call the attention of Artists, Amateurs, and Drawing-masters to this useful preparation.

N.B.—S. and J. F. continue to receive, weekly, from Paris, New Works, Studies of the Human Figure, by Julien and A. Maurin; Figures for Illustration by Valerio and Ferrogio, Studies by Victor Adam, and beautiful Coloured Costumes, Dame de la Cour, the Graces, &c. &c.

Just published, Part I. of a new and unique Work, entitled,

**THE CLANS;** consisting of highly-coloured Lithographic Plates, representing full-length Figures of Chiefs and other Personages in their respective Costumes; from Original Paintings made expressly for this Work. By R. R. M'LAN, Esq., with Descriptive Letter-press, by JAMES LOGAN, Esq., F.S.A.Sc., Corresponding Mem. Soc. Ant. Normandy, &c. Author of "The Scottish Gaff."

The object of the Publisher, in the production of this Work, is to give accurate representations of the Tartan, Arms, and Insignia peculiar to each of the Scottish Clans, with requisite Descriptions and Historical Notices of each.

It is intended to be published in Parts, each containing Three Coloured Plates, with Letter-press, in a Wrapper, to appear on alternate months, and is expected to be completed in Fifteen Numbers. The size will be imperial quarto, and the price,—

To Subscribers ..... 12s. each Part.

To Non-Subscribers ..... 15s.

A few Copies will be printed on imperial folio, price 21s. each Part.

It is requested that Subscribers will forward their names and addresses to the Publisher as early as possible, as a Printed List of them will be given.

London: Published by W. Bosley, 28 and 29, Silver-street, Golden-square; also, Adam and Charles Black, Edinburgh.

In fcap. 8vo., cloth, 6s.

**CRITICISMS ON ART, and SKETCHES of the PICTURE GALLERIES of ENGLAND.**  
 By WILLIAM HAZLITT. And now first collected, CATALOGUES of ELEVEN of the PRINCIPAL GALLERIES.

"An invaluable work; if we wished to give any person a correct and exalted idea of Art, we should say read Hazlitt's Criticisms."—Tait's Magazine.

"The Catalogues alone are worth twice the purchase-money."—Monthly Magazine.

John Templeman, 24s, Regent-street.

**NEW EDITIONS** have lately been published of Mr. ROSCOE'S WANDERINGS and EXCURSIONS in NORTH and SOUTH WALES. Each volume is embellished with 50 beautiful Steel Plates of the Abbeys, Castles, River and Mountain Scenery, &c., and a new Map. It forms an elegant work for a present, or for the drawing-room table; and no well-selected library can be considered complete without it. Price 25s. cloth extra, or 35s. morocco extra per vol., and either may be had separately.

Tilt and Bogue, Simpkin and Co., and Orr and Co., London; Wrightson and Webb, Birmingham; Wareing Webb, Liverpool.

**UNDER THE IMMEDIATE SUPERINTENDENCE OF THE COUNCIL OF THE GOVERNMENT SCHOOL OF DESIGN AT SOMERSET-HOUSE.**

This day is published, price 3s. 6d.,

**THE Fifth Number of a DRAWING-BOOK;** containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

The Council have arranged that this Work shall be sold at a price little exceeding the cost of production, so that, as far as possible, it may come within the reach of all classes of persons desirous of instruction in Drawing and the Art of Design.

The First Part is devoted to Elementary Instruction, and exhibits a course of Outline Drawing (including both Geometrical and Free-hand Drawing) and Shading, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction in Ornamental Design, preliminary to drawing from nature. The series of examples for Outline Drawing will be comprised in Five Numbers, each containing Fifteen Sheets, accompanied by Descriptive Letter-press.

Chapman and Hall, 186, Strand.

**SCHOOL OF ART, No. 6, CHARLOTTE-STREET, BLOOMSBURY.**—This School, established and carried on many years by Mr. Sass for the EDUCATION of ARTISTS, and the Instruction of Amateurs in Drawing and Painting in Oil and Water-colours, Modelling, Etching, &c. possessing every requisite as a Probationary School for the Royal Academy, is now conducted on the same principles as heretofore by Mr. F. S. CARY, with the aid of Mr. REDGRAVE, A.R.A., who is engaged as Visitor. The Gallery, Studios, and Library contain an extensive collection of Casts from the Antique, Drawings, Works of Art, and Folios of Prints from the old Masters.

Instruction is given in Figure and Landscape-drawing, Anatomy, Perspective, Proportion, Light and Shadow, Character, Expression, Composition, Colour, &c. Mr. F. S. Cary may be spoken with from nine till eleven, at the School, where printed particulars of the terms are to be had.

MILLER'S VENETIAN OIL

VENETIAN VARNISH.

VENETIAN GROUND CANVASS.

MILLER'S GLASS MEDIUM

FOR WATER-COLOUR PAINTING.

MILLER'S ANTHYDOR,  
 FOR SKETCHING AND PAINTING IN WATER COLOURS.

MILLER'S MINIATURE TABLETS.

To be used instead of Ivory for Miniature Painting, &c. They take colour freely; hold it with tenacity, and are obviously incapable of change through time, or the effects of heat or damp. Ivory, it is well known, becomes yellow, and in hot climates often splits or warps, and is with difficulty obtained of a large size, whereas the Tablets can be had of any dimensions.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

MANUFACTORY, 56, LONG-ACRE, LONDON.

NEARLY READY.

MESSRS. HENRY GRAVES AND COMPANY

Have the honour to announce, that their very beautiful and interesting work of the

## SKETCHES IN TURKEY, SYRIA, AND EGYPT,

BY THE LATE SIR DAVID WILKIE, R.A.,

WILL SHORTLY BE READY FOR PUBLICATION.

This splendid work consists of *fac-similes* of the original drawings Sir David intended as studies for composition, but which his untimely death prevented, including the Beautiful Subjects of the 'Letter-Writer,' and 'The Tartar Announcing the Fall of Acre,' the 'Portraits of the Sultan,' 'The Pasha of Egypt,' and many others, not less beautiful in costume than striking for Eastern character.

Price: Twenty-six plates, Imperial Folio, half Morocco, £4 4s. .... Coloured and mounted, in imitation of the original Drawings, £10 10s.

AND THE NOBILITY.  
BERLIN, DÜSSELDORF, and DRESDEN.

The price of the Subscription Ticket, in either of the above Associations, will be 20s. each, which will entitle the holder to one copy of the Annual Presentation Engraving, which will be delivered IMMEDIATELY after the drawing, free of duty and carriage, and also the chance of obtaining a work of Art, value from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the Presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 153, Regent-street.

A Prospectus, detailing the plans of management of the German Art-Unions, and explanatory of the advantages afforded to the Subscribers, can be obtained, or forwarded free, upon application.

The Presentation Engravings from the Art-Union of Dresden, the drawing of which took place on the 21st of December; and those of the Art-Union of Düsseldorf, the drawing of which took place on the 20th of September, are now ready for delivery to the Subscribers.

Messrs. HERING and REMINGTON, Secretaries,  
153, Regent-street,  
Bankers' Union Bank of London.

**BURNET'S ILLUSTRATED EDITION.**  
Just published, in 4to., price £2 2s., in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s., half morocco, gilt tops.

  2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
  3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
  4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica—See the article "Drawing."  
James Carpenter, Old Bond-street.

Nearly ready for publication, in one vol. imperial 4to.  
**MEMOIRS of JOHN CONSTABLE, Esq.,**  
R.A., with Selections from his Correspondence and other Papers, and Notes of his Lectures on the History of Landscape Painting. By C. R. LESLIE, R.A. Illustrated with Twenty-two Mezzotint Engravings by D. LUCAS, from Pictures by CONSTABLE; and a Portrait.

Only One Hundred and Fifty Impressions have been taken off, which are equal to Proofs, and the Plates are destroyed. The price of the Work to Subscribers will be two guineas and a half in boards; to non-subscribers, three guineas.  
London: James Carpenter, Old Bond-street.

**MESSRS. HENRY GRAVES and COMPANY, PRINTSELLERS and PUBLISHERS** in ORDINARY to HER MAJESTY and HIS ROYAL HIGHNESS PRINCE ALBERT, beg to announce the publication of the most exquisitely-finished series of SKETCHES in TURKEY, SYRIA, and EGYPT, made by that lamented and highly-talented artist, Sir DAVID WILKIE, R.A., during his late Tour in the East, and selected from the most splendid drawings of his latest compositions, lithographed in the finest style of Art, in exact imitation of the superb originals, by JOSEPH NASH, Esq.

Price: Imperial folio, half-bound morocco, £4 4s.; coloured and mounted as the original drawings, in portfolio, £10 10s.

London: Published by Henry Graves and Company, 6, Pall-mall.

UNDER THE IMMEDIATE SUPERINTENDENCE OF THE COUNCIL of the GOVERNMENT SCHOOL of DESIGN at SOMERSET-HOUSE.  
(To be continued every alternate Month), price 3s. 6d.

**THE Fifth Number of a DRAWING-BOOK;** containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

The First DIVISION, comprised in Five Numbers, each containing Fifteen Sheets of Examples, accompanied by Descriptive Letter-press, is devoted to Elementary Instruction, and exhibits a course of Outline Drawing (including both Geometrical and Freehand Drawing) and Shadowing, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction in Ornamental Design, preliminary to drawing from nature.

Chapman and Hall, 186, Strand.

**THE ORIGINAL WORKS and EXQUISITE COPIES, in OIL and WATER-COLOURS, OF F. W. WILKIN, ESQ., Deceased,**

BY MESSRS. CHRISTIE and MANSON, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on SATURDAY, APRIL 1st, at One precisely, by order of the Executors, the entire Collection of the Works left by that most distinguished Copyist in Water-Colours, and exhibits a course of Outline Drawing (including both Geometrical and Freehand Drawing) and Shadowing, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction in Ornamental Design, preliminary to drawing from nature.  
Chapman and Hall, 186, Strand.

Also some Original Pictures in Oil, and a few by Old Masters.  
May be Viewed two days preceding, and Catalogues had.

THE IMPORTANT AND ATTRACTIVE  
FINE-ART DISTRIBUTION

TO BE GRATUITOUSLY MADE BY

THOMAS BOYS,

PRINTSELLER TO THE ROYAL FAMILY, 11, GOLDEN-SQUARE, REGENT-STREET, LONDON.

PLAN.

Mr. Boys has apportioned from his stock, Pictures, Drawings, and fine Engravings, richly framed, all of them the productions of this country, to the amount of upwards of SIX THOUSAND FIVE HUNDRED POUNDS, to be GRATUITOUSLY distributed by lot to purchasers of his publications to the amount of one guinea or upwards, as hereafter mentioned.

The above amount of property will be divided into SIX HUNDRED PRIZES, as undermentioned:—

LIST OF THE PRIZES.

	Guineas.		Guineas.
The Original Picture of the interesting Historical Subject of the TRIAL OF THE EARL OF STRAFFORD in Westminster Hall, 1641, embracing more than Fifty Portraits, and presenting a true portraiture of that memorable scene: the time is that moment of his defence when he uttered those affecting words: "MY LORDS, I HAVE NOW TROUBLED YOU LONGER THAN I SHOULD HAVE DONE, WERE IT NOT FOR THE INTEREST OF THESE DEAR PLEDGES A SAINT IN HEAVEN HATH LEFT ME—(here he pointed to his children, and his weeping stopped him). WHAT I FORFEIT FOR MYSELF, IT IS NOTHING; BUT THAT MY INDISCRETION SHOULD FORFEIT FOR MY CHILDREN, IT WOUNDETH ME DEEP, EVEN TO THE VERY SOUL." This interesting picture, painted by WILLIAM FISK, the engraving from which is dedicated by special permission to Sir Robert Peel, Bart., M.P., &c. &c. &c., is in a splendid gold frame, and is a noble picture for a gallery or any large room. Valued at . . . . .	500	THE SAME, Fine Print Impressions, in best maple frames; best glass. Value, 7 guineas. Of this there will be 30 as Prizes . . . . .	210
The equally interesting Original Historical Picture of the TRIAL OF KING CHARLES THE FIRST in Westminster Hall, 1649, by the same artist, with Portrait of His Majesty and more than Forty of the persons who took part in that memorable event. The time chosen is that when it is declared his Imprachment is in "the name, and by the authority, of all the good people of England," when Lady Fairfax, the wife of the general, exclaimed, "No; nor the hundredth part of them! Oliver Cromwell is a traitor." She was then commanded to unmask; and Col. Axtell ordered the soldiers to fire into the Box, which the king is just in the act of restraining. This excellent picture is in a splendid gold frame, and is of the same size as that of the Trial of the Earl of Strafford. Valued at . . . . .	500	LUCAS's celebrated Portrait of His Grace the DUKE OF WELLINGTON, &c. &c. &c., and WALTON's new whole-length Portrait of SIR ROBERT PEEL, Bart., M.P., &c. &c.; engraved of the same size, as a Companion to the Duke; the pair, India proofs, in splendid gold frames, with plate glass. Value, 24 guineas the pair. Of these, equal in all respects, there will be 18 pair as Prizes . . . . .	432
*. The Condition of the delivery of this Picture is, that it be lent to Mr. Boys by the future proprietor for the purpose of making an Engraving from it.		THE SAME TWO PORTRAITS, India Proofs, in best maple frames; best glass. Value, 18 guineas the pair. Of these, equal in all respects, there will be 17 pair as Prizes . . . . .	306
The splendid highly-finished Water-Colour Drawing, by EDWARD CORBOULD, of 'CANTERBURY PILGRIMS setting out from the Tabard Inn, Southwark, on their Pilgrimage to Becket's Tomb,' in which are introduced the whole of the characters described by Chaucer. This excellent and interesting drawing of old English and literary history is a large size, being nearly 5 ft. long by 4 ft. in height, in rich ornamented gold frame and plate glass. Value . . . . .	200	LONDON AS IT IS. 26 Lithographic Drawings, just executed by THOMAS SHOTTER BOYS; coloured and mounted, in portfolio. Value, 10 guineas. Of this set, the same in all respects, there will be 20 as Prizes . . . . .	200
A genuine early Picture, by the late Sir DAVID WILKIE, R.A., (the Scene at Cultra, Fifeshire,) in gold frame . . . . .	50	THE SAME WORK, tinted, half-bound in morocco. Value, 4 guineas. Of this, the same in all respects, there will be 114 as Prizes . . . . .	456
The set of 26 Drawings of LONDON AS IT IS, by THOMAS SHOTTER BOYS, coloured by himself, mounted, in an elegant morocco portfolio . . . . .	50	THE TRIAL OF THE EARL OF STRAFFORD, beautifully engraved by JAMES SCOTT from the original Picture; Proof Impressions, in best maple frames, with best glass. Value 5 guineas. Of these, equal in all respects, there will be 63 as Prizes . . . . .	315
The set of 26 Original Drawings of the COLLEGES, CHAPELS, AND GARDENS OF OXFORD, by W. ALFRED DELAMOTTE, mounted, in an elegant morocco portfolio . . . . .	50	THE SAME in all respects, but Print Impressions. Value, 4 guineas. Of these there will be 64 as Prizes . . . . .	256
Two beautiful Drawings after EDWIN LANDSEER, designed to show the same subjects, now engraving in the finest line manner, in superb gold frames, plate glass, the pair . . . . .	50	THE MOMENTOUS QUESTION, from MISS SETCHEL's beautiful and much admired Drawing in the Exhibition of the New Water-Colour Society, 1842; beautifully coloured from the original Drawing, in rich gold frame, with plate glass. Value, 16 guineas. Of these, equal in all respects, there will be 12 as Prizes . . . . .	192
EDWIN LANDSEER'S BOLTON ABBEY IN THE OLDEN TIME, beautifully coloured as a Drawing, in the same colours as the original Picture, in rich gold frame, with plate glass. Valued at 40 guineas. Of this, equal in all respects, there will be 12 as Prizes: making . . . . .	480	THE COLLEGES, CHAPELS, AND GARDENS OF OXFORD. 26 Views from Drawings by W. ALFRED DELAMOTTE; coloured and mounted, in portfolio. Value 10 guineas. Of these, the same in all respects, there will be 20 as Prizes . . . . .	200
THE SAME NOBLE SUBJECT, so exquisitely engraved by SAMUEL COUSINS, Esq., A.R.A. First Class, on India Paper; rich gold frame, with plate glass. Value, 20 guineas. Of this, equal in all respects, there will be 10 as Prizes . . . . .	200	THE SAME WORK, tinted, half-bound morocco. Value, 4 guineas. Of these there will be 114 as Prizes . . . . .	456
		The beautiful Engraving by WAGSTAFF, now nearly completed, having been in hand between two and three years, from EDWARD CORBOULD's celebrated Drawing of 'CANTERBURY PILGRIMS setting out from the Tabard, on their Pilgrimage to Becket's Tomb.' First Proofs, on India Paper, before the letters, in rich gold frames, with plate glass. Value, 18 guineas. Of these, equal in all respects, there will be 18 as Prizes . . . . .	324
		THE SAME, Proof Impressions, best maple frames, best glass. Value, 9 guineas. Of these, equal in all respects, there will be 44 as Prizes . . . . .	396
		THE SAME, Print Impressions, best maple frames, and best glass. Value, 7 guineas. Of these, equal in all respects, there will be 28 as Prizes . . . . .	196
		THE SAME BEAUTIFUL SUBJECT, most carefully coloured as a Drawing, from the original; rich gold frame, and plate glass. Value 25 guineas. Of these, equal in all respects, there will be 10 as Prizes . . . . .	250

MAKING TOGETHER

THE AMOUNT OF SIX THOUSAND FIVE HUNDRED AND EIGHTY-TWO POUNDS.

Every purchaser of Mr. Boys's publications, under these proposals, to the amount of one guinea or upwards, shall for every such guinea be entitled to one chance in the drawing for the prizes above enumerated, when the amount of 12,000 guineas shall have been purchased. The drawing is intended to take place in the spring of 1844, or sooner if practicable. Should the drawing be made when only a smaller amount has been disposed of, some of the prizes, where there are several of the same description, will be withdrawn, so as to keep exactly the same proportion of the amount of prizes to the amount of purchases as if it were carried out in full.

All purchases to be paid for at the time of making the same, for which a proper receipt shall be given, and the prints chosen, delivered at the time of payment, if published; and in case of selecting any works now in progress of engraving (the whole of which it is expected will be completed in the course of this year), vouchers will be given for their immediate delivery on publication. The receipts must be carefully preserved, as they will be necessary to be produced to entitle the BEARERS thereof to the prizes that may fall to them in the drawing to take place for the distribution of the prizes. No purchases will be entitled but where receipt tickets are given; and every RECEIPT must be signed by "Thomas Boys."

The purchase may be selected from the entire stock of Mr. Boys's publications, affording a variety of nearly two hundred different proofs and prints for choice; among which will be found not only the works of Bolton Abbey, &c. &c., he has already published, but also several now in course of engraving, including

TWO BEAUTIFUL SUBJECTS AFTER EDWIN LANDSEER.

ENGRAVING IN THE MOST HIGHLY FINISHED MANNER IN LINE;

one by WILLIAM FINDEN, Esq.; and the other by WM. CHEVALIER, Esq.; two drawings of which, to show the subjects, may be seen at 11, Golden Square, and will form one of the prizes; also a highly-finished engraving from Miss SETCHEL's beautiful drawing in the last New Water-Colour Exhibition; and the fine historical subject of 'Chaucer's Canterbury Pilgrims at the Tabard,' engraving by Wagstaff from EDWARD CORBOULD's splendid drawing, which itself will also be one of the prizes. The prints in all cases of published works will be delivered at the time of purchase. The manifest advantage to the public of this range of selection over the being obliged to take some one particular print, or some one out of three or four, is so clear as scarcely to need being pointed out.

The prizes are on view at Mr. Boys's Rooms, 11, Golden Square, Regent Street, where he invites their inspection, and where prospectuses and full particulars may be had. The mode of drawing will be in the usual method, and take place in London.

Parties desirous of being appointed Agents are requested to apply to Mr. Boys, who will give them any particulars required. Also Foreign Agencies, where desired.

## THE CARTOON COMPETITION.

THAT Literature and the Arts reflect the character of a nation, flourish in the ratio of its progress, and have a powerful influence upon its civilization, is a truth supported by the concurrent testimony of antiquity and confirmed by the evidence of daily life. For there is no nation, however rude and isolated it might be, that has not attempted to give form to inanimate matter, possessed some perception of the beautiful, nor sought to ascertain and define the principles of its varied forms. And step by step, as their Arts have advanced, something has been progressively added to knowledge, manners, and customs— which, if not refinement, was at least amelioration. Literature and Art become by degrees the symbolic expression of national thought, and are intimately connected with the religious creed, the philosophical system, the laws and governments of successive eras. The spirit of man soon asserts its supremacy over matter; the varied scenery of nature is around him, not to govern but awaken his genius, stimulate his imagination, and guide him imperceptibly, by the knowledge of constituent particles, to the comprehension of a great FIRST CAUSE:

*Præsentior conspicere Deum  
Per invias rupes, fera per jura,  
Clivosque præruptos, sonantes  
Inter aquas, nemorumque noctem.*

It is by this benevolent constitution of our nature that we acquire also the perception of ideal beauty, that we awaken taste, exercise both reason and judgment, and spiritualize the emotions of the mind. But instead of being governed by the character of external objects, we are conversant with them for the purpose of reproduction; reflect what we borrow, and impart a definite individual interest to all things by the subjective treatment of ideas derived from our acquaintance

with the material world. And thus it is we discover the great truth—which has glided down the stream of time, has been invested with all the charms of poetry, glowing eloquence, and philosophy—that matter is not beautiful in itself, but derives this character from being made the expression of MIND. By this system it is, that conceptions, originally rude, are enlarged and refined; that Sculpture becomes, as it were, animated, significant of human passion, a memorial of the greatness of man, and the almost spiritual emblem of his most degraded superstitions. By this system it is, under a purer revelation, that a loftier object is pursued, and, as mind conquers matter, we advance in the scale of creation—have a nobler ambition, the impulse of a higher destiny, and still find that here, as elsewhere, pleasure accompanies exertion, and is made subservient to social progress by strengthening and extending moral purpose. And moreover, by this system it is,

The intelligible forms of ancient poets.  
The power, the beauty, and the majesty  
That had their haunts in dale, or piny mountain,

are so represented, that, however hitherto untaught, we become instructed by lessons derived from the imagination, and cultivated by the associations of a severe but discriminating good taste.

To understand properly the creations of Art, we must study it under its two great epochs—the Pagan and the Christian. To the Greek it was the personification of the beautiful: his creative imagination, haunted by the impression of the scenes around, became inspired by the beauty it surveyed, and, thirsting for the knowledge of Deity as cause, sought to represent his darkened creed of spiritual existence, by every graceful symbol and elevated attribute such an innate desire could assume. The Deity to him filled space; his faith was the pantheism of physical beauty. Yet still, amid this imperfect civilization, which arose from a natural perception of

the beautiful,  
Astonishing, universal, wonderful,  
Drawn from the stars and filtered through the skies,  
and a natural appreciation of what is right, rather than from enlarged moral instruction, the Arts of Greece were the vehicles of social progress, and their rise and decay were dependant upon the state of public morality. The paintings of Polygnottus were incentives to national glory, and served as the text books of Chrysippus; and Aristotle has remarked, that Painting is Philosophy—instructing by ideal and graphic methods. Of the productions of the chisel of Phidias, Quintilian says, that they seemed to elevate the sentiments of popular religion, by freeing it from the trammels of matter; and the artist wrought then, instructed in all but his manual dexterity by the elevated standard of national thought. At a subsequent period—when superstition oppressed their minds, or the public creed if not openly renounced, was unsatisfactory, and derided by all but the lowest; when slavery completed the degradation, that civil war, conquest, and luxury had commenced; when subtle disputes passed for philosophy, and subservience to a tyrant's power was considered as the respect due to heroic fame,—Greece fell. Marathon and Salamis recalled only the blush of shame; and says, Pliny—*Cessavit deinde Ars.*

The Roman was the robber of the world; his Capital a den of booty. He, who could reduce the Greek to slavery, soon sunk to the level of the same debasement. Roman Art was the handmaid of luxury, vitiated and sensuous in its reflections. We do not say it was invariably so; that the productions of one age were not superior to those of another; but it was at all times a general feature. That this was its state when the Christian religion freed man from his abasing superstition, and restored him to his lost connexion with Heaven, will hardly be denied. And what, in fact, relative to the Arts, could be

the dominant taste of a people, whose nobles and ambitious chiefs ever sought to impress their own false ideas of the nature and objects of government upon the vast mass of the community? During the Republic, war was the commerce of the nation; at every future period it was the speculation of ambition. Their leaders spoke of justice, amid the carnage and devastation they excited;—of public faith, whilst they violated the most sacred laws of nations;—of respect of treaties, evinced by plundering the unprotected;—of virtue, during the practice of the most degrading vice;—of love of country and her great men, shown by their banishment to the most inhospitable climes;—and of public liberty, the Senate, and the people of Rome, in the reigns of Augustus, Nero, Caligula, and their successors! True, magnificent edifices arose, temple vied with temple, public baths, triumphal arches and the Colosseum, attested the wealth and the power of the Emperor and the noble; but not the genius or taste of the people: they possessed an individual, not a national character, dazzled, rather than instructed.

The great difference which existed between the operating principle of the Pagan and Christian world, very naturally created a varied mode of physical imitation. It is the difference between physical and moral beauty. Christian Art had besides a distinct mission; it was historical in its origin and progress—a form of language expressive of scriptural truth. This was felt from the days of Cimabue to Raffaele. The chief aim of the artist was the intelligible expression of his subject; technical skill, however earnestly acquired, was not the end or the reward of his ambition. The decline of Art was ushered in by artists directing their attention to mere imitation, or rather to a spiritless and mannered exaggeration of the motives found in earlier master works; it was hastened by the lower tone of public feeling and the conflicting excitements of the times. Let us now consider the causes which mainly favoured this development of the high tendencies of Art. In all cases was it not owing to Religion, the general education of the people, and the fostering patronage of the state? To immortalize greatness, and symbolize religion and philosophy, were the chief employments of the Greek artist; Art was not to him the art of luxury, amusement, vain display, or of technical skill,—he wrought for his institutions, both political and religious. From the first origin of Christian Art to the conversion of Constantine—from the ruin of the Roman empire to the time of Charlemagne—from the first stage of its subsequent development to the glorious period of Michael Angelo, Da Vinci, and Raffaele—the motive power was the same. It was religion and the state that called for, encouraged, and rewarded the energy of the artist; it was not Lorenzo, nor the Pope; it was the feeling of the people, and the liberal tendency of the ruler. In France, at various periods, great efforts have been made to introduce a general love of Art, but with less success than in Italy. For this purpose Francis I. obtained the aid of Rosso, Primaticcio, and Rubens; but at a latter period, under Louis XIV., we find Art existing under the same conditions as literature—great, certainly, but not devoid of that laboured magnificence which forms the distinguishing character of the period. But here there was but little of religion, less of the people, nothing whatever of the state, *L'Etat c'est moi*: this was the patronage,—the patronage of vanity, and of the masters and mistresses of the court. With regard to our own country, Horace Walpole has observed, that "It would be difficult perhaps to assign a physical reason why a nation that produced Shakespere should owe its glory in another walk of genius to Holbein and Vandycck. It cannot be imputed to want of protection: who countenanced the Arts more than Charles I.?" Walpole forgot that to countenance is not always to protect, and that the case of Shakespere is an exception to all rule, and the general condition of human life. He for-

got also the troubled state of the times, and that Calvinistic hatred of the Arts, which has excommunicated her productions from the days of the Reformation. Every age has its mission; and in judging of the character and circumstances attending the productions both of literature and Art, the historian

æstimet ante  
Compositum quo sit tempore, quoque loco.

Could individual patronage materially influence the destinies of Art—that of Charles I. must have been inevitably efficient. He had the liberality of a king, and the untiring zeal of a collector. Mr. Frere has wittily remarked—

Princes protecting Sciences and Art,  
I've often seen in copper-plate and print,  
I never saw them elsewhere, for my part,  
And therefore I suspect there's nothing in 't.

But Charles protecting British Art, did not flame as the Frontispiece of the "Picture Dealer's Guide"—it was not the threadbare subject of the laboured dedications of the day, but a patronage at once intellectual and elevated, arising from the impulse of a mind naturally good, and which, if not turned to evil by the contamination of others, had promoted not only Science and Art but his subjects' welfare. "His spirit was lofty, his discernment great, his taste refined, and his nature generous. He encouraged merit of the first order. Inigo Jones was his architect, Vandyke his painter. Through the interposition of Rubens, he obtained the Cartoons of Raffaele; and by the negotiation of Buckingham, the collection of the Duke of Mantua, containing 82 pictures, principally by Julio Romano, Titian, and Correggio." The productions of Holbein, Mytens, Parmegiano, Raffaele, Rubens, Rembrandt, Tintoretto, Titian, Paul Veronese, and Da Vinci, adorned his gallery. He invited Albano, and honoured Rubens at his court, and tried to form a national taste, by the encouraging example of his own. The Rebellion, which ensued, wreaked its puritanic vengeance upon Art, which had ministered to the pleasures of a King. The fury of the Parliament fell upon his collection, and Cromwell became, in reality—the critic of the gallery. The following is from the Journals of the House of Commons, July 23, 1645. "Ordered—That all such pictures and statues at York House as are without any superstition, shall be forthwith sold for the benefit of Ireland and the north. Ordered—That all such pictures there as have the representation of the Virgin Mary upon them shall be forthwith burnt." And the same injunction was issued relative to any representation of the second person of the Trinity. Thus the Rebellion completed what the Reformation had commenced; as fanaticism, which hates every symbol, nevertheless erects its own, in the *auto-da-fé* or scaffold. But patronage, to be availing, must be at least continuous. The patronage of Charles II. was like that of Louis XIV., with less means at his disposal. The taste of William III. was so exclusively military, that, to reward the genius of Swift, he offered him a captaincy of horse. Of the coarse Anne it is unnecessary to speak. George I., says Mr. Jesse, "wanted a love for polite literature and the Fine Arts; he possessed no taste for the one, and extended no patronage to the other. George II. had no feeling for science in the very country where science had its birthplace; and he had no taste for the Fine Arts among a people who affected particularly to cherish them." "I believe," says Walpole, "he would have preferred a guinea to a composition as perfect as Alexander's Feast." What Pope said of him with respect to poets might be applied to artists—

Poems I heeded (now berhymed so long)  
No more than thou, Great George, a birthday song.

Such was the state of Art, as regards the court, to the reign of George III. It is not said individual patronage did not prevail, but this must take its rise from personal taste, or vanity, or as one of the attributes of wealth. And this influence must be limited; however beneficial its di-

rection, even supposing it extensive, the patronage of Art is not to be considered with reference solely to the individual, but as it may be made the vehicle of social progress. The application of Art to national purposes, and a delicate appreciation of the beautiful, has been ever considered the sign of an advanced state of civilization. The pursuit of the *το καλον* should form not only an important but a permanent object of human intelligence; and those who consider utility, commerce, and manufacturing power to be the exclusive ends of man's solicitude, take a mistaken view of his nature.

Man's progress is not the consequence of individual perfection, but of the generally advanced state of social cultivation. It is necessary, says Schlegel, that the different natural circumstances and situations of the various classes of mankind should in a certain degree work together, before we can either attain or enjoy excellence in the productions of mind. The poet and the painter have as much influence upon civilization as the varied productions of the murky furnaces of Birmingham. But whatever may have been the patronage, however casual and misdirected, whatever may have been the apathy of the public, it cannot be preferred as an accusation against the present. The public feeling of England is like the climate; either hot or cold, or too variable to be capable of being reduced to a definition. From the days of George III. to the present hour, as education has extended, the Arts have advanced, a more cultivated and liberal feeling has prevailed; and amid much to be deplored there is much of which we may be justly proud. The patronage of Art has lost its individual and assumed a national character. Improvements are planned and executed not only because they are useful, but because they are expressive of our social state. The restoration of a church now leads to an attentive study of its style, and most consistent mode of decoration; excellent societies are established for this express purpose; even churchwardens are occasionally influenced by the progress of a purer taste, and of a more cultivated zeal. Country corporations have ceased to mutilate, they do more; their public buildings exhibit, nothing certainly reminding us of Greece or Rome, but a great advance beyond the general efforts of the Palladio of the county town. Our large cities have each become the centre of a circle of civilization, soon to be connected with the metropolis, by a taste and lettered zeal, at once coequal and coinciding. Art has now the patronage of the court, the higher classes, the people, and the state. We use this word in its most extensive sense, as not that which only encourages the productions of Art individually, but which imparts and maintains the general feeling in its favour. This being so, our inquiries are to be directed as to the best means to render this patronage permanently beneficial.

We have said that for national purposes religion and the State are the great patrons of the Fine Arts. This is not a speculative opinion, it is an historical truth. From Pericles to Lorenzo the Magnificent, their sedulous cultivation, among every imaginative and refined people, as a national feeling, either religious or political in its expression, is of this a sufficient record. And how did they proceed? Not certainly by negligence of acknowledged merit, but by its honourable employment, and investing it with the esteem of great men, in great times; and moreover, by an earnest encouragement and enlistment in the service of the state of rising talent. This was obtained by COMPETITION. It was the peculiarity of the public life of the Greeks to bring each mind in opposition to that of another. The honours paid to genius created a generous rivalry throughout the land. If it were less so among the Romans, it was because their great conquests, which placed the genius of the world at their disposal, had greatly tended to reduce Art to the state of the master and the slave. As in literature, so in Art, they borrowed and applied the

works of subject nations, and imported a civilization not originally their own. Among the principal Italian states, during their most flourishing periods, we again observe the system of COMPETITION to prevail. For the same causes which had contributed to the rise and progress of the Arts of antiquity, now tended to their revival.

Whilst Germany and Gaul groaned beneath the oppression of tyranny in its worst form; of ignorance, rapacity, and force; a few cities of the ancient Etruria, favoured by a fortunate combination of circumstances, commenced about the tenth and eleventh century their course of intellectual progress. These were Pisa, Sienna, Florence, Bologna, Venice, and Anaphli. Necessity had created a public spirit, and with the turbulent vices of a republic;—the party strife, confiscations and banishments of their chief families, the perpetual reform and instant change of the thing reformed, they exhibited, nevertheless, some of the virtues of a free state,—the love of country; and the recurrence to moral as well as physical power, in the conduct of government. Art was patronised, to recall the memory of the public benefactor; to decorate the city; or to give additional value to the gains of commerce. Venice was the first to solicit the aid of the most celebrated artists of Constantinople to reconstruct the church of St. Mark. The Pisans followed this example with regard to their cathedral; and the pupils of Buschetto, emulated their master in their plan for that of Lucca. The zeal of the Florentines exceeded that of the other republics; their independence and progress in Art may date from A.D. 1010, and every successive year decorated the city, either by the spoils of Greece, or the creations of their active poetic imagination. Cimabue, Giotto, and Tommaso were but as the light which seems at first to suffuse along the space of heaven, still gradually increasing in intensity; filling earth, sea, and sky with its brilliant hues, until it is lost amid the brighter radiance of the sun. The Campo Santo excited a competition; the walls of the palace displayed the results of competition, and detailed the most glorious events of Florentine history; the war and conquest of Sienna, that of Pisa and Aretino. Frecco now, too, evinced its highest tendencies. Scriptural truth, the varied interests of human life, were the subjects which inspired and disciplined the powers, not so much of eminent artists, as of great minds. And who then entered the lists of COMPETITION. It will be sufficient to name two, LEONARDO DA VINCI and MICHAEL ANGELO BONARRUOTI! It was in 1503, when the Florentines announced their intention of decorating their great council-hall, to which these and other great artists of the day furnished designs, "Da che vi tornò," says Lanzi, speaking of Leonardi da Vinci, "aveva trovato quivi nel giovane Bonarruoti un emulo che già compete con lui; anzi gli era preferito nelle commissioni in Firenze e in Roma, perchè dava opera ove il Vinci, spesso dava parole. E' noto che fu ira fra loro due; e Leonardo provvedendo alla sua quiete che fra l'emulazioni mal può godersi, passo in Francia ove, senz'aver mai dipinto, morì nel 1519." At a future period, when the Sodality of St. Rocco determined to decorate the church with a picture representing the apotheosis of their patron saint, and being desirous of having the choice of several designs, they were honoured by the competition of the greatest artists. Paul Veronese, Schiavone, Salvati, Tintoretto, and Zuccherò were of these. Does not this impress the seal and impart the character of high authority upon the system of competition? Does it degrade Art, or lower the artist in public estimation, to conduct great works upon this plan. Is it always

Better to reign in bell than serve in heaven—  
to be the petty monarch of a pettier sphere, rather than a competitor with the great and brave? He, whose genius gives him the right to dare, even unsuccessful, may exclaim with the Roman, "Another such defeat, and we shall learn

how to conquer." And if it be said, "The eminent should not compete; having won the honours of their profession, they may claim its rewards; all else is to jeopardize their fame, and to submit an established reputation to the lottery of accidental judgment and good taste:" we reply, Da Vinci and Buonarroti competed, are you greater than they? Do you risk more? Can you claim a higher reward? The great works of three centuries look down upon you; and remind you, they are the result, the glories won by COMPETITION. We do not say competition, as a system, has not its evils; but have not commissions theirs? Moreover, the best course is not to abate the system, but to remedy its abuse; the physician does not kill his patient to relieve him from his misery—he endeavours to subdue his pain. But it is said, Great artists cannot compete; they have no time. We reply, Repair to Italy, and see what great artists have done; and then estimate, by comparison, what it is possible in the space of one life to conceive and to perform. Again, it is urged, Society has greater claims upon individual freedom, and the domestic life of England precludes so much devotion to any professional pursuit. We answer, Human nature is much the same at all periods; to waste time, and fritter away existence in trifling occupations, was as easy in the days of Lorenzo as in the reign of Victoria. From his peculiar organization, it seems to follow that man's earthly destination is placed not in speculative knowledge alone, but in active exertion, by means of which he is enabled to become, although in a narrow sphere, a creator of the beautiful and good. It was this combination of speculative and active power which distinguished the great masters; the early painters, like some of the more eminent of the poets of the æsthetic-religious school, not only strove to blend moral with scriptural truth, but united the beautiful to both, and thus endeavoured to approach the Infinite through the medium of the sensations. What they did, it is sufficient for us to imitate: competition cannot disgrace eminence—it does foster rising talent, and relieves mediocrity from the embarrassment of perhaps too partial praise. If it be true, no book was ever so dull, from which some useful idea might not be obtained—so, even estimating competition at the lowest rate, it must be a means towards the accomplishment of good. No work was ever yet entitled to be called truly perfect, in which the strength and enthusiasm of youth was not blended with the experience and maturity of manhood. Competition secures this. F. Schlegel well observes, "There are only two common principles on which every great work must more or less proceed: first, on the expression of those feelings which are common to all men of elevated thinking; and secondly, on those patriotic feelings and associations peculiar to the people for whom it is composed, and on whom it is to exert its nearest and most powerful influence." Competition, by appealing to a class of educated men, whose imaginative faculties have been trained and disciplined by great examples and guided by technical rules, possesses obviously by the combination and comparison of its various powers, the means not only of raising the tendencies of Art, but of fixing every fleeting impression and preserving every great conception, that can give to history the character of duration, and make the genius of a nation illustrative of national honour. We are willing to admit, competition as at present conducted must be the resource of the weak rather than of the strong, of the man advancing into notice, than of the artist of established reputation. This of necessity will ever be the case in proportion as the thirst of gain is a greater incentive to action than the desire of producing a work men would not willingly let die. National feeling, although indirectly, has besides a very powerful influence upon individuals; the opinions of social life still more. We may court the public, but our impressions of its judgment are heightened or lowered after all by the friends with whom we

associate, and the circles amid which we move: What is the prominent passion of the day? DISTINCTION, the notice of a newspaper, the opinion of a coterie, and more particularly that conferred by the attributes of wealth. There is an incessant struggle to appear better than we are. No man now willingly admits a superior. And in a commercial country, where rank and honour are synonymous terms for wealth, money becomes the hope, the ambition and the reward of exertion. Such a system, so far from tending to encourage or develop talent, is destructive of its best efforts. The moment is all in all: Art becomes no better than a mechanic trade, when the desire is not so much, *what we can produce; but how much we may possess.* What Hood has so inimitably written of Miss Kilmansegg, may be quoted, as describing the *ruling passion* of the day.

The very metal of merit they told,  
And praised her for being as "good as gold,"  
Till she grew as a peacock haughtily.  
Of money they talked the whole day round,  
And weighed desert, like grapes, by the pound;  
Till she had an idea, from the very sound,  
That people with naught were naughty.

We must recur to first principles, if we would accomplish great results. If we work for a patron, let us but do so in accordance with his wishes, and our purpose is attained. But it is different with the competitor for public fame. The subject chosen must be great and comprehensive—it must be forcibly conceived and powerfully executed. If selected from Scripture, Art becomes then the ministrant of the truths of God; if from the book of human life, the illustration of all that is terrible, grand, or noble, in the varied conflict of earthly passions, and the highest virtues of our race. Pictures such as this can be wrought only by deep intellectual study, and the silent, but enlarged observation of mankind. It must be the thought, which is instructed by the drama of the world, not momentarily quickened by the trifling scenes presented to us, in the little theatre of our daily life, that must actuate and guide us, as it did the painters of old. There is no slave so fettered, no prisoner more hopelessly doomed, than he who has become spell-bound by the witcheries, to use a generally descriptive term of "fashionable life;" within that circle—

Lasciate ogni speranza voi che entrate.

How many hearts, once glowing with the passionate ambition of fame, have been sunk within its vortex, what talent has been withered, wasted, neglected, and desecrated to convert the heaven-born thought into immediate gold, that rank might be purchased, and opinions gathered in, which rewarded not the genius which struck forth the Michael Angelo, Dante, Titian, or dramatic poet of the age; but the man who was clothed in purple and fine linen, and could afford to fare sumptuously every day.

There are, however, some rules connected with competition to which we most readily subscribe. "There must be perfect explicitness in the terms, careful investigation to determine that the terms are complied with, perfect competence in the judges to select, and perfect honour in making that selection."

We are aware of the great difficulty of obtaining a tribunal of this description. Few are found willing to submit to the decision of one, and none without friends at court, to the judgment of any public body. In the former case, the responsibility is too great; in the latter, not sufficiently felt. There are, moreover, two feelings powerfully operative in English life, very naturally generated by the influence of the commercial spirit—those of personal interest, or of party. We do not say men do not rise superior to these motives; we are only fearful they yield, and not occasionally, to such an amiable weakness to serve their friend, that an active canvass is very frequently rather more effective than acknowledged merit. There is, besides this misfortune, the ignorance that cannot judge, can vote, and is far more frequently guided by the designing than the honest. Now, a high-minded man, conscious of his powers,

will hesitate before he submits his claim to any tribunal, not fully impressed with the moral responsibility of the uttermost justice in decision. He will not be judged also by his inferiors, nor by men suspected of partial views. But in this case, we must endeavour to secure the artist, not only the "perfect competence" but the "perfect honour," he has a right to claim in the selection of the judges, to whom his designs are submitted. In Greece, the judges of the Olympian games were invested with a dignity almost sacred, and subject to a responsibility of the greatest strictness and severity. Some were appointed by the Archons, and confirmed at the public assemblies, and these held their office for a term of years. At other times, a director of the works was elected; and the individual whose taste and integrity were thus acknowledged, was called *ἐπιστάτης τῶν ἔργων*, "Superintendent of the Works." Pericles filled this office; and thus nominated Ictinus and Callicrates to conduct the building of the Parthenon, and Phidias to execute the sculpture. The Theseum, the docks, arsenal, the Dionysiac Theatre, and the Panathenaic Stadium, were completed upon this system. Some interesting information may be obtained upon this point, in the introduction to the Catalogue of the Designs for the New Houses of Parliament; and from this it seems perfectly possible to appoint a competent tribunal, in which the artists should be as a body represented, and the public interest protected. To endeavour to secure such a result, is better than not to compete. Vacillating, too, as public opinion may appear, in the end it is generally just; it confirmed the decisions upon the New Houses of Parliament, and it has reversed some later, upon other public works. "The multitude," says Aristotle, "is the surest judge of the productions of the Arts." We are willing also to admit, that when, for national purposes, we claim the competition of men of acknowledged celebrity in their profession, that a fair remuneration should be made, and that of nine competitors, eight should not be subject to an entire sacrifice of time and thought. Any other system is defective; it makes one fortunate, eight discontented; the rejected as a matter of self-respect, considers himself ill used, and does not compete again; it is, moreover, to confiscate, and not to reward genius, and to make a lottery of established reputations. What we desire to possess we should afford to pay for; and to obtain one, and that the best design of the ablest men, is cheap even to the commercial system of our institutions in this respect. We say then, in competition appoint the ablest, limit your number as you please, and remunerate those you appoint—but exclude none whose freewill and genius urges him to appear and combat in the lists. The youth who does so is to be welcomed and honoured as the greatest.

non tam  
Turpe fuit vinci, quam contemdisse decorum.

With respect to the results hitherto obtained, we may observe, that the design for the New Houses of Parliament was the consequence of competition, that of the *National Gallery*—we believe—of a commission. To us it has ever appeared as an appropriate frontispiece to the "History of Public Jobs;" and Trafalgar-square might be becomingly consecrated as the burial-place of the genius and good taste of the nation. Two great states at the head of European civilization, erect two public buildings at the same time, each characteristic of the progress of Art amongst them—the *National Gallery*, and *La Madeleine*!

Now, considering therefore the importance of the rules laid down by F. Schlegel, with regard to public works, how naturally suggestive, too, the Cartoon competition must be, of the noblest conceptions of the mind: the rise and progress of the social state, the heroic actions of the great and brave, of the adventurous spirit which roamed unchecked in its high daring though fallen on evil days, and evil tongues; of the lofty mind, which, nothing unabated, still maintained its struggle for

the mastery of right; of the very greatness which casts at intervals a false halo round the deed of ill, of scenes upon which Shakspeare has written, of which Milton formed a part, of Poitiers, Cressy, the Peninsula, and Waterloo; of the memory of great men; the establishment of a religious faith, and the misfortunes of fallen greatness; we trust, we hope, and as a "NATIONAL CALL," we require—that amid the names of those who compete, those of several Royal Academicians will be found. Let us not be misunderstood. Upon the Continent the result of the Cartoon will be held decisive as to the state of Art in England; we may be able, and it is not difficult, without the aid of an elephant's foot, to crush its critics; but who can refute a fact? Therefore let great artists appear. The Government has now done so, modestly, it being for the first time;—as the encourager of Art, if those who have at every opportunity taunted that Government for its inertness, now hold back, will it not be said they feel that

Tutius est fictis igitur contendere verbis  
Quam pugnare manu.

Or that yielding to personal motives, they have the leaven of the pride of Ajax during the first competition upon record, and feel, as well as exclaim—

Et mecum confertur Ulixes.

However unwarranted, or ill-mannered, who can refute a sneer? We never will become an abettor, or adherent of the abusers of the Academy. Very much of this may be readily understood; it is flattering to our vanity to indulge in censure, as that infers the possession of superior powers, and mediocrity is always malicious. It is the general result, and not some minute, paltry, and particular evil that, in regard to such institutions, must be considered. An Academy cannot bestow or create genius, but it may elevate and guide it. You may plant a bramble beneath an oak, it will always remain a bramble; but as such it may even be improved. The only useful protection an academy can give, says Parini, is to provide excellent pictures, examples, and models—the best and most zealous masters, the means and the establishment requisite for study and practice. In a dearth of medical skill would the fault be exclusively imputed to the rules of the College of Physicians? Is the oratory of the House of Commons the consequence of the education pursued at the University? Nature creates her own great minds; it is for man only to guide them. General education and the state of public feeling are for the most part the best and chief excitements and instructors of genius; but the discipline of a public institution, which collects the facts and records the traditions that tended towards the perfection of works of Art, is requisite to the majority of men who are anxious to attract, and desirous to win, the esteem, rewards, and the honourable reputation of their age. The sun will never set upon a generation that has forgotten Homer, Virgil, Dante, or Milton; and from the books of human life, what hand can erase the names of Phidias, Apelles, Michael Angelo, or Raffaele. They were born to be great, and were so; and of the latter, be it remembered, all entered into, and none feared, a COMPETITION.

We feel it a duty to be earnest upon this point, for the honour of the Arts of our country, their progress, and becoming protection. Mr. Wyse has well and eloquently said, "The opportunity which will be furnished by the decoration of the New Houses of Parliament—not to one Art, but to all Arts, from the lowest to the highest of its forms, for every display of talent, and, I trust, of excellence—will, I need not say, open new channels, hitherto obstructed or unknown, and be, in fact, the commencement of a new era for the country. I have never heard a foreign artist speak of the subject, without envying us the most glorious opportunity (so they consider it) that was ever opened to the Arts of any country. And now, gentlemen, it is for you, not less to do your

parts, and to justify the hopes reposed in you. Exclude the interference of others, not by prohibition, but by superiority; and raise, by your own exertions and merits, Art to that station amongst us, that you shall not need the patronage of the country, but the country shall need you. It is in the hands of the artists, in combination with the great opportunity now offered, to work a thorough revolution. Let them perform their share of the duty, and I have no fear that the State and the public will not do theirs. The decoration of the Houses of Parliament is not intended to be a job got as hastily as possible out of hand, *but a great permanent school*. It is the beginning, but do not imagine it is the end. It will do more, I am thoroughly convinced, to effect the two great improvements we all desire, to elevate and diffuse Art, than any scheme yet attempted in this country." In this we entirely concur. It can be no selfish motive that induces us to urge it upon public attention; it is the wish, rather, to raise the artist, by elevating the direction of Art, and to instruct and refine the people, by the lessons inculcated through their public monuments. The conquests of a victor, however extensive, may be lost, his own fame eclipsed or forgotten in the ceaseless tide of time; the laws of the legislator may be rejected, or disannulled; the poet may cease to please, and the orator, who once charmed us, vainly attempt to reanimate the passions that his genius raised. But it is otherwise with the great productions of Art. They are not for an age, but for all time. With them there is no change; they stand before us in their eternal majesty, the awful evidence of the greatness of the past,—eloquent witnesses of the moral supremacy of man. The gauntlet has been thrown down; earnestly we hope many a well-remembered name will be entered in the lists, to boldly take it up. If the terms proposed be unbecoming or unjust, let it be stated; but if not, we trust the Government will be fairly met; for who would wish to have it said of him—

too late  
I thus contest; then should have been refused  
Those terms, whatever, when they were proposed;  
Thou didn't accept them; wilt thou enjoy the good,  
Then cail the conditions?

Let but one case be supposed, and all further argument we imagine is unnecessary. Let us contemplate for one moment the failure of the Cartoon Competition: nevertheless, the Court, the Parliament, and the People, determine upon the employment of fresco as *one* of the means of decoration for the new houses. Will it be pleasant to hear the Teutonic dialect prevalent at Westminster? to witness strange forms, "unshaved, unkempt, unwashed," at work upon English historical compositions in the neighbourhood of the Abbey? or to see the name of HERR CORNELIUS affixed to the eastern door of the Academy?

Will this thing be,  
Nor overcome us like a sudden cloud,  
Without our special wonder?

We think not; but we have done. From the first announcement of the Government intention, with respect to the Houses of Parliament, we have given, as it was our duty,—to the Prince who presided at the inquiry;—to the great artists, of whom we are justly proud;—to the student now entering into life;—and to the public, whose interests were at stake, our warmest, earnest, and most assiduous support; true, it may have been, may be still, unavailing—but it is and was sincere. The state of the Arts can never be a matter of indifference; they are held as luxuries only by the idle and the sensuous, to whom the wonders of heaven and the beauty of earth are but as dross; they are, and we repeat it, a part of education, the sign of the social state; and to assist and to promote them is to provide the youth of both sexes "with one gentle and unrepublishing friend," whose voice is in alliance with goodness and virtue, and which, when once understood, is able both to soothe misfortune and to reclaim from folly.

## OBITUARY.

T. C. HOFLAND, ESQ.\*

Thomas Christopher Hofland was born on Christmas-day, 1777, at Workop, in Nottinghamshire. His father was a skilful and extensive manufacturer of cotton-mill machinery. He removed to Lambeth about the year 1780, where he became a partner in a very important business, which unfortunately failed, when his son (who continued an only child) was in his 19th year.

After this time, the subject of this memoir devoted himself to landscape-painting as a profession; but he never had the advantage of any instruction, save what he received in three months from Rathbone, then an artist of considerable celebrity; but, in consequence of these lessons, he produced two pictures, which were favourably hung at the Royal Academy. He did not exhibit for ten years afterwards, as he soon found that, by teaching alone, he could ensure the means of existence; for there was at that time no British Gallery for the disposal of pictures, and it is well known that the great exhibition was no place of sale.

At this period every man was a volunteer, and young Hofland was in the King's Own company, at Kew; being fugleman, his singular agility and soldier-like carriage attracted the attention of the Sovereign, who, on learning his profession, desired the Rev. Dr. Willis to bring him and his drawings to the Palace, and he had the honour to receive his Majesty's commands to prepare a series of drawings of new plants and flowers then newly received for the Royal gardens. One of these I still find among his numerous sketches; it is very beautifully executed, and, though torn and dirty, evidently in its colouring true to nature. The King rewarded him by an appointment to be his Majesty's draughtsman on board a vessel about to set sail on a voyage of discovery, but his mother's extreme distress prevented him from profiting by it, and he was superseded by W. Westall, Esq., A.R.A.; the King also designed him a commission in the army, which was lost to him by a mistake in the name, and fell to the lot of the late Colonel Haverfield, a brave officer and good man.

Having an opportunity of entering on a very superior line of teaching at Derby, he availed himself of it, and resided several years in the country, where he married; but after visiting London, for the purpose of copying in the British Gallery, the desire of entirely devoting himself to painting became irresistible. The flame was so fanned in the following year, that he resolved on removal; and, after settling all his affairs, he arrived in town at the close of 1811, the house he had taken at Hampstead not being ready.

His copies made in the gallery had sold well; his pictures, which were views of the lakes, which he had closely studied two preceding summers, did not sell immediately, but they were much spoken of, and occasioned him to receive many commissions from Miss Richardson Currie, at whose seat in Yorkshire he spent most of the ensuing summer, and for whom he painted, amongst others, two views of night scenes, in which fire of extraordinary truth and brilliancy was introduced, and which were much praised when hung at the Royal Academy the year following. In this season of exhibition he was very fortunate; and, eager to seize every medium of improvement, he spent between three and four months in the Highlands of Scotland. One picture, the fruit of that exertion, remains with me: it is a view of Stirling Castle, and is much improved in colour since then, being indeed beautifully clear and mellow in tone. I can have no doubt many others are equally benefited by time.

In 1814 he had the honour to receive from the Governors of the British Gallery the award of one hundred guineas for the best landscape, 'A Storm off the Coast of Scarborough,' purchased by the Marquis of Stafford. His lake views, painted about this time, were considered very excellent, and the copies he continued to make at the British Gallery of Claude, Wilson, Poussin, and Gainsborough, were purchased with avidity, being considered (particularly the Claudes) as perfect facsimiles of the originals.

In 1816, he removed to Twickenham, being always so passionately attached to the country that he considered pure air and sunshine as the life of life; and

\* Communicated by his widow.

being engaged by the late Duke of Marlborough to paint a series of pictures intended to illustrate a description of his seat of White Knights, a residence in London seemed no longer strictly necessary. During several successive years he was principally engaged in this business,—to his great loss in every sense of the word; for his health, always delicate, became decidedly bad, in consequence of his having (confiding in the Duke's assurances) given his own bills to different engravers, all of whom he was compelled to pay. In fact, no man could be more cruelly circumstanced than he was for many—yes! *many*—years; nor can this portion of his history be dwelt on further than to say, that the integrity of the poor painter was as decisively proved as that of his noble patron was deficient.

Driven by this circumstance back to London, he both painted much, and extensively engaged in teaching. His most remarkable pictures were a 'Lake View on Windermere,' bought by the Earl of Durham; a composition 'Jerusalem at the time of the Crucifixion,' commissioned by Lord de Tabley, and repeated for the Earl of Carysfort, the original remaining with himself; several much admired moonlights, and numerous views in the Lakes of Scotland, Cumberland, Wales, and Ireland. It was somewhat singular, that having been so successful in his pictures where fire was a prominent object, he did not renew them, but the difficulty of obtaining studies in the country prevented him.

In his 63rd year he set out for Italy, which he had long desired to visit with all the ardent solicitude so natural to an artist, being enabled to do so by the commissions given to him by the Earl of Egremont. He made at Naples, Castellamare, Pompeii, Rome, Tivoli, and Florence, between 70 and 80 beautiful sketches, but became at the latter city so exceedingly ill that he set out suddenly, in a hope which appeared almost vain of reaching home again. Happily as he passed through France the fever left him, but its ravages were terrible, more than twenty years seemed added to his age during five months' absence, nevertheless his spirits were elated; and he hastened to lay the fruit of his labours before his noble patron, of whose judgment he had the highest opinion, and whose approbation was most important.

But from this time he was sensible that, in addition to his usual affliction of distressing pain in the stomach, he had also the infirmities which belong to age, though his energies remained unimpaired, and therefore tempted him to exertions beyond his strength. His passion for angling, known from the book he wrote on that subject, still existed in its wonted force; and it is consolatory to remember, that during the last two summers (in which he resided at Richmond, a place to which he was fondly attached), he still enjoyed it. But, alas! in October last he suddenly became incapable of any fatigue, and he lost not only appetite (which was in him always delicate), but even the power of swallowing anything save liquids. After ten or twelve weeks of suffering, being earnestly requested by our excellent medical friend, Dr. Grant, to change the air and the scene, he suddenly resolved on going to Leamington, having for the last twenty years desired to know Dr. Jephson, of that place, in consequence of his services to several of our friends.

The doctor was most kind and valuable, but the waters disagreed with him; and in the third week all hope ceased even with *me*—with himself it had long been gone; but the circumstance of my own recovery under Dr. Grant's care, though several years the elder, had rendered me too hopeful. Violent hemorrhage (showing the true cause of my dear husband's severe sufferings for more than thirty years) revealed the truth—he died of cancer in the stomach.

I think it my duty\* to add, that Mr. Hofland, in conjunction with Mr. Young, originated the "General Benevolent Society of Artists," though he always belonged to the *first* excellent Institu-

\* Mr. Hofland had the great and somewhat singular satisfaction of saving the lives of three of his fellow-creatures at the risk of his own life. One was the wife of a drummer at Kew, a suicide who chose a place in the river that rendered rescue extremely difficult. When taken out, she seemed dead; but, the persevering humanity of the present King of Hanover, restored her. For this, the Society gave them two medals. Another was a child saved at Brentford. The third, a youth, taken out of the Trent, near Nottingham.

tion. He afterwards, together with Mr. Linton, projected, and with the assistance of Messrs. Glover, Holmes, &c., carried into effect the building of the Gallery in Suffolk-street, by which many of his brother artists were much benefited; and when it is remembered that such painters as Hurlstone, Stanfield, Roberts, and Linton, have emanated thence, shall we not say, that his country was benefited also?

Of his pictures it does not become me to speak; they belong, perhaps, somewhat to a time that is past, and not less, but *more* I trust, to a time which is to come, when the great, the gifted, and the good, may probably estimate the nature and truth of his colouring—the faithfulness of his detail, that tone of simplicity devoid of pretension, yet not of poetry, which must secure admirers among congenial minds, and enable them to gaze with calm delight on the interesting pictures of Hofland.

B. HOFLAND.

Richmond, Feb. 25.

[In printing the communication with which this estimable lady has favoured us, we cannot avoid making some reference to her own most honourable and beneficial career in life. Her name is, indeed, identified with the literature of her country—with the most useful portion of it; for her pen has been exerted chiefly to inform the young, to train the mind, to teach the heart, and to cultivate the affections of "rising generations," of whom she has seen more than one in her, happily, lengthened life. The works she has produced—and they number, we imagine, upwards of half a hundred—have been of incalculable value in the great purpose of education; and to her much is owing for modern improvements introduced into the system of teaching, by which dry and uninviting modes have given place to alluring and interesting methods. It is, we believe, nearly 40 years since Mrs. Hofland began to write; and within the last year she has produced a work in three volumes, as healthful, vigorous, and attractive as was the earliest of her productions. May she long continue in her career of quiet glory, cheering and benefiting mankind—still performing with exemplary exactness and perfect rectitude the several duties of social life; they have become less in number; but all who have been of her acquaintance know full well how tenderly, disinterestedly, and devotedly she discharged those of a wife.

We had the privilege of ranking among the friends of the late Mr. Hofland; and, with all who knew him very deeply lament his death: his loss will not be easily supplied either to society or to the Arts. In reference to his position as an artist, we gladly adopt the opinions of a brother artist—one of Mr. Hofland's oldest and most accomplished friends—who conveys to us in these terms his notions of Mr. Hofland's professional reputation:—

"With whatever peculiarities of manner the critics may charge some of his more recent works, when in the decline of health, there was an elevation both of style and thought which pervaded his larger compositions not unworthy of Poussin, which all admirers of landscape Art must recollect, whose memory can serve them for twenty or five and twenty years back. His 'Richmond Hill' is a bold and effective landscape, and will be esteemed as long as the material endures; his 'Jerusalem' had a solemn and unaffected grandeur about it which, I well remember, impressed all who saw it on its exhibition in the British Gallery. Hofland was a man of reading, and did not confine all his hours to the drudgery of the easel; he had a high idea of his Art, and sought to convey an impression of its mental power in all his compositions. He had very little value for the prettinesses so indispensable in the landscapes "painted for the eye," which are now so much in vogue. It was not little displays of taste here, or bits of execution there, which he aimed at, but a well-studied and poetically-conceived whole. His conversations upon Art were always highly intelligent, and he was ever an eloquent advocate of its claims on the respect of the educated and the refined; while no one could discourse more fairly and unprejudicedly respecting the deserts of his contemporaries. He was an enthusiastic lover of the Angle, and a first-rate practitioner, and he invariably united his Art with it in all his piscatory expeditions; and in the

Artistical Sketching Clubs, held, not at Mr. A's or Mr. B's, but *sub dio*, in nature's own drawing-room—on Hampstead Heath, or Greenwich Park, Richmond, or Windsor Forest—he was ever a necessary member. He did much to implant a right feeling for high landscape Art in his day—a feeling which, when once entertained and appreciated by the public, must stimulate the artists of Britain to rival the best days of Claude and the Poussins; if, indeed, they have not rivalled them already."

JOHN RHODES, ESQ.

This promising young artist (for some particulars concerning whom we are indebted to a provincial paper) died in December last, at Leeds. His father was also a painter of established repute in Yorkshire. From his earliest youth Mr. Rhodes showed strong indications of that taste and application in the Arts, by which he afterwards distinguished himself. He was a close and accurate observer, and an admirable imitator of natural objects, even in his childhood. These indications of talent were not, however, encouraged by his father, who had experienced the uphill work of a professional artist's career, and the blighting disappointments arising from inadequate remuneration for the labours of his pencil. He therefore endeavoured to direct his attention to some more lucrative and certain means of obtaining a living; but when the time of decision came, no persuasion could prevail upon the boy to be anything but a painter. He was then allowed free scope with his pencil and crayon (for as yet he had not been allowed the use of colours), and assisted his father in making lessons for the use of his pupils in teaching.

With his pencil, chalk, or sepia, he would luxuriate during the long winter's evenings; and sketches of wonderful power and beauty floated away from his fingers in a manner absolutely amazing.

But it was his oil paintings which established his fame, and brought out his full powers of colouring and design. The subjects he usually selected were from humble life—groups of cattle, with occasional figures of rustics in their ordinary garb. How he enjoyed in a green lane, with its wild weeds, brambles, and creeping plants! With what wonderful beauty and fidelity he painted the wild flower dangling from the old wall, or perched in the cottage window!

Many of Mr. Rhodes's pictures have appeared in the first exhibitions in the kingdom, and met with deserved encomium. Those of his works which appeared in the London exhibitions were highly praised by the London press. We believe that his principal patrons in his native neighbourhood were, Mrs. Jas. Brown, of Harehills, Mr. Stanforth Beckett, late of Barnsley, and Mr. Neale, of Newstead Hall, near Wakefield, who possess many of his best pictures. His shy and retired habits, however, rendered him far less known than he ought to have been.

Some years ago Mr. Rhodes moved to London his fame as an artist was rapidly rising, and he was himself buoyant with aspiring hope of future eminence and emolument, when, like Girtin, Liver seidge, and Bonington, he was attacked with inflammation in the eyes, and general bad health the consequence of his close study and application in his Art. He returned to Leeds in the hope that his native air would revive him. A partial improvement took place, and several beautiful pictures, painted in the neighbourhood during his sojourn, though under the most afflicting circumstances, bear ample testimony to his intense devotion to his Art. Like Girtin, he worked on in spite of his affliction, even to the day of his death when an attack of epilepsy overpowered his feeble constitution, and finished his career at the early age of thirty-three.

MRS. SEYFFARTH.

This accomplished lady, better known to the Arts as Miss Louisa Sharpe, died at Dresden on the 28th of January. Her paintings in water colour, exhibited during many years in the Gallery of the Society of Painters in Water-colours, have been greatly celebrated. Of late years she resided in Dresden, where her husband was settled as a professor.

## HAMPTON COURT.

We are indebted to the kindness of Messrs. BLACKWOOD—the eminent publishers of Edinburgh, and of Pall Mall, London—for permission to transfer to our columns a series of wood-cuts to illustrate the existing character of the far-famed and long-famous Palace of HAMPTON COURT—one of the chief glories of Old Father Thames. Now that the summer is drawing near, it will, as it has done during past years, attract crowds of visitors. It is unnecessary for us to copy the valuable information and interesting details communicated by Mr. Murray in his book.\* The whole of its history, with full and ample descriptions of all its varied objects (and a sufficiently accurate account of the pictures) largely illustrated, will be found in the Third Part of the agreeable and useful work. As a guide or companion, therefore, it is preferable to either of the volumes that have been placed in our hands, not only as being cheaper, or at least equally cheap, but as containing engravings of the more striking points—with a bird's-eye view of the Palace.

We have selected six of the cuts. The first pictures the River about a mile below the Bridge; the second, the Palace as it existed in the time of the great founder, Wolsey; the third, "the Hampton Court of William and Mary;" the fourth, the Palace in its present state, "looking up the River;" the fifth, the beautiful Gate to the Private Garden; the sixth, the graceful and much-admired Archway.

It will be well to occupy the space here left at our command, in conveying some information concerning "the Picture Gallery"—the great source of attraction to Hampton Court. The twenty-four apartments shown to the public on every day of the week—*except Friday*—contain about 750 pictures. In 1830, the collection consisted of no more than 200; but it was augmented by removals from Kensington Palace, Windsor Castle, and Buckingham House—without, however, being greatly enriched; for it is notorious that the mass of recent acquisitions are unworthy to be hung anywhere. Moreover, it is most miserably mal-arranged, and probably affords instances of blunders almost as numerous as the works of Art exhibited. A time will come, no doubt, when some judgment will be exercised in the selection, and a degree of taste in the placing. At present Hampton Court is lamentably deficient in both. Mrs. Jameson, whose remarks are exceedingly judicious, has entered very fully into this subject:—in her "Handbook to the Public Galleries of Art, in and near London;"—her appeal in reference to the condition of the Gallery should be heard and attended to; in order that one of our national storehouses may be no longer a reproach to our national character—making it the laughing-stock of Europe.

When the metropolis of Great Britain possesses a National Gallery, and the present assemblage of closets, so styled, have been transferred to the keeping of some wholesale haberdasher, we shall labour that the gems of the Hampton Court collection may be transferred to London, where they can be made practically useful for the great purpose of education. At present, it is better that even "the Cartoons" should remain where they are. We hope, however, that all our artists who mean to enter into the pending competition, have been often to visit them. They will teach more in an hour than the Germans can teach in a year.

\* The Environs of London, by John Fisher Murray. Illustrated by numerous Engravings on Wood. Published by William Blackwood and Sons, 45, George-street, Edinburgh; and 22, Pall Mall, London. It is full of facts; too full perhaps; and the writer has not manifested a sufficient feeling for the picturesque. The drawings on the wood are by Messrs. LITCH and PAXON, and are highly creditable to the abilities of the artists. The engravings are in general remarkably well executed. We regret that there is no index to point attention to the works of the respective draughtsmen and engravers. This should never be neglected in an illustrated work. It supplies a right stimulus to exertion; and is moreover an encouraging reward that may be bestowed at small cost. The omission is, we are sure, not intentional; for the liberality of the Blackwoods is proverbial. The illustrations are useful as well as beautiful, for they are accurate copies of various interesting localities in the neighbourhood of London; and among them are several maps, engraved also on wood.

## MEMORIES OF PICTURES.

By Mrs. S. C. HALL.

NO. I. JAMES BARRY.

There are few pleasures so cheering or so invigorating as that which, when wearied of daily anxiety or labour, we derive from our memories of pictures. When the volume, designed to be read, is thrust aside, because fatigue forbids its attentive perusal; when the exhausted mind cannot its "thoughts call home;" when ordinary amusements offer no refreshing relaxation; when conversation wears; and even affectionate zeal becomes troublesome, instead of relieving—(and what worker out of the intellect has not felt all this, often?)—then come such memories as anodynes to the soul; memories of pictures beheld, perhaps, in childhood, or in youth, or in wiser, though not happier, years, recalled from the gulf of time, brought in their full force before us, claiming and obtaining a blessing upon

"the Art that can immortalize."

Blessings be with them—these unforgotten pictures—the "old familiar" friends, who are ever present with me when I need them; hanging upon these paper'd walls; crowding every vacant space. One by one, I summon them, and talk with them of gone-by things; they come at times together, but more often singly. Some particular memory is lord of the ascendant; some mighty one fixed in its place by a sort of mental Daguerrotype—suddenly fixed, and indelible; a thousand matters may cover and conceal it, but it will be erased alone by Death.

To what vast uses we may turn these shadows of the past. A little child looks upon the storied canvass, or framed print; or cons over the contents of her "picture book;" each "picture" giving her a new idea, an incident, or a story—a lesson without the aid of words. She has gained something which, if worthy, will remain with her through life—elevating her nature—teaching her to think, observe, and compare; the education of the eye has progressed, and intellect become expanded through it. This is, indeed, a mighty power by which to teach, and until lately, when pictures (such as they are) have been adopted into the system of infant school education, almost an unused one. I hope, humbly and earnestly, it may be worked out to some great end, so that every public and private school-room may be illustrated by PICTURES, tending to promote noble thoughts and noble actions. Let any one, who has observed the effect produced on the minds of the merest children by pictures, think upon this subject, and I am sure they will agree with me in seeing a wide and elevating field of useful and rapid culture, by pure and legitimate means, thrown open to our youths, who usually remember what they see far better than what they hear; and who, if trained to observe, through the medium of high Art as well as through that of books, would grow up with more just appreciations of the sublime and beautiful in life and character, than have yet been taught to those into whose hands the great FUTURE must be, in a few brief years, resigned.

But even admitting that no greater good were to result from pictures than filling the mind with pleasant memories, would it not be wise to add another delight to those which Letters bestow, so that there shall be no lack in the hours of fatigue, solitude, or sickness, of an additional balm—in the memories of pictures?

In that old rambling house, on the wild Irish coast, where, in my childhood, my winter's lullaby the sound of dashing waves against the dark and pointed rocks, and my summer's music the ripple of the waters on the rugged beach;—in that dear old house—every stone of whose mouldering walls is dearer to my heart at this moment than most precious gems—in that, my lovely childhood's home, there was one old-fashioned "little parlour," in which I learned my lessons out of old French books, and thrummed a narrow lean piano; the great charms of that small chamber, with its mottled chimney-piece of Kilkenny marble, and its queer painted cornices, were the pictures. "The family canvases," gentlemen in brown bob-wigs, and one very lovely quiet lady in blue satin, with a huge *bouquet* in her bosom, ornamented the cold blue walls of the grim dining-room. But the little parlour was "costed" with pictures.

I can recall them each and all; nay, so strongly have they left their impress, and so vivid are their memories, that I think I could trace every leaf upon every tree, and compare tint with tint, that composed the colours of every one of them. But beyond all the rest in my estimation, and the one now most strongly remembered, was a copy from a picture by my countryman Barry—the picture which I was told made Edmund Burke his friend. To have been the friend of the noble and eloquent senator, whose name is hallowed in every Irish heart, was enough to render me enamoured of it; but, besides, it was one calculated to interest a child in the legendary lore of her country.

The legend illustrated by Barry, who had embraced at an early period of life his mother's Romish faith, is to be found in "Keating's History of Ireland." Aongus, king of Cashel, was converted to Christianity by the preaching of Saint Patrick, and consented to be baptized. The Saint was drawn leaning upon his crozier, the spiked point of which had transfixed the monarch's foot. The royal guards, inclined to avenge their master, are arrested in mute wonder, by seeing that Aongus is unconscious of the wound, as he stands absorbed in the regenerating sacrament of the Christian faith. The subject allowed ample scope for the expression of the highest species of heroism—the religious; and it was one of the favourite themes in our house—how that the baptism of the King of Cashel was painted by a young man, almost a boy, at Cork, a lad of humble parentage; for his uncouth father commanded a sort of half hooker, half fishing-boat, that coasted from Cork to Kinsale, or loitered about the exquisite scenery of the harbour and river of the "beautiful city." "Commanded" is a high-sounding word applied to one who worked the craft with his rough hands, sometimes assisted by a man and a couple of boys—one of them his own son, in after times the most self-sacrificing and devoted painter of whom the kingdom boasts.

The firm-hearted child drew inspiration from the beauties of the southern coasts, and copied the passing scenes with charred stick upon the deck of his father's vessel. "An idle young dog," he was called, and "an obstinate," for he would either do nothing, or do what he liked; and his only liking was to be along the deck, sketching, as I have said, with burnt stick the groups or effects which struck his fancy.

"It is you who have ruined him," exclaimed the rough sailor Barry to his wife. "As you brew, so you may bake. Keep him at home and make a scholar of him; he's fit for nothing else."

And so to school the boy was sent, where, if he did not learn the purest-sounding English, he acquired, as Irish boys do, even at hedge-schools, a knowledge and a deep love of classic poetry; while his love of Art, drawn in with the air he breathed upon his native shores, assumed daily a more tangible form, and he pictured forth, upon the doors and walls, rude sketches of *Æneas* escaping with his family from the sack of Troy, and other illustrations of classic subjects which, according to the vague memoirs that remain of his childish days, elicited the admiration of his schoolmates and the reproofs of his master. His mother's ambition, however, was the ambition of many of her class: she desired to devote the boy who had such genius to the service of the God who gave it. If she could only once see him "serve Mass," she had been often heard to declare, she would die a happy woman. But, though the imposing forms and ceremonies, its strict fasts and rigid observances, caught firm hold of the youth's imagination, and there can be little doubt but the ascetic denials to which in his first youth and his latter days he subjected himself grew out of his belief in the necessity for religious discipline, yet *his soul was Art*, and to its highest calling he devoted himself, with as much zeal as could be contained in one human heart. And a great strong-beating heart it was—impatient of control—impatient of repose—disdaining the cravings of animal existence—choosing the coarsest of the homely food of an Irish cottage—choosing the floor as his bed, hardening his nerves into iron, so that, casting off the coil of human wants as much as a human being can, he might be able to take his own path, a pilgrim without scrip or staff, trusting to the majesty and dignity of his CAUSE to reach the goal, to win the immortality—which he *did* win; but at great cost! His course is a glorious one to contemplate, but a most unsafe one to follow; for a heedlessness as regards the opinions of others, a disregard for the common proprieties of life, are what no one has a right to practise—or to affect. But, though Barry looked upon the delicacies and elegancies of life as inconveniences instead of comforts—if, indeed, he ever thought of them—he did so without affectation; his carelessness and coarseness was the growth of early habit, the result of hard, stern, iron discipline such as a Spartan would exult in. And his unfortunate disregard for the feelings and prejudices of his friends, upon which, in after time, Burke so wisely and eloquently decanted, was the overboiling of a rash, natural, and most honest heart, zealous for truth in Art and truth in all things, but rushing madly forward, and thinking that madness duty. Those who have attributed mean motives to this child of nature—and *Irish* nature also, the wildest of all natures—have done him wrong; he was as much above all meanness as those who would mimic his eccentricities are below him. People can overlook crimes in their associates rather than those ebullitions of temper which needlessly insult self-love and outrage received habits and opinions. This is sad to think of, but observation will attest the accuracy of the remark.

There are plenty who imagine that adopting a singularity is a proof of genius; but the style of affectation is not that of self-denial: on the contrary, it is display—the vanity of a girl. An open collar, a shock of lean, lank, dark hair, and an untrimmed moustache, because they are seen in some finely-painted portrait, must create a painter! Out upon such baby follies. *Do great men this! Do the*

A more delightful mode of passing a day in summer can scarcely be imagined than a "trip" to Hampton Court; an examination of its pictures; a stroll beside its canal, or through its gardens; and an inspection of its venerable architectural remains. And then it stands upon the banks of the noble and beautiful Thames—a visit to any portion of which in this delicious neighbourhood might justify a much larger sacrifice than that which dwellers in the metropolis will be called upon to make.

And then "THE CARTOONS!" with their mighty lessons in Art—and that is the proudest and noblest purpose of Art—the power which h Virtue.

r to teach

masters of Art, the few mighty ones we have, so walk abroad that boys may point at them and say, "There goes an artist!" Barry's eccentricities, painful as they were to those who loved him, were not assumed for the sake of notoriety, but were, he well assured, the growth of circumstances; a poetic feeling, that sought to out-brave poverty; a native dignity, needed and true to those who would wish to find poor talent humble and glove-like, to suit the whim of patronage. Necessity gave him habits; and habits, with such unyielding natures, become parts of the person; his active and unwearying mind maintained a perpetual war with circumstances, and became stronger in the contest. His father opposed him. His mother, from anxiety for his health or dread of fire, stole away his candle, so that he could neither read nor draw at night, and annoyed him with misplaced fears and foolish wishes. Parching for information, he had no money to buy books, and actually transcribed such as he could borrow. Seeking only the society of such as could give him information, his startling zeal, his industry, the influence, in every rank of life, which a feeling of self-dependence attains and exercises over subaltern minds, tended, unfortunately, to fix habits which had no opportunity of refinement, and whose influence marred his success all through life. His temper, soured by vexations and firm by nature, acquired the mastery over him, which he, by virtue of his genius, exercised over others; and looking, until his twenty-second year, all comparison with rival excellence—seeing almost nothing in the way of Art, and knowing how superior were his designs to any he had come in contact with—the only wonder, to me seems that he bowed with so much deference to the opinions which Burke so frankly gave after his first exhibition in Dublin, and which should be engraven in letters of gold over every school of design in England. When he accompanied his pictures to Dublin, and saw them—the work of his own untaught hand, the children of his creation—hung upon their wall by the Society for the Encouragement of Arts and Manufactures, he went back to his inn confident of success; and yet his heart surely beat more quickly than usual, when, on the first day of the exhibition, he mingled with the crowd, which, to his delight, he noted gathered round his picture of "The Baptism of the King of Cahoon." Here was cause for exultation. At first the people murmured their applause; then way was made for one—for EDMUND BURKE—whose fate was never disputed, whose eye was kind as keen, one in whom all men believed, as well they might; and then, again, the crowd enclosed the picture, and listened for his dicta. Warmly, generously, was it given, and murmur of approbation swelled into upraised tones of praise. One asked another, *who* was the painter? *Where* was he? Could no one tell who he was? And then the youth felt the hot blood rushing to his brow. He, the unknown stranger, the ill-dressed palid boy, small of stature, and whose expressive features were marked by that which destroy beauty, could contain his fierce delight no longer. "I am the painter!" he exclaimed from amid the crowd. "You, a boy, impossible!" was the reply from many lips. "It is my picture," he added, "and I can paint a better." But when Edmund Burke advanced to congratulate him, he was overpowered; the mob's congratulations, and astonishment, gratified his pride, but the praise of Edmund Burke shook his heart; he burst into a sudden gush of tears, covered his face with his hands, and rushed from the room.

One of the members of the old Irish parliament told me, that when the picture, which created such a sensation, was afterwards hung in the House of Commons, some complained that it interfered with the business of the House, drawing off the members from their duties. For once, Irishmen appreciated the produce of their own country. But there is no opportunity of judging of its merits now; it was consumed in a fire soon after its achievement of so honourable a distinction. It is impossible not to imagine how the young painter must have felt, in society with Burke and Langbrith, Lord Charlemont, Flood, Brough, and all the brilliancy of Dublin, as it was in that golden age of eloquence. What a change from the small tenement in Watergrass-lane, in Cork, which, when I visited it some months ago, it was great courtesy to call a house—what a change from his father's taunts, his mother's gentle, but wearying frowns—what a confirmation of the hopes of those who knew better than his parents—especially Doctor Sleight, who introduced him to Burke; and I have heard that Barry never presented the letter, until after his pictures had introduced themselves!

It is painful, though interesting and useful, to contemplate, after the lapse of a very few years, the turmoil of Barry's mind during his residence in Rome: now exulting in the glories of the fifteenth century—now, amid the debris of a past empire, quarrelling with the pitiful dealers in manufactured rubbish, whether of canvases or opinion, throwing down a scorching gauntlet amid a tribe of irritating mercenaries, who dared not take it up in fair combat, but who, stung in their only vulnerable part—the traffic of their calling—by the young impetuous Irishman's keen observation and brave exposition of their faults and forgeries, had ready hold of his want of temper and discretion, and worried the chafed lion until his dignity was forgotten. And then it was, when James Barry, yielding to the natural combativeness and bitterness of his temper—which, he it remembered in strong extenuation, had never been curbed or managed in his youth—then it was that Edmund Burke addressed to the young painter the letter which I have often heard read, by one whose mellow voice has long been silent in the grave, and who read it in the same small parlour where the picture hung, whose memory is with me at this moment. HE had seen Barry, and he

called Edmund Burke his own friend. He was an Irishman, proud of both, but used to term the letter a prophecy—and so it was. The letter runs thus:—

"That you have had such subjects of indignation always, and anger often, I do in no ways doubt. Who can live in the world without some trial of his patience? But believe me, my dear Barry, that the aims with which the ill disposition of the world are to be combated, and the qualities by which it is to be reconciled to us, and *acc to it, are moderation, gentleness, a little indulgence to others, and a great distrust of ourselves*, which are not qualities of a mean spirit, as some may possibly think them, but virtues of a great and noble kind, and such as dignify our nature as much as they contribute to our repose and fortune; for nothing can be so unworthy of a well-composed soul as to pass away life in bickerings and litigations, in snarling and scuffling with every one about us. Again and again, dear Barry, we must be at peace with our species; if not for their sakes yet very much for our own."

Here is the great senator's picture of a great painter's ruin:—"You will come here; you will observe what the artists are doing, and you will sometimes speak a disapprobation in plain words, and sometime in a no less expressive silence. By degrees you will produce some of your own works; they will be variously criticised; you will defend them; you will abuse those who have attacked you; expostulations, discussions, letters, possibly challenges, will so forward; you will shun your brethren; they will shun you. In the meantime scoundrels will avoid your friendship, for fear of being engaged in your quarrels; you will fall into distresses, which will only aggravate your disposition for future quarrels; you will be obliged for maintenance to do anything for anybody." This was Mr. Burke's only mistake. Barry NEVER degraded his Art "to order"; nor did "his talent depart for lack of hope and encouragement"; but he did "so out of the world fretted, disappointed, and ruined!" His tender and affectionate letters to his humble home show that he was anything but devoid of social affections; and the lofty designs of his pencil prove the rugged dignity of his mind. It would ill become me to play the critic. I have no knowledge for such a task. I seek only to convey to others more ardent than myself a firmer belief in the power that is within them to form, and instruct, and exalt their country, by elevating their Art and its high purpose. Oh! that any word of mine could stir up and excite a self-sacrificing spirit, such as, despite his ungovernable temper, his irascible nature, his stubborn pride, elevated Barry above so many others of his age; although the ever-perilous evils contracted his sphere, cramped his usefulness, fettered his genius, and destroyed his life.

After his return to England he became involved, as his friend had too truly anticipated, in various quarrels. Even Burke shrank from his side rather than lose the friendship of the "gentle Sir Joshua." His person was neglected, and he permitted slothful and uncleanly habits to disquiet others and enervate his mind—as they always do, and must do. Still, grieved as we are, and ought to be, to see part of anything so noble disarranged—far more in ruin—it is impossible to pause, with the light of his full glory upon us, to pick moats out of sublimities. Let us think upon the greatness of this man in what constitutes all that is great—self-denial.

I have heard some say "they cannot live and draw cartoons." Barry commenced his prodigious labour in the Adelphi with sixteen shillings in his pocket, with the previous and positive certainty that if the offer he was about to make were accepted he must live mean, dress coarsely, not for a week, a month, a year, but for many years of his life. You say, "He had done this before, and had learned to bear it." Ay, but he had so done when a boy, full of the bursting hope that seemed of itself heaven. That is not so much matter for marvel, there are even now—when men are more effeminate by fifty years than they were then—there are still plenty of youths who would bear privations for their own peculiar glory's sake. Barry had endured them, but he had since mingled with the highborn and wealthy, had at times lived luxuriously, and at all events, had arrived at that period when men sink into easy chairs and think of comfort. Yet, when his hot blood must have been cooled—when the world to him was waxing old, for he was one whose months were years—when he had proved the fallacy of hope to those who look upon it without considering its immortality—when he was to all lookers on a worn-hearted and worn-headed man, beset with enemies and reproached by friends—when he had the grim certainty that, to provide himself with the commonest necessities of life, he must steal hours from sleep after his hard day's labour ended, that he must take up the graver when he laid down the pencil—yet, with all this, HE, for the sake of that glory which should be the pole-star of Art, for the sake of the HEREAFTER, which, God knows, is the sole thing worthy the work of human life, bound himself to paint, free of all cost, pictures in the great room of the Society of Arts which we should take our children to see, that they may treasure in their memories Barry's offering to his country, and be stimulated to imitate his self-sacrificing spirit, so that selfishness may give way before love of country, and each English subject feel himself a great and influential unit of a mighty whole.

There can be no doubt that Barry was powerfully urged on to this noble sacrifice by the sneers and statements and assertions of a tribe, of whom Montagu, Du Bos, and Winckelmann were the spokesmen—who declared that the climate, soil, and food of England and Englishmen were natural drawbacks to our advancement, and that, however admirably we might execute, we were

incapable of reaching the highest region of design. [Have these foolish critics found no imitators in the middle of the 19th century? Does not the "en classe" bubble come to-day from Germany as it came yesterday from France?] Like some masters in the Art of our own time, Barry could use his pen as well as his pencil, and published an "Inquiry into the Real and Imaginary Obstructions to the Acquisition of the Arts in England." That such an "Inquiry" should be necessary seems allied to insanity; but out of it came the painter's resolve to paint a great epic poem, proving by the work of his own resolute mind that both design and execution could exist, and be combined in our misty island as well as under the blue vault of unclouded Italy. The nobility of the idea atones a thousand-fold for whatever faults are to be found in the execution. He lived through bitter privations to work out his plan, bequeathing to his country in this series of pictures, illustrative of the progress of man from a savage to a civilised state, the pure lesson, "That the attainment of happiness, individual as well as public, depends on the development, proper cultivation, and perfection of the human faculties, physical and moral, which are so well calculated to lead human nature to its true rank, and the glorious designation assigned to it by Providence." This, it has ever seemed to me, is the greatest object of the most noble "Art" to which we already owe so much, and to which I hope we shall become far more largely indebted. Beautiful and precious it is in all its branches, giving us fruit and flowers amid the sterility of winter, bestowing a perpetuity of blessings in those "silent selves" of what we loved, but can look upon no more; placing upon our town wall the freshness and foliage of the country—adding strength to the poet's song and practical value to our country's history. But when it takes the loftiest range of all, it becomes second only to that inspired word which leads to immortality. The more this power is felt and acknowledged, the greater shall we become. Barry knew that he should meet no reward here; doubtless, sooner though he was, his heart yearned for those social enjoyments from which his unhappy temper and disagreeable peculiarities had cut him off. A stricken and disappointed man, if his mind be lofty, is *never* a conciliator. Such a man will fight with his destiny, however he may have provoked it, till the last; and I do not envy the person who, knowing the history of those paintings, knowing that the painter's lifeblood was poured out in their execution, can contemplate them without a strange mingling of grief and veneration. He was a martyr to his morose, ascetic nature; but he was a still greater martyr to the theory that Art, before it can be honourable to England, required to devote itself fully to historic compositions. Imagine this man, strong-hearted and enthusiastic as he was, working from day-dawn until sunset at those pictures, which he, an artist, poor in all things save God's gift of genius, was *giving, presenting* for nothing, to the richest country in Europe. Fancy him, having wiped the damps of labour from his brow, returning to his wretched and dilapidated "home" in Castle-street, where the rent walls admitted the wind, and the shattered roof let in the rain, and there, accompanied by Poverty, in solitude, *enslaved* by the light of a solitary candle that he might not starve.

But, to my mind, the saddest thing of all was, when gaunt and yellow misery so stared him in the face that he was forced thereby to apply to one Sir George Saville, a leading member of this society for whose advancement he was pouring out his genius, to communicate his situation to his brethren for a small subscription to enable him to exist until he had finished the undertaking. *THE APPEAL WAS VAIN!* Nay, he could hardly obtain the stipulated allowance for models and colour. At last, perhaps, the dread of his funeral, or the degree of his starvation, stirred their blood, and they doled him out two fifty guineas—and two hundred, when his seven years' labour was completed. To have taken anything from them must indeed have crushed his generous heart; for generous his heart was. Think how he rushed to the Academy after the death of Reynolds, whom he had so opposed, and pronounced so eloquent a eulogium upon him, that Sir Joshua's niece sent him as a present her uncle's painting-chair. It is really beautiful to see how, even then, his enthusiastic nature glowed towards kindness, and to mark how, casting off all bitter memories towards one with whom he had waged so bitter a war, he carried his chair home to his desolate house with as much triumph as if it had been the throne of the Cæsar, and wrote one of his full characteristic letters to the noble giver, wherein he compared, with that classic taste which perfumed his mind, the chair of Reynolds to the chair of Pindar, shown so many years in the porch of Olympia; giving way to a nature prone to honour as the highest distinction whatever the Almighty had impressed with the stamp of moral glory. His sense of its value was enhanced by its "having been instrumental in perpetuating the negligent, honest exterior of the authors of the 'Rambler' and the 'Traveller,'" and pressed by Mrs. Siddons as the 'Tragic Muse,' adding, "that it should find a reverential conservator *whilst God permitted it to remain under his care.*" [Sir Thomas Lawrence afterwards had his chair. Where is it now?] I can fancy such a tribute as this rendering a man of Barry's nature gentle as a lamb, as long as the influence of the gift remained uppermost in his mind. Occasionally such things were done unto him: a few, appreciating the sublime sternness of the painter-hero, came forward with words and acts of kindness; but it is difficult to know how to serve men differing in their actions, and motives of actions, from their fellows—it is only a high mind that can understand a high mind—and a desperate combat—a single-handed battle with the Royal Academy, which he had beyond question grossly

insulted, made many forget what they owed to this man—as champion of historic art. I said his combat was single-handed, but, no; Joseph Nollekens did not desert him. His intemperate letter to the Dilettanti Society gave the Academy, whom he had frequently annoyed, a power over him—they brought various charges against him, without permitting him a copy of the indictment, or the means to offer a word in explanation or defence, ending their inquisitorial proceeding by degrading.—No, THAT they could not do—by dismissing him from their professorship of painting, and expelling him from their body. Oh that such a man as Barry should have suffered his temper so to triumph, as to be in the position that every puny daw could peck his eagle plumage, and exclaim, “See there!”

His friends hoped he had now done with debates, and raised by subscription a thousand pounds, upon which the late Sir Robert Peel granted him an annuity. Here was another heart-crushing to the painter—he who had lived upon what others would have died on, to be GIVEN what he would far rather EARN. Of all mortal cups this must be the hardest to drink up, even when held to the lips by the fleshless hand of stern necessity. Still it supplied what he considered competence; and, during the years which passed after his expulsion from the Academy, he had grown less ungentle and unyielding. His real character became better developed, for he had ceased to be disturbed by councils or committees. Still a large picture grew slowly under his hand; nor had he, at any time, that “dashing alacrity” of execution which distinguished many of the old Italian masters, and renders all but miraculous the rapidity of thought and execution of Macleise—the fellow-townsmen of Barry, and in many respects the superior of Barry as an artist. Barry laboured unceasingly at his engravings; but mused, more than he painted, over his pictures. Dining at a cheap house, he was seized with sudden and violent illness: death had given the unerring blow, and his great heart quivered under the shock. He was borne to the door of his lonely dwelling, and it could not be opened—some of those evil urchins who run about the streets had plugged the keyhole with pebbles. The night was dark and cold, and, shivering with disease, Barry was carried to another abode. He was one of those strong men who cannot bear their weakness to be known. In his strange room he locked himself for forty hours, bearing his physical agony, it would seem, unheeded. At last he strayed out to make his complaint—for nature will have way—and the physician sent him to his friends, Mr. and Mrs. Bonomi, who now managed to receive him into their house. The struggle was strong, but not terrible. He was a Christian hero to the last, talking cheerfully and kindly to those around him, anticipating, but not fearing, death. If he had summoned the same mild fortitude to his aid through life, he would have lived a happier man—happier and more useful, for his powers would have been doubled, increasing by the exercise of the proprieties and suavities which sway, and ought to sway, society; and, adding unto admiration love:—the combination would have given greater might into his single hands than was ever possessed by any British painter. He lingered for ten or fifteen days, and then expired. The monument erected by himself to himself is to be seen at the Adelphi; that generously set up by Sir R. Peel (honour to the name of a great father of a great son!), who paid the expenses of his funeral, stands in the cathedral of St. Paul.

The faults of this mighty master may serve to deter many from vain disputes and ill-tempered sarcasms, who have no pretensions to his talent, and therefore have no claim whatever upon the respect and sympathies of their kind. For myself, I delight to recal his greatness, his fortitude, his desire from boyhood—arising, one might almost imagine, from instinct, but deepening into a principle—to depict only what is dignified, magnificent, or sublime. His failing to reap the reward which ought to have waited upon him must be imputed, in a great degree, to his infirmity of temper, but in a still greater to the unawakened taste in the country for works of a high class of Historic Art. Is this last on the eve of remedy?

One word more, even though I have written words too many. The Academy did not forget their feud with the dead painter. He was borne to his grave by hands that had never touched a pencil!

His noble qualities stand out in bold relief from the mass of feeble indistinctness which surrounds him. When I recal the memories of his life and of his pictures, I honour him as a hero deserves to be honoured, whose chief failings and great errors arose out of an unpruned overgrowth of truth and fidelity.

And what a lesson does his life teach! It is needless to draw the moral. But may we not hope that many youths of genius will ponder over it; and, while they proudly and disinterestedly emulate the good, shun the evil of his example?

February 22nd, 1843.

#### ART IN CONTINENTAL STATES.

**ITALY.—ROME.—Victoria Colonna.**—It has been decided by the Senate, and by the votes of a meeting of the Arcadian Academy, that a statue in honour of the celebrated poetess Victoria Colonna, wife of the Marquis Pescara, shall be placed in the hall of the Capitol.

**T. Tasso.**—A society composed both of foreigners and natives of Rome have agreed to erect, in the garden of St. Onofrio, where the beautiful oak of Tasso stood, a simple monument to mark the spot.

**PERUGIA.—M. Del Rio.**—Cesare Masini, the painter and poet.—M. Del Rio, after his visit to Florence, in the course of his artistic journey for his work “L’Art Chrétien,” could not avoid visiting Umbria, where exists the works, and where existed the painters who are now the models of the German school. This is well shown in the classic work of the Marquis A. Ricci.

M. Del Rio, after having examined the beautiful pictures of Bonfigli, of Perugino, and of Raffaele (whose styles fraternize so much that their works are frequently mistaken for one another), paid a visit to the studio of the living painter and poet Cesare Masini, professor of painting in this city, and there our correspondent assures us that he found many works well worthy of his attention. Amongst these were a ‘Mater Dolorosa,’ painted for the Cardinal de Angeli; another of the same subject; ‘Dante, Ambassador to Pope Boniface VIII.’ and an Altar-piece (23 Roman palms in height, and 13 in breadth), painted for the Church of the Dominicans at Cork; the subject is the ‘Ascension.’ These three last works were executed by the order of Bishop Thomas Hynes.

**CORTONA.—Etruscan Statues.**—In the valley called del Dritto, excavations have been making lately, and have led to the discovery of some very important remains of antiquity. Besides vases and monuments in the most perfect state of preservation, there have been found Etruscan idols and allegorical figures, in a style that rivals the purest Grecian or Roman.

**SPAIN.—MADRID.—Exhibitions of Fine Arts.**—Among the exhibitions of works of Art which have been held in many of the large Spanish towns, that of Valencia stands pre-eminent. The Lyceum was the place of exhibition. It would seem as if the spirit of Art, which once inspired this famous school, was again to call it into existence, and that the blue sky of this beautiful country was once more to shine on the bright creations of our artists as of old. Of all the Valencian living artists, Raffaele Montesinos is the most admired.

There was an excellent collection of wood engravings and drawings with the pen exhibited by members of the Lyceum.

**GRANADA.—Ribeira’s Picture.**—No trace has yet been discovered of the robbers of the famous ‘St. Paul’ of Ribeira, called Spagnoletto, taken from our cathedral.

**FRANCE.—PARIS.—Duke of Orleans.—M. A. Scheffer’s Pictures.**—The two charming pictures of M. Ary Scheffer, known as ‘Les deux Mignons,’ which formed part of the collection of the Duke of Orleans, are now in the possession of Count Molé. They were bequeathed to him in a testamentary deed executed in 1840 by the Prince Royal, in the following words:—

“As it was Count Molé who married me—as he received my son at his birth—as he attached the great act of amnesty to my marriage being the first step to the fusion of all Frenchmen, by oblivion of the past in a common interest in the future—I wish to leave him a special mark of my feeling, and I beg him to accept the two pictures of Mignon, by my friend Scheffer, which are amongst those of my gallery I most prefer.” This bequest was fulfilled by the Duchess of Orleans, accompanied by a very affecting letter to Count Molé.

**Mr. Meyer’s Picture.**—Our readers may perhaps remember how much the paintings of M. Louis Meyer were admired at the last exhibition in the Louvre, when he gained the gold medal for his ‘Pêcheur de Normandie.’ His chief work for this season for exhibition is ‘Napoleon on his return from Egypt.’

**Agnado Gallery.**—The catalogue of the pictures and statues belonging to this collection is completed, and an immense number of copies have been printed. Besides richly-bound copies intended for distinguished persons, some in folio, ornamented with extraordinary magnificence, are destined for the Sovereigns of Europe.

**Hôtel de Cluny.—Museum Sommerard.**—It appears Government has determined to purchase the Hôtel de Cluny, and with it the famous collection of objects of Art of the middle ages which it contains, which belonged to the late lamented M. de Sommerard. We have before in this journal noted the importance and the variety of the objects which compose this collection, brought together by the most unwearied zeal and talent, and at a great expense of time and fortune by the illustrious Sommerard, author of the work entitled “Les Arts au

Moyen Age.” The purchase-money of the Museum and Hôtel will be, it is said, 400,000f.; this will be paid by Government, but it is also the intention of the city of Paris to expend a large sum in improving the exterior, and clearing away the buildings adjacent to the Hôtel de Cluny, to which will be added the adjoining edifice of the Palais des Thermes. It is said that in these improvements 700,000f. will be expended.

**Department du Loire.—MALESHERBES.—Column of Mazagan.**—On the 6th of February the ceremony of inauguration of the column, erected in honour of the defence of Mazagan, took place with much solemnity and great demonstrations of enthusiasm on the part of the spectators, chiefly caused by the presence of the Commandant Lelievre, one of the principal heroes of Mazagan, and a native of Malesherbes.

**GERMANY.—PRUSSIA.—BERLIN.—Greek Theatre.**—The King of Prussia has given orders to an architect for the construction of a Greek theatre at “Sans Souci,” where, during the fine weather, the *chef d’œuvres* of the Greek school are to be performed.

**Exhibition of Fine Arts.**—The exhibition closed some time since, and we regret that we must still defer a detailed account of it. It was on the whole considered equal to those of former years, and was rich in sacred pictures in the present style of the German school, where symbolical and psychological representation predominates, rather than powerful expression of passion or action. The picture which perhaps attracted most attention was a painting by Lessing, the figures larger than life, ‘Huss before the Council of Constance.’ There were many excellent pictures *de genre*, and many good landscapes especially, characterised in general by being faithful representations of natural, we might say individual effects, rather than *beau idéal* imaginations.

**Winckelman.**—On the 9th of December a festival was celebrated here in commemoration of the birth of Winckelman, an archæological celebration of much interest as well for the numbers as for the various remarkable persons who were present; we may name Herren Gerhard, Panofka, and Rauch.

**BELGIUM.—BRUSSELS.—Godfrey of Bouillon.**—It having been decided by Government to erect a monument to Godfrey de Bouillon, the Chamber of Representatives have voted as a first subsidy, 12,000 francs towards the erection of it. Count Meroze has marked his co-operation in the work by a personal gift of 3000 francs.

**HOLLAND.—WESTZAAN.—The Bell Tower.**—The ancient bell tower of the church of this place, one of the most remarkable remains of the middle ages, pretending to an antiquity of a thousand years, fell on the first day of this year. We grieve to say, eight persons were buried under the ruins, inhabitants of a house close to the tower, and none were taken out alive. For a year an inclination had been observed in the old tower, and means had been decided and commenced for strengthening the base; the contractor for the work taking up his abode close under the tower, notwithstanding it was observed that the leaning increased; as the neighbouring inhabitants were warned of the danger, all left their houses but the unfortunate persons who were killed, who persisted in remaining in theirs.

**BOHEMIA.—PRAGUE.**—In the year 1796, the friends of Art here formed themselves into a society, whose object was the improvement of painting, and the awakening and extending the taste for it. Later, it united with the Academy of Painting in the formation of a permanent gallery for works of Art, which of late years has been much forwarded by the purchase of pictures from the yearly exhibition and by the lotteries of the Art-Unions. The number of subscribers to the Art-Union proves the extending of the love of Art; and the works of our artists, amounting this year to 341 objects, are the best testimonies of its progress.

**RUSSIA.—SIMPHEROPOL.—The Monument to Dolgorouski.**—This monument, which will be soon uncovered, consists in a Doric obelisk, with bas-reliefs in white marble. On one side is seen the bust of the Prince, with his weapons; on the other sides are represented his famous battle against the Tartars, the triumph of the Cross, and the blessings of peace under a just and mild government. These beautiful bas-reliefs are the work of Herr Streichenberg, a German artist, who brought them himself here from Rome.

## THE BRITISH INSTITUTION.

## THE EXHIBITION—1843.

ON opening the Exhibition Catalogue, the reader will be startled by an announcement that

"THE DIRECTORS REGRET THE NECESSITY OF RETURNING UPWARDS OF FOUR HUNDRED AND SIXTY PICTURES FROM WANT OF ROOM."

Now, with all due respect for the honourable and right honourable Directors, who superintend this Institution for "the exhibition and sale of works by British Artists," we must enter our protest against the introduction of the words "regret the necessity" into their two line preface. If there has been "regret," there has been no necessity; or rather, there need have been none; and, consequently, there would have been no regret. Regret, at all events, there is among the artists who have been excluded from the rooms. The number must be great. The four hundred and sixty pictures were, probably, transmitted by two hundred and thirty painters. It is not common for a junior candidate for admission within the walls to send more than two proffered contributions—many send but one; and although, no doubt, in several instances a moiety was taken and a moiety rejected, we do not think we are far out in estimating that the productions of two hundred and sixty artists have been excluded.

This is "TOO BAD!" Let us consider the class of painters who are thus unhappily situated. Among the rejected pictures, there was *not one* that had been forwarded by a member or associate of the Royal Academy—the men who have achieved fame, and its almost invariable concomitant, ample employment—and who enjoy the best facilities for exhibiting their works. With few exceptions, indeed, the whole of their contributions had been previously seen "along the line" of their gallery in Trafalgar-square, and the majority of them are of large size; such, for examples, are Danby's 'Vale of Tempe,' Howard's 'Staying the Plague,' Herbert's 'Brides of Venice,' Redgrave's 'Bad News from Sea,' Patten's 'Hymen burning Cupid's Arrows,' Collins's 'Welsh Guides,' Hollins's 'Juliet and Paris,' Witherington's 'Ferry,' Chalon's 'Summer,' &c. &c. Added to these are many other pictures that have been "well hung" elsewhere; or have been sold previous to exhibition. Here are the 'Scene from Henry VI.' and 'The Widow of Edward IV. delivering up her Children,' by E. M. Ward, (exhibited at the Royal Academy); 'The Duel from Twelfth Night,' by W. P. Frith (sold at Birmingham); 'Dolly Varden,' by the same artist (sold also); three or four works by Etty (all sold previous to exhibition); 'Scene from the Devil on Two Sticks,' by A. Egg (sold at Birmingham); 'The Reverie of Alnaschar,' by T. Brigstocke (exhibited at the Royal Academy); 'The Beggars,' Giambelli, ditto; 'Lay of the Last Minstrel,' W. D. Kennedy, ditto. We call these to memory as the more prominent of the works that have been fairly seen—and either have been (as many certainly have been) actually sold, or have had all reasonable chances of sale. There would be, of course, no objection to their respective producers being supplied with other and new means for the disposal of their works,—provided that, in according to them such advantage, we did not deprive other parties of the *only* opportunity within their reach of parting with theirs.\* But we speak within our own knowledge, when we assert that a vast proportion of the pictures "cast out" had never been seen beyond the studies of the painters. We say therefore that such a procedure is unjust and unwise—unjust for obvious reasons, and unwise, as withholding the temptation to give novelty and variety to the annual exhibition, by producing pictures expressly to

\* It cannot be forgotten that one of the express stipulations in hanging pictures is, that the works hung shall be the *bona fide* property of the artists. Now we can, if required to do so, enumerate at least 50 out of the 430, in the sales of which the producers have no interest whatever: some of them, indeed, are said to be "of the goods and chattels of picture-dealers;" and some of them, to our own knowledge, were sold to their present proprietors years ago. The artists send them, no doubt—and why? Because they have no others to send. And this is the strongest reason for their exclusion, because they have sold all they possessed. We earnestly entreat the attention of the Directors to this point hereafter. They are imperatively bound to admit none that are not *bona fide* the property of the artists, unless they cannot make up their exhibition without them.

be shown there. For it is clear that our more popular artists will not send thither their new works, when they know that their old productions will be accepted in preference to the fresher offerings of men of comparatively minor note. Be it remembered that we consider the British Gallery in the light of an establishment for the express aid of artists. Unhappily there is in London a sad want of some depository in which artists may place their productions with a view to sale. Against many of them the gates in Trafalgar-square and even Suffolk-street are shut; for their abilities may not be of a sufficiently high order to render their admission certain. It is a too common and far too cold-blooded a course, to answer this fact by an assertion that such men had better take up another trade; that painters are already too numerous; and that mediocrity merits no encouragement. Such arguments should be reminded—first, that mediocrity is usually, if not always, the earliest step of genius. Genius will make its way, no matter what may be the difficulties that oppose its progress at the outset; will make its way, that is to say, if it do not sink in the struggle, where keen sensibilities, a weak constitution, and embarrassing circumstances are arrayed against insult or neglect. But to lessen discouraging obstacles, and remove, as far as possible, the "stumbling-stones" from its course, is the duty of all who would aid it or sympathize with it. Timely help may prevent its extinction, or at all events render it more early beneficial, and secure for it a more early reward. We have heard it said, and that by several who ought to have more consideration, that such exclusions as we complain of are to be justified on the ground that the profession is already too full, and that wisdom suggests the policy of preventing further accessions to it. We know, indeed, that this feeling very largely prevails among those whom it cannot affect. But surely it should be recollected that precisely the same reasoning applies to every other profession. The church is overstocked, so is the bar; and in many of our streets every second house is inhabited by a "medical man," physician, surgeon, or general practitioner. In fact it is sufficiently notorious that every source by which employment can be procured is completely choked up—from the very highest to the very lowest, even down to that of the cotton-spinner and the delver in the field. The argument we refer to is, therefore, not only idle but cruel.

We return to our lament over the excluded artists. Had the Directors postponed their visit from the private view day to the day of first public exhibition, and stood for a few minutes in their entrance hall, we say with confidence that this evil would never again occur. For it was impossible to mark the dejected countenances of the disappointed artists who were removing their rejected works, and to know that inconceivable wretchedness might follow the affliction, without feeling an earnest desire and a strong determination to prevent the recurrence of so pernicious an event. No one will for a moment imagine that, among these outcast pictures, there were not many of very high merit. We know indeed that there were, and could easily point out their producers; men whose names would be a sufficient guarantee that their productions were entitled to claim prominent places on the walls of any gallery in the kingdom. We should do them disservice if we alluded to them more particularly; and yet we are strongly disposed to do so, in order to establish our case. We may speak of one, however—Mr. ALFRED CLINT—because his reputation stands too high, and his abilities are too extensively appreciated to render such a course prejudicial to him. He sent several contributions; but his name does not appear in the catalogue. He is far, very far indeed, from being the only one—of equal rank and of proportionate talent—in precisely the same position.

Are we arguing against an evil that has no remedy? Do we make manifest an injury without pointing out a mode of redress? By no means. The redress is at hand; the remedy may be easily provided. The British Institution was founded in the year 1805. Its first annual exhibition took place in 1806—thirty-seven years ago. The space then supplied was no doubt sufficient. We are not in possession of its early catalogues; but we imagine the list of exhibitors did not greatly exceed three-score. This year they number just three hundred. Yet exactly the same quantity of wall is assigned to the three hundred that was given to

the sixty. There is no excuse for this. The Directors are, nearly without exception, the wealthy aristocrats of England; men to whom a sum of £10,000, or even £20,000, divided among them, amounts to a mere nothing. But it is unnecessary that we ask them for this. Let them but declare their readiness to extend their premises *sufficiently*, and we undertake to procure whatever sum *MAY BE NEEDFUL* within half a year. We do not reckon without our host. Sure we are that the country would be ready with its grant in aid; that the artists generally would augment it; and that no one, whose picture was disposed of there, would hesitate to make some sacrifice for the sustenance of the establishment.\*

We call earnestly, but most respectfully, upon the Directors to consider this matter. We are aware that the majority of them do us the honour to consult these pages; and it is neither our interest nor our inclination to write a line that may seem offensive. But we must entreat them to bestir themselves—to be no longer satisfied—as assuredly most of them are—with lending their names to the periodical catalogues of the Institution; paying it a visit during the year, to be pleased with its appearance—ignorant that the flushed cheek may indicate the constitutional disease that works within, and leaving the weighty interests of hundreds in the keeping of, at most, half-a-dozen individuals—*responsible to no one*.

The exhibition, 1843, contains 440 works of Art (eight of which are in sculpture), contributed, as we have said, by about 300 artists. The collection cannot be characterised as above the ordinary merit. It affords no matter upon which to congratulate the country or the profession. We sought in vain for indications of rising genius—a point to which our attention ought to be always scrupulously directed; and the established painters have, with one or two exceptions, furnished no proofs of progress.

## NORTH ROOM.

No. 1. 'Not so easily Caught,' E. LANDSEER, R.A. It may be remarked of the pictures of this accomplished artist, that no object without meaning has a place in any of his compositions. A discourse is here held in the manner of a fable between a fox and a trap; the latter is baited with a rabbit, but the former, who is evidently far beyond his cubhood, declines the invitation. The bit of foreground is painted with infinite skill; and the fur of the animal seems here and there dank with the dew, for it is morning, and the drops are yet heavy on the grass. The spectator approaches this scene cautiously, desirous of seeing the farce to an end; but it turns out to be only a picture by Landseer.

No. 2. 'The Lammas Meadow,' J. STARK. A composition of the simplest materials, but not the less acceptable when agreeably treated. It shows everywhere the most elaborate finish, occasionally, perhaps, amounting to hardness in parts where there is a marked opposition of tones; and the good intention of the painter is somewhat frustrated by the crudity of the lights. We are all aware that in "screwing up" a picture it is most difficult to know where to stop; but it should be borne in mind that a free and a close manner equally command success. We rejoice to see the post of honour this year accorded to Mr. Stark. He has justly earned it by pursuing a course thoroughly and essentially English—Truth rendered pleasant and becoming.

No. 3. 'Interior of a Cottage, Brittany,' F. GOODALL. This little sketch is finely balanced, and harmonized with grey and warm tones. It is, as its title imports, only an interior; but, in its liquid perspective, equal to anything so unpretending we have ever seen.

No. 5. 'Scene from the Devil on Two Sticks,' A. EGG. Of this work we have one or two remarks to make, which will apply to many of its

\* We have heretofore referred to the adjoining building, "St. James's Theatre," as comparatively easy of attainment for this great national purpose. The theatre is notoriously a bad speculation—indeed, now-a-days the public have grown indifferent to this source of enjoyment, while that derivable from the Arts is wonderfully on the increase—and, we imagine, it might be purchased for a sum very far less than its cost; perhaps for one no very great deal larger than the value of the premises which the Directors now occupy. But the requisite amount of money we treat as of no moment—*whatever it may be, it may be had*.

class. It is not because the personal character of a nation may have been successfully drawn in certain instances, that it is to be continually painted in one approved method and no other. The various races of the great human family are definable by colour and feature, the latter of which is open to endless modification without injury to its nationality. It is better to attempt originality at every risk, than to model from hackneyed materials, for the distance between Nature and Art is yet sufficiently great. It is curious to observe the particular manners set apart as belonging to those authors most prolific of subjects; a picture from Le Sage may be distinguished almost as far as it can be seen; as can also pictures from Goldsmith, Shakespeare, Spencer, Cervantes, and all who are popular among artists. We have written of this work in terms of high praise, when noticing it as the leading attraction of the exhibition at Liverpool. They were justly merited. Mr. Egg is on the sure road to fame; let him summon to his aid more of the inventive faculty, and he will achieve it.

No. 7. 'A Pastoral,' H. LE JEUNE. The figures here are two children, the elder teaching the younger to "modulate upon the oaten reed." It is a small picture made out in the manner of the dark landscapes of the Italian schools—resembling more particularly the small pictures of Schidone. The little incident is told with much natural feeling, and the elder of the two, to use a phrase of Sir Percie Shafton, is "a most bucolical juvenal," but somewhat too English for the spirit of the story.

No. 8. 'Belshazzar beholding the Handwriting on the Wall of the Palace,' H. BOUGHTON. A study of a crowned head, but without any of the circumstances necessary to make out the fearful agitation with which the King sees the mysterious hand—his knees smote each other and his joints were racked asunder; the features should therefore have indicated this excessive emotion.

No. 11. 'Fruit Piece,' G. LANCE. The fruit pictures of this artist still excel those of all others who have practised this department of Art. The fruit here lies upon an old mat, which is painted with extraordinary nicety. The down and texture of the coat of the peach are imitated to perfection, and we learn that the pine is not freshly cut, because the points of the leaves are turned and becoming sere.

No. 12. 'The Toilet,' W. FISHER. The title here is unfortunate—the composition would not suggest 'The Toilet.' It is a large picture, and the principal figure is a gipsy, apparently in a profound reverie: who, but for the lines which appear in the catalogue, might have been pronounced an Odalisque, so strong is the Eastern leaven which pervades the work. The work, however, possesses very considerable merit; the character is well preserved, and the expression is admirably given—in reference to the darker nature of the two figures which occupy the background.

No. 17. 'Scene from King Henry VI., Part II.,' T. VON HOLST. This is a large picture, and painted in a manner different from that which has been generally seen in the works of this artist. The scene is that occurring at the moment when the folding-doors of an inner chamber are thrown open, and the body of Gloster is seen on a bed—the dialogue is between Warwick and the King.

Warwick—Come hither, gracious Sovereign, view this body.  
King Henry—That is to see how deep my grave is made.

The work seems to be an experiment on the powers of middle tones. It is not satisfactory; and by no means an advance upon the picture exhibited by Mr. Holst last year—the 'Raising of Jairus's Daughter,' for which he obtained one of the Institution premiums. We wish it were possible to give more unqualified praise to this picture; but to us it appears more like a stage arrangement for a melodrama than anything else. The figures are placed so as to produce a certain amount of picturesque effect, but with very little discrimination, whether as to sentiment or action. The King is invited to look at the body of his murdered relative, but he sits without the slightest sign of excited attention, like one brooding over some long-settled grief. King Henry was certainly a passive being, and so Shakespeare has drawn him; but, consistently with that character, everything he says or does in the play is just and appropriate. The execution of the picture is somewhat woolly, the colouring monotonously brown. The figure of

the Queen is the reclaiming point: she stands like one preparing for the contemplation of a terrible spectacle—conscious of guilt, but stringing up her nerves to prevent any betrayal of it. We have said often—and say again—that Mr. Holst has more real genius than half the modern painters put together; but he will not school it, and train it, and curb it; preferring rather to let it run riot, as if he scorned restraint. In the picture exhibited last year he gave promise of a departure from this—folly; and manifested a resolve to paint so that spectators might be gratified and instructed. Let him return into a path where wisdom is the guide, and glory is the goal.

No. 18. 'On the Thames,' W. ETTY, R.A. The composition is as simple as anything that can be found on the river, and the whole is treated in the known free-and-easy manner of the artist—a passage of nature, written down in running hand. The peculiarity of Mr. Etty's flesh-colouring extends even to this picture.

No. 19. 'An Italian Girl,' J. INSKIPP. A head in the decided style of this artist, but rather English than Italian. It is exceedingly graceful, natural, and pure—a passage of poetry.

No. 21. 'View of Dindarra Castle, and Head of Loch Fyne, Argyllshire,' COPLEY FIELDING. A charming admixture of warm and cool tints prevails throughout this picture, which is executed with a breadth undoubtedly acquired from the flat washing in water-colour. The foreground is water; the background is closed in by high land; and the whole is broken by comparatively minute objects, in a manner which must be familiar to all who know the artist's pictures.

No. 23. 'Relics of the Olden Time,' W. S. P. HENDERSON. A collection of objects of still life; as, for instance, pieces of armour, an antique cabinet, and furniture—all painted with much care.

No. 24. 'Cottage Children,' MRS. CARPENTER. We may say of this lady that she is rather an accomplished master than a finished mistress of her Art, as her touch and manner give no indication of the hand feminine. This little work consists of two children, with an open background; both (but especially the younger) abound in natural grace, and the success of the colouring seems to have been attained without an effort.

No. 25. 'Composition—Evening,' E. GILL. It cannot be denied that there are rules to assist the painter in an approach to the effects of nature, but it cannot be maintained that a picture can be brought to a successful result without a reference to nature. The effect of this composition is a very common but a very agreeable one—dark masses telling against light clouds; part, however, of these masses are heavy from want of transparency.

No. 30. 'Harry Hall, the Ratscatcher of Land Guard Fort,' G. G. BULLOCK. The ratscatcher is seated, and surrounded by the implements of his craft. This is a picture of a kind which, to be at all valuable, must be painted in no common style.

No. 31. 'Scenery on the Borders of Dartmoor,' F. R. LEE, R.A. An oasis in waste; a picture constituted of the commonest items, to which abundant interest can be given when thus brought forward. A rustic bridge and a babbling stream, closed in by a screen of trees, and more distant high land, is all we have. The sky is clouded, but not stormy—an effect to which this artist gives singular reality. The water is muddy from recent rain, from which everything seems yet wet. Nay, we may hear the chuckle of the blackbird so loud in the copse, as to induce some of us to look behind the picture. This is the poetry of Art sung in the vulgate of Nature.

No. 33. 'Interior of a Cottage—North Wales,' W. J. MULLER. This picture presents an extraordinary change of style in comparison with others which have acquired a high reputation for this gentleman; indeed, so different is it in everything, that it would be impossible to recognise it as by the same hand as the 'Mussulman Sketches.' It is an interior, every utensil of which is made out with an extreme care which is prejudicial to the effect, as much that is brought forward in this way ought to have been in shadow.

No. 34. 'Bathers,' W. ETTY, R.A. One of the exquisite works of this accomplished painter. It contains portraits of two girls, one of whom encourages the other, who exhibits something of trepidation in advancing further into the cold stream. It is a rich example of the usual manner of the artist in dealing with flesh tints.

No. 35. 'A Mother and Child,' B. R. FAULKNER. These are portraits, and treated in a manner much practised by this artist. We have seen better.

No. 37. 'Moses returned with the Gross of Green Spectacles,' MARSHALL CLAXTON. This picture wants the *déjà* style of the book whence it is taken. It is assuredly one of the greatest difficulties of the painter to place his figures at ease with themselves, and on a good footing with the others around them; it is most difficult to avoid a sort of *mise en scène*—a dramatic effect—from a desire of making his characters indirectly address, and make an impression upon the beholder. The vicar's family remind us of a very famous personage, on the occasion of his last walk in these parts—at least the last celebrated in verse—they are "dressed in their Sunday best;" and although they are all simple hearts, yet ought they here to have shown themselves acquainted with the saying, that people of a certain cast, when dressed, do not feel themselves to be so.

No. 38. 'Landscape, with Water-fall,' F. W. WATTS. We have seen, by the same hand, better works, even less elaborately painted. The general effect of this would be good, were it not for a distracting spottiness, the result of not knowing where to stop.

No. 39. 'Mouth of the Thames—Vessels off the Maplin Lighthouse,' E. W. COOKE. One of the best works we have ever seen by this artist; the waves, however, are painted in somewhat of "a manner" (against which he must scrupulously guard), and cut the picture too decidedly across; the clouds, too, are heavy, from being overwrought.

No. 40. 'Sketch for a large Picture of Christ blessing the Children,' W. ETTY, R.A. It is a sketch of the kind called "spirited," and draws largely on the intelligence and imagination of the spectator. The tone throughout is so low that, even as it is now placed, much of it is with difficulty made out; and if we were to suppose that the large work was to have been similarly painted, the picture, as an altar-piece, would have been scarcely visible. But this we have no right to do; the inquiring and considerate mind of the great painter would have been exercised upon "the proprieties." As a composition we may judge of it. It is *happy* in the most extensive meaning of the term. It brings the striking and interesting scene before us; reads the most beautiful of all the lessons taught by the Redeemer, and leaves the strong impress of a powerful sermon, delivered with reasoning, eloquence, and grace. Who could doubt that such a work, placed in one of our churches, would become a powerful aid to piety and virtue; that such an auxiliary to pure faith might instruct tens of thousands? This little sketch is a gem of rare value. For our own parts, we covet it above any other contribution, large or small, to the gallery, and envy its possessor. By what obtuseness of intellect could it have been placed upon the ground?

No. 41. 'Scene in the Apennines between Tivoli and Subiaco, &c.,' R. R. REINAGLE, R.A. The foreground, with the figures and cattle, is sufficiently characteristic; but it is oppressed by the heavy and cold uniformity of the distances.

No. 42. 'Bad News from Sea,' R. REDGRAVE, A.R.A. Rather over-finished and hard, but well composed, and with passages of deep pathos. Nothing can be better than the expression of the little girl, who, perceiving that her mother hesitates to break the black seal of the letter she has just received, looks in her face with ominous apprehension. An infant sleeps in its cradle, and a young boy pursues his sports, happily unconscious of fear or calamity. These are touches of Nature, and would give value to a work of far less pretensions as to pictorial skill.

No. 43. 'Dead Game,' W. ETTY, R.A. A pheasant and partridges, which have been painted with the plumage, unsettled by travel and close packing. Mr. Etty's touch, as may be conceived, is not sufficiently light for this kind of subject. It is a specimen of genius in sport.

No. 45. 'The Avenue—Shobrooke Park,' F. R. LEE, R.A. Were we asked to show one department of Art in which our school excelled all others, we should in-stance as chiefest that to which this picture belongs. The masses of the foliage are painted with a cool and verdant freshness, everywhere strikingly imitative of reality. For the surpassing beauty of the work, the artist is nowhere

indebted to trick; the object and effect are copied precisely as they are familiar to the commonest observer. This is a style of Art which is understood in no country but our own; and yet we have nothing to be proud of in painting! All visitors to the gallery will pause before this charming work. It speaks to the memories of all; will come home to every heart by its truth. Yet what is it? A double row of trees, with a gravel walk between. Suggest the subject without seeing the treatment it has here received, and you will laugh at the notion of making a picture out of such inauspicious materials. See how great a thing genius can do!

No. 46. 'The Jew Merchant,' A. MORTON. The title and arrangement of this picture will remind the spectator of Rembrandt's work, although, of course, the points of difference are yet striking. We sympathise with the author in his objection to paint the vulgarity of the Hebrew features; the head he has painted is sufficiently Jewish to be so. The figure is advantageously studied and brilliantly painted, and secures the best support from the skilful treatment of the background.

No. 61. 'Welsh Guides—Llanberris,' W. COLLINS, R.A. A charming copy of a natural scene and incident. The picture was one of the attractions of the Royal Academy two or three years ago. It has lost none of its value with time.

No. 62. 'An Old Earth Stopper,' J. SIMPSON. An extraordinary power of self-denial with respect to colour is here shown. Every thing is sacrificed for the head, which stands forth one bright spot upon the canvass. If this be not a portrait, it is to be regretted that it should have been so large, since it is sufficiently apparent that such a subject is not fitted for a three-quarter length canvass.

No. 65. 'The Village Common,' W. SIMSON. So inartificial is the appearance of this production, that it looks very much like an uncompromising view of such a place as the title indicates.

No. 66. 'A Dying Warrior,' C. LANDSEER, A.R.A. A subject from "Castle Dangerous," consisting of two figures, one of which, the wounded and dying soldier, is extended upon some straw, apparently in one of the vaults of the castle, and before him is a monk, who holds up the crucifix, and offers ghostly comfort. The expression thrown into the features of both is sufficiently well maintained. In those of the confessor there is earnestness and truth, as if the soul of the exhausted man were about to escape him. The other lies heavily on the straw; his limbs are already rigid; his face is wan, and his groan is almost audible. Why, we would ask, is the man equipped like a trooper of the seventeenth century? If a subject be worth painting at all, it is worthy of being painted without anachronism.

No. 67. 'A Window in Rome during the Carnival,' W. A. ELMORE. The production of an artist who, having given good promise at home, has been studying in Italy. This work, although of comparatively humble pretension, sustains the expectations very generally entertained concerning the future fame of the young painter. It is full of point and character. At first view, an air of affectation seems to pervade it; but, upon reflection, it will be seen that such is in perfect keeping with the scene, the occasion, and the parties pictured. It is coloured with much skill and judgment. It may have been thrown off, perhaps, a little too hastily; but it is of a right good class; keeps up our hopes of the producer, and was undoubtedly worthy of a better place.

No. 68. 'The Cottage Door,' P. A. MULREADY. A capably painted cabinet bit; savouring a little too much, it may be, of the school in which the artist has been taught; but that school is a good one, and good only can come out of it.

No. 69. 'The Duel Scene on Twelfth Night,' W. P. FRITH. We noticed this picture as one of the leading gems in the Birmingham exhibition, where it was sold. It is in all respects worthy the most rising artist of the day. It may be objected to it that the principals in the affair are overdone in cowardice. Although the licence of the stage may in some degree mediate between the artist and nature, we lean rather to the latter in looking at scenes thus brought before us, and are so led to the conclusion that the characters would have been better supported had their disinclination to the encounter been less conspicuous.

No. 70. 'View on the Rhine,' C. F. TOMKINS. We find in this little picture less of the

trick of Art and more of the truth of Nature than we have been accustomed to see in the works of the artist.

No. 71. 'In Wharfedale, Yorkshire,' T. CRESWICK, A.R.A. One of those glimpses of river scenery which are among the best of the admirable works of this artist, who possesses, in a wonderful degree, the faculty of selecting such spots as look very much as if their histories would fill the mind with strong emotions. The water is not broad enough to give pathos to the wail of the Kelpie, but the woods seem deep enough to give tone to mortal romance of the most inveterate hue. Beautiful as is this picture, we miss the wonted freshness of tint in the foliage—the effect is sombre, but the same effect has been painted with more truth by the same hand.

No. 72. 'The Highland Repast,' A. JOHNSTON. This is a retiring passage in the adventures of one Edward Waverley in the Highlands. The 'Repast' is in preparation by a daughter of the Gael, well enough known to us all—"in a sunny recess, shaded by a glittering beech-tree, and carpeted with a bank of firm white sand." The female figure is drawn with inimitable grace—and so light that the footfall of such a creature could never be heard. A little beyond there is a figure listening to the song of the damsel—but he is not our Waverley—his aunt brought him up to wear his hat with a better grace.

No. 73. 'Stony Ford Castle,' F. R. LEE, R.A. This picture is made out in a manner which seems to be much in favour with this artist. Some of the foreground objects tell against a screen of foliage, so finely rounded and deepened that the spectator looks round it, being desirous of seeing as much of it as possible. The sky and background are painted with singular skill, and present one of the most beautifully retiring effects we have seen.

No. 80. 'Head of Judas,' W. ETTY, R.A. There is enough of the sinister lurking in the shadow of the eye to create distrust of a man with such an expression. In this head we see nothing but the eyes, the scintillations of which sufficiently display the interior workings. Judas is frequently painted wild and raving, but by this method of treatment he is more truly portrayed.

No. 82. 'View on the Coast near Hastings,' F. GREENWOOD. Constituted of the usual materials of beach scenery—a cliff, distant sea, and a few objects thrown in as auxiliaries. It is well executed.

No. 83. 'Dolly Varden,' W. P. FRITH. A small picture distinguished by many of the highest attributes of the Art—consisting of a single figure brought forward by a wooded background. The incident is taken from "Barnaby Rudge"—Dolly Varden admiring the bracelet on her arm—a theme sufficiently simple, yet here invested with graces of which it might have been thought incapable, without affectation. The artist has felt his subject, and worked it out in a manner to place his production among the gems of his class.

No. 84. 'Château Bourg, on the Rhone, &c.," C. R. STANLEY. A large landscape, in which is well preserved the character of the country which furnishes the subject. The objects are made out with perhaps more regard to form than effect, a circumstance which has produced a degree of hardness in the execution.

No. 85. 'A Highland Feud,' R. R. M'LAN. The feud is of very ancient date, and the rancour and hostility of the parties militant is such as to leave no hope of peace. We read, in brief, that the depredations of a couple of eagles have determined (in legend phraseology) "the suffering inhabitants of the district"—to an attempt upon their eyrie. A man is therefore let down from the overhanging cliffs by the usual means of a rope—but he is surprised by the old birds, one of which fixes upon his neck, while the other is about to attack him with equal fury. The birds are extremely well painted, and the narration is so forcible, that you feel a wish to fly to the rescue. It is a capital characteristic work; a bold transcript of an "original" incident.

No. 93. 'Water Mill on the Roc, North Wales,' C. BENTLEY. The mills, trees, and the bed of the rivulet constitute the picture. It is most carefully painted, but in nowise a brilliant production, much of the freshness of the colour being lost by over-toning.

No. 94. 'The Baths of Caracalla and Part of the Campagna of Rome,' W. SCROPE. Gene-

rally well executed, but yet with a strong inclination to Italian mannerism. The best effect lies in the middle and background of the work. In a scene like this there is no such thing as being alone—not a nook without evidences of the hand of man—there is not movement enough for social life, and yet too much for retirement. Here is breadth enough for the play of the noonday sun. Albeit, commend us to the fresh verdure of some shaded nook painted in the feeling of our own schools.\*

No. 96. 'The Flower Girl,' J. F. PASMORE. A girl lying on a shaded bank with flowers spread before her. The back-ground of this picture is admirably wrought and coloured, but the drawing of the face is faulty.

No. 97. 'Distant View of Rivaux Abbey, Yorkshire,' COPLEY FIELDING. The abbey is seen in the distance, softened by a watery sunshine most skilfully managed, against which the foreground is forced with shadow. The pencilling of the trees here is extremely like the manner in water-colour drawings by the same hand.

No. 99. 'Ecce Homo,' J. FOVEY. A head of the Saviour with the crown of thorns, and bleeding—a subject we would gladly see entirely dismissed by our artists. It recalls remembrances that must be injurious to most modern painters.

No. 102. 'Rebecca resolves to give her Jewels to the Lady Rowena and leave the world,' J. SEVERN. Rebecca is standing, and the casket is before her. The dress and circumstantial detail is effectively managed, but the flesh is "leathery;" it needs clearing up.

No. 103. 'The Way across the River,' T. CRESWICK, A.R.A. A dark group of trees telling against a light sky: the river spreads out into a shallow, and the tranquil and limpid current is most poetically described. This method of composition is frequently repeated by the artist, but we must confess we are never weary of such pictures, although, perhaps, this is surpassed by others which have preceded it.

No. 107. 'Helena,' F. STONE. This is a single picture, embodying the lines of Shakespeare:—

"It were all one  
That I should love a bright particular star  
And think to wed it, he is so above me."

The artist succeeds in the expression thrown into his faces. The drapery of this picture is too much cut up, and there is a parallelism created by the wall, the building, and the horizon, which is destructive of good effect.

No. 108. 'Nourmahal,' F. STONE. This is a better production. Nourmahal is a dark, joyous, witty-eyed beauty, with whom you feel immediately at home. The whole is skilfully painted, especially the face, which is like a piece of ripe fruit. Mr. Stone assuredly reads the poet thus—

"And the life of his harem was young Nourmahal."

No. 109. 'Portel, Coast of France,' E. W. COOK. A heavy fishing lugger is left on the sands by the receding tide; on the right of the picture we have a glimpse of the coast—and a stiff breeze is blowing off the sea—*Voilà tout*. This arrangement, although so often repeated, is yet pleasing; the appointments of the boat and the wet sand are finely imitated.

No. 111. 'Scene near Bala, North Wales,' D. COX. This is a picture with a wild and threatening effect: the scene is shut in by trees and high

\* The painter of this picture is an amateur, a gentleman of large fortune, and one of the Directors of the British Institution. We feel assured that he was ignorant of the fact that it was found necessary to "return upwards of 460 pictures for want of room;" if he had been aware of this difficulty, he would, no doubt, have called back one of them to hang in the place his production now occupies. True, it would have been but one—yet it may have chanced that to the artist upon whom the fortunate lot would thus have fallen, the consequent sale would have brought a year of independent comfort, instead of another year of struggle against evil destiny. To Mr. Scrope the exhibition of his picture can render no service of any value; he may be indifferent to praise, because he is indifferent to that which praise usually brings—fortune; and we can have no question that the knowledge of his having retired from a prominent station to give place to a professional artist, whose sole dependence is on his profession, would have been infinitely more satisfactory, and a far greater reward, than the small celebrity to be acquired by an amateur seen in competition with the matured painter or the eager neophyte.

land, the whole being characterised by a most portentous gloom.

No. 114. 'Rustic Music, Brittany,' F. GOODALL. This is a charming composition; the French cannot dazuerreotype themselves thus! Two itinerant artistes are amusing an audience of *paysannes* before the door of their home. One, the elder, does the hurdy-gurdy to a ballet and tambourine accompaniment, both done by the other; these figures are exquisitely rich in life and action, contrasting effectively with the smiling women and children seated around. This is the finest picture we have seen by the artist; the touch is free yet clear, and the colour is everywhere sweetened by the most judicious variety. Taken altogether, it is the most satisfactory work in the exhibition. The artist has, we believe, not yet seen twenty summers, yet here is a production that would do honour to a veteran in Art.

No. 118. 'On the Campagna of Rome,' W. D. KENNEDY. A small picture brilliant with local colour, of which it entirely consists. In the foreground is a fountain, at which are two peasants, a man and woman, the former proffering the homage of his love.

No. 120. 'View of the Islands of Ischia and Procida, from the Rocks called Le Schiave, &c.,' C. STANFIELD, R.A. This is an unqualified daylight effect, always so airily described by this distinguished painter. Immediately before the spectator is a rolling sea, triumphantly liquid and transparent, on which is a boat, the "hands" of which are endeavouring to pick up their rudder. Near the boat, and in the middle of the picture, a rock rises boldly out of the sea, behind which are seen the islands. The picture is remarkable for the extraordinary purity of the sky. The power of colour cannot go beyond this.

No. 123. 'Port Hoogan, North Wales,' W. J. MULLER. This is a close scene, the substance of which is a mill, a rivulet, with its stony bed, and a group of trees. The picture is most carefully painted, but is distinguished throughout by a flat tint, as if it were an experiment on the effect of neutral colour. It bespeaks, however, the master hand; and upholds the high reputation of the artist—a reputation second to that of very few living painters, and which increases as he progresses.

No. 124. 'The Lord of the Manor,' W. SIMSON. Portraits of a sportsman and his gamekeepers, the former mounted on a grey shooting pony, and the latter busied in sorting the game, of which there is an abundant show—nothing more.

No. 127. 'Over Hasty,' C. RUNCIMAN. It is a matter of surprise that experience in Art does not generate a taste for subject-matter beyond this—a butcher's boy burning his mouth with hot soup. That the picture is well painted is so much the worse, as evidencing the power of doing something better.

No. 129. 'On the Dutch Coast, near Katwyk,' E. W. COOKE. Composed of the same objects as all the other coast-scenes by the same hand—a boat aground, a glimpse of the beach, &c. An artist may live half a century upon one idea; but in such a case he is no friend to himself.

No. 133. 'Jacob deceived by Joseph's Coat of many colours,' JOHN BRIDGES. This is a well-executed work; the drawing is skilful, the touch fresh and firm, and the positions are natural and expressive.

No. 134. 'The Sisters of Bethany,' J. HARWOOD. The manner of this work is free and unaffected, but the colour is extremely muddy and opaque.

No. 135. 'Shepherd and Children of the Abruzzi,' E. V. RIPPINGILLE. The shepherd is a figure wearing the modern Italian steeple hat, the ancient sheepskin of the days of Hesiod, and the leg bands of our own Saxon times. He stands before us a miscellany of the fashions of thousands of years. The roundness and substance thrown into this figure declare it at once to have been painted from a man whose clothes were his own; even the manner of his leg bands have been studied from the life. The ease and firmness of the position are admirable, as are also those of the children. The wild landscape background is of a character with the figures, and the whole is painted with the highest finish.

No. 137. 'Diana Vernon and Francis Osbaldeston in the Library,' T. SMART. In this picture there is too much of the profitless part of model painting. In both figures there is a lack of

life and spirit; they neither commune well between themselves, nor with the spectator. We could say much more, but this is enough. The library and its appurtenances are well painted: the higher tones of the picture are excessively crude and cold.

No. 138. 'Neapolitans Gipsying in a Wood,' J. SEVERN. The subject is one rather of gaiety than gravity; two figures extended on the grass—one (the cavalier) helping the lady to wine. It is a graceful and pleasant example of the peculiar "manner" of the artist; that manner is too frequently wiry, cold, and, in a word, "foreign," and materially detracts from the vigour and delicacy of his compositions.

No. 139. 'A Stream from the Hills,' T. CRESWICK, A.R.A. This is a striking picture, but it does not belong to the class upon which Mr. Creswick's fame rests.

#### MIDDLE ROOM.

No. 143. 'The Infant Chief,' J. W. KING. A child sleeping watched by his nurse, or mother it may be; a composition of that indefinite class extremely difficult to work in a manner at all advantageous to the author.

No. 144. 'Roman Cattle,' C. JOSI. An ox, sheep, goat, &c., which are all remarkably well painted; but the sky and landscape want clearing up, which would add to the effect. A title were scarcely necessary to this picture, for the features of the sheep proclaim their country, having

"Noses hooked like that of Antoninus."

No. 146. 'Scene from James's Novel of Philip-Augustus,' C. S. BROCKEY. This picture is firmly and unaffectedly painted, but the artist is too late in his costume. It is sentimental, and in this essential successful; but it is most singular that in every picture executed with the German taste, the *frausiness* of the women cannot be relieved. The lady here is distinguished by the usual immensity of bust, and, like the monk in the German story of the Spinning Chair, seems as if fixed to her seat never more to rise.

No. 147. 'Moorland Scenery,' T. CRESWICK, A.R.A. A picture made out of as little as may be—a rock in the foreground and moorland distance; yet the effect, being true to nature, is admirable.

No. 165. 'Hagar and Ishmael in the Desert,' MARSHALL CLAXTON. This is a large picture of a subject very often painted. We have frequently had occasion to remark, that our artists are unjust to themselves in selecting subjects which have been so frequently resorted to that it is impossible to invest them with any new interest. Mr. Claxton is a painter of very great talent; but he is not often fortunate in choosing topics for his pencil.

No. 168. 'The Water Witch,' T. VON HOLST. Although, perhaps, the treatment of his subject might have justified a freer exercise of the ideal faculty, the work must be classed very high among the productions exhibited in the gallery. It is the work of a master mind; the countenance of the 'Water-Witch' will haunt the memories of those who look long upon it, like an uneasy dream. It is of earth, and yet most unearthly; a woman—but undoubtedly one who has no sympathies in common with humanity.

No. 170. 'Il Canzone di Sera,' T. BODDINGTON. Two figures seated in shadow, opposed to an evening sky, always a pleasing effect when carefully painted. The title is absurd and affected.

No. 172. 'Jeanie Deans's Visit to Reuben Butler,' A. T. DERBY. The face of Butler is covered by his hand, his elbow resting on a table, while Jeanie Deans is in the act of earnest expostulation. The attitudes are commonplace, but the effect of the picture is good at a distant view.

No. 173. 'C'est lui,' B. R. HAYDON. The Duke of Wellington as he *now is*, standing with his back to the spectator. This is a little epigram of Mr. Haydon's, who hereshows our "faithful allies" over the water what they have never seen—his Grace's back. We do not like the picture; few will like it. It is at best a piece of foolish sport with a grave subject.

No. 174. — G. E. HERING. This seems to be a scene in Italy, embracing reliques of the time when Italy was Roman. The objects compose well, and the evening effect is well painted, but in the colouring there is a want of cool tints—incident perhaps to the time and the climate. The artist is one of the most agreeable of our school,

and always succeeds in giving pleasurable sensations to a spectator.

No. 175. 'A Young Bacchante,' Mrs. SALEER. This is a portrait with little of the bacchante character about it; it is, however, painted with more spirit and freedom than ladies usually manifest.

No. 180. 'The Missal,' A. J. WOOLMER. A maiden of the by-gone time seated in an antique chair perusing "The Missal." But for one or two defaults, this would be an excellent little work—these are bad colouring in the flesh; and the infelicity of the fair (?) student's pose—she looks as if she did not understand what she saw: this latter arises from a want of caution on the part of the artist, in copying the restless or fatigued position of his model.

No. 181. 'The Temptation,' E. M. WARD. A natural, true, and inartificial copy of nature; drawn with skill, and effectively coloured. A little village lass is tempted by the fruit she is carrying to market. We dare swear she will yield to the evil councillor before her mission has ended.

No. 183. 'Dorothea,' A. D. COOPER. Another threadbare subject, which would incline us to think that, instead of reading for themselves, many of our artists seek their subjects from catalogues. Were they to paint from Johnson's Dictionary, they might be original; but they cannot be so in pursuing a course like this.

No. 184. 'Chambre à Coucher de Louis XIV., à Versailles, d'après Nature,' P. LAFAYE. This is one of the most perfect *chambres à coucher* we have ever seen upon canvass: in drawing, effect, and execution, it is beautiful. The *grand monarque* himself is seated at a table examining an architectural drawing laid before him by two officials. This is an exact representation of the room, with the exception that it is a little freshened in the painting. The artist says it is *d'après nature*—we know what he means; but cannot help remarking that the French abuse the term by calling drawings of interior embellishments works *d'après nature*: the misapplication is general, and is applied to furniture, armour, &c. We have no overweening love for foreign pictures, merely because they are foreign; but when such a work comes before us with claims to commendation, we can do it justice.

No. 188. 'The Dying Cateran,' Mrs. M'LAN. The Cateran has been mortally wounded, and is dying in the arms of his wife. The main incident and all the circumstances are most effectively related. He has been engaged in a recent fray, in which it appears there has been some hard fighting, for his claymore is broken, but the hilt yet remains in his dying grasp. The head of the wife is turned—she gazes convulsed with grief and terror at some distant object; whence we learn that there is pursuit, or that the combat is still going on. This picture does infinite honour to its authoress: in subject as well as execution it puts to shame the productions of many who are wont to be considered learned in the Art. There is one fault, however, in the composition we are induced to mention: the juxtaposition of the two parts of the sword make it appear that the weapon has been broken since the man has fallen to the ground; and we may add, perhaps, that the dress of the Cateran appears much too fresh and new. Mrs. M'lan can afford to hear objections so small and unimportant; for her picture as a whole will justify the highest praise. It is a large step in advance of former productions; yet these productions were unquestionably good.

No. 190. 'Prince Charles Edward in Adversity,' F. PICKERING. This little picture possesses in a high degree many qualities by which larger ones would be eminently benefited. We do not remember what particular incident in the wanderings of the Prince are here illustrated; but there is a good understanding between the figures: they are free and expressive, and the whole is most agreeably coloured.

No. 195. 'Sheep and Donkey reposing,' T. SIDNEY COOPER. The sheep are lying, but the donkey is standing. At a certain focus this little picture has all the appearance of enamel. We have for years observed this chance in progress, which is destructive of that freshness which in former years distinguished the works of the artist, and against the encouragement of which he will do well to guard.

No. 196. 'A Brigand Family,' E. V. RIPPINGILLE. The figures are the father, mother, and two children, one of whom is a child in a sort of portable

cradle. The principal figures are seated, and the scene is open landscape; the group comes out in bold relief against a light sky. The manner of this picture is especially free and decided, and its character cannot well be questioned, as this gentleman, like "savage Salvator," seems to have sought the bandit in his close retreat.

No. 197. 'Hagar and Ishmael,' J. STEVENS. The head of Hagar is fine both in character and expression but certainly there is nothing of the incipient patriarch in the figure of Ishmael; he is not one of those children who *teem with the man*. Artists, assuredly, before they attempt works of high historic pretension, should well consider the essential qualities belonging to that class of Art. The painter of familiar life has little occasion to draw on his imagination: it is sufficient for him to copy what he sees; but it is absurd to fill the historic canvass with mere transcripts of ordinary models. The boy in this picture is nothing more, and is as unideal in colour as in form. Mr. Stevens, however, has acquired a considerable command over his materials, and may expect to be more successful, if to his painting he adds a little more poetry. The picture undoubtedly manifests *thought*, and is therefore entitled to respectful consideration. It is, however, a gallery-picture, and it is well understood what powers are requisite for the treatment of this subject on so large a scale. It is by no means agreeable to be compelled to speak in terms of censure of any production, but we trust that our remarks are received as they are intended. Defects which, in small compositions, are comparatively insignificant, are magnified at a fearful ratio in larger ones: thus the weakness of this would have been perhaps entirely veiled, had the picture been smaller. To justify these observations, it is only necessary to point to the drawing of the limbs of the child; their emaciated appearance ought not to have been so prominent a feature of the picture.

No. 198. 'Vessels off Burlington Pier,' COLLEY FIELDING. A tempest threatening, with a sky as black as night. The composition is simple to a degree, and the truth of the scene must be evident to all by whom a storm on the waters has been witnessed.

No. 203. 'The Water-Cart at Gran, on the Danube,' J. ZEITZER. A fortress towers out of the water, against which the cart and surrounding figures are skilfully relieved; the whole is harmoniously coloured, more than usually so in the works of this artist, who is generally more happy in the arrangement of a picture, its grouping, and peculiar character.

No. 205. 'La Cava, in the Kingdom of Naples,' the late T. C. HOFLAND. A *mélange* of buildings and trees, forming an agreeable subject; the whole is very retiring in tone, and bears evidence of the care with which the lamented artist studied natural effects in Italy.

No. 210. 'Rouen Cathedral, from Place Notre Dame,' H. GAITTEN. This work presents a very faithful view of the Cathedral and adjacent buildings. There is, perhaps, too much space given to the Place. A too great desire of finish has injured the breadth, and the shadows about the cathedral are too green; the picture, however, bears out our anticipations of the artist's future fame.

No. 211. 'Goldsmith's Hermit,' J. MARTIN. There is a remarkable sameness in the composition and effect of the pictures of this artist. A valley in deep shadow, between two backs of rocky highland, the cliffs on the one hand reflecting the light of the declining sun, and those on the other opposed to it. The perspective of this picture places the Hermit and the Pilgrim at some distance from the spectator, which, together with the prevailing gloom, does not justify the nice finish of the two figures, and the distinctness with which they are seen. The extreme background is painted with marvellous skill. In this particular part of a picture, Mr. Martin is of unrivalled excellence.

No. 217. 'View on the Rhine, near Andernach,' C. F. TOMKINS. The nearest objects in this work are wrought with a hard, crisp touch, and contrast somewhat too rudely with the distance, which is soft and melting; it is otherwise a graceful production.

No. 218. 'Scene from Taming of the Shrew,' F. R. PICKERSGILL. With all his eccentricities, Petruchio is a gentleman; there should not, therefore, in any impersonation of the character, be any-

thing to gainsay this truth. It should not be forgotten, that his extravagant humours are assumed; he should not, therefore, in a picture, be so wholly given up to them, as to convey the impression of natural violence. The scene is that in which a servant is relieving him of his boots, and his manner of chastising the man is rather that of a tavern swaggerer than what it should be. The composition is good, and the picture is by no means without merit.

No. 220. 'The Virgin Mary,' T. C. THOMPSON, R.H.A. This is not an ideal portrait of the Virgin Mother. The character and expression are by no means such as to realise our conceptions of the original. The face, indeed, reminds us more of a fair Irish maiden, whose solemn feeling of a moment subdues the natural bias of her mind. It is, however, a beautifully-wrought picture, pure in design, graceful and effective in arrangement, and of a delicate yet forcible tone of colour. Few modern works, of the class portraiture, have been more entirely successful.

No. 225. 'The Gulf of Gaeta,' W. LINTON. The middle of the picture is occupied by a fortress, and some very effective pines and other trees; beyond these is the gulf, bright with the reflected light of the sky, and the horizon is bounded by some backs of high land, yet further distant. The nearest parts of the picture are thrown into shadow, which is painted with much feeling. The spirit of the work is in unison with that of the land where the scene lies.

No. 226. 'Study from a Hindoo,' A. MORTON. The head and upper parts of the body made out with an extraordinary command of natural effect. The flesh seems warm with life, as if it would yield to the pressure of the fingers.

No. 228. 'Shakespeare's Cliff, Dover,' J. B. PYNE. The composition is closed by the cliff in the distance, which rises out of a bank of mist. The sun is in the lower sky, and of its light, softened by the hazy atmosphere, the artist has availed himself, to describe one of the most delicious effects in nature; and this he has accomplished with the most perfect success.

No. 229. 'Windsor Castle, from the Fishery at Black Pots,' J. STARK. One of the best of the late productions of this artist. The Castle is a distant object, and is seen over a group of trees, which close the more immediate parts of the composition. These trees are better than the pollards, so often repeated.

No. 238. 'Salmon Trap in the Leder, North Wales,' W. J. MULLER. This is a large work, bearing in every part evidence of profitable study. The trees are somewhat flat in tone; but they are, together with the sky and background, most effectively painted. The works of Mr. Muller, in this exhibition, are all seen here for the first time; a circumstance upon which no common stress should be laid. They are generally well placed, or, at all events, better placed than his productions have been in former years—a distinction to which they are entitled. He is an artist of most undoubted genius; and the country, if not already proud of him, will be so ere long. The versatility of his mind is remarkable—his powers are as varied as they are extraordinary.

No. 239. 'Scene from Twelfth Night,' H. O'NEIL. The scene is between Olivia and Viola—the latter standing, and the former seated. The position and manner of Olivia are easy and graceful, and her face is full of language. But there is an ill-assorting *gaucherie* in the address of Viola. She has been studied from a bad model, as witness the leg. Upon the dresses and finish much care has been bestowed, with the best results.

No. 240. 'Forest Scene from Nature,' J. LINNELL. A spot seems to have been cleared in the forest by the axe, and the main feature of the view is the huge trunk of the tree by which the place has been shaded. The title is accompanied by a line from Dryden's "Virgil," which we confess we cannot well understand as allusive to an English scene (if such it be): something from our own poets had been more applicable, but if Virgil it must be, why not Maro's Virgil—

—cuneis et fissile robur  
Scinditur.

No. 244. 'Scene near Plumstead Common,' J. TENNANT. A work of great ability, without the slightest affectation. The production of a genuine artist, who has studied in the best school—the school of nature.

No. 245. 'Queen Elizabeth, Widow of Edward IV., delivering up her Children,' &c., E. M. WARD. We noticed this excellent work during its exhibition in the Royal Academy. It is the production of an accomplished mind, which aims, and successfully aims, at departure from the beaten track of Art, to essay one more difficult but far more honourable.

No. 246. 'The Education of Gil Blas,' J. GILBERT. Gil Blas and his uncle Gil Perez, who in teaching his nephew materially improved himself. The future glory of Oviedo stands playing with a dog, while the canon pores intently over the book open before him. This is a work distinguished by great power, originality, and truth; in short, it is a prize essay.

No. 250. 'Sheep-washing in the Webber, South Devon,' S. R. PERCY. This seems to have been studied industriously from the place itself—the objects sustain each other very effectively.

No. 252. 'Fortune Telling,' N. J. CROWLEY, R.H.A. A work of great merit—the merit of which will be most fully appreciated by those who understand something of Irish character. It tells the story of an aged woman reading the future fortunes of a young girl by consulting the grounds in the tea-cup. The heads are admirably painted—just the right expression is given to each; the nature of the prophecy is told by the girl's alarm approaching to horror, while the crone is searching out some remnant of a leaf that may afford clue to consolation. In all respects the picture deserves unqualified praise. It should be seen by the Committee of the Irish Art-Union, who would do well to engrave it. It is worth a score of 'Drowned Children,' such as that they design to issue as one of their annual gifts; and Mr. Crowley is as infinitely superior to Mr. Burton—the adopted and spoiled child of the said Committee.

No. 255. 'Effie Deans,' J. G. MIDDLETON. She is in confinement, "seated on her little flock bed, plunged in a deep reverie." The light enters from the barred window, and falls broadly on every part of the figure, even to the feet, a treatment which is productive of a tame and insipid effect. This defect is to be lamented, as there is much nature and thought in the head, and all the accessories are well painted.

No. 260. 'The Reverie of Alnaschar,' T. BRISTOCK. This work also we noticed in the Royal Academy. It is a capital reading of the fine old story. The expression thrown into the countenance of the castle-builder is inimitable.

No. 261. 'Tempe,' F. DANBY, A.R.A. This too we commented upon in reviewing the Royal Academy. It is here seen to the highest possible advantage, and is undoubtedly a work of rare merit—redolent of the luxury of the happy valley. Every part is clearly and distinctly made out; yet all is in perfect harmony.

No. 275. 'The Sailor's Home,' J. HOLLAND. A finely painted picture of the Palace Hospital; liable to the objection of exceeding mannerism, but very excellent as a portrait, and meritorious in the mode of treatment.

No. 277. 'A Visit from Old Nurse,' R. T. LONSDALE. A modern apartment with its abundant upholstery, all elaborately painted, and a lady handing "old nurse" a glass of wine.

No. 278. 'The Love Test,' T. M. JOY. Two girls auguring "the course of true love," by the burning of two lights. It may easily be determined which is the maiden most affected by the result, from the intensity of interest thrown into the countenance. The tone of the picture is of a subdued character—accuracy rather than brilliancy seems to have been the object.

No. 284. 'Sunday Morning,' C. MARTIN. A naturally graceful, but simply-dressed, female walking alone, "with solemn step and slow," to the village church. The picture is beautiful, and is painted with matured ability. We shall look again for the artist's name as one that promises much.

No. 285. 'A Walk in Kensington Gardens,' H. M'MANUS, R.H.A. A very clever sketch; manifesting an accurate acquaintance with nature, and a proper study of Art.

#### SOUTH ROOM.

No. 289. 'Alcon,' E. V. RIPPINGILLE. Alcon, the son of Erectheus, King of Athens, was so skilful an archer, that he slew a serpent which attacked his son without injuring the child.

Alcon has just discharged the arrow which has passed through the head of the snake, that falls writhing to the ground; such is the action of the works. Its *morale* discourses eloquently of the force of human affection; the mother of the child crouches at the feet of the father in a paroxysm of fear lest the child should be pierced by the arrow. The figure of Alcon is noble and commanding; he is distinctly like the patron of Horace, descended of ancient kings.

No. 298. 'A Barge off Tilbury Fort,' J. C. GOODEN. A small picture full of agreeable colouring.

No. 305. 'In Devonshire, Dartmoor in the Distance,' H. JUTSUM. Another small picture with a pleasing effect, and very firmly painted.

No. 316. 'River Scene—Moon Rising,' E. CHILDE. The moon is surrounded by dark and heavy clouds, with which the rest of the work is in good keeping. The picture is dark, but the effect is well made out.

No. 326. 'The South Downs, near Lewes,' COLEY FIELDING. A small clouded view with distant rain forcibly described.

No. 333. 'An Osteria, near Rome; Peasants preparing to cross the Campagna,' J. NOBLE. A work of very considerable excellence, painted with rare truth. It is a long and narrow picture, standing in an out-of-the-way position, and will escape general notice. Those who go to examine it, however, will be amply repaid. There are in it much careful study, matured thought, and attentive observation of nature; and the characteristic groups are remarkably faithful to the scene.

No. 337. 'One of the Olden Time,' MORRIS MOORE. We see now but few pictures of this class; it is a study of a man in an antique costume, darker than anything by Giorgione—as dark as Diego Velasquez; it is such as we see in the marble halls of the Venetian palaces, and is as worthy of them as many that are there. As for the author—*Vixit Romæ et Venetiis*—it is sufficiently evident.

No. 340. 'Rural Life,' A. JOHNSTON. A composition full of talent, but mannered somewhat more than usual. It is a favourite method with this artist, when he has two figures, to throw them in opposition of light and shadow.

No. 346. 'Scene in Devonshire,' H. JUTSUM. A mill embowered in trees, which form the principal feature of the picture, being well rounded in their masses. The objects are closely transcribed from nature, and the colour is happily balanced. In the water is the weakness of the work.

No. 347. 'The Hampshire Farmer,' W. SHAY-ER. A farmer's home, but so beset with injudicious lights, as to destroy all good effect. The subject, naturally coarse, has been coarsely rendered.

No. 348. 'Queen Berengaria soliciting Richard Cœur de Lion to spare the Life of the Earl of Huntingdon,' J. GOODRICH. This is a large picture composed from the "Talisman," one of Scott's "Tales of the Crusaders." The Queen and Edith Plantagenet are in the tent of the King, who is sitting up on his couch turned from the spectator. Artists are too much in the habit, it may be assumed, of *getting up* works for the mere purpose of exhibition. It is difficult to account, on any other grounds, for the vast discrepancies frequently seen in the same picture. Queen Berengaria, as shown in this performance, is really a very charming figure, and had the whole picture been executed in a similar spirit, we should have given it unqualified praise. But the other figures, we are compelled to say, appear to be mere figures *à let*, that of the King being the most objectionable of all; he appears wholly unconnected with the composition, and in his head there is not even an attempt at character. We shall be glad to see Mr. Goodrich again in a better digested work; he does not want talent; we recommend to him study and deliberation. We would fain accord higher praise to his picture—first, because his name is new to us, and may be new to the Arts, and next, because it is of a class that we desire to see encouraged. Mr. Goodrich may be a young man; if so, we doubt not all will be right with him hereafter.

No. 349. 'Lay of the Last Minstrel—Scott as the Minstrel,' W. D. KENNEDY. Considered as a concatenation of parts, this picture is very clever, but very deficient when looked at as a whole. It is impossible to discover which are meant for the principal figures, nor is there any predominating

mass of light. But, if the detail is examined bit by bit, there is much to gratify the connoisseur: expert pencilling, clear elaboration of parts, passages of pleasing composition, and great variety in the characters of the heads. Still it must be observed that a deficiency in general effect is a fatal one: the neglect or observance of this important quality makes all the difference between the dexterous mechanic and the great artist.

No. 353. 'Study from Nature,' H. LE JEUNE. A girl seated in a close woody scene. The figure is broken by too strong a shadow, but has yet many points of excellence.

No. 355. 'Market Boat on the Scheldt,' H. LANCASTER. The boats contrast strongly against a sky with a warm Cyp-like effect.

No. 356. 'Cornish Market People on the Beach,' W. SHAYER. The foreground is in shadow, and occupied by an assemblage of figures thrown forward by a light distance—a favourite arrangement of the artist. This is a far more agreeable and effective example of his abilities than the work that companions it.

No. 362. 'Guardian Cherubs,' J. P. DAVIS. A most pleasant picture, conceived and arranged with consummate skill—combining happily the class portraiture with the purely imaginative, and giving to the real all the charm that may be derived from a fitting use of the fanciful.

No. 363. 'Gil Blas at the entertainment given him by Camilla and Don Raphael,' T. M. JOY. Partout et toujours—te voilà encore, Gil Blas! He is perfectly happy in the discovery of the very significant looks of Camilla, into whom and Don Raphael is thrown much of the spirit of Le Sage's description. The understanding between these two is well sustained; but a man of Raphael's pretensions ought not to have been set down to table in gambado boots. Mr. Joy seems to have studied the works of the Flemish school with great success. His colouring exhibits much depth and clearness, and an attention to *tone* which gives evidence of an age not yet perverted by the practice of painting for public exhibitions. He has thoroughly entered, too, into the spirit of the delightful romance, from which he has taken his subject. For Raphael looks so palpable and thorough-paced a knave, and the lady so effectual a coadjutor, that we must perforce pity poor Gil Blas, while we laugh at his credulity.

No. 368. 'Silvia comparing herself with the Flowers,' J. SEVERN. A realization of the *Aminta* of Tasso. A beautiful composition, full of exquisite feeling; and coloured with more than usual truth to nature—and far less objectionable on the score of mannerism.

No. 365. 'Pond at Harlow, Essex,' E. J. COBBETT. The water wants relief in colour, it is too green—the group of trees in shadow on the left is forcibly painted, and very like nature.

No. 369. 'Abbaye St. Amonde, Rouen,' C. F. TOMKINS. A venerable front, extremely well-drawn, and laid in colour; it goes little beyond a *sepiâ* drawing, but it is nevertheless pleasing.

No. 373. 'The Fair Client,' F. P. STEPHANOFF. Highly burlesque, like so many other works by the same hand. The matter in question is perhaps a breach of promise—the 'Fair Client' is reading the letters, but the lawyer is evidently busied with other thoughts; he is a little caricatured, but is still very like life. This artist is often a pithy satirist.

No. 376. 'Blondel,' G. F. WATTS. This is the story of the discovery by Blondel of the place of captivity of Richard. Blondel has sung his part of the famous "Trobadour," and is now listening to Richard. The incident is well described, and the drawing accurate and forcible.

No. 381. 'The Pollard Oak,' E. W. COOKE. One of the subjects of our early school—an old hollow oak and a thatched cottage. The tree is extremely well executed: its foliage is accurately given, without any hardness of touch.

No. 384. 'Curtius,' B. R. HAYDON. This is a large picture; the horse and man look beyond life-size, and for such magnitude there is not space enough of canvass for the perfection of the terrible. The grand story of the Roman sacrifice is familiar to every reader—from childhood to old age; it was a famous subject to select, but a hazardous one to treat. Its selection, however, bespeaks a mind of no common order. The moment taken is that when Curtius has leaped into the gulf, down which he is falling, fully armed, and mounted

on his noble steed, as fully caparisoned. The action of the horse is one of great difficulty. It can have happened to few to have seen a horse in such a position; but we feel at once that it is correctly rendered. The retracted legs, the eyes turned back and wildly staring, the whole expressing that frantic terror of which the horse is so peculiarly susceptible. As some one observed, who had more matter-of-fact than romance—the horse shows more sense than his rider. There will be very opposite opinions concerning the noble Curtius. To our minds the expression is correct—true to fact; although the model has not been a good one, the countenance not being sufficiently heroic to correspond with previous impressions. Still, the absence of all alarm is a triumph. Curtius should assuredly not be seen, at the moment he is precipitating himself into the gulf, bracing up his nerves for the terrible exploit—all *that* is past. His face exhibits the calm determination of one who has resolved on self-immolation as the price of immortal glory. The picture betrays few of those errors of proportion into which Mr. Haydon sometimes falls; nevertheless, the right arm is somewhat too long; and the whole effect would have been greatly improved, if the abyss into which the figures are plunging had been glazed into more transparent darkness. The idea of an empty space would thus have been more effectually given; at present it looks merely like a smear of dark paint on a level surface.

No. 386. 'Nostradamus predicting the future fate of Mary Queen of Scots,' J. A. CASEY. A clever picture, supplying an apt illustration of a remarkable incident. The work manifests thought and careful consideration, and it is executed with considerable skill.

No. 387. 'Rocks at the Land's End,' T. CREWICK, A.R.A. Parts of this production are very like nature, but, as a whole, it is the least interesting of all the accomplished painter's works. The sea does not to our minds look like sea.

No. 391. 'On the Bristol Channel,' J. WILSON. The sea-beach, with a distant lime-kiln, and other objects, painted with a beautiful though somewhat artificial effect.

No. 400. 'Roman Beggar from the Life,' T. BRIGSTOCKE. The roundness and substance of the limbs sufficiently proclaim this a careful transcript from nature.

No. 401. 'The Procession of the Brides of Venice,' J. R. HERBERT, A.R.A. We see pictures occasionally which almost make us angry; and this is one of them; pictures which approximate so closely to excellence, without reaching it, that one cannot help wondering that the mark should have been so nearly approached without being hit. The mass of light formed by the white draperies of the young brides in the gondola should have been painted up into positive brilliancy; this would have formed a key for the *chiaroscuro* of the whole picture, so as to have given it vivacity, depth, and richness. As it is, there is an absence of all those qualities, the whole effect being cold and grey, notwithstanding the opportunity afforded by the subject for every imaginable variety of light, shade, and colour. But, as in another picture we have just mentioned, there is an exceedingly good accumulation of detail, tasteful pencilling, and an attention to correctness in costume, architecture, &c., which give an air of truth and reality, and atone, in great measure, for the absence of effect. As an *interesting* work, few pictures in the collection surpass this. But it is not a very late production of the artist—one of the most agreeable and able painters of our English school. He has since gone beyond it in many essential particulars, and is no doubt destined to occupy a still higher place than even that which he has hitherto filled.

No. 407. 'Evening,' W. LINTON. The principal object in this composition is a river lying between two perpendicular walls of rock; beyond this we look into the distance lighted up by the declining sun, the subduing and harmonizing power of which is most poetically described.

No. 408. 'The Hindoo and his European Charge,' W. SIMSON. The Hindoo is seated, and his charge is a child, which is seated on his knee. The heads are well painted, but the limbs are defective.

No. 410. 'Scheveling Beach,' R. J. HAMERTON. Scheveling seems to be a favourite watering-place with many of our artists. Of course a low sandy shore; very little of the town is seen. The

picture is pleasantly made out, although the foreground and distance are nearly of the same colour and tone.

No. 412. 'An Illicit Whiskey Still, near Tulla, County Clare, Ireland,' A. FRAZER. A work of which we are happy to speak in terms of high praise, the more especially because it is a large advance on recent pictures by the artist. Mr. Frazer has formed his style apparently on the best examples of Art; and although a whiskey-still has nothing appealing to one's feelings on the score of pathos or dignity, yet its accompaniments are not unpicturesque, and they are here shown up in a manner evincing that the rudest materials may be made interesting by the hand of skill and genius. We look with particular respect at the works of artists whose style is not contaminated by an abominable straining after exhibition effect, a feeling which has produced the most pernicious results on a large portion of the English school. Mr. Frazer's picture may be adduced as a proof that brilliancy is a widely different thing from crudeness; it says, indeed, as emphatically as Du Fresnoy's lines—

"Though he who colours well must colour bright,  
Hope not that praise to win by sickly white."

No. 413. 'The Translation of Elijah,' J. WOOD. This work is sufficiently large for an altar-piece. It is a most difficult subject to deal with; we have the "chariot of fire and horses of fire" painted in many ways, but never approaching the idea conveyed by the text.

No. 418. 'King Jamie conferring the honour of Knighthood on Richie Monoplies,' J. LAUDER. A genuine picture, successfully following the author in rich and discriminated character, and manifesting corresponding mastery in those qualities which belong more properly to the painter. Mr. Lauder's are not works "slabbered o'er in haste;" we perceive in them a sustained attention both to detail and general effect; we think, however, that a thicker and richer *impasto* in the high lights might be employed with advantage. This is a difficulty which we think our whole school of painters of familiar life are somewhat apt to shirk, and the consequence is, that their pictures have too frequently the appearance of water-colour drawings. Mr. Lauder's genius, we feel certain, has *stamina* enough to overcome this deficiency—we recommend it to his serious consideration.

No. 421. 'Ruins of Tintern Abbey,' W. P. ELEN. A small view, but firmly and effectively painted.

No. 425. 'The Fern Cutters,' J. INSKIPP. Two lads provided with sickles, and partly shaded by some overhanging branches—near them a donkey.\*

#### SCULPTURE.

This year a most important, but discouraged department of the Arts claims *addenda* in reviewing the collection. The nine works exhibited are all excellent.

No. 432. 'Eliza,' a statue in marble, by P. PARK, is very beautiful and touching in its pure simplicity; seeming to be as accurate a copy of reality as hand could make, even to a defect in nature; for the limbs are too "spare," to indicate the peculiar character of very early girlhood.

No. 433. 'The Wanderer,' by J. H. FOLEY, is of the highest order of merit. A young girl is shivering with the cold—absolutely shivering, for

\* The haunches of the donkey are marked—largely and very legibly—with the letters R.A. in a circle, as if indicating the owner's name. If this was a mere accident—which we would fain believe it to be—it was an unfortunate one. If it was designed as an insult to the members of the Royal Academy—and it seems generally to be so considered—the act is utterly unworthy an artist of ability as Mr. Inskipp undoubtedly is. It bears the aspect of a paltry and pitiful trick to take miserable vengeance for disappointment; and, viewing it in this light, the letters have been by many construed to mean R—rejected, A—associate. This is, however, giving change in the same coin. A better anecdote is told of a member of the Royal Academy, who, on being led up to look at the picture, coolly observed, "Well, for my own part, I would rather elect the *Ass* than the Painter." The circumstance is by no means creditable to Mr. Inskipp; if, that is to say, he really meant what he is by most people supposed to have meant. If it were an accidental coincidence, and he intended nothing more than to give, as is usual in such cases, the initials of the donkey's owner, the sooner he rubs out these the better. We do think it should have been done before the directors of the British Institution had allowed the picture to be placed in the gallery.

it is scarcely necessary to call on fancy to induce a belief that the knees knock together, or to hear the teeth chatter. The thinly-clad girl is a powerful appeal to sympathy. What a treasure this would be in the hall of some charitable institution. It would be an investment that would pay a hundred per cent. per annum; for who could look upon it without yielding to a demand for relief? In execution, too, it is perfect. A more exquisite statue, in all respects, has not been produced in England. Surely the merits of Mr. Foley must have been discovered, appreciated, and recompensed. Surely, when tributes, national and private, are "commissioned" by scores, this admirable sculptor cannot have been passed over. If he has been, the fact is discreditable to the age. He will make his way as M'Dowell has done, in spite of all obstacles. Honour and glory be to "the patron" who shall be the first to make that way smoother, easier, and safer.

No. 434. 'A Girl at Prayer,' by P. M'DOWELL, A.R.A. Beautiful, exceedingly! The Statue will become one of the chief glories of British Art.

No. 435. 'The Sick Child,' W. CALDER MARSHALL. A touching figure; faithful to nature and to fact.

No. 436. 'Whittington listening to the Bow Bells,' J. E. CAREW. A story was never more effectively told by a single figure. It is the very image of the friendless boy, who fancies that in the distant chime he hears a call to fame and fortune.

No. 437. 'Psyche,' H. TIMBRELL. A beautiful small model, of wonderful accuracy and freedom. It is the work, we presume, which elected Mr. Timbrell the "Travelling Student" of the Academy. If he turn his time to account, he will be a member of the body—and that not long after his return.

We have thus gone somewhat minutely through the collection of the British Institution; and our remarks occupy no inconsiderable space. Still there are many works unnoticed, of merit amply sufficient to demand observations. We trust their producers will attribute our inattention to our utter inability to consider all—to the positive exhaustion incident upon so much lengthened detail—rather than to their absence of right to demand notice at our hands.

#### PICTURES SOLD AT (IN) THE BRITISH INSTITUTION.

135. 'Shepherd and Children of the Abruzzi,' E. V. Rippingill; Her Royal Highness the Duchess of Cambridge. 1. 'Not so easily Caught,' E. Landsaer, R.A.; W. Wells, Esq. 3. 'Interior of a Cottage, Brittany,' F. Goodall. 114. 'Rustic Music, Brittany,' F. Goodall. 79. 'The Evening of Life,' A. Morton; 30 guineas. W. Wells, Esq. 39. 'Mouth of the Thames,' &c., E. W. Cooke; 65 guineas. Lord Charles Townshend. 45. 'The Avenue, Shobrooke Park,' F. R. Lee, R.A.; 85 guineas, the Marquis of Lansdowne. 18. 'On the Thames,' W. Etty, R.A. 34. 'Bathers,' W. Etty, R.A. 40. 'Sketch for a large picture of Christ Blessing the Children,' W. Etty, R.A. 43. 'Dead Game,' W. Etty, R.A.; 15 guineas. Charles Hawker, Esq. 80. 'Head of Judas,' W. Etty, R.A.; 10 guineas. 219. 'The Terrace, Haddon Hill,' J. D. Wingfield; 220s. C. B. Wall, Esq. 381. 'The Pollard Oak,' E. W. Cooke. 5. 'Scene from the Devil on Two Sticks,' A. Egg; George Dudgeon, Esq. 69. 'The Duel Scene from Twelfth Night,' W. P. Frith; George Briscoe, Esq. 83. 'Dolly Varden,' W. P. Frith; C. O. Parnell, Esq. 25. 'Composition, Evening,' E. Gill; 25s. Sir H. Webb, Bart. 107. 'Helena,' F. Stone; 25s. Sir H. Webb, Bart. 108. 'Nourmahal,' F. Stone; Jacob Bell, Esq. 401. 'The Procession of the Brides of Venice,' J. R. Herbert, A.R.A. 72. 'The Highland Repast,' A. Johnston; 30 guineas. 'Hardie,' Esq. 249. 'A Dog,' C. Josi. 346. 'Scene in Devonshire,' H. Juteau; H. W. Alfrey, Esq. 238. 'Salmon Trap on the Leder,' N. Wales; W. J. Müller. 123. 'Port Hoogan,' W. J. Müller. 58. 'From Dibdin's song of the Bacco Box,' J. C. Schetky. 60. 'From Dibdin's Song of the Bacco Box.' 382. 'The Discovery,' Mrs. Salter; 10 guineas. Sir W. Eden, Bart. 317. 'Scene in North Wales,' P. W. Elen; 7 guineas. Sir W. Eden, Bart. 388. 'The Love Letter Detected,' T. Ellerby; 10 guineas. Right Hon. Sir James Wigram. 11. 'Fruit Piece,' G. Lance; 80 guineas. J. Broderip, Esq. 26. 'Fruit Piece,' 80 guineas. J. Broderip, Esq. 344. 'H.M. Brig Nautilus and Revenue Cruiser Dec, in Hull Roads,' J. Ward; 22 10s. Sir J. White. 30. 'Harry Hale, the Rat-catcher of Languard Fort,' G. G. Bullock; 30 guineas. W. Wigram, Esq. 255. 'Effie Deans,' J. G. Middleton; 50 guineas. 352. 'Lillington, Warwickshire,' T. Baker; 7 guineas. G. Faulkner, Esq. 299. 'Ehrenbreitstein,' H. Gritten; 15 guineas. Colonel Wyld. 120. 'View of the Islands of Ischia and Procida,' C. Stanfield, R.A. 354. 'Ponies,' G. Morley; Lady Burdett.

#### THE ART-UNION OF LONDON.

SINCE we last gave our readers note of the proceedings of this Society, the committee have made strenuous efforts in furtherance of their great object—the advancement of the fine arts and the improvement of public taste. Mr. Doo has been engaged to engrave in line Mr. Mulready's picture, the 'Convalescent,' and Mr. Goodall to engrave Mr. Stanfield's 'Castello d' Ischia.' A medal to Sir Joshua Reynolds is arranged to follow that commemorative of Chantrey, which is making rapid progress under the hands of Mr. Wyon, and the committee contemplate such steps regarding the distribution of them as will ensure them a large circulation among the subscribers, and tend greatly to increase the number of admirers for this branch of Art. The head of Chantrey, which Mr. Wyon has modelled for the purpose, is certainly the most striking likeness of that eminent man which has been produced.

The subject of the next bronzes is the 'Nymph and Child,' by Westmacott; it is expected they will be ready previous to the distribution. Another is to be chosen from models for that purpose, which will probably be exhibited at some of the Galleries, in reply to an advertisement to that effect issued by the Society; and we hope sincerely, that our sculptors will be found to have responded efficiently to the call. Anxious to direct public attention to sculpture, and to afford every aid in their power to its professors, the Committee of the Art-Union of London have recently altered their regulations so as to authorise prize-holders to commission, for their prize, the execution in marble of any model exhibited at the various London Galleries, provided the price of the work, when so executed, was left with the proper officer at the gallery at the opening of the exhibition—an arrangement which, we are disposed to think, will act very beneficially. Sculpture in England labours, unfortunately, under so many disadvantages, and is so little encouraged or appreciated by the people generally, that it needs every assistance which can be afforded it.

Too much praise can hardly be given to the committee, for the steady course they are pursuing, and for their desire to allow no opportunity to slip of advancing the Arts, in which it is hoped they will be well supported by all who feel interested in the same noble end.

A paragraph has been extensively circulated to the effect that every subscriber to an Art-Union is liable to a penalty, recoverable by any common informer. We have no hesitation in stating that this is incorrect, even as applied to gambling transactions, inasmuch as the 46th of Geo. III., c. 148, provides, by section 59, that no pecuniary penalties inflicted by any law touching or concerning lotteries, shall be recovered excepting by the Attorney-General for her Majesty's use. Art-Unions, therefore, are not at all affected by any existing legislative enactments. This opinion is borne out by the fact, that the establishment of such Societies was recommended by a Committee of the House of Commons on Arts and Manufactures previous to the formation of the Art-Union of London, as they would hardly have suggested an illegal proceeding. "These Associations for the purchase of pictures to be distributed by lot," says the Report in question, "form one of the many instances in the present age of the advantages of combination. The smallness of the contribution required brings together a large mass of subscribers, many of whom, without such a system of association, would never have become patrons of the Arts."

[Very considerable alarm seems to exist on this subject—the assumed illegality of Art-Unions. We have received at least twenty letters on the subject. Our correspondents may be thus answered. They may be assured that in subscribing to an Art-Union, they are infringing neither the spirit nor the letter of the law. Among subscribers to the London Art-Union are the heads of the church, a host of barristers, and two or three judges. The case is precisely similar as regards Scotland, and just the same in reference to Ireland. In Ireland, indeed, we know that a certain judge at first refused his name to the Society, suspecting its legality. He subsequently, however, looked closely into the matter, and, after due consideration, added his name to the list of Vice-presidents.]

## VARIETIES.

**THE ROYAL ACADEMY.**—On the 10th of February Sir W. C. Ross was elected a member of the Royal Academy. This selection from the candidates cannot be otherwise than satisfactory, although it is not a step in advance for "high Art." There is no other miniature painter in the Academy,—unless Mr. Chalon is to be so described; and that this branch of the profession is capable of marked elevation, the career of Sir W. Ross abundantly proves. He has already elevated it into great importance. His miniatures are indeed of such rare excellence, as to be altogether unparalleled in modern times. In his works, grace and delicacy, combined with vigour and effect, are absolutely wonderful. Moreover, he is the Court Painter—a circumstance very worthy of consideration, where the post has been earned by ability, held by merit, and is sustained by character as well as genius; for *character*, we rejoice to say, always forms a very important item in the claims of a candidate for election into the Royal Academy. Sir W. Ross began life, we believe, as an historical painter. We remember a lithographic print from a painting of his—"Christ casting out Devils"—if our memory serve us rightly; and we call it to mind as a production of no ordinary power. It is indeed understood that he has not abandoned this, the nobler path of the Art; but is actually preparing a Cartoon for "the competition." His master-mind may work out any purpose, to which it is directed. As a miniature painter, moreover, he is unrivalled in Europe; indeed, it is not too much to say the world has not yet seen his equal. We record therefore with exceeding pleasure his election into the Royal Academy. The vacancy thus filled up was caused by the demise of Sir Francis Chantrey.

Mr. J. T. WILLMORE was, on the same day, elected an associate engraver in the room of the late J. Bromley. This is also a good election. Mr. Willmore has adhered to *LINE*; a style in which he has produced many admirable works. He is a landscape engraver, of acknowledged ability and of considerable repute.

Mr. H. TIMBRELL, a young sculptor, has been chosen by the Royal Academy as "travelling student." He is an artist of right good promise. A very beautiful model of 'Hebe' by him was contained in the exhibition last year. The travelling student is allowed £80 to pay his expenses to Rome and back, and £130 per annum for three years. The following is the rule of the Academy, under which this election takes place:

"The Royal Academy will, in times of peace, enable a student from among those who have obtained gold medals, to pursue his studies on the Continent for the term of three years. He shall be elected from each of the classes, painting, sculpture, and architecture, in rotation, and shall be allowed the sum of £80 for his journey and return, and the sum of £130 annually for his expenditure."

**STATUE OF WILKIE.**—The sub-committee have assembled to inspect Mr. Joseph's model of the statue of Sir David Wilkie, to be executed in marble, in order to be placed in one of the rooms of the National Gallery—to be followed, we trust, by others in honour of our great national painters. The sub-committee expressed themselves fully content with the progress of the work; and they may well have been so, for it affords the safest and surest proof of the wisdom of their choice in selecting Mr. Joseph to execute the commission. It is, in design, a work of high merit, very simple in detail, but as eloquent of meaning and character as any statue yet produced by the British school. The figure is standing, a large cloak is thrown around the shoulders, the right hand holds a crayon. No composition could be more homely; yet the attitude is very dignified, and the countenance, although remarkably like, has that fine intellectual expression by which the painter was distinguished in his happier moods. It is, in fact, a pleasing resemblance, in which the features have been skilfully harmonised,

while preserving all their peculiar characteristics—a striking likeness, conformable to nature and truth.

**THE QUEEN AND PRINCE ALBERT.**—We have examined two new portraits—of her Majesty and her illustrious consort—at Messrs. Colnaghi and Co.'s, Cockspur-street. They are the production of a German artist, M. Winterhalter; and have been painted expressly as presents to the King of France. That of the Queen is a very meritorious work—remarkably striking as a likeness, and very natural and graceful in composition and arrangement. The Queen is described as walking: one hand is folded over the other, and she holds a bouquet of roses. The flesh tints are very true; the draperies are put in with free and judicious effect; and the attitude is simple, easy, and becoming. The portrait of the Prince is comparatively a failure—the artist has strained to produce something out of the common; and has given to the form an uneasy position, and to the face a sort of bravado expression, out of harmony with the character, although in keeping, perhaps, with the background of mountains, which, very unwisely, he has introduced into both the pictures. This would have been right if they had been designed to ornament some public hall in Scotland—which, by the way, we wonder has not yet been done, to commemorate the royal visit—but as gifts to the King of France, bits out of famous old Windsor would have been more *à propos*. We have no right to complain that a German artist has been employed to paint these pictures; and the artist is unquestionably of talent enough to merit the selection for so honourable and enviable a task. But, undoubtedly, they are not of sufficient excellence to discourage our British painters—we have several who could have surpassed them. Yet we may protest, with some reason, against the employment of two French engravers—M. Foster and M. Aristide Louis—to whom it appears has been assigned the duty of multiplying copies for the liege subjects of the British crown. There is surely not such a paucity of engravers in England as to have rendered this course necessary; nor can we regard it as wise. Art is certainly, or ought to be, republican; but there are many strong reasons why commissions of this kind should be given at home. We are now in a condition to export the best works from Germany and France—the establishment of a *dépôt* here will enable us to do this—and, as we have shown, we shall aid in promoting so desirable an object. But our engravers need shrink from no foreign competition; and the art, in line, is just now suffering under heavy discouragement in England.

**THE LATE SIR ROBERT KER PORTER, K.C.H., &c. &c.**—Having seen a notice, last month, of a proposed sale at Christie's, some time in the present one, of certain pictures and drawings, and the like, by the late Sir Robert Ker Porter—who, as an artist, was distinguished amongst us in the days of our youth and his own—and, subsequently, not less respected as a traveller of great research, and fidelity in his representation of all interesting objects he saw—and who, towards the latter part of his life, became equally esteemed for his diplomatic services to his country—we sought for, and had been led to hope, we might furnish our readers this month with a comprehensive sketch of his eventful, and indeed brilliant, career,—from the pen of a friend, who knew him from his earliest boyhood, when he commenced his studies as an enthusiastic aspirant of the pencilling honours in the Royal Academy at Somerset-house, till he showed their luminous effects in the execution of his wonderful picture of 'The Storming of Seringapatam,' painted when he was barely twenty years of age! Thence followed several other historical pictures, of similar magnitude and excellence; till his pictured battles won him to the real field itself, in Spain, Portugal, &c.; and, when universal peace hushed the belligerent world into repose, he then turned his sword into the "diplomatic plume." But

yet, in none of his varied avocations did he entirely lay down his artist pencil. It had recorded the objects of his travels: and from Russia and South America, where he severally resided on duty, he brought home historical, and landscape, and antiquarian recollections of those countries. In South America he painted a warrior-portrait of General Bolivar, its renowned liberator. And in Russia he painted, and left on the walls of its Admiralty Hall an historical likeness of 'Peter the Great planning his grand Port of Cronstadt, and his future Capital of St. Petersburg:' in which city our lamented countryman breathed his last sigh (after so gallant and meritorious a career), far from his own most revered land, last spring; leaving his only surviving sister to return to England without him—now, indeed, to be considered as almost the last relic of his name, and the talents of his family.

**THE SCHOOL OF RAPHAEL.**—A new print about to be issued in France has been shown to us by M. P. Hering. It is in process of engraving in mezzotinto by Jazet, from a painting by Horace Vernet, and will, undoubtedly, be classed as a *chef d'œuvre* of the art. Raphael is pictured surrounded by his pupils; the fair model with her child, from whom he is painting the virgin mother, is seated in the centre of his school. The leading incident of the picture, however, is that which depicts his great rival, Michael Angelo, departing in jealous wrath; and throwing a bitterly angry glance upon the young and triumphing competitor—a look that is returned by Raphael with gentle and tender goodness. The back ground is filled by eager and anxious watchers, among whom is the Pope. The subject is a full one—perhaps too full—yet the interest is not scattered; it concentrates upon the main object. In all respects this is a work of extraordinary merit. In design, grouping, and, more especially, in character, it will be regarded as one of the chief glories of modern Art; and cannot fail to elevate the honoured name of the great French painter even higher than it has yet stood—removing, at once, all our preconceived notions that he can attain excellence only in one particular walk. The engraving, although not yet finished, promises to be one of corresponding excellence; and, as we understand the print is to be dedicated to the Marquis of Northampton, we presume it is intended to issue it simultaneously in England and France. If our space permitted we should notice the work at greater length, for it is entitled to very elaborate criticism. Another opportunity of doing so will be afforded us.

**ROYAL ACADEMY LECTURES.**—We have found it totally impossible to give with any reasonable degree of fulness, reports of the lectures on Architecture and Painting delivered, or in course of delivery, at the Royal Academy. To render them at all serviceable to our readers, it would be necessary to assign to them considerable space, which we cannot do. We may, therefore, refer to the "Athenæum," in which sufficiently ample and accurate details are published weekly.

**AN ARTISTS' INSTITUTE.**—We have received several statements of a society said to be in course of formation, under this, or some such title. We are not at present aware of the nature of its design and purpose—whether it is designed to do things which the Royal Academy have been condemned for not doing; to manage Art-education on better principles; and to give to excellence more extensive rewards. We have as yet heard of no artists of high professional reputation as aiding in the plan. We shall no doubt know more upon the subject next month.

**SALES TO COME.**—Messrs. Christie and Manson will sell, on the 25th instant, the Collection of Dr. Franck, F.R.S. And, on April 8th, the Pictures of Joseph Bond, Esq., among which are Lord Litchfield's celebrated 'Ruydael.'

Mr. Phillips will sell, on the 14th instant, the Pictures of T. A. Patahall, Esq. And, on April 5th and following days, a Collection of Standard Works on Architecture and the Fine Arts.

### THE CHRISTENING OF THE PRINCESS ROYAL.

The Painting by C. R. LESLIE, Esq., R.A.

The subject of this picture is one that will touch the heart of every British mother. It portrays the queen of a great nation, not in her grandeur as a crowned sovereign, not presiding at some high festival, or throned among her peers, but at the most interesting moment of her existence, when, all state being laid aside, she stands at the foot of the altar, and presents her first-born to be "received into the congregation of Christ's flock." Under ordinary circumstances, the ceremony is the most impressive and interesting of all the ordinances of our church; ever hopeful, ever joyful, it is the promise of a glad future—the recompense of an anxious past; exciting only tranquil and unmingled pleasure. But the occasion here pictured created universal joy throughout these kingdoms; each individual felt as if Providence had bestowed a boon upon his own domestic circle; shared in the perfect happiness of the young mother and her husband, and fervently joined in their prayer for God's blessing on their child.

No incident of modern times is calculated to supply so important and valuable a theme for the painter. It commemorates the homeaffections—the pledge of that early and happily-placed attachment, the news of which was a universal joy-bell throughout Britain; gladdened the heart of every subject of the realm, and formed a connecting link between the cottage and the throne. The young mother at the baptism of her first-born—the husband of her choice beside her—dedicating their babe to the service of her Maker, and praying that she, "being steadfast in faith, joyful through hope, and rooted in charity, may pass the waves of this troublesome world, and finally come to the land of everlasting life."—A solemn prayer, responded to by millions of loyal and loving subjects.

The point selected by the painter in the beautiful and impressive ceremony is when the venerable archbishop called upon the godfathers and godmothers to "name this child;" and the Queen Dowager stepped forward to do so, the other royal sponsors of the infant standing by her side. The artist could not have obtained from his invention a group more favourable to his pencil. It comprises the mother of her Majesty, the King of the Belgians, the Duke of Sussex, the Duchess of Gloucester, the estimable Relict of the late King, and the great soldier of the age, who, by a fortuitous circumstance, was present as the representative of the Duke of Cobourg. On the other side of the altar are the Queen and Prince alone, the lords and ladies attendant, and the nurses. It is impossible to convey an idea of the gracious and touching expression of her Majesty; the painter copied that which is true to NATURE—the earnest hope, confiding trust, and unbounded love of the mother for the babe receiving the holy sacrament of baptism. The centre of the picture is occupied by the Archbishop of Canterbury naming the child, whom he holds in his arms.

The ceremony took place in the evening; a circumstance very fortunate for the artist, who was thus enabled to give the splendour of artificial light to his great work—a work most worthy of the interesting, impressive, and important occasion, and also of the genius of the accomplished painter. A picture of greater merit, or of higher value, has never been produced in this country. As a series of portraits of unsurpassed fidelity, representing persons each of whom forms an honoured portion of British history, it would alone appeal to the heart of the nation. It has other claims to that universal admiration it cannot fail to excite. As a work of art it nears perfection; the grouping is skillfully managed, the minor accessories are all so harmoniously introduced, and the execution in every part so thoroughly bespeaks the mind and hand of a master! The subject, indeed, so treated, would have been a triumph of the painter, and a glory of the art, and have been coveted by tens of thousands, even if comparatively little interest had been attached to the scene described and the persons delineated; but, picturing, as it does, a group of such distinguished persons assembled upon so eventful an occasion of our times, its value is augmented infinitely. The picture is about to be engraved by Mr. Moon, and a more desirable acquisition will never have been presented to the British public.

### REVIEWS.

THE DRAWING-BOOK OF THE GOVERNMENT SCHOOL OF DESIGN. Publishers, CHAPMAN and HALL.

This is one of the best offerings that has yet been made from the School of Design at Somerset House. The peculiarity of such a work in England is great, and, as regards Art, is one of the "signs of the times," for twenty years ago such a comprehensive digest of the principles of "design" would have attracted little notice except among the initiated few. Now, it finds a ready acceptance, not only among the members who are entering the ranks of ornamentists, but among others who, with different ulterior objects, are desirous of mastering the principles upon which ornament is applied to purposes of common practical utility. We therefore hail with pleasure the effort to promote the cultivation of design by this series of instructions, "published under the superintendence of the council" of the Government school. This institution, if it continue to be as well managed as of late, will be one of the few establishments which obtain a ready vote of the public money from all parties. Those who are the least capable of appreciating the beneficial effects of extending a love of beauty among the masses, will at all events comprehend the *A. S. D.* results that must accrue from the consequent improvement in our manufactures. Leaving the presiding council out of the question, we find, in this comparatively young institution, the directing agency of three individuals, whose talents are pre-eminently adapted for the stations they occupy. Where, indeed, could be selected more efficient heads of the posts they severally fulfil than Messrs. Dyce and Herbert, and Mrs. Mac Ian? It is gratifying to be informed that a due appreciation of this circumstance is evidenced by the large and constantly-increasing number of the classes. The benefits of graphic and ornamental instruction are thus conveyed through many channels into various ranks of the public, and among both males and females. Hence there is being created a source of increased perception and enjoyment of that which is beautiful, by the millions; of future wealth for the commercial world; and of happiness for thousands of ingenious individuals.

The "Drawing-Book" is strictly what its name implies, if it do not, however, rather pass beyond the estimate which the name might have led one to form of the probable nature of its contents. These comprise a mingled instruction, by literary description and by graphic example. The illustrations necessarily and usefully form the predominating section of the work, out of the five numbers which are now before us. They lead the student on from the simplest and most general elements of form, through various phases of "geometrical" and "freehand" design. They are executed with beautiful precision, and knowledge of the due inflexion of line which shall give the character to every part, and, as examples that are to form *exercises* on the principles conveyed in the text, are chosen with judgment, and arranged with a due foresight of the wants of the pupil. In introducing a notice of the letter-press portion of the "Drawing-Book," we cannot do better than quote the initiatory paragraph of the "Introduction." "The object of the following work," we are there told, "is two-fold. In the first place, to serve as an elementary drawing-book for schools, and, in particular, for those schools whose ultimate purpose is to educate young persons in the art of inventing and executing patterns and designs for the various branches of ornamented manufacture; and, in the second place, to be a handbook of ornamental art, for the use and guidance of manufacturers and pattern draughtsmen. The work will accordingly be divided into two principal parts, one having reference to the study of Design, the other to its application to industry." The introductory remarks proceed to enumerate the wants and direction of studies of the ornamental designer, making a lucid and proper demarcation of the objects of this portion of Art as distinguished from those classed under the title of "Fine Arts." The first division of the work, as far as it at present goes, comprehends separate sections on "geometrical," and "free-hand design." Space will not permit us to extract such large portions as would alone do justice to the

careful treatment of the subjects; we must, therefore, content ourselves with remarking that the style adopted is admirably suited to the intention of the work; and we would particularly direct attention to the excellent remarks on beauty, and on the observation of nature, which distinguish the second section.

We cordially recommend the "Drawing-Book" both to students of ornamental design, and to the cultivators of Art generally. Whether or not we are correct in ascribing this production to Mr. Dyce, as the Director of the school, we know not, but, from whatever quarter it originated, its conception and execution alike do credit to the author and to the institution. It manifests that rare but valuable combination of qualities—the possession of learning and the ability to teach.

CRITICISMS ON ART, &c. By WILLIAM HAZLITT. Edited by his SON. Published by JOHN TEMPLEMAN, Regent-street.

This volume of the new edition of Hazlitt's writings is full of most pleasant reading about galleries and pictures. So rarely now do we find anything in the shape of what is called "Criticism," marked by knowledge, thought, feeling, or perception, that we turn to Hazlitt once more to make the most of him, with a *gusto* sharpened by long inattention. Certes, your every-day critic is the very Van Tromp of writers: he has adopted the broom for his cognizance. But "*Sera nunquam est*," &c.; one word of apology—they must somewhere have been accustomed to "better bread than is made of wheat."

This volume contains all the late Mr. Hazlitt's notices of the public galleries, and most celebrated private ones. A paper is devoted to Hogarth's works, another to the Elgin Marbles, followed by his valuable remarks on Flaxman's Lectures. In addition to these and others, the volume contains catalogues of the National Gallery, of the Galleries of Dulwich and Hampton-court, of the pictures at Grosvenor House; Stourhead, the seat of Sir Richard Colt Hoare, Bart.; at Longford Castle, Burleigh House, Blenheim, and Oxford; constituting the book a most valuable *cicerone* on visiting any of these places.

ORIGINAL VIEWS OF OXFORD; ITS COLLEGES AND GARDENS. From Drawings by W. A. DELAMOTTE; in Lithography by W. GAUCI; with Historical and Descriptive Notices, by CHARLES OLLIER. Publisher, THOMAS BOYS.

This is really a superb work; of the highest possible interest, as preserving faithful and beautiful copies of a series of the most remarkable structures in the kingdom. It comprises 26 prints; and is issued both plain and coloured. The artist has aimed chiefly at accuracy—as he ought to have done; but he has treated his subject with no inconsiderable regard to pictorial effect. Not only has he transferred the buildings to the paper, but the gardens, and the picturesque "bits" about the noble old city, have formed favourite topics for his pencil. He has, indeed, placed us in the very midst of the venerable University; with its hallowed memories and soul-stirring associations. The volume opens with a clever title-page, into which the armorial bearings of the several colleges are skillfully introduced; it is followed by all the leading points of greatest interest—"High-street, with University College," "Christ Church," the other colleges—each and all—with their gardens and "walks."

The letter-press which accompanies the collection is of no ordinary value. The subjects are not dismissed, as is too frequently done, with a line or two of meagre and barren description. What an important addition to "Nash's Mansions," and similar works, would be a proportionate quantity of explanatory details. Here we have them amply; the History of the College, and a number of leading anecdotes connected with it are given; so that knowledge is communicated while enjoyment is received, and that without burthening the mind or deducting an iota from the pleasure obtained from an inspection of the series as works of Art. If our space permitted, we should gladly transfer one of the pages to our columns.

THE FALCONS. Painted by E. LANDSEER, R.A. Engraved by C. G. LEWIS. Published by H. GRAVES and Co. Although only the "counterfeit resemblance" of

two birds, there are few prints calculated to give greater pleasure than this companion pair—the one hoodwinked, the other fixing his brilliant eye upon a distant prey. They are in truth models of the race; their portraits are the very perfection of poetical accuracy, and go far to induce regret that the noble sports, of which they are suggestive, is only a topic of history.

"Pity 'tis  
That villainous salt-petre should be dug  
Out of the bowels of the harmless earth!"

The paintings have received ample justice from the engraver. Every feather seems to be distinctly made out; and the expression in the countenance of the unmasked hero of the morass has been rendered with admirable skill.

**PORTRAIT OF SIR ROBERT PEEL.** Painted by J. W. WALTON. Engraved by C. E. WAGSTAFF. Publisher, T. BOYS.

Another full-length portrait of the Premier—a sure indication of popularity; for publishers have an instinctive knowledge of statesmen who may be, in one sense, bought. This is a good and pleasant likeness: one of the best resemblances, if it be not the best, we have yet seen. Sir Robert is standing in a curtained hall, his right hand resting upon one of the Acts of Parliament to which he owes his fame. The accessories are all skillfully introduced, and the production is sure to be a favourite with the tens of thousands whose hope of national prosperity, honour, and glory mainly rest upon his judgment, ability, and integrity.

**AN ENCYCLOPEDIA OF ARCHITECTURE, HISTORICAL, THEORETICAL, AND PRACTICAL.** By JOSEPH GWILT. Illustrated by more than a Thousand Engravings on Wood. In one volume, 8vo, 1089 pp. London, 1842.

It is only a portion of this work which calls for notice from a journal like our own, namely, that which relates to architecture in its quality of a Fine Art, which is altogether distinct from building, for this last merely furnishes the means to the other. Every day experience convinces us that there may be building, and as such good enough, without architecture, although architecture cannot exist without building; unless we choose to admit into the ranks of the former those unexecuted ideas which occasionally surpass the executed works of the same artists, as is the case with Inigo Jones's magnificent palace at Whitehall, on the designs for which his reputation mainly rests at the present day.

The Encyclopædia before us embraces both branches of the subject; and, by devoting much greater space to the practical than to the æsthetic one, is not so popular in its character as it might have been; on the contrary, the greater part of it is now in danger of being considered as dead weight and encumbrance, by those who require merely an encyclopædia of architecture, apart from the theory and practice of building. Had the usual dictionary or alphabetical arrangement been adopted, the relative proportion allotted to the respective divisions of the subject would not have been so apparent; but as the work is divided into separate treatises, it is seen at once that the bulk of it is altogether of a technical nature; which is the case with the illustrations likewise.

The work is one of considerable labour, for it contains an immense mass of letter-press; but it is not so satisfactory as it might have been in regard to fresh matter, which is naturally looked for in an encyclopædia, where readers expect to find the very latest information that can be supplied. Unfortunately, however, Mr. Gwilt has contented himself with bringing down the history of modern English architecture to only the commencement of the present century, thereby passing over nearly forty years, during which more has been done in it than in the whole of the preceding century. Nor are we the better reconciled to this by the motives alleged for it: to deprive his readers of so much interesting, and what might have been rendered instructive, historical matter, merely because his opinions might not always have been favourable, but have given offence to parties still living, seems to us an over refinement of delicacy and scrupulousness. At that rate, nothing ought to be said of either artists or literary men, and their works, until they and all their friends are gone quite off the stage, which suits neither with the impatience of the public, nor exactly with the wishes of the other parties, few of whom have any particular dislike to

be noticed. At all events, having laid down such a rule for himself, he should have been more consistent than to violate it as he has more than once done by rather unnecessarily animadverting on certain individuals. He has not scrupled to reflect rather freely—we do not say unjustly—on the new Royal Exchange, in that part of his volume where he speaks of the different classes of buildings, and of Exchanges among the rest. And with reference to it we may observe that nothing is said of one class which is not a little important, for it comprises some of the handsomest of our recent structures, we mean that of Club-houses, which have more the air of *palazzi* than is possessed by any other of our town buildings. Indeed, besides such addition, that chapter on "Public Buildings" might have been greatly more extended in other respects, for it is certainly interesting as far as it goes, and contains much that is valuable. By not favouring us with more of such matter, Mr. Gwilt has been rather unjust towards himself, and deprived his work of what would have served to render it more attractive. It is in fact far more adapted for the professional student and practical man than for the general public. If such was his aim he has accomplished it, and with the credit thereupon attending he will doubtless be satisfied. Considered in that light his "Encyclopædia" may be recommended as a very useful work, bringing into a small compass a great deal of sound instruction. Still we think there might have been infused into it what would have rendered it more attractive to a larger class of the public—ourselves included.

**SYNOPSIS OF PRACTICAL PERSPECTIVE.** By THEODORE H. FIELDING. Published by ACKERMANN and Co., Strand.

In this treatise perspective is taught by a series of the usual diagrams, circles, elliptic arches, &c. &c., which are followed by the perspective of shadows, aerial perspective, and instructions relative to sketching from nature. We would gladly see a more general attention paid to aerial perspective, which is so often overlooked by men even of eminence, when certain effects are to be obtained. The author quotes with good effect Leonardo da Vinci, whose fragments evince his extraordinary acumen and ingenuity in establishing natural facts, although sometimes a little loose, if the following passage be rendered correctly:—"The air which is between the earth and the sun, when it rises or sets, will always dim the object it surrounds more than the air anywhere else, because it is whiter." It is sufficiently clear that the old Florentine understands the effect, but seems to have had some odd crotchets about the cause. This book contains much valuable information of that kind indispensable to any degree of excellence in drawing and painting.

**THE HAND-BOOK OF WATER-COLOURS.**—By W. WINSOR and H. C. NEWTON.—Published by TILT and BOGUE.

This little book describes the effects of colours as employed in water-colour art, the sources whence they are derived, their sympathies, &c., but does not anywhere assume the tone of instruction with respect to their application. We are persuaded that the colour manufacturers could offer much valuable information to the artist: all the great colourists were manufacturers of their own colour, and in many instances chymists; hence their particular excellence. In the first sections of the little work the colours are arranged under the three heads, mineral, animal—and vegetable, after which they are separately treated. In speaking of the three primitive colours, this passage occurs:—"The theory, that the three primitive colours afford all the compound tints by admixture is doubtless philosophically correct, and is very useful in its reduction to practice as a means of instruction, but if we suppose that by selecting three known colours we shall be able to match by their means the tints we observe in the works of a finished artist, we shall find ourselves in error. In order to carry out this theory completely, we must suppose ourselves in possession of pigments much more perfect than any yet discovered, and so absolutely transparent, that a compound formed of all three shall have no turbid or milky appearance, otherwise the deep tones so valuable to the painter are not attainable. For instance, to form a compound brown of three primitive colours equal to Vandyke brown, we should require a red

as pure in tint as the finest vermilion, and perfectly transparent—a description of colour to which we make no approach.

**A HAND-BOOK FOR WESTMINSTER ABBEY.** By FELIX SUMMERLY. Publishers, BELL and WOOD.

A valuable companion to the Abbey, written in a pleasant style, full of useful descriptions, and abounding in old traditions. We refer to it chiefly to notice the interesting fact, that the "fifty-six" illustrations—an unusually large number for so small and cheap a book—are engraved from drawings on wood, exclusively by ladies. They are all creditable, while some are of a very excellent order. A more agreeable or suitable employment for ladies it would be difficult to find; and in these days, when occupations for them, short of those that are menial, are very limited indeed, we rejoice to find such unequivocal tokens of ability.

**TITIAN.** A Novel, in 3 vols.

It is a rare event for us to be called upon to notice a work of this class, but the novel in question is intimately connected with Art, and especially interesting to artists. It is from the pen of Shelton Mackenzie, LL.D., and is an attempt to direct the growing feeling of the public towards the Arts into a wholesome channel, by blending reality with fiction. A more eloquently written, or a more deeply exciting story, we have never read. We shall endeavour to do it justice next month.

Our remarks upon the Exhibition at the British Gallery have been so much extended, that we are compelled to postpone the insertion of several reviews in type. Among them are those of the 8th part of "Roberts' Holy Land;" the volume of "Sketches by Sir David Wilkie;" Haydon's "Duke of Wellington on the Field of Waterloo," &c. &c.

#### TO CORRESPONDENTS.

**VIGILANS.**—We cannot agree with our correspondent in considering Mr. Eastlake bound to answer any queries that may be put to him by any anonymous writer. It is, we think, amply sufficient if he express himself willing to do so (which he has done in most explicit terms), when he has assurance that information is required for a useful and not a harmful purpose. We trust our correspondent will see this matter in its proper light—and, if he really require to have his doubts cleared up, he will take the only proper course open to him. We are, however, justified in stating, upon authority on which we can rely, that THE NAMES OF THE JUDGES WILL BE MADE PUBLIC.

We have to acknowledge the receipt of a letter signed "James Fahy, Hon. Sec. to the General Meeting of Artists." It was received on the 23rd (its date is the 21st) the day but one before our going to press. We cannot, therefore, give it insertion in this number; neither should we think it right to do so without accompanying it with some remarks, which must be the result of inquiry that will take time.

A paragraph in our last number having seemed to Mr. Moon to have reference to him, we were called upon by that gentleman to examine the documents in his hands, in order that we might satisfy ourselves of the utterly unfounded nature of a suspicion that he kept to himself certain royal gifts, intended for other persons. We have done so; and cannot for a moment hesitate in according to him the full justice he demands. The gifts are two—one from the Emperor of Russia, the other from the King of France; and both were undoubtedly transmitted to him as the "publisher" of the works he had presented to their majesties; they were sent and delivered in a manner that cannot leave the remotest doubt on the subject. All who know Mr. Moon will know this "inquiry" to have been needless.

The artist who looked for the "Studio in Tottenham-court-road," would have found it by turning round the corner.

The poem on "Cunningham's Burial" is in type.

It is in the power of any anonymous scribbler who can write—after a fashion, to offer an insult under the signature of "Fair Play," or any other; but such persons, generally, would as soon eat their shoes as sign their real names.

We are requested to point attention to the fact, that in the list of pupils who received Premiums at the Royal Dublin Society there were three who received MEDALS FOR SUPERIOR MERIT—their names were ROBERT GEORGE KELLY, CHARLES V. KELLY, and EDMOND FITZPATRICK.

A correspondent will feel obliged by receiving information concerning a Portrait Painter of the name of J. LINTON—one of whose works, painted in 1683, is in the possession of our correspondent.

We must decline printing the letter of "W." We should have enough to do, if we were to publish opinions, *pro* and *con.*, upon every topic that comes under our notice.

Mr. Fairholt will next month reply to two letters respecting "Costume."

**THE CHINESE COLLECTION**, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 225 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d; Children under Twelve, 1s.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR**.—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lamqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**NOTICE**.—SPLENDID STOCK of GLASS and PICTURE FRAMES, the most modern and elegant patterns ever offered to the public, may be had at J. RYAN'S extensive Manufactory, 13 and 14, LONG-ACRE, at prices that will defy competition. Console Tables, Girandoles, Brackets, Cornices, and every article connected with the trade; Fancy Wood Frames of every description, of a superior quality, in great variety. Frames joined in the gold in the first style. A few fine Pictures for Sale.

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE, 25, Pall Mall, LONDON.**

Capital £500,000.

#### PRESIDENTS.

Sir HENRY HALFORD, Bart., M.D., G.C.H., F.R.S., F.S.A., President of the Royal College of Physicians, &c. &c.

Sir WILLIAM BURNETT, M.D., K.C.H., F.R.S., Inspector-General of the Navy, &c. &c.

Sir MATTHEW J. TIERNEY, Bart., M.D., K.C.H., &c. &c.

#### TRUSTEES.

J. H. ANDERSON, Esq., 59, Queen-street, May Fair.

BENJAMIN BOND CABELL, Esq., F.R.S., Temple.

CLAUDE EDW. SCOTT, Cavendish-square.

#### DIRECTORS.

THOMAS COATES, Esq., 59, Lincoln's-inn Fields.

EDWARD DOUGLEDAY, Esq., 249, Great Surrey-street.

#### STANDING COUNSEL.

JOHN SHAFER, Esq., Lincoln's Inn.

#### BANKERS.

Messrs. BOSANQUET and Co., Lombard-street.

Messrs. C. HOPKINSON, BARTON and Co., Regent-st.

Sir CLAUDE SCOTT and Co., Cavendish-square.

#### SOLICITORS.

Messrs. RICHARDSON, SMITH, and JONES, 28, Golden-square.

#### DEPARTMENT OF MEDICAL STATISTICS.

WILLIAM FARR, Esq., General Register Office.

#### ACTUARY.

F. G. P. NELSON, Esq.

THIS OFFICE is provided with very accurately constructed Tables, by which it can Assure UNSOUND Lives on Equitable Terms.

The Extra Premium discontinued on restoration of the Assured to permanent Health.

A portion of the Extra Premium may remain as a Debt on the Policy.

Survivorship Assurances where the Life in expectation suffers from Disease, effected at Cheaper Rates than at any other Office.

Similar Tables enable the Society to grant INCREASED ANNUITIES on Unsound Lives—the amount varying with the particular Disease.

Members of Consumptive Families Assured at Equitable Rates.

HEALTHY LIVES are Assured on Lower Terms than at most other Offices.

**TO MINIATURE PAINTERS, &c.**—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET of DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**GLOBE INSURANCE**, Pall-Mall and Cornhill, London.

EDWARD GOLDSMID, Esq., Chairman.

WILLIAM TITE, Esq., F.R.S., Deputy-Chairman.

GEORGE CARR GLYN, Esq., Treasurer.

Established 1803.

For FIRE and LIFE INSURANCE and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES. Capital, ONE MILLION STERLING; the whole paid up and invested, and entirely independent of the amount of Premiums received.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

By order of the Board,

JAMES CHARLES DENHAM, Sec.

London, March 1843.

**NORWICH UNION LIFE INSURANCE SOCIETY**. Instituted 1808.—Capital invested, £1,700,000.—Chief Office for London, No. 6, Crescent, New Bridge-Street, Blackfriars.

#### DIRECTORS.

E. T. Booth, Esq.

Isaac Jermy, Esq., Recorder of Norwich.

Major-General Sir R. J. Harvey, C.B.

Dr. Evans.

Timothy Steward, Esq., &c. &c.

SECRETARY.—Samuel Bignold, Esq.

ACTUARY.—Richard Morgan, Esq.

This Society has been established upwards of 34 years; all just demands upon its funds have been promptly and liberally settled; nearly two millions and a half have been thus paid away on expired policies; and to meet the existing engagements of the Institution, it possesses funds amounting to upwards of a million and three quarters almost wholly invested on real and government securities.

The Rates of Premium are below those of most other offices, and, under the age of 45, not less so than 10 per cent.—a benefit in itself equivalent to an annual bonus; whilst periodical additions are also made to the sums assured upon all policies for the whole duration of life in proportion to the amount of premium paid: the full advantage of Life Assurance is thus enjoyed by the members of this Institution.

The subjoined list of some of the existing Policies of the Society exhibits the aggregate amount of bonus assigned to each of those Policies, including that declared at the General Meeting held on the 9th of September, 1842.

No.	Sum Assured.	Bonus.
477	£100	£776 4 10
951	499	431 10 5
170	1000	445 15 6
751	1000	458 7 4
1235	2000	852 5 1
1276	1500	619 3 4
1450	2000	754 17 2
1444	1000	519 10 7
1459	300	155 14 4
1745	2000	1117 1 11
1850	1500	149 10 5
2570	1000	531 6 10

Tables of Rates, &c., may be had at the Society's Offices in Norwich, London, Edinburgh, and Dublin, and of the Agents in all parts of the United Kingdom.

Copies of the Directors' Report at the last General Meeting may be had on application to any of the Society's Agents.

ROBERT JOHN BUNYON,  
6, New Bridge-Street, Blackfriars.

**NEWLY INVENTED SKETCHING PENCILS.**

BB. Very black for the foreground.

HB. Middle tint.

N. Neutral tint, for distance.

E. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturers', 23, CHURCH-STREET, SPITALFIELDS.

**RAND'S PATENT METALLIC COLLAPSIBLE TUBES FOR OIL COLOURS.**

**J. RAND**, the Inventor, Patentee, and sole Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.

WINSOR and NEWTON, of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

#### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES**, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

#### THE PATENT EASEL.

**WINSOR and NEWTON** respectfully inform the Profession and the Public, that this admirably-constructed Easel, the invention of M. BONHOMME, of Paris, is manufactured by them with considerable improvements on the French model, and with the advantage of the best English workmanship.

W. and N. are induced to submit this Easel to the Profession in England by the high encomiums and great patronage bestowed upon it in France, where the ingenious Inventor, not only obtained a prize for the merits of his Easel at the National Exposition of Manufactures and Inventions, but also received from the Government a liberal reward for the assistance he rendered to the Professors of Art.

Though possessing the advantages of the largest Easels, by standing firmly and holding steadily paintings of a very large size, M. BONHOMME's invention occupies no more space than the smallest of the Artists' Easels now in use, and certainly not so much as the greater number of them.

The position and height of a painting may be adjusted with the utmost facility by a novel arrangement, which permits even unusually large works to be, when placed on this Easel, as much under control as smaller ones. The painting can also be sloped or thrown forward to any angle most favourable for the view, and this forward inclination can be adjusted with ease and exactness.

It presents a neat and even elegant appearance, and is peculiarly fitted as well for all purposes of exhibition as for the studio; affording the utmost convenience for the advantageous display of large or small works. The connoisseur who desires to exhibit his gems of Art in a manner adapted to make the most favourable impression, obtains in the improvements here brought forward an auxiliary hitherto much required.

The Easel to be seen at WINSOR and NEWTON, Artists' Colourmen to Her Majesty and His Royal Highness Prince Albert, 38, Rathbone-place, London.

Now ready,  
**BENJAMIN BARKER'S ENGLISH LANDSCAPE SCENERY.** A series of Picturesque Studies in SEPIA, engraved in Aquatint, from original Paintings, by the late B. BARKER, Esq.; complete in 12 numbers, containing four plates each, price 3s. 6d., or, in one volume, bound, half-morocco, price £2 2s.  
 Bath: W. Everitt, 1, Pulteney Bridge; S. and T. Fuller, Rathbone-place; and Tilt and Bogue, Fleet-street, London.

Published this day,  
**ENVIRONS OF LONDON.**  
 By JOHN FISHER MURRAY.  
 Western Division, comprising Chelsea, Richmond, Twickenham, Hampton Court, Windsor, &c. &c.  
 Complete in one vol., royal 8vo., price 17s., handsomely bound in cloth, with Four Maps, and upwards of 100 Wood Engravings by distinguished artists from original drawings, by W. L. LEITCH, and others.  
 W. Blackwood and Sons, 45, George-street, Edinburgh, and 22, Pall-mall, London.

In fcap. 8vo., cloth, 6s.  
**CRITICISMS ON ART, AND SKETCHES of the PICTURE GALLERIES OF ENGLAND.**  
 By WILLIAM HAZLITT. And now first collected, CATALOGUES OF ELEVEN OF THE PRINCIPAL GALLERIES.

"An invaluable work; if we wished to give any person a correct and exalted idea of Art, we should say read Hazlitt's Criticisms."—*Tait's Magazine*.

"HAZLITT'S MATCHLESS AND UNRIVALLED CRITICISMS.—The Catalogues alone are worth twice the purchase-money."—*Monthly Magazine*.

John Templeman, 248, Regent-street.

AFGHANISTAN.  
 Now ready, the fourth edition of  
**HAGHE'S BEAUTIFUL LITHOGRAPHIC WORK**  
 of the

**PASSES, FORTS, AND CITIES of the SCENE of WAR in INDIA;** drawn on the spot by Dr. JAMES ATKINSON, including Views of Cabul, Candahar, all the CELEBRATED PASSES, PORTRAITS FROM LIFE of Shah-Soojah, Dost Mahomed, Sir William Macnaghten, &c. &c.  
 Price: 26 plates, half morocco, £4 4s.; coloured and mounted in folio, £10 10s.

London: Published by H. Graves and Co., her Majesty's Publishers, 6, Pall-mall.

Published this day, in one handsome vol. royal 8vo., price 16s., cloth lettered,

**THE PHILOSOPHICAL WORKS of JOHN LOCKE.** With a Preliminary Discourse, Introductory Prefaces, and Notes, by J. A. ST. JOHN, Esq., Author of the "Manners, Customs, Arts, &c., of the Ancient Greeks."

"An edition of the Philosophical Works of Locke has long been wanting. It is in fact matter of surprise, that a body of writings, in which the most popular metaphysical system of modern times is developed, should never before have been presented to the world in a collected form, and detached from all miscellaneous compositions."—*Preliminary Discourse*.

London: George Virtue, Ivy-lane, Paternoster-row.

TO PAINTERS IN WATER COLOURS.

Just Published, price 1s.,

**THE HAND-BOOK of WATER COLOURS**  
 By WM. WINSOR and H. C. NEWTON, Artists Colour-makers to the Queen. Being a brief treatise on their qualities and effects when employed in Painting, with some account of the general nature of Colours: of Colours obtained from the mineral world—of pigments from the animal world—of vegetable Colours—on the choice of Colours for use. Together with a

DESCRIPTIVE LIST

of all the Cake Water Colours now in use—Seventy-six in number: of Blues, 10; of Reds, 15; Yellows, 14; Purples, 3; Browns, 13; Greens, 8; Orange, 2; Neutrals and Blacks, 6; and Whites, 3.

Detailing the peculiar qualities of each, and its value in combination.

Tilt and Bogue, Fleet-street.

**THE CARTOONS OF RAPHAEL, AT HAMPTON COURT.**

**MESSRS. H. GRAVES & CO.** have received instructions to offer to the Admirers of Art this splendid Series of LINE ENGRAVINGS, from the Burin of the late celebrated THOMAS HOLLOWAY, at a greatly reduced price.

The Series consists of—'St. Paul preaching at Athens'—'Christ's Charge to St. Peter'—'The Death of Ananias'—'Elymas the Sorcerer struck blind'—'The Sacrifice at Lystra'—'The Miraculous Draught of Fishes'—'St. Peter and St. John at the Beautiful Gate of the Temple.'

These splendid Engravings occupied the admirable Engraver 30 years, and are, by far, the most exquisite productions ever issued from the unrivalled Originals. Publication price: £10 10s. each, now reduced to £4 4s. The whole of the impressions printed on India paper.

London: Henry Graves and Co., Publishers in Ordinary to the Queen and H.R.H. Prince Albert, 6, Pall-mall.

This day is published,  
**THE BRITISH AND FOREIGN REVIEW,**  
 No. XXVIII.

1. Philosophy of Socrates.—The Utilitarians.
2. State of the Nation.—Tariffs.
3. The Disasters in Afghanistan.
4. The Statesmen of Germany during the War of Independence.
5. The Spanish Question.
6. Aesthetic Study of Art.
7. Austrian Statistics, Illustrated by Official Tables from Unpublished Sources.

London, R. and J. E. Taylor, Red Lion-court, Fleet-street; Edinburgh, A. and C. Black; Dublin, J. Cumming.

**BRIGHT'S DRAWING-BOOK ON LANDSCAPE.**

This day is published, in Eight Numbers, at 1s., or in boards, price 9s.,

**BRIGHT'S DRAWING-BOOK on LANDSCAPE, in a series of 32 Studies.**

Published by S. and J. Fuller, 34, Rathbone-place, where is also made and sold Bright's superior Coloured Crayons for Landscape Painting, so justly admired in his beautiful Crayon Drawings, and so much approved; also, a new article, called VOLATILE FIXER, a preparation to fix and secure Crayon and Chalk Drawings, to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d. each.—S. and J. Fuller particularly call the attention of Artists, Amateurs, and Drawing-masters to this useful preparation.

N.B.—S. and J. F. continue to receive, weekly, from Paris, New Works, Studies of the Human Figure, by Julien and A. Maugin; Figures for Illustration by Valerio and Perogio, Studies by Victor Adam, and beautiful Coloured Costumes, Dame de la Cour, the Graces, &c. &c.

**A NATIONAL AND COMPLETE SYSTEM OF DRAWING.**

**THE SCIENCE OF DRAWING SIMPLIFIED;**

OR, THE

**ELEMENTS OF FORM**

ACCURATELY DEMONSTRATED BY MODELS.

BY B. WATERHOUSE HAWKINS, ESQ.

"The great utility of Models in teaching Drawing by conveying that perfect knowledge of Perspective, hitherto so difficult to comprehend, yet so necessary to attain, is now proved beyond all doubt. Pupils, young or old, taught on this admirable system, are enabled to Draw from Nature with all the fidelity and pleasing effect which characterised the old masters, and the most talented of the modern school,—gifts hitherto attained by a limited few after years of persevering and most anxious study. We cannot, therefore, too forcibly recommend this excellent system to all desirous of attaining a thorough knowledge of this valuable accomplishment."—*London Review*.

The Series of Models, with a descriptive book, are contained in a portable Cabinet Box, bound as a Library Volume. Price two guineas.

Smith, Elder, and Co., 65, Cornhill, London.

Just published, price 16s.,

**THE SKETCHER'S GUIDE;** a light and portable Apparatus for Drawing Landscape, and other Outlines, in Perspective, without Elementary Knowledge. To which is added, a Compendium of the Rules of PERSPECTIVE and EFFECT.

By W. F. ELLIOT, ESQ.

There are few persons, unacquainted with the art of Drawing, but have (either when travelling, or at other periods of their lives) had frequent occasion to lament that deficiency. The difficulties in the way of sketching objects correctly, without a knowledge of the laws which regulate Optical Perspective, have been so great, and hitherto so forcibly felt, as to be considered insuperable. Messrs. Fuller, however, are happy to announce, that, in "The Sketcher's Guide," they have perfected an apparatus, extremely simple, and as portable as a hand-book, by means of which those obstacles are overcome; and any person, by simply attending to the printed instructions, may draw Landscapes, or other objects, as faithfully as they are presented to the eye.

And, in order to simplify and encourage the study of Perspective and pictorial Composition, they have added to the above a Synopsis of the Rules of Perspective and Effect; clearly and popularly written, and containing numerous Illustrative Examples.

To persons travelling, either on the Continent or elsewhere, "The Sketcher's Guide" will be an invaluable companion; as, by its assistance, there is not a single scene of interest but may be secured, to give birth to pleasurable, if not useful, reminiscences at some future period. The student in Drawing and Perspective will also find it an important help. It will facilitate his progress by demonstrating practically the application of the rules he may have learnt theoretically. At the same time, the letter-press and illustrations will teach him the most approved methods of combining and treating his subjects to compose a picture.

Orders should be immediately given to Messrs. Fuller, 34, Rathbone-place, or through any Book or Print-seller in Town or Country.

London: Published by S. and J. Fuller, at their Temple of Fancy and Artists' Repository, 34, Rathbone-place.

**PICTURE-FRAMES, CHIMNEY GLASSES, CONSOLE TABLES, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.** An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regilt, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre, uninjured by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz.:

Pale and Deep Yellow.	Pale and Deep Brown.
Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

T. M. has great pleasure in informing Painters that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

MANUFACTORY, 56, LONG-ACRE, LONDON.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. Sotaneous and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

MR. MOON, HAVING RECEIVED HER MAJESTY'S COMMAND, HAS THE HONOUR TO ANNOUNCE  
HIS INTENTION TO PUBLISH, EARLY THIS SEASON,

## THE QUEEN RECEIVING THE HOLY SACRAMENT

AT HER CORONATION. PAINTED BY C. R. LESLIE, R.A.

This beautiful Work belongs to Her Majesty, and Mr. Moon has been honoured by Her Majesty's gracious commands to have it engraved by Mr. SAMUEL COUSINS, A.R.A., it being the only Picture of the Coronation painted expressly for the Royal Collection.

The Picture represents one of the most interesting moments in that sacred and splendid ceremony that could be selected. The Painter, who was present, was so much struck by the beautiful appearance of Her Majesty kneeling at the altar, and so impressed with the deep and sacred character of the moment, that he chose it for his subject, as that which would become the fittest record of the event, as it represented the young and innocent Queen, after having vowed, by the sacred obligations of her oath, to govern well and wisely the great people over whom she had been placed by Providence to reign, kneeling, in humble reverence, and deep devotion, to Him who had placed her at the head of a great Nation; and thus ratifying, by the most solemn rite of our holy religion, this her great compact with her people.

The Crown—the emblem of her station—and all her ornaments, are removed from her, except the Dalmatic robe, as she bends before that Infinite Power, which makes no future distinction between the prince and his people—but is equally the Father of all. It is a striking feature in this fine work of Art, that it tends to excite deeply religious emotions—it represents the most sacred act of duty and devotion of one, who kneels to acknowledge her allegiance where all bow in a common faith, and in a common hope of mercy; and where she must obtain hers by as faithful a fulfilment of her duty as that which is claimed from the lowest of her subjects.

Mr. Moon intends to make this one of the largest prints ever executed; the Engraving will be 4 feet long, and 2 feet high. The perfect likenesses made by the Painter of the principal personages, and the beauty of character and expression which prevails, render this necessary to do it justice; and upon such a scale, and in Mr. Cousins's hands, such justice will be done. There are no crowds to fill the canvass; not a head seen but of those whose duty it was to attend Her Majesty, or the members of her august family. The whole scene lies between the throne and the altar, and no gallery or its occupants are seen, to disturb the concentration of the interest upon that act of deep devotion. There are thirty-eight portraits introduced with a fidelity of representation never exceeded. All had their places in the Picture sanctioned by the Queen, and all sat to Mr. LESLIE at the gracious command of Her Majesty.

The price of the Proofs and Impressions will necessarily bear proportion to the great cost of the production of the Engraving, upon which no expense has been spared; and by Mr. Moon's arrangement with Mr. Cousins, every impression will be delivered THROUGH HIM—a guarantee that they will not be unworthy to display his great talent, and support his distinguished reputation. The Price of the impressions from the Engraving of this work, which it is just to reiterate contains nearly forty portraits, will be, to Subscribers, Prints, with the Dedication, £12 12s.; Proofs, with the Royal Arms and Title, £15 15s.

ALSO,

## COLUMBUS'S DISCOVERY OF AMERICA.

Painted by Sir D. WILKIE, R.A., and now Engraving by H. T. RYALL, Historical Engraver to her Majesty.

COMPANION TO THE MAID OF SARAGOSSA.

Price: Prints, £3 3s. . . . . Proofs, £5 5s. . . . . Before Letters, £8 8s.

"A stranger travelling on foot, accompanied by a young boy, stopped one day at the gate of a convent of Franciscan friars, dedicated to Santa Maria de Rabida, and asked of the porter a little bread and water for his child; while receiving this humble refreshment, the guardian of the convent, Friar Juan Perez de Marchena, happening to pass by, was struck with the appearance of the stranger, and observing from his air and accent that he was a foreigner, entered into conversation with him. That stranger was Columbus. The conference which followed, remarkable for opening a brighter prospect in the fortunes of Columbus, forms the subject of the picture; in which he is represented seated at the convent table, with the prior on

his right, to whom he is explaining, on a chart, the theory upon which his long contemplated discovery is founded. At his left is his son Diego, with a small Italian greyhound at his feet, supposed to have accompanied them in their voyage from Genoa. At the other side of the picture, resting on the table, is the physician of Palos, Garcia Fernandes, who, from scientific knowledge, approved of the enterprise, and whose testimony has recorded this event. Behind him, with the telescope in his hand, is Martin Alonso Pinzon, one of the most intelligent sea captains of his day, who, though tarnished in his fame by subsequent desertion, concurred in the practicability of his plans, assisted in the outfit of the expedition, and sailed with Columbus."

## ROBERTS'S HOLY LAND, PART VIII., *Now Ready.*

CONTAINING VIEWS IN BETHLEHEM.

PREPARING FOR PUBLICATION,

A MAGNIFICENT WHOLE-LENGTH PORTRAIT OF HIS GRACE

## THE DUKE OF BUCCLEUCH AND QUEENSBERRY.

To be engraved by THOMAS LUTTON, from the Picture painted by JOHN WATSON GORDON, R.S.A., A.R.A., for the Nithsdale Agricultural Association. As no engraved Portrait of his Grace is in existence, every effort will be made to render this publication worthy the patronage of his Grace's numerous friends and admirers.

Price to Subscribers: First Class Proofs, with Autograph, £6 6s. . . . India Proofs, £4 4s. . . . Proofs, £3 3s. . . . Prints, £2 2s.

ALSO,

A FULL-LENGTH PORTRAIT OF THE LATE

## COUNTESS OF BURLINGTON.

Painted by JOHN LUCAS for his Grace the Duke of Devonshire, K.G., as a companion in size to Sir Thomas Lawrence's full-length Portrait of the Duchess of Sutherland and Child, engraved by SAMUEL COUSINS, A.R.A.

Prints, £2 2s. . . . Proofs, £4 4s. . . . Before Letters, £6 6s.

## BREEZE, A FAVOURITE RETRIEVER.

Painted by E. LANDSEER, R.A., engraved by C. LEWIS, as companion to the 'DISTINGUISHED MEMBER OF THE HUMANE SOCIETY.'

Prints, £1 11 6d. . . . Proofs, £2 2s. . . . Proofs before Letters, £4 4s.

## A BARONIAL HALL IN THE OLDEN TIME; OR, OLD ENGLISH HOSPITALITY.

Engraved by the late J. FGAN from the celebrated Picture by GEORGE CATTERMOLLE, as a companion to 'Bolton Abbey in the Olden Time,' by SAMUEL COUSINS, A.R.A. This national Work has excited intense interest from the scene being so truly English. The First Proofs being nearly all sold, early application must be made for the remainder.

Prints, £3 3s. . . . Proofs, £5 5s. . . . Before Letters, £8 8s.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 51.

LONDON: APRIL 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, 24th March, 1843.

Her Majesty's Commissioners hereby give Notice:—

1. That the Cartoons or Drawings intended for competition, according to the notices published in April and July 1842, will be exhibited in Westminster Hall, whither they are to be sent between the hours of ten and five on any day, Sunday excepted, during the first week in June next, when agents will be in attendance to receive them; but no drawing will be received after Wednesday the 7th June.

2. Each Candidate is required to put a motto or mark on the back of his drawing, and to send, together with his drawing, a sealed letter containing his name and address, and having on the outside of its cover a motto or mark similar to that on the back of the drawing. The letters belonging to the drawings to which no premium shall have been awarded will be returned unopened.

3. The title of the subject of each drawing, together with the quotation, if any, to illustrate it, must be affixed either to the back or front of the drawing.

4. Each drawing is to be sent upon, or accompanied by, a stretching-frame; but no ornamental frames in addition to the stretching-frame will be admissible.

5. The artists or their agents may attend to examine the works sent by them, and to re-stretch such drawings as shall have been detached from their stretching-frames and rolled for the convenience of carriage.

6. No drawing will be allowed to be retouched after having been received, except to repair an injury occasioned by accident, and then only by the artist himself.

7. Every possible care will be taken of the works sent, but in case of injury or loss the Commissioners will not be responsible.

8. All the drawings will be exhibited, and catalogues will be published.

9. The names of the judges appointed to award the premiums will be made known.

By Command of the Commissioners,  
C. L. EASTLAKE, Secretary.

**ROYAL ACADEMY, TRAFALGAR-SQUARE. — NOTICE TO ARTISTS.** — All Works of Painting, Sculpture, or Architecture, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or by Six o'Clock in the evening of TUESDAY, the 4th instant, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

The other Regulations necessary to be observed may be obtained at the Royal Academy.

HENRY HOWARD, R.A., Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss; nor can it undertake to pay the carriage of any package which may be forwarded by carriers.

N.B. Pictures and Drawings will be received on the South Side of the Building, and Sculpture on the North. The prices of works to be disposed of may be communicated to the Secretary.

**ARTISTS AND AMATEURS' CONVERSAZIONE.** — The NEXT MEETING of the SEASON will take place on WEDNESDAY, 5th APRIL, at No. 6, PALL MALL.

**BRITISH INSTITUTION, PALL MALL.** — The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS is OPEN daily, from Ten in the Morning till Five in the Evening. Admission, 1s. Catalogues, 1s.  
WILLIAM BARNARD, Keeper.

**SOCIETY OF IRISH ARTISTS.** — Notice to Exhibitors. — The FIRST ANNUAL EXHIBITION of the SOCIETY of IRISH ARTISTS will Open on WEDNESDAY, the 19th of APRIL, 1843. All works intended for exhibition must be sent to the Royal Irish Institution, College-street, Dublin, on or before Wednesday, the 12th of April, which will be the last day for receiving works.

By Order,  
M. ANGELO HAYES, Secretary,  
(Military Painter in Ordinary to the Lord-Lieutenant.)  
No. 34, Westmoreland-street, Dublin.

### PUBLIC NOTICE.

**ART-UNION OF LONDON.** — The Subscribers are respectfully requested to take notice that the ANNUAL GENERAL MEETING, to receive the Report of the Committee, and distribute the amount subscribed for the purchase of Works of Art, will be held at the THEATRE ROYAL DRURY-LANE (by the kind permission of W. C. Macready, Esq.) on TUESDAY, APRIL 25, at Eleven for Twelve o'Clock precisely. His Royal Highness the DUKE of CAMBRIDGE, President, in the Chair. — Subscribers will be admitted on presentation of the receipt for the current year at the entrance in Brydges-street.

GEORGE GODWIN, F.R.S., F.S.A. } Hon.  
LEWIS POCOCK, F.S.A. } Secs.  
4, Trafalgar-square, 31st March, 1843.  
\*The legality of the Art-Union of London has been fully established by the highest legal authorities.

ESTABLISHED 1829.

**THE ART-UNIONS OF GERMANY:**  
Under the Patronage of  
H.R.H. THE DUKE OF SUSSEX,  
H.R.H. THE DUKE OF CAMBRIDGE,  
AND THE NOBILITY.  
BERLIN, DÜSSELDORF, and DRESDEN.

The price of the Subscription Ticket, in either of the above Associations, will be 20s. each, which will entitle the holder to one copy of the Annual Presentation Engraving, which will be delivered IMMEDIATELY after the drawing, free of duty and carriage, and also the chance of obtaining a work of Art, value from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the Presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 153, Regent-street.

A Prospectus, detailing the plans of management of the German Art-Unions, and explanatory of the advantages afforded to the Subscribers, can be obtained, or forwarded free, upon application.

The Subscription List to the Art-Union of Berlin will shortly close.

Messrs. HERING and REMINGTON, Secretaries,  
153, Regent-street,  
Bankers—Union Bank of London.

**SCULPTURE.** — Sir RICHARD WESTMACOTT'S LECTURES at the ROYAL ACADEMY. — Full and accurate Reports of these Lectures appear in THE ATHENÆUM.

**PAINTING.** — Professor HOWARD'S LECTURES at the ROYAL ACADEMY. — Full and accurate Reports of Professor HOWARD'S Lectures on Painting appear in THE ATHENÆUM.

**ARCHITECTURE.** — Professor COCKERELL'S LECTURES at the ROYAL ACADEMY. — THE ATHENÆUM: Parts for JANUARY and FEBRUARY (200 large quarto pages of three columns, price 1s. 4d. each), contain the whole of the SIX LECTURES, and may be had of all Booksellers.

**TO PROVINCIAL ARTISTS.** — The PROPRIETORS of the "ILLUSTRATED LONDON NEWS" will be glad to receive SKETCHES of Interesting Subjects; for each of which they will pay One Guinea if used. — OFFICE, No. 196, STRAND.

**BURNET'S ILLUSTRATED EDITION.**  
Just published, in 4to., price £2 2s., in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s., half morocco, gilt tops.

**SIR JOSHUA REYNOLDS' DISCOURSES,**  
Delivered to the Students of the Royal Academy. Illustrated by Explanatory Notes and Plates, by JOHN BURNET, F.R.S., Author of "Hints on Painting." James Carpenter, Old Bond-street.

Published in 4to. price £4 10s. in French boards; and on royal paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The parts may be had separate.  
1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.  
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.  
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.  
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica—See the article "Drawing."  
James Carpenter, Old Bond-street.

Just published, in royal 4to., price £1 5s. bound, **RUSTIC ARCHITECTURE.** — PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the USE of ROUGH WOOD, THATCH, &c. Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICCAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed." — London's Gardener's Magazine.  
James Carpenter, Old Bond-street.

**LAY FIGURE.** — To be SOLD, made by HUOT, of PARIS, price Sixteen Guineas. May be seen at Mr. Best's, Upholsterer, 60, Berners-street.

**MR. F. W. BRANSTON** claims the attention of **PUBLISHERS** of **ILLUSTRATED WORKS**, and more especially of **AMATEURS**, who, not being familiar with the Art, may require assistance in placing drawings on the wood. By zeal, attention, punctuality, and moderate charges, he desires to become a useful auxiliary to all persons who may require his services.

IN PREPARATION.

## THE BARONIAL HALLS, PICTURESQUE EDIFICES, AND ANCIENT CHURCHES OF ENGLAND.

FROM DRAWINGS

BY J. D. HARDING, W. MÜLLER, W. PYNE, &c. &c.

Executed in Tinted Lithography and Litho. tint; with Descriptive Letter-press, and numerous Engravings on Wood.

EDITED BY S. C. HALL, F.S.A.

The size of this Work will be Royal Quarto; and the mode of its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic arts. Each Part—of which one will be issued on the first of every alternate month—will contain Three Subjects of a large size, executed in Litho-tint—the patent invention of Mr. Hullmandel, or in Tinted Lithography—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

The Drawings will be taken on the spot by accomplished and popular artists, among whom it is sufficient to name Messrs. HARDING, MÜLLER, PYNE, &c. Woodcuts, when desirable to elucidate the text or to convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of Twelve pages,—sufficient, it is believed, to furnish all necessary information to the general reader.

\* \* A full Prospectus and Specimens of the Work will be issued in the course of April.

LONDON: CHAPMAN and HALL, 186, STRAND.

### FRAMES FOR ART-UNION PRINTS,

&c.—C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c. which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street, North Strand.

### CALIGRAPHY.—NEW DECORATIVE

ART.—JOHN CRAIK, Teacher of Caligraphy in the Academy of the Royal Burgh of Dumfries, begs most respectfully to announce to the Nobility, Gentry, and Public in general, that he continues to compose and execute varied Ornamental Designs in Caligraphy with the common pen, in a manner peculiar to himself, without being guided by the pencil, consisting of figures of Animals and varied Ornaments of all kinds. The great facility J. C. has acquired in producing these designs (from Twenty Years' practice) is such, that he can design, compose, and execute, in the short space of 48 hours, 30 yards of Room Papering, suitable for internal decorations of Drawing Rooms, Lobbies, Libraries, Fire Screens, &c. &c. &c. Examples of these novel designs can be forwarded to any part in Great Britain, free of charge, by a remittance of half a sovereign.

Ladies' Albums, decorated with the pen (or designs forwarded to any part) by J. C., with varied Ornamental Figures of all kinds and colours, Plain and Ornamental Caligraphy, &c. &c.

P.S. J. C. had the honour of dedicating a Specimen of his Art to the Queen and Prince Albert, which was most graciously received and much admired by her Majesty and the Court.—See Literary Gazette, 1218, 23rd May, 1840; 1st August, 1840; and 14th May, 1842.

Nith Lodge, Dumfries, 9th March, 1843.

NOTES ON BRITISH COSTUME.  
PART THE FOURTH.

BY FREDERICK W. FAIRHOLT.

## YORK AND LANCASTER.

The effigies of Henry IV. and his Queen, Joan of Navarre, in the Chapel of St. Thomas-à-Becket, Canterbury Cathedral, are elegant instances of a style of royal costume, uniting richness, grandeur, and simplicity. The king's dalmatic is ornamented by a simple border, and has at the sides an opening similar to a pocket-hole, surrounded by a richly-wrought border; a sort of tippet, or cape, envelopes the shoulders and reaches to the waist; the sleeves of the dalmatic are wide, and display the tighter sleeve of the under tunic, with its row of buttons and its rich border at the wrist. The royal mantle is full and flowing, with a plain narrow border, fastened across the breast by a richly-jewelled broad band, secured to lozenge-shaped clasps of elaborate workmanship, and from which descend cords and tassels. But the most beautiful portion of the "Glory of Regality" exhibited on this effigy is the crown, surrounded by oak-leaves and fleur-

de-lis, and which could scarcely be more appropriately conceived as the diadem of a monarch claiming territory in France as well as Britain.

To this splendid bauble Henry clung with characteristic fondness, and, although so indirectly obtained, endeavoured to sooth his latest hours by ordering it to be placed upon the pillow of his deathbed. Few monarchs could cling to the outward display of power with greater pertinacity and more unfeigned delight than Henry; under this influence he adopted for his motto or device the word "Soverayne," and introduced the collar of SS., the initials of that impress, to be worn by his nobles; an ornament and a motto frequently repeated on his tomb.

The Queen's dress is simple—a long gown, open at the sides, and displaying the jewelled girdle beneath, and ornamented by a row of large buttons richly chased, with a flowing mantle secured by a cord, a collar of SS. round the neck, and the hair incased in a caul of jewelled network, from which a veil descends, complete her costume, which, like that of the king, is rich and majestic. The crown is similar to that of her husband.

The very singular gown, open at the sides, and displaying the dress beneath, and the girdle that confined the waist, as worn by Queen Joan, is first observable on monuments of the time of Edward III. It is clearly seen on the effigy of that monarch's daughter, Blanche de la Tour, in Westminster Abbey, and also upon one of the females on his tomb. The effigies of Beatrice Countess of Arundel, Lady de Thorpe, the Countess of Westmoreland, and others in Stothard's "Effigies," display the fashion with great perspicuity. A fine example has been selected for engraving here, from the Royal MS. 16, G 5. It will be

seen that the figure to the left in this cut is habited in one of these singular dresses; while the female confronting her wears a simple tight-fitting gown or cote-hardie, with a girdle loosely encircling the waist, and joined in the centre by circular clasps, from whence hangs an ornamental chain. This may be considered as the fair average costume of a person of the better class; and the lady beside her displays that of the wealthy and noble: it is the same in form, but has, in addition, the sideless gown, with its facing and border of fur; it appears to cover the front of the body similar to a stomacher, a row of jewels running down the centre, in colour green, blue, and red, alternately. \* The ermine appears also to line this robe, and it may be seen distinctly where it is lifted. This dress, in the original, is coloured of a deep ultramarine blue, while the tight-fitting gown beneath, similar to the one worn by the other female, is of "Baudékyn," or cloth of gold; † the girdle round the

\* It is sometimes confined to the hip on each side by a jewelled brooch, as in the effigy of Lady Beauchamp of Holt, in Worcester Cathedral, engraved by Mr. Hollis in his "Monumental Effigies."

† Cloth of Baudékyn was cloth of Baldach, or Babylon, whence it was originally brought. It was the richest kind of stuff, the web being gold and the wool silk, with embroidery.

hips is seen at the opening on each side of the dress, which is long and capacious at bottom, trailing on the ground and completely hiding the feet. This peculiar costume continued in fashion until the reign of Henry VI.

The male costume of Henry IV.'s reign is here delineated from the illuminations in a little calendar of the year 1411, preserved in the Harleian collection, and numbered 2332. In the original MS. they represent a winter and summer month. The elder figure, seated in his chair, is an interesting example of the costume of that class of the community whose lives were in "the sere and yellow leaf." He wears a dark cap or hat, turned up behind only, so that it forms a projecting point or shade for the eyes in front: such hats were worn until the latter part of the period of which we are treating. \* A close-fitting hood envelopes his head and shoulders, having buttons down the front. A long gown, very similar to that worn during the reign of Edward I., already engraved in part 3, but tighter in the sleeve, completely envelopes the body; it is fastened by a row of buttons in front, and the sleeves are secured by a similar closer row from the elbow. By looking at the younger figure we shall perceive that the great excess of cloth in sleeves and gowns, so glaringly visible in the previous reign, had a little abated. The gown or tunic reaches only to the knee, where it is cut into the form of leaves; in the original delineation it is of a dark chocolate colour, and is secured round the waist by a close-fitting ornamental girdle. The wide sleeves are of a different colour, and are generally light when the body of the dress is dark, or *vice versa*; the juncture at the shoulder being slightly ornamented. Tight hose, and boots reaching above the ankle, which are deprived of their enormous *crackoives*, or long-pointed toes, finish the dress, which is much less foppish than that worn during the reign of Richard II. The hair is parted in front, and curls at the sides; and in some instances we find the gentlemen confining their locks across the forehead by a very feminine jewelled band.

Sumptuary laws of a stringent kind, for the regulation of excess in apparel, were revived with considerable additions during this reign, by which the costume of the members of the community was sought to be regulated by the rank or riches of the wearer. No person of lower estate than a knight banneret was by these enactments permitted to wear cloth of gold or velvet, or to appear in a gown that reached to the ground, or to wear large sleeves, or use upon his dress the furs of either ermine or marten; while gold and silver ornaments were strictly forbidden to all who were not possessed of two hundred pounds in goods and chattels, or twenty pounds per annum. Gowns and garments cut into the form of leaves and other figures at their edges, or or-

\* During the recent rage in France for all things connected with the "Moyen Age," these hats were resuscitated; and two years ago, were pretty commonly worn in Paris; they were formed as above described, and accorded better than might be expected with modern costume.

namented with letters or devices, were altogether condemned, and declared forfeit to the king, while the unlucky tailor who manufactured such finery was rendered liable to imprisonment during the royal pleasure!

The effect of these severe enactments very much resembled stage-thunder, which may startle us at first by its loudness, but its utter harmlessness soon composes the nerves. The perfect inattention showed by all classes of the community to any of these laws, rendered them complete dead letters on the Statute-book, where they lay "all sound and fury, signifying nothing." Occleve in his valedictory poem on the pride of serving-men and their wastefulness in clothing, declares his horror at seeing them walk in robes of scarlet twelve yards wide, with sleeves hanging to the ground, and bordered or lined with fur to the value of twenty pounds or more, declaring that they see no merit or virtue in any man but him whose array is outrageous. He adds:—

"Also there is another new jett,  
A foul waste of cloth and excessive;  
There goeth no less in a man's tippet  
Than a yard of broad cloth by my life."

He then asks how such menials are to assist their masters, if they should be suddenly assailed, when their

"—arms two have right enough to do,  
And somewhat more, their sleeves up to hold?"  
He declares they have thus rendered themselves as unserviceable to their lords as women, and satirically declares what he considers to be their only utility in the words—

"Now have these lords little need of brooms  
To sweep away the filth out of the street,  
Since side \* sleeves of penniless grooms  
Will it up lick, be it dry or wet."

These literary gentlemen of the middle ages at least practised what they preached, as far as we can judge from their "lively effigies" still remaining to us. John Gower—"the moral"—who died in the year 1402, lies buried in St. Saviour's, Southwark; he is habited in a plain gown, tightly enclosing the neck, and having sleeves fitting easily but not widely; this gown hangs to the feet, which it completely covers, being secured down the front, from the neck to the bottom, by a single row of large buttons. He wears no girdle, and no other article of his dress but this simple gown is visible. His only ornaments are the collar of SS. and a fillet confining his hair, upon which is inscribed, "Jhu. mercie," the clasped hands and simplicity of figure and face admirably portraying, in obvious truthfulness, a man who did much good in his own day, and who looked upon God's gift of poesy, intrusted to him, as a high and holy thing not lightly to be used, but for his glory and the good of man.† Geoffrey Chaucer, who

\* Side-sleeves are wide sleeves. The word is still used with that signification in Northumberland among the commonalty, the tailor being admonished, when a capacious garment is wanted, "to myke it *eyde* enough." I have this on the authority of a resident in that part of England.

An ignorance of this meaning of the word has rather puzzled some commentators on our old poetry. In Ellis's "Specimens of the Early English Poets," is printed a curious poem on the power of money, personified under the form of "Sir Penny," and, among many other instances, his success with the ladies is declared:—

"Long with him they will not chide,  
For he may get them *trail side*  
In good scarlet and green."

The editors inquire in a note whether the phrase in italics means that they may "wear trailing gowns." It plainly means that a superabundance of finest cloth may be procured through the intervention of this puissant knight.

† I remember—and it is always a painful remembrance—Gower's tomb, in its original station, in the nave of St. Saviour's, on the north side. It might be truly called "magnificent in decay;" the entire tomb and its ornaments was elaborately painted and gilt, while elegantly-designed figures of Charity, Mercy, and Pity were painted in fresco behind, encircled by scrolls, upon which the inscriptions were painted that now appear upon that part of it where these figures once were; for the tomb has been moved within the last few years, and every trace of painting and gilding obliterated by a ghastly coat of white colour, that has for ever destroyed this interesting and beautiful relic of antiquity, "by guardian hands depraved," in the progress of ignorant improvement—"a deco for the phrase!"

alludes to him with that affectionate respect which true genius can always afford even a humble fellow-labourer in the same field, is depicted by Occleve from his own memory of this master-spirit of the age. His dress is similar to that of Gower, except that his gown is scantier (showing his short boots), and his sleeves wider; he also wears a hood. This portrait has been frequently engraved, but the best one in existence is that in Sloane MS. 5141, and which has been beautifully engraved and coloured after the original, in Shaw's "Dresses and Decorations." Occleve is also very soberly habited, as befits a scholar and a gentleman.

Strutt has copied, in his "Regal Antiquities," pl. 39, a very curious illumination from the Digby MS., No. 233, in the Bodleian Library, at Oxford. It represents Henry seated on his throne, and receiving a copy of Occleve's "Regimine Princeps" from its author; he is surrounded by his courtiers, one of whom is particularly remarkable for the dress he wears, which is party-coloured, diagonally across the body, the upper half dark, with its sleeve; the lower part light, with the opposite sleeve; and he also wears a hat looking two centuries more modern than the era of the fourth Henry.

Of his son and successor the monumental effigy still remains in the Abbey; but, unluckily, the head was formed of silver, and was, therefore, too tempting a bait for the ecclesiastical spoliators of the 17th century, who ruthlessly consigned it to the melting-pot. The robes worn by this figure are similar to the ordinary regal costume of British sovereigns at this period, but are void of all ornament or embroidery. Above the tomb are suspended (after the usual fashion of interments during the age of which we are speaking) the helmet and shield of the king, with the saddle upon which he may have sat during some of his glorious victories; the helmet is a tilting-helmet, such as was usually worn over the bascinet, in times of peace, during a tournament or joust; and therefore we must not, in this instance, imagine we gaze upon

"—the very casque  
That did affright the air at Agincourt."

We are not however without a likeness, small and minute though it be; for among the MS. in Bennet College Library, Cambridge, there is one volume which was presented to Henry by John de Galopes, Dean of the Collegiate Church of St. Louis, in Normandy, and which has an illumination representing the presentation of the volume to the sovereign on the throne, attended by his courtiers. It is a curious and valuable picture, and has been engraved by Strutt in his "Regal Antiquities," pl. 40.\* The king's dress is chiefly remarkable for the singular girdle he wears, which has suspended from it, at regular intervals, by ornamental chains, a series of circular pendants; a fashion which appears to have been indulged by the gentlemen of the day, and to have continued until the reign of Henry VII., for we meet with similar rows of hanging ornaments surrounding the waist in illuminations during the whole of this period.

A curious example of these odd decorations occurs in the engraving here copied [next col.] from Royal MS. 15, D 3. The gentleman wears a baldric slung across his person from his right shoulder, and reaching to his left knee, which is decorated in its entire length with a series of small bells, hanging by loops, so that the gallant gentleman must, upon the slightest motion, have rivalled a team of waggon-horses, to whose bells those upon his baldric bear an exact resemblance. It will be seen that his dress, with this excep-

\* There is a portrait in the British Museum, bequeathed by Dr. Andrew Giffard, said to be of Henry V. It of course is not so old as the era of that prince, but it bears marks, in the cut of the hair and other minor peculiarities, sufficient to warrant a supposition that it was copied from some authentic original, of a more perishable character, perhaps, and which this might be intended to perpetuate. It is worth consideration, but perhaps may not thoroughly be relied on, although it has been frequently engraved.

tion, varies in no essential particular from the dresses of the previous reigns of Richard II. and Henry IV.; while that of the lady is similar in the head-dress, which had become decidedly square in its shape; the tight-fitting long-waisted gowns were pretty generally discarded, and the waist became gradually shorter, while the sleeves were again extravagantly wide and long.

The head-dresses of the ladies during this period were the most remarkable and striking novelty in fashion adopted, and which continued varying in absurdity and monstrosity until the death of Richard III. It is impossible to conceive anything more preposterous and inconvenient than some contemporary representations of this fashionable head-gear. The annexed engraving will however convey an idea of these things much better than pages of description, selected as they are from effigies of "ladies sayre," who gloried in displaying such inventions surmounting their fascinating countenances when they walked the earth. Fig 1. is from the tomb of Lord Bardolf (circa 1408), and his Lady Joan,\* whose head-dress very clearly

shows the horned additions to the golden caul at the sides of the head, which had remained so long in fashion, and which is now surmounted by these ugly elevations, from which hangs a small veil behind the head. Fig. 2 is a little less ugly and unassuming, and is worn by Catherine, Countess of Suffolk, and wife of Michael de la Pole, who died during this reign at Harfleur, while serving in Henry's French

\* Described in Stothard's "Monumental Effigies" as the supposed effigies of Sir R. Grushill, but which have been, since that work was finished, correctly ascribed to Lord Bardolf by Mr. Kempe.

war. This lady's dress is altogether simple and unpretending. No. 3 is, on the contrary, as extravagant an example of the fashion carried to excess as now remains to us, and is exhibited on the effigy of Beatrice, Countess of Arundel, in the church at Arundel, who died 1439. Her head-dress is altogether in the extreme; the side ornaments of the face are preposterously large and ugly, while the veil that covers them is stretched out to its full extent, and supported probably by wires. The coronet above, of equally enormous proportion, descends from the forehead down the back of the head, and completes a head-dress that in size endeavouring to be sublime, has certainly taken the one step farther, and reached the ridiculous.

The engraving here given, from a brass in the church of Kingston-on-Thames, will afford a good example of the costume of the middle class and gentry of this period. It has been engraved from a sketch I made about twelve months since, when it was uncovered, after very many years' concealment, and it has not been before engraved that I am aware of. The gentleman and lady are in dresses plain, but elegant in some of their details, which have been engraved on a larger scale between the figures, fig. 1 being one side of the caul of the lady's head-dress; fig. 2, the brooch confining her mantle; and fig. 3, the end of the gentleman's girdle, with its beautiful pendent ornament attached by a chain.

During the troublesome period that succeeded the death of Henry V., until peace was again established by that of Richard III., it would appear as if the minds of the English nobility and gentry sought relief in the invention of all that was absurd in apparel, as a counter-excitement to that feverish spirit engendered by civil war. All that was monstrous in the past was resuscitated, and its ugliness added to by the invention of the day, until ladies and gentlemen appear to be mere caricatures of humanity. To detail or depict one-half of their doings, would be impossible in thrice the space I have to devote to the subject. It has been done, however, by a contemporary hand; and any person who can obtain a sight of a very curious volume in the Harleian Collection, marked 2278, may see enough to convince him of the lengths to which the votaries of fashion now carried their whims. The volume is a small quarto, full of splendidly-coloured and richly-gilt illuminations, and is the very volume given to Henry VI., when he passed his Christmas at Saint Edmundsbury, by William Curties, who was then abbot of the monastery there. The volume is a life of St. Edmund, by the famous John Lydgate, written in tedious rhymes, for his Majesty's especial gratification.

Specimens have been selected from the costume exhibited in this volume, for the use of those persons who may never see the original, and which give a fair idea of that generally depicted.

"*Hommage aux dames*," let us consider the ladies first, who seem to have had a fixed determination to render themselves the most conspicuous of the sexes, by the variety, size, and capacious form of their head-dresses. The group here engraved is exactly copied from the volume described, without the slightest attempt to correct it in any particular, and well exhibits the fanciful variety indulged in by the fair wearers. The most unpretending head-dress is that worn by the foremost of the group. The heart-shaped one of the lady to her left is of very common occurrence; which is also the case with the turban worn by the farthest figure of the group. The other lady, whose forehead is surmounted by a pointed *coiffure*, is by no means so ungraceful as many of her contemporaries. The dresses, it will be observed, are worn long and full, with sleeves wide, and tight at the wrist, or in the opposite extreme; of both which fashions we see examples here. The ladies' gowns are trimmed with fur at the wrist, round the neck, and sometimes round the seam at the shoulders. Their waists are exceedingly short, giving a very long and ungainly appearance to the lower part of the figure, at the expense of a compressed look to the upper portion.

The head-dresses of the ladies can, however, be but slightly understood by a single engraving; they exist in so many varieties, and appear to have been constantly on the change, while vari-

ous patterns were adopted by various gentlewomen; and a group of them collected together on any great public occasion, must have presented a very singular assemblage of forms. A few more are accordingly given of the most ordinary kind, all selected from the same manuscript. Fig. 1 is a horned *coiffure*, which may be said to be "strangely and fearfully made," and of a pattern that excited the ire of the sober-minded satirists of the day to an irrepressible pitch. The ladies were declared to carry about with them the outward and visible sign of the father of all evil, proudly, triumphantly, and without shame! Lydgate, the monk of Bury, the most celebrated poet of the day, set his never-wearied pen to the task of condemnation, and produced a ballad against them—"A Ditty of Women's Horns"—the gist of the argument, and burthen of every verse being an announcement that

"Beauty will show, though horns were away."

He declares that—

"Clerkes record, by great authority,  
Horns were given to beasts for defence;  
A thing contrary to femininity,  
To be made sturdy of resistance.  
But arch wives, eager in their violence,  
Fierce as tigers for to make affray,  
They have despite, and act against conscience.  
List not to pride, then horns cast away."

He then excuses himself to the ladies for what he considers a justifiable condemnation, quoting the example of Scripture characters, his last verse alluding to the

"Mother of Jesu, mirrour of chastity,  
In word or thought that never did offence,  
True exemplar of virginity,  
Head spring and well of perfect continence;  
There was never clerk, by rhetoric nor science,  
Could all her virtues rehearse until this day;  
Noble princesses of meek benevolence,  
Take example of her—your horns cast away."

Nothing, however, that could be said, sung, or written, appears to have had the effect of preventing these fashions from becoming universal.

The turban of fig. 2 is pretty frequently seen of true oriental form, and certainly much less extravagant in its proportions. A simple roll of cloth sometimes encircles the head, the hair being brought through its centre, and allowed to stream down the back, as in fig. 3. A front view of a forked head-dress, with its small hanging veil, is seen in fig. 4; and fig. 5 exhibits another variety of the same fashion, less acutely pointed, and modified in the centre.

The dress of the gentlemen may be comprehended by an examination of the above figures, selected with a view to display the most ordinary and least whimsical and extravagant costume then worn. That of the gentleman with the dog varies but little from the fashion that had commenced so long previous, except in the cap, which is composed of a thick roll of stuff encircling the head like a turban, and styled a roundlet, having to its inner edge a quantity of cloth attached, which covers one side, while a broad band of the same material, secured to the other, hangs down to the ground, unless tucked in the girdle or

wound round the neck with the end pendent behind. The cap is frequently seen suspended by this band at the back of the wearer, and thus preventing it from falling, which would appear to be the legitimate use and intention of the invention. The figure opposite has a similar cap with its band or "tippet;" his sleeves are remarkably wide, and cut into ornamental escallops; the girdle confining the waist being remarkably low, in contradistinction to that adopted by the ladies, and which sometimes is seen encircling the hips, giving the body an exceedingly swollen and ungainly appearance. The central figure behind exhibits the fashion, now universal, of closely shaving the face and cropping the hair above the ears, giving an amount of meanness and harshness of feature, to the effigies and delineations of the period, very unpleasant to view. This gentleman wears the sleeves "shaped like a bagpipe," which come in for their fair share of monkish censure, as receptacles for theft, when worn by servants and fashionables of questionable character, who haunted public places in the pursuit of what Falstaff calls their "vocation."

There is no monumental effigy of the unfortunate Henry VI., who, loving retirement and religious seclusion, was denied their enjoyment living, and knew no rest in the grave. The body was conveyed from the Tower to St. Paul's, and then buried at Chertsey, whence it was again removed to Windsor, to allay the uneasiness of Richard III., who was annoyed by the popular belief of miracles effected at his tomb. When Henry VII. wished to remove it to Westminster, it appears that it could not be found.

Of the representations of this monarch, his queen and court, the best is that to be found in the Royal MS. 15, E 6, which depicts John Talbot, Earl of Shrewsbury, presenting a volume of romances to the king and queen. It has been engraved by Strutt, in his "Regal Antiquities," and by Shaw, in his "Dresses and Decorations;" the tapestry supposed to represent these illustrious personages in St. Mary's Hall, at Coventry, also engraved in this work, is of a later date, probably of the time of Henry VII. In the volume we have used for our examples of costume there is also a representation of Henry. The painting formerly at Strawberry Hill, and supposed to represent the marriage of Henry with Margaret of Anjou, is certainly of a later date, if it does represent the marriage of Henry at all, which is not positively ascertained.

[We are reluctantly compelled to break this division of the subject, and postpone its continuation until next month. A variety of matters are pressing upon our attention, and demand space. At the same time, we must admit that we are scarcely rendering justice to Mr. Fairholt, whose train of argument and illustration is thus prejudicially interrupted.]

#### ART IN CONTINENTAL STATES.

**ITALY.—ROME.—Mr. Wilson.**—The English architect, Wilson, came here making researches into the old manner of painting in fresco, with a view to its being applied to adorning the new buildings for the English Parliament.

**Mr. E. Hauser's Cartoons for the new Basilica near Birmingham.**—Edward Hauser, the painter, of Basle, has designed the cartoons intended to be painted in oil in the new Basilica erected by the celebrated architect Pugin, by desire of Lord Shrewsbury, near Birmingham. The principal design is a Last Judgment.

At the feet of the Saviour appear the seven angels, four of them blow trumpets, while the other three unfold rolls, on which words from Scripture are written. One of the blessed receives from an angel a crown of life, while another brandishes the rod of condemnation. The newly-risen form beautiful groups, among these are the wise virgins, and a soul yet in the grave is holding the emblem of salvation. The designs are greatly admired; the artist has shown much talent in adapting them to the forms of the walls.

**The Fesch Gallery.**—Part of Cardinal Fesch's gallery will be sold publicly in April, the remaining pictures will also be sold by auction next season.

**Camuccini.**—The well-known and admired artist Baron Vincenzo Camuccini having, on account of declining health, resigned his chair and appointment as general inspector of the public paintings at Rome, the Pope has appointed in his room, to the first chair in the academy of St. Lucca, the Cavalier Filippo Agricola.

**BOLOGNA.—Statue of Rossini.**—The city has decided that the monument to Rossini shall be placed in the Liceo Filarmonico. It is to consist in a statue representing the genius of music crowning the bust of the celebrated composer. On the pedestal is the date of Rossini's admission, as student of music, in the Liceo Filarmonico of Bologna, and that of his appointment, by the city, to be the perpetual director of that famed establishment. Near the base appears a winged child opening a book, where are inscribed the names of all Rossini's works. The whole is to be executed in white marble, and the design and execution are both placed in the hands of Professor Barruzzi, of the Bologna Academy of Fine Arts.

**J. Sohn's New Plastic.**—The Bavarian sculptor and modeller, Julius Sohn, of Munich, residing here, has discovered a plastic material, admirably adapted for modelling or copying works of sculpture. It is extremely soft, pliant, and capable of taking a form. When dry it does not crack; it receives any colour, and becomes tolerably hard. The works of Swankhale have been rendered popular here by means of the copies made by M. Sohn. The Academy of Sciences had ordered this plastic mass to be proved by the chemists Dumas and Gauthier, and their report has been pronounced so favourably to the invention, that its general adoption is anticipated. The Bavarian ambassador sent an account of it to the Royal Academy of Fine Arts at Munich.

**FRANCE.—PARIS.—M. Brian's Bust of M. de Lamarline.**—This sculptor, who obtained the grand medal at Rome, has finished the bust of the poet Lamarline for the city of Arles, where it will be placed in one of the principal squares.

**Tomb of Napoleon.**—We omitted last month to mention that the foundation-stone of the tomb of Napoleon in the Invalides was laid by the King early this year. Coins were placed in a box sealed within the stone; about two hundred workmen are now employed in the works under the direction of the architect, M. Visconti.

**The Homograph.—Mechanical Drawing.**—M. Burnier, formerly a pupil of the Polytechnic School, has submitted for the examination of the Academy of Sciences an instrument for drawing in perspective from nature, which he calls "The Homograph." Nothing can be more simple than the composition of the homograph, and the facility of its application distinguishes it from all other instruments of the same kind. It can be used to produce drawings on any scale up to the natural size of the object. Should this account be fully realized by further experience, the invention is indeed a great one.

**The Painter David.**—A petition has been presented to the Minister of the Interior by M. David, of Angers, having for its object to remove the remains of the celebrated painter David from Brussels to Paris.

**BELGIUM.—BRUSSELS.—Coloured Daguerreotype.**—The painter Lechi, of Milan, who has discovered a mode of preserving the colour in copying pictures by the daguerreotype, is now here making copies of the best pictures of Rubens, Vandyke, &c. Many miniature copies of an oil picture are produced in one day.

**BERLIN.—Prof. Rauch's Model of the late Prussian King.**—A most interesting sight was exhibited here; but alas! only for two days, in the studio of Professor Rauch. It was the clay model of the monument of the late King, to be placed in the mausoleum of Charlottenburg, beside that of his beloved Queen Louisa. Like that celebrated one, which was the first step in the increasing fame of Prof. Rauch, this monument is extremely simple. The dying sovereign is extended on a couch, wrapped in the military cloak it was always his custom to wear, a symbol of the long struggle for freedom which distinguished one part of his life. The features have a mild and earnest expres-

sion; and in the whole there is a character of solemn simplicity which is very affecting.

**The Shield of Hercules.—Max Wideman.**—The attention of the artistic world here and at Munich, where the work was exhibited, has been strongly attracted by a model for the Shield of Hercules, the production of a young sculptor, Max Wideman. The model is intended to represent the Shield of Hercules, as described by Hesiod; whether taken from reality, or his own fancy, remains, we believe, undecided. Classical scholars consider its design to be by a series of cosmogonical types to present a history of the world, and, taken in this view, Herr Wideman has erred in altering, in some degree, the position of the series of subjects as laid down by Hesiod; but the execution of the work, the invention, and the manner in which the proportions are preserved, has met with general admiration; and if the critics find some faults, they seem willing also to hail a new star arising in the horizon of Art. The middle of the shield represents the great dragon and serpents, emblems of the early state of things; then come combats of wild beasts, gods and heroes; lastly, the Arts and happiness of civilized life, typified by a marriage procession round the last circle of the shield; the rim is the ocean, emblematic of its power to extend the blessings of civilized existence by intercourse with other countries. The place of the combats of wild beasts is altered in Herr Wideman's design.

**BAVARIA.—MUNICH.—The House of Castor and Pollux.**—The King intends to erect at his villa near this city, a fac-simile of the house called the house of Castor and Pollux, considered the most perfect found at Pompeii; fac-similes of every article found in it will be placed in their original positions, as they were in the various apartments when first excavated.

**RUSSIA.—Arts and Artists.**—Scarcely anything can as yet be said to be known in regard to the state of the Fine Arts in Russia, for, as far as they are concerned, travellers and tourists have made no inquiries, or, if they collected any information of the kind, have kept it entirely to themselves. Beyond a few names and meagre notices, apparently only got out of ordinary guide-books, they have communicated very little indeed. All the more welcome will be the publication lately announced by Nestor Kukolnik (the father, if we mistake not, of the popular dramatist and novelist of that name), which is to give a lithographic series of historical pictures, executed by Russian artists for various churches; and which will include an essay by the editor on the "Russian School of Painting." The term "school" sounds somewhat presumptuous, for what is at all deserving of such name seems hardly to exist at present, even admitting that there are some individual artists of ability in that country. At all events, however, the work will prove a contribution to the history of Art; and the illustrations will be recommended by novelty, if by nothing better. Another publication of equal, perhaps of greater general interest, is Sokolov's "Portrait Gallery," containing the likenesses and biographical notices of Russian artists and literary men; of these, the majority are still living, consequently, distinguished as some of them are by reputation, very few particulars are to be met with in print relative to the individuals themselves. Even of some, or, we might say, of most of those belonging to this department of biography who are deceased, scarcely any satisfactory account is to be obtained; although of field-marshal and generals, and other "illustrious obscures," the lives have been recorded with fatiguing minuteness. Among the artists to be included in this "Portrait Gallery," are Basin, Karl Briulov, Bruni, Ivanov, Venetianov, Vorobiev, Yegorov, painters; and the architects, Alexander Briulov, Glinka, Sviyazev, and Constantine Thon, besides some sculptors and engravers. Of literary names the list is very extensive, and comprises those of all the most popular writers of the present day. Omissions there may and must be; yet, on the other hand, there will be no intrusions of military and official characters—of persons whose eminence consists in their place, and who never leave a gap in the world when they die, nothing being easier than to fill their places up again.

**AFRICA.—TUNIS.—Palace des Bardes.**—Achmet Pacha, Bey of Tunis, has sent through his ambassador, M. le Chevalier Raffo, at Paris, the

sum of 8000fr., and a diamond of great value, to M. Læderich, as a mark of his satisfaction for the equestrian portrait he has painted of his highness, and which adorns the hall of the throne in the Palace des Bards. The Arts penetrate everywhere—even through Mussulman prejudices.

### OBITUARY.

#### PROFESSOR VERMIGLIOLI.

The Chevalier G. B. Vermiglioli, Professor of Archaeology, is dead. He was an academician of the Fine Arts, and a member of almost all the literary and scientific societies of Italy, and of other countries. He published many works on antiquities and on the Fine Arts during his long and honoured life, and to him we owe the best and most complete "Life of Pinturicchio," which we possess. Pinturicchio is one of the old masters, whose works most frequently pass for those of Raffaele in his second manner.

#### M. PEYRE.

Paris.—M. Peyre, Knight of the Legion of Honour and of St. Vladimir, honorary member of the Council of "Bâtiments Civils," chief architect to the third division of works of the department of the Seine, formerly Colonel in the Etat-Major of the National Guard of Paris, died in his 74th year.

#### C. BOULANGER.

The *Smyrna Journal* of the 8th of October records the death, on the 28th of September, of M. Clement Boulanger, painter, and member of the Scientific Commission under the direction of M. Terier, sent from Paris to explore the ruins of Magnesia, on the Meander. The commission were occupied, at the time of the death of M. Boulanger, in excavating a temple to Diana, destroyed, in ancient times, by an earthquake. Great labour in removing immense blocks of marble was required, and part of the works were obliged to be conducted standing in water. The reward of these labours were some magnificent friezes, entirely covered with sculpture; but M. Boulanger sunk under these great exertions, aggravated by the heat of the weather, causing inflammation of the brain. He was buried in the Greek Church of Scala Nova. The funeral was attended by the foreign consuls and residents. The ships in the roads, the fort, and the consulate, lowered their flags. Achmet Bey, the governor, sent his carriage to Magnesia for the use of the sick man, but it came too late.

#### DR. BETTERMAN.

Berlin.—On the 25th of October, the Consistorial Councillor, Dr. Betterman, celebrated for the services he lent to archaeology, by his labours on the Abrasa Gems. He died at an advanced age.

#### DR. H. HASE.

Dresden.—Dr. Heinrich Hase, High Councillor and Inspector of the Royal Gallery of Antiquities, &c., died here on the 9th of November, aged 54. He had long delivered lectures, which were largely attended, in the Academy, on the history of Art in Greece and Rome. In 1839, he undertook a journey to Greece and Asia Minor, the fruits of which will be found, we trust, among his literary remains. He was attended to his resting-place by a numerous train of friends, pupils, and admirers, and laid beside his intimate friend Karl Forster.

### THE LIVING ARTISTS OF ITALY.

SKETCHED BY A TRAVELLER.

Milan.

MY DEAR \* \* \*,—I shall not attempt any description of the works of those illustrious men to whom, in bygone times, Italy owed the revival and splendour of the Fine Arts. I shall confine myself to briefly mentioning those artists now living, not unworthy successors of their glorious forefathers, whose names, although familiar in their own country, are, I conclude from what you say, unknown in England, unless to those who have passed the Alps.

I will begin with Milan, the capital of fertile Lombardy, the not unworthy sister of far-famed Rome, Florence, and Venice, which I visited last, after having spent many months in traversing the various states of the *antiqua mater* of Arts and learning, and unremittingly studying the present condition of the Fine Arts.

As I have no pretensions to deep technical arguments, I can only give you what may be a guide to

you or your friends visiting the *ateliers* of modern Italy.

FRANCESCO HAYEZ, a Venetian by birth, but settled in Milan, is considered the first historical painter in Upper Italy. His works are stamped with decided originality. He imitates none, but has a crowd of imitators. His favourite subjects are taken from the middle ages. Amongst the most remarkable are 'Carmagnola,' 'Romeo and Juliet,' and 'Mary Stuart'; but 'The Younger Foscari's Farewell to his Family' is universally considered his *chef d'œuvre*; and it is indeed worthy of Byron's magnificent drama which inspired it. It is free from the fault of too cold and gray colouring which is sometimes charged in his other works. His drawing is always correct, and his composition simple, well-imagined, and careful in the most minute details. He was a pupil of the Academy of Fine Arts in Venice.

PALAGIO PALAGI, a native of Bologna, has removed to Turin, but his studio, which contains a splendid collection of antiquities, still remains at Milan, where he resided many years, and is liberally open to strangers. He is considered the founder of a new school of historical painting.

GIUSEPPE MOLteni is a Milanese. He holds the first rank as painter of portraits and *tableaux de genre*. 'The Chimney-Sweeper basking in the Sun on a Winter's Day,' 'The Christian Slave in the Harem,' 'The Happy News,' delight all who behold them, from the exquisite grace of their composition and their delicious mellowness. Molteni is still young. His effects of light and shade recall the manner of Rembrandt. His studio contains a choice collection of ancient arms, armour, and specimens of Egyptian, Etruscan, and Roman antiquities.

MASSIMO D'AZEGLIO, a Piedmontese, is the first landscape painter in Northern Italy, and is also distinguished amongst the literati. 'The Vendetta,' 'Ferrol,' 'The Fight of Barletta,' 'The Death of Montmorency,' amply support his reputation.

GIUSEPPE CANELLA, of Verona, is eminent in the same style. I was charmed with the freshness of execution displayed in his 'Sunrise in the Roman Campagna.'

LUIGI BISI, a Milanese, and a very young artist, has displayed great skill in colouring, light, shade and perspective in an 'Interior of Milan Cathedral.'

Sculpture flourishes in Milan not less than painting, there are 18 or 20 studios, three of which I cannot but mention.

POMPEO MARCHESI stands at the head of the sculptors of Northern Italy. Some of his works are in the highest style of art. I was particularly struck by his 'Venus disarming Love,' 'Flora,' 'St. Magdalen,' 'Innocence,' and a basso-relievo he executed for that beautiful monument, 'The Arco della Pace.' He is now engaged on a colossal group of ten figures, a commission from the Emperor of Austria, who intends to present it to the City of Milan to be placed in the new Temple of St. Charles.

ABRONDIO SANGIORGIO, (best known by the beautiful horses which draw the chariot of the goddess on the Arco della Pace.) BENDETTO, CACCIA-TORRE, and MONTI, of Ravenna, hold the next place.

'The Arco della Pace,' unrivalled in its kind, and the arch of 'Porta Ticinese,' both by Caguola; the 'Arcua,' a circus capable of containing thirty thousand spectators, the 'Galleria de Cristoforis,' by Pizzata, and the 'Temple of St. Charles,' by Amati, are noble specimens of modern architecture, worthy of the City of the Duomo.

The eminence which Milan has attained in the Arts, although only a provincial capital, is due not only to the Imperial Academy of Fine Arts and its enlightened professors, but to the refined taste of the wealthy citizens, in whose dwellings of many galleries may be seen the productions of modern artists, side by side with the glorious legacies of the old Italian school.

If the traveller should, as I had, have the good fortune to visit Milan at the time the annual exhibition of Fine Arts takes place, he will see a course of pictures and statues highly honourable to the old Lombard city, from Venice and Bologna, from Turin and Florence, nay, even from distant Rome.

(To be continued.)

### CORRESPONDENCE.

#### THE "MEMORIAL" TO PRINCE ALBERT.

TO THE EDITOR OF THE ART-UNION.

SIR,—I quote the following paragraph from your last number:—"The artists have, we humbly think, carried their hostility much too far: they should have been content with expressing their dissent from the new system, and their confidence in the old. In memorializing the Prince Albert to change his mind, they acted, to say the least, indiscreetly, and they ought not to have been surprised to find it was of no avail."

If, Sir, this be asserted in ignorance, could you not easily have been better informed? But I confess I find it difficult to persuade myself that it proceeds purely from error. I presume, the editor of a paper professing to advocate the interests of Art should, where the character and motives of artists are attacked, be the first to defend them; that he should not, at all events, seek to place their actions in a disadvantageous point of view; and, least of all, that he should misrepresent them.

I am sorry it has fallen to the lot of one so inadequate as myself to make this reply; but the character of those gentlemen who deputed me at the general meeting alluded to demands, that I explicitly deny their having acted so "indiscreetly," or that they did so far forget the duty and respect due to the exalted station of his Royal Highness Prince Albert, as to ask his Royal Highness "to change his mind." Unacquainted as artists frequently are with matters of business, they are not so ignorant of the courtesies of life to have adopted such a proceeding; even their gratitude for the exertions his Royal Highness has made to elevate the Arts would, alone, have suggested a contrary course; and I shall be strictly speaking the truth in stating, that they did not memorialize his Royal Highness at all.

Their conduct being thus mistaken in your last number, you will doubtless do them the justice to insert this in your next. Unwilling as they would be to publish a correspondence that their own sense of honour dictates should be regarded as a private communication, the projectors of the scheme you advocate would be little honoured, and their cause less promoted, by dragging it before the public.

I confess it would have given me more pleasure to find you defending the large mass of the profession, present at, and represented by, the general meeting of December 17th, from the insults heaped upon them by the projectors of the National Art-Union, who, in advertisements on the 19th, instead of using the honoured name, granted them expressly to promote Art for its legitimate purpose, perverted it to the abuse of artists;—such a course would have secured you the esteem and gratitude of all, and the artists would have been convinced that they had an advocate willing, as they know he is able, to assert their right.

Yours, &c.,

JAMES FAHEY,

Hon. Sec. to the General Meeting of Artists.  
15, York Place Fulham-road, Feb. 21, 1843.

[After considerable hesitation we have resolved upon printing this letter addressed to us by Mr. James Fahey. We hesitated—not from any dread lest the insult it conveys should militate against our interests or excite ill-feeling towards us; but lest the discreditable style our correspondent has adopted should prejudice the great body, of which he is a very minor member. At the outset of our comments, we beg to apply to Mr. James Fahey a few lines from Shakespeare:—

"You the great too of this assembly!"

"For that, being one of the lowest and the poorest  
In this most wise rebellion, thou go'st foremost."

Mr. Fahey, it is clear, knows but little of the courtesies of society. The mode in which he addresses us goes far to convince us that, if to him was assigned the task of corresponding with his Royal Highness the Prince Albert, the correspondence was not so conducted as to be to the credit of the profession. Mr. Fahey may assert that his letter to the Prince was not a "memorial," and that it did not request his Royal Highness to "change his mind." He might have known that all official communications to royal personages are usually styled "memorials," whether so headed or not; and he will not deny that the design

\* In reference to the obnoxious advertisement of the 19th December, we direct Mr. James Fahey to the following passage in the Art-Union of January 1st:—"As if to prevent any after-concession, the projectors (of the National Art-Union) followed up the day's proceedings by the concoction of an advertisement which the artists could construe only into a deliberate insult to a large proportion of their members." That we "did defend the large mass of the profession present at, and represented by, the general meeting of the 17th," is evidenced by the following passage from our remarks on the subject:—"The meeting was in all respects creditable; the proceedings were conducted with system and dignity, strong expression was given to strong feelings, but with a degree of decorum which cannot but add to their weight. The artists felt they had a duty to discharge, and they did it boldly, firmly, and honourably."

and purpose of the letter was to induce the Prince to withdraw his patronage of "the National Art-Union," although we may fully admit that such a request was not formally and explicitly advanced. Our notice of so ill-advised a step was given with sufficient delicacy: we little expected it to call forth so offensive an answer from Mr. James Fahey—as "hon. sec. to the general meeting of Artists." If that gentleman has acted upon his own responsibility, he has acted very foolishly; if he is backed by others, and the letter we have printed is "by authority," we beg to say we utterly scorn the insinuations it conveys. If, after upwards of four years of toil, our motives could be effectually assailed by a group of small items, we must be miserably weak indeed. We might easily place against this protest of the body, of which Mr. James Fahey is "the great toe," a mass of cheering and encouraging communications—from nearly all the really important artists of the country; many of them have cordially aided us, and, with scarcely an exception, they have all testified their approval of our course and conduct from their commencement, have rendered the fullest justice to the purity of our intentions, and borne ample testimony to the earnestness and sincerity of our desire to advocate the artists' "Rights." Our "ability" any person is justified in questioning, but our "integrity" no person shall dare to question without receiving a reply. There are, we feel assured—and that assurance we ground upon abundant and safe proofs—very few members of the profession who consider, with Mr. James Fahey, that our notice of the "Memorial" was written—not in ignorance, but with a malicious design; that we have wilfully misrepresented "the artists," and deliberately sought to place their conduct "in a disadvantageous point of view." Mr. James Fahey may have fallen into the not uncommon mistake of supposing that he and five other gentlemen, who, we understand, signed the letter to Prince Albert, constitute "THE ARTISTS OF GREAT BRITAIN." But Mr. James Fahey can scarcely expect that we should recognise his claim. We shall continue to discharge our duty, unappalled by the reproaches heaped upon us by this gentleman, who was, and it seems is, "Honorary Secretary to the general meeting of Artists." A public man who makes no enemies, deserves no friends. To have succeeded where so many have failed is, at least, something. Our integrity may be subjected, we think, to a safer test than the opinion of Mr. James Fahey—that of our own conscience. It is necessary that we apologize to our readers for occupying so much space with this subject.]

#### ARTISTS' ANNUITY FUND.

SIR.—The letter which appeared in your journal of December last, recommending limits to be put to the admission of members to the Artists' Fund, is now verifying its predictions in the decline of the benevolent branch of it, which we may take as a mere precursor to what must assuredly follow in the Joint-stock Fund. I trust it will now be seen (before it is too late) whether the failure is owing to the *diseases* which gentlemen are endeavouring to provide against, or to a society half-employed and over-populated; and whether the present diseased state of Art is not of itself sufficient to produce more paralyzing effects than are even anticipated in their catalogue of prohibitory complaints. I know your good feeling towards Art too well to believe you would withhold what is publicly due to its vital interests; and therefore avail myself of this consideration to entreat of the society that it would look to the real cause of the evil, instead of inflicting a medical scrutiny upon the members, the worst effect of which would be to divert the attention from it. I do not mean to say that the society should not be protected from imposition; but there seems a marked inconsistency in shutting the society against a few unfortunate artists, and leaving it open to the mass, with all the temptations and sicknesses arising out of the necessities of the times, and who are crowding into it as for their lives. Yours, &c.

A MEMBER OF THE ARTISTS' FUND.

March 16.

[We have received other letters on this all-important topic; it concerns a vast proportion of the members of the profession, and it is our duty to direct their attention to it. Truth is easiest to be obtained by discussion.]

#### MODELS FOR TEACHING.

SIR.—Will you allow me to make one or two remarks on the system of teaching drawing from models, which appears now to be coming into vogue, or is, at least, warmly advocated by some professors, and applauded by many plebeians in Art, as evidently supplying a "royal road" to perfection. I do not presume to think that anything I can say on the subject will be likely to enlighten the world, but if I can draw the attention to it of those qualified to discuss its merits, my purpose will be accomplished.

A principal object in the study of Art is to cultivate

the taste, to give a keener relish for *beauty*, and a quicker and more intense appreciation of the principles on which it depends. In order to estimate correctly the merits of the practice of drawing from models, it ought to be considered both with reference to the method adopted and the object aimed at—for instance, the drawing from the best casts from the antique must simultaneously improve both the taste and the hand—must inculcate sound notions of taste, and impart manual dexterity and accuracy. But it seems to me that the practice of drawing from blocks of wood of various geometrical forms, or purporting to give vague (puerile) imitations of buildings, must, so far as the exercise of taste is concerned, have an opposite effect, and be likely to generate a frigid, mechanical style, which may prove radically prejudicial. It is of great importance that the first steps be taken in the proper direction. If merely mechanical drawing be the object ultimately aimed at, then it may be consistent and advantageous to adopt such means of acquiring it: but it is questionable how far such a method will lay a foundation for proficiency in a department of the Art in which beauty is a prevailing element.

In a class which I have, consisting of a dozen pupils, there is one who, previous to his entering the class, had been initiated into an excessively hard, stiff manner—so much so to pervade every drawing he executes: his eye appears not at all offended by the most violent and harsh combinations of lines; in fact, his drawing looks like a number of pieces of wire intersecting the paper at all angles. I know not whether the habits already acquired can be entirely eradicated, but it appears to furnish absolute demonstration that they impede a progress, which there is every reason to believe would otherwise equal that of his companions. Allow me to mention a little circumstance in my own experience, which will show something of the power and permanency of early impressions. The first opportunity I had, after emerging from scholastic bondage (no disrespect to the worthy order of pedagogues), I made a pedestrian tour through Westmoreland and Cumberland. When on my way thither I accidentally saw a small lithograph of HARDING'S—the first I had ever seen by him—which made such an impression on my mind that the recollection of it haunted me even in the midst of the beautiful scenery through which I afterwards traversed; and though I have since then seen many excellent pictures, and collected very many of the lithographs by the same hand, there are few things which have made, or left such a vivid impression on my mind, as that small lithograph.

One may imagine that the study of strict geometrical forms, relations, and combinations, may be of great benefit to the advanced and experienced artist; for I am much inclined to suspect that the principles of beauty depend upon mathematical *proportion* more than is generally supposed. A connexion, for instance, has not unfrequently been remarked between mathematical talent and musical taste. Mozart himself, who possessed, perhaps, the most transcendent musical genius, the most subtle and ethereal musical temperament that ever fell to the lot of man, at one time threw aside his musical pursuits, and devoted himself as passionately to the study of mathematics as he had previously to that of music.

The system of model-drawing is advocated on the ground of its being considered the first step in drawing from nature. With reference to the time when it may be proper and profitable to commence the study from nature, Harding, whom you will esteem no mean authority, in his work on the "Use of the Lead Pencil," after urging the great advantage of drawing from memory, says—"Many believe they cannot too soon study from nature. This is a great mistake; for, until by contemplation of the works of others, we have had our tastes cultivated and refined—have obtained the experience of others as the foundation on which to build our own—can understand the principles of Art, and carry them into operation—we are not supplied with the requisite ability to gather instruction from the study of nature. That student can hardly fail to draw well from nature, who, whilst copying the works of others, carries into operation the principles of nature there displayed; and by the same principles of Art, satisfies himself that he has gained these, by endeavouring to do the same for himself, from memory, before he practices them from her."

March 16.

A COUNTRY ARTIST.

#### RECENT AND LIVING FOREIGN ARTISTS.

##### NO. II.—LESSING.

THE name of Lessing, heretofore so illustrious in German literature, is now one of considerable eminence in German Art, and is borne by a member of the same family, Karl Frederick, the painter, being the great nephew of J. Gotthold Ephraim Lessing. Though there may be among his countrymen some whose names are more familiar to English ears, Lessing stands very high, not only as one of the leaders of the so-called Dusseldorf school, but as an artist of great power and original mind. Besides which, some account of him just now may prove more especially acceptable to our readers, in consequence of the

"sensation" produced by his picture of 'Huss before the Council of Constance,' at the late Berlin exhibition. (Vide p. 63, col. 3.)

Lessing was born at Breslaw, Feb. 8th, 1808, but passed his earliest years at Wartemberg, in Silesia, where his father about that time received the appointment of *Justiz-rath*. As a child, he did not exhibit any precocity, for he did not begin to speak until he was four years old; nor did he afterwards display any sort of quickness, or aptitude for instruction of the usual kind, nevertheless a strong fancy for everything in the shape of prints and drawings, and for imitating them;—which might now pass for a sure prognostic of his future destiny, and that he was born to speak to the world, and give evidence of his intellect by his pencil. While at school he was far from distinguishing himself by his brightness, or by "taking kindly to his learning;" in consequence of which incurable dulness, as it appeared to be, his father determined to follow Martial's epigrammatic advice, and make him—let our architectural friends shut their eyes at this passage—an architect! thinking that he might then turn his fondness for drawing to some account. He was accordingly sent to Berlin, there to commence his professional studies; he had, however, very little relish for them, and, becoming acquainted with Professor Rösel, a landscape painter, from whom he received some further instruction—while at the Gymnasium at Breslaw, he had been allowed constantly to take lessons in drawing,—he determined to abandon the study of architecture for that of painting, very much against the wishes of his father, who at first refused to listen to any proposal of the kind, but, when he found that whether he withheld or granted his consent, it would make little difference, he had the good sense not to oppose the youth's inclinations any further.

It was as a landscape painter that Lessing made his *début* before the public, at the Berlin exhibition, 1828, with a composition of his own, representing a churchyard in ruins, and which at once brought him into notice. So great was considered its merit, that the Berlin "Kunstverein" purchased it at double the price he himself had set upon it, no doubt equally to the agreeable astonishment of both himself and his father, who was probably, by this time, pretty well reconciled to his son's waywardness and dulness. In the same year he produced his cartoon of the 'Battle of Iconium,' which he afterwards executed in fresco for Count von Spee, in his villa at Heltorf. On Professor Schadow's being appointed Director of the Academy at Dusseldorf, Lessing accompanied him, and by his advice began to apply himself to historical composition. In the meanwhile he gave proof of most peculiar and extraordinary talent of a different kind, in his 'Klosterhof in Schnee.' This piece, exhibited at Berlin in 1830, is a winter scene, representing the small court and cloister of a convent, with the monks seen through the open arches of the further end going in procession to their matinal devotions. The effect of this picture is truly magical: never was winter, with snow, and icicles, and frost, depicted more characteristically, and at the same time so attractively and poetically. The snow looks flaky and crisp, and the effect of it on the branches of the two trees, and on the statues which adorn the porch of the cloister, is truly admirable. The very air seems impregnated with intense cold; yet, so far from chilling, the picture itself rather warms and kindles the imagination. One happy artifice in it is the contrast produced by the light of the tapers in that part of the cloister where the monks are seen, and which is managed not only with exquisite truth, but with the still more exquisite charm of profound and touching sentiment.\* A similar species of intense poetic feeling stamps more or less all his productions of this class. His landscapes awaken in the spectator that frame of mind and cast of thought which the scenes themselves excite in the lover of nature. Character—either romantic, or pensive and melancholy—is so legibly impressed upon them, that, even if we never did so before, we are conscious that we look upon nature, for the time, with the eyes of a painter and the enthusiasm of a poet. The artist breathes his own spirit over the scenes he depicts, and communicates it to all who possess the least degree of kindred

\* Of this subject a small sketch is given by Raczyński, in his "Histoire de l'Art Moderne."

sensibility; and he, consequently, stands in a far higher sphere of Art than those who are content with transcribing literally the mere external features of nature.

He next proceeded to a different class of subjects, combining historical or dramatic action with landscape scenery; and among his productions of this kind 'The Hussite Preacher' is one of the most celebrated. In this picture, which was first exhibited at Dusseldorf in 1836, he has delineated every shade of religious feeling, from the energetic wildness and fanaticism of the preacher, to the devout humility and confiding reverence manifested by some of his auditors. The figures—which are nearly the size of life—are chiefly men, some of whom are on horseback, while others have just alighted. The landscape, where a village that has been set on fire is seen in the distance, is masterly in itself, and serves materially to heighten the impressiveness of all the other circumstances. In 1838 he produced his 'Ezzelino, Tyrant of Padua,' who, imprisoned in a cell, is visited by two monks, who fruitlessly exhort him to repentance. This work is now placed in the Städel Museum at Frankfurt.

Instead of enumerating other productions of Lessing, we will now come at once to his two subjects in the late Berlin exhibition. One of them represents the Emperor Henry V. ordering the Pope, Paschalis II., and his cardinals, to be seized as prisoners, for refusing to acknowledge his right to the privilege of investiture. The sudden tumult succeeding the solemn ceremonial of an interview between two such mighty personages, is well expressed; and the two principal figures—the Emperor starting up from his seat, unable any longer to control his violence, while the Pontiff sits calm and undismayed, are admirable in themselves, and finely contrasted. Of the rest, some are—we need not say inferior, for that would not be a defect—but hardly satisfactory in themselves, and apparently introduced only to fill up the scene. This picture, however, obtained but little notice, in comparison with that of 'Huss before the Council of Constance,' which last, admired and applauded as it was both by the public and by artists, did not escape quite free from the censures of criticism. Some objected to the subject itself—and of course to all similar ones—that it was wholly unfitted for the pencil. In an art which addresses itself to the eye, it is indiscreet to attempt to compete with the stirring interest of eloquence. Reasoning, argument, debate, cannot be represented by forms and colours. Unless, therefore, there be also some sort of dramatic action—some incident that speaks to the eye—what we behold is scarcely at all more satisfactory than would be a drama of Shakspeare's performed in dumb-show.\* One not altogether unreasonable objection urged against this production of Lessing is, that he has rendered the want of action and incident all the more striking by making the figures colossal—that is, considerably above the size of life—owing to which the whole looks like a dwarfish subject magnified to gigantic dimensions. So exaggerated a scale can be adopted with propriety only where there is a very great deal of bustle and motion in the composition, or else where there is no action at all, but merely symbolical personification, as in the case with the representation of 'Prophets,' 'Sybils,' 'Virtues,' and other figures of that kind, in which exaggerated size comes in aid of poetic signification. In Lessing's 'Huss,' on the contrary, historic—dry historic—*reality* has been attended to more strictly than historic *truth* required. The scene is a bare, vaulted chamber, where the Reformer stands in the middle of the picture, resting a Bible in his left-hand upon a table, while the other figures are seated on each side, except a few in the back-ground. Yet, though such arrangement is not at all a favourable one for making a "picture" of, there is a great deal of variety in the attitudes, physiognomies, gestures, and expressions of the different figures. Their characters display themselves both in their demeanour and features: yet all, though from different motives, have predetermined to reject the defence and oppose the doctrines of the Reformer.

\* Considerable difficulty of this kind will probably be felt in selecting historical subjects for the new Houses of Parliament. While events comparatively trivial may be excellently adapted for pictorial representation, many of the most momentous may be precisely the reverse, and afford nothing whatever that speaks in any way to the eye.

Great as are Lessing's powers in oil-painting, and that in more than one branch of it, it is from his drawings and water-colour sketches (for the most part in a very original and masterly style of execution,) that an adequate idea can be obtained of the fertility of his imagination and the extent of his invention.

#### ART IN THE PROVINCES.

##### THE EXHIBITION OF THE ROYAL SCOTTISH ACADEMY, EDINBURGH.

THE walls of the exhibition rooms contain very little to divert one's attention from the visitors. We doubt whether it contains one picture of a very high class—one of those works which, once seen, is never forgotten—and to which we recur as we do to a fine passage of music or of poetry, to discover a deeper significance and rarer beauty. Much ability there is, no doubt—much dexterity of drawing—much good colouring; but there is little of the power to achieve the elevated in Art—little even of the effort to do so. Laurels are too easily won in these days of Associations and Art-Unions, and it is only natural, where artists can command a high price and sure sale for pictures which cost them little time and less exercise of mind, that they should care very little about working for fame.

Judging of this exhibition by a high standard—and our previous exhibitions warrant us in doing so—it is comparatively a failure. We do not remember to have seen upon the same walls so many bad pictures, so few good ones. It is really time to denounce the everlasting recurrence of domestic scenes of the most vulgar kind; and splashes of colour that only by a courtesy of the most expansive kind can be called landscapes. It is an abuse of the term Art, to apply it to such productions, for example, as No. 121, 'The First Visit of the Grandchild,' or to No. 433, 'A View of Fair Head, county of Antrim, from Bally Quay,' which not even the fact of its having been purchased by the Association for fifty guineas, will allow us to recognise as anything but a miserable daub. We do not select these from any pre-eminence in inferiority which they exhibit; on the contrary, we could point to many even worse; but we do so, because they occupy prominent positions on the walls, and because we see the mystic letters R.S.A. annexed to the artists' names. We have said that the Association has purchased one of them—for what reason, except to maintain its character for perversity, it is hard to discover; and we believe, that if the subscribers were polled, they would, to a man, complain of this gross misdirection of their funds. What benefit can such an institution do to Art, when it gives a higher price for a picture so totally worthless than it does for pictures of undoubted merit?

The most interesting picture of the exhibition, as certainly it is the greatest, is Wilkie's unfinished work, 'John Knox Administering the Sacrament at Calder House,' a picture admirable in expression and grouping, as it is masterly in texture and colouring. Opposite to it hangs Allan's picture of the 'Death of Colonel Gardiner at the Battle of Prestonpans,' exhibited at the Royal Academy last year. This picture is painted with great spirit, and with more life and reality than any of the recent pictures of the same artist. It is, however, already familiar to most of our readers. Mr. David Scott has contributed three pictures, two of them marked by all the peculiarities which overlay his very considerable powers. In almost every picture which Mr. Scott paints, there are manifestations of undoubted genius; but he just as certainly mars them by some perversity of drawing or colour that destroys their general effect. He is never content to see nature as other men see it. His most ambitious picture in this exhibition, 'The Interview between Richard the Third, the Queen of Edward the Fourth, and the Princes, her Sons,' is a strong illustration of this. Gloster is finely conceived. His deadly purpose speaks through his sickly smile—the hand quivering along the hair of his intended victim, the contraction of the feet, with the violence of his self-constraint, are admirable. The form and visage of the man, too, are of a piece with his history. His very soul is livid as his face. Again, the elder prince is finely imagined. In him is seen majesty shrinking instinctively from the touch of baseness. The attitude of the young Duke of York is highly characteristic of the sharp-witted garrulous boy of Shakspeare; and, as the grouping prevented the artist from showing his face, we consider the production of this result more to be admired. But here our admiration stops. The queen is a mere display of vulgar melo-dramatic suspicion; the proportions of the figure, the drawing of the hands, are faulty in an extreme degree; indeed the hands are of a most Punch-like woodenness. The other figures are, if possible, worse. One gentleman, at the right hand of the picture, must have been a court curiosity, as he wants the part which cherubs want, to which deficiency may be added, item, a thigh. The other figures are representations of extreme degrees of ugliness, which reaches its climax in the persons of two figures in green chain armour on either side of Richard's throne. There is something to be said, however, in favour of these latter, as expressing the iron despotism of which they are the instruments. With all its faults, however—and we have only touched a few of them—this is a mark-worthy picture. But what shall we say of the same artist's 'Belated Peasant,' from Milton? This consists of a gigantic

figure stretching from end to end of the picture, which, upon a narrow scrutiny, turns out to be a peasant lying asleep in a quagmire, while, between him and the moon, certain tiny figures are seen disporting to the admiration of a mannikin of their own species, who is squatted on the top of a wheat-stalk, and nursing his knees, obviously to the tune of, "Oh, 'tis my delight in a shiny night," &c. Now, what but the utmost perversity of mind could have conjured such a scene out of Milton's lines?—

"Elves  
Whose revels some belated peasant sees,  
Or dreams he sees."

Mr. Scott, a poetically-minded man, has fallen into the sorriest matter-of-fact in construing these lines. The poet uses the word "dreams," and, therefore, Mr. Scott sends his belated peasant into a sleep. Milton never meant any such nonsense. He knew better. For who ever saw fairies in dreams? Nobody. They are always seen by people who are wider awake than usual. For our own part, we remember once to have seen an eightsome reel performed by the "Cannie folk," in a style that would have astonished Fox Maule or Davidson of Tulloch, and it was when our eyes were as wide open as they are now. We had been overtaken by nightfall in a lonely valley far away among the hills, the moon—but we shall not be tempted into a description. Suffice it, we saw them, or *dreamt* we saw them, which was quite the same thing to our belief. But as to Mr. Scott's 'Belated Peasant,' nothing but the most hopeless intoxication could have stretched him in such a morass, and, if he ever awoke, which we strongly doubt, we venture to say that a violent fit of lumbago banished all idea of elves from his head for six months at least. We are glad to be able to speak in terms of unqualified praise of Mr. Scott's other picture in four compartments, illustrative of the four great Italian painters—Michael Angelo, Raffaele, Titian, and Correggio, each at work upon one of their *chefs d'œuvre*. This is a charming picture, and would grace any collection.

Duncan has contributed some excellent pictures. His portrait of 'Mr. Patrick Robertson' is the finest portrait in the exhibition, as a mere work of Art, and as a portrait, must have a high value in the eyes of the friends of the most numerous of Deans of Faculty. His other pictures, 'Water From the Fountain,' No. 59, and 'Phoebe Dawson,' No. 436, are distinguished by great harmony and simplicity of colour, and, in the latter picture particularly, there is a repose and truth of nature which comes nearer the perfection of Art than any picture in the rooms. It is a beautiful embodiment of Crabbe's lines—

"The joy of youth and health her eyes displayed,  
And ease of heart her every look conveyed."

We hope to see many more illustrations of Crabbe from the same hand.

Mr. Robert Scott Lauder's pictures do not equal those which he exhibited last year—"The Trial of Elsie Deans," and 'The Glee Maiden.' His 'Ruth,' No. 48, is not the Ruth of our imaginations. Why has Mr. Lauder selected so "marvellous ill-favoured" a damsel, for one whom we all picture as the perfection of all that is gentle and fair? We might also object to some very equivocal drawing in the bosom and figure, and to the absurdity of clothing Ruth in a garment of the richest Tyrian dye. We can only account for the presence of such gems by supposing the name of Ruth to have been entirely an afterthought. The picture of 'Meg Merrilies and the Dying Snuggler,' No. 324, by the same artist, has been spoiled by the same anxiety to produce certain favourite effects in colour, which led to his clothing Ruth "in purple and in pall." The dying smuggler, with the crimson and green cloth thrown across his half-naked body, is a reflex of the colouring of the dead Christ in Titian's well-known picture of 'The Entombment,' but the soft and almost womanly texture of skin and absence of muscularity, which is true and beautiful in that picture, is here absurd. The other parts of the picture however, particularly the effect of the moonlight upon the snow at the open door, and the awe-struck figure of Harry Bertram peering into the vault, convey the grim and ghastly character of the scene with much effect. Mr. Lauder's other pictures are only noticeable for their richness of colour, of which he is a great master. In this respect his brother, Mr. James Eckford Lauder, follows closely in his footsteps, with a closeness, indeed, which occasionally amounts to servile imitation. Mr. Lauder should avoid this, more especially as his pictures show that he has original powers of no mean order. His 'Ailie Gourlay showing Lucy Ashton the Vision in the Mirror,' is a picture of great merit. In the face of Lucy Ashton we think the artist has failed. The expression is feeble and undefined. He has been more successful with that of Ailie Gourlay—in which the brute heartlessness of the hag is well expressed. The drapery of the figures and management of the light are highly artistic, and the figures in the mirror have a shadowy mystery about them, that might well appal a stronger mind than poor Lucy's. Inferior in power to this, but still displaying considerable knowledge of his Art, is the same artist's picture of 'Mariana,' No. 365. But we miss in this picture the poetical feeling which pervades the other; and here again the artist has failed in conveying any depth of expression to the face of the deserted Mariana. Are we right in supposing the face and neck of this picture unfinished?

M'Nee contributes two very pleasant pictures—"The Bathing Pool," No. 94, and "Burns and his First Love," No. 421: both of them characterized by the same truthfulness which is preserved in all this artist's pictures. He paints most closely after nature. In both these pictures you seem to see the play of the sunshine among the leaves, and their shadows fluttering to and fro upon the turf. The Association have bought the first of them. They would do well to secure the other. M'Nee has also some excellent portraits.

Harvey's only picture is so far beneath him, that we should be sorry to be forced to speak of it.

Of the pictures of the younger artists, that of 'Cain,' by Mr. James Archer, whose name we do not remember to have seen before, is, perhaps, the best. The tone of the picture is excellent, and reminds one of the works of Gaspar Poussin. No. 464, by the same artist, gives indications of an ambition of the right sort. We shall expect good things of him hereafter. In Alexander Christie's 'Oliver Cromwell,' No. 250, the figure of the Protector is full of character. We are not able to explain satisfactorily to ourselves where or how the other figures are standing. But for this defect, the picture, so far as it goes, is a good one, although looking too much like a mere portrait. We have seen and heard a great deal of commendation of Bonnar's 'Peden at the Grave of Richard Cameron,' No. 110. We confess we cannot discover its merits. A vast mass of iron-coloured sky and moorland, with a grim-visaged convict in ribbed stockings, sitting upon a knoll in one corner of the picture, and apparently suffering from some internal disorder—whether of mind and body is doubtful, though, from the dampness of the vicinity, most probably the latter—is not, in our notions of things, the best possible subject for a picture. The quotation in the catalogue tells us he is exclaiming, "Oh, to be wi' Richie!" We can only say, we wish he were. The same artist's picture, No. 438, may be 'Lady Margaret Bellenden in the Cottage of Mause Headrigg,' but it may as well be anything else, for any individuality of expression in the characters represented. 'David, Duke of Rothsay,' by James Drummond, No. 80, though rather brick-dustish in the colour, shows considerable powers of invention as well as execution, and is a great advance upon this artist's former works. Of all the young artists, however, none has made a more signal stride than Alexander Johnston, whose 'Wolf and the Lamb,' No. 330, is the most popular picture in the exhibition. It certainly is a very charming work—in tone and colouring unexceptionable, and managed with great delicacy of feeling. The conception is the same as that of Retzsch's 'Faust and Margaret in the Garden.' The treatment, however, is entirely different. The fault we find with the picture is, that the male figure has not enough of the wolf in him. He is not sufficiently a scoundrel. He has too much heart—a strange fault certainly—but still we think it is one. At the same time, had the artist infused more of Mephistophiles into this figure, he might have produced a picture truer to the title, but less beautiful in itself. This picture is, perhaps, the completest and least exceptionable in the rooms.—M'lan contributes a spirited picture of a 'Highland Whisky Still.' William Johnston, Gourlay Steele, Houston, and Blackburn have done nothing this year to merit particular notice; and it would be only "to chronicle small beer" were we to enumerate the other limners who have spoiled good canvas.

Our landscape painters this year have hardly maintained their reputation. M'Culloch's pictures are pleasing copies from nature—faultlessly true; but they exhibit none of the imaginative power which is necessary to produce a fine landscape. D. O. Hill's pictures have more of this quality, but they are by no means fine specimens of his powers. Montagu Stanley has produced a great number of pictures, all possessed of considerable merit, but wanting, to our eyes, both that truth of nature which is M'Culloch's forte, and the power of embodying a sentiment which D. O. Hill possesses in a great degree. Stanley, we should say, does not keep his eye sufficiently on nature. We are much pleased with J. C. Brown's landscapes, particularly a small one, No. 107, called 'The Mountain Tarn.' He will put his seniors to their mettle, if they do not take care. Crawford has some very pleasant landscapes and sea pieces, and M'Neill M'Leay revels among the Highland mountains and lochs as usual. If to his great power of representing nature, he could only add a little of what John Williet called "imagination," his pictures would be admirable indeed. Mason and Perigal, and Simson contribute several tolerable pictures. When the first of these acquires a greater power of finish, he will be among our best painters. He grapples boldly with nature, and never shuns a difficulty in detail. Charles Lees has produced one fine landscape—'A Moonlight View of the Church of San Giorgio, at Naples,'—a glowing, poetical picture.

As to the portraits, we presume, the parties for whom they were painted are satisfied with them, and that is the chief matter. Colvin Smith and Watson Gordon are, as usual, excellent. We observe a new name in this line, a Mr. James R. Swinton. It is a pity that none of his friends should have prevented his putting forward such a mass of execrable daubing as his full-length portrait of 'Mrs. Campbell, of Blythwood, and Child,' No. 13, in which every rule of colour and perspective is violated. Mr. Swinton seems to have his studies yet to begin, while he is, no doubt, fully satisfied that he has concluded them.

There are some admirable water-colour portraits by

Kenneth M'Leay, whose works appear to marked advantage even beside Sir William Ross's miniature of 'John Sobieski Stewart,' which is exhibited in the same room. There is a breadth and vigour in M'Leay's pictures, which, in our apprehension, place him above any miniature painter in this country. Mrs. Musgrave and Mr. Faed also contribute some graceful portraits. The other water-colour pictures present nothing remarkable.

The collection of sculpture is small, "but choicely good." Calder Marshall's 'Fountain Mirror' would charm a solitude. It is truly a gem of Art, and, of course, the Association never dream of purchasing it. Mr. Marshall's 'Head of Ophelia' is a rare piece of beauty, but it does not seem to us to realize the poet's idea—

"Oh heavens! Is't possible, a young maid's wits  
Should be as mortal as an old man's life!"

Next in excellence to these, is a marble 'Bust of a Child,' by Patrick Park, a work full of life and exquisitely cut.

It is possible we may have, in this hasty review, omitted to mention many pictures which others may think ought not to have been passed over in silence, and of which, had we space to go more into detail, we might have had something to say in commendation. But the line must be drawn somewhere, and we are of opinion that, in the criticism of Art a high standard should always be adopted. We tolerate no mediocrity in poetry, nor in romance. We neglect, and justly, a bungling doctor or an incapable lawyer. Who willingly listens to the drowsy morality of an imbecile priest? So should it be with Art, in even a more especial degree. No encouragement should be held out to moderate abilities. What may be a very graceful accomplishment in an amateur, is but a sorry stock in trade for one who is to make Art a profession.

We are daily called upon to remark, that in Art as well as in literature, this truth is forgotten; and the consequence is, that the public is overwhelmed with a profusion of mediocrity, amid which it is difficult to detect anything which is fitted to give an enduring satisfaction to the mind, or which bears upon itself the impress of immortality. If we had less cleverness, we should have more genius.

## ART-UNIONS:

### THEIR LEGALITY OR ILLEGALITY?

THIS question has been brought to something like an issue—"the general issue," for the matter is left pretty nearly where it was found. That "doctors differ" is an adage; and who has ever gone to law without discovering that lawyers differ also? We have before us two "OPINIONS"—and is it not indeed strange—although in an opposite sense from that conveyed by the couplet—is it not "Strange that such difference should be  
Twixt Tweedledum and Tweedledee?"

Both the consulting lawyers are learned pundits—each is on his way to "the Bench"; Mr. Sergeant Talfourd and Mr. Fitzroy Kelly, Q.C., are skilful and practised untwisters of knotty points. Yet let us see what these explainers of the law say upon the cases submitted to them. First, Mr. Sergeant Talfourd is questioned concerning the legality of Art-Unions; and has submitted to him the three prospectuses of three societies—i. e., No. 1. "The Art-Union of London;" No. 2. "The National Art-Union;" No. 3. "The Scheme of Mr. Boys."

\* The opinion of Mr. Sergeant Talfourd purports to have been taken by "the print-sellers and publishers of the metropolis," who believe that the many "Art-Unions," lately established in London and the provinces, are very prejudicial to their interests generally, and that they do not really contribute to the advancement of the Fine Arts as they profess. We may also be permitted to express our "belief." It is this—that the publishers are altogether mistaken in their narrow view of the subject. Such societies, at least extend and increase a desire to make Art an intellectual luxury. This is undeniable. And they may be assured that no plan could be devised so effectual for the *ultimate* benefit of publishers. It may, and we hope will, have the effect of diminishing the prices of prints—but it will as certainly lead to the issue of thousands, where heretofore hundreds would have been sufficient; thus, with an augmented sale, there will be an augmentation of profit. The publishers allege that they have assumed an attitude of hostility in self-defence. This is explicitly stated by Mr. Boys. They imagine that Art-Unions, as publishers of prints, interfere materially with their business, and that they are, consequently, not only justified, but imperatively called upon by duty to themselves, to oppose them; but such an argument would have equal weight against any public improvement; and the current, in our age, has set strongly in against monopolies of every description. On the same principle—and with infinitely greater force—the publishers will exclaim against the invention of the electrotpe. A similar outcry has indeed been raised against every new process by which Art might render any desired acquisition easier of procurement.

The Polytechnic Union was not included—why we cannot say; but it differs in no essential feature from the others. Upon these the learned sergeant decides.\* He is of opinion—first,

"That all the schemes are lotteries, or such distributions by chance, as are in direct violation of the Statutes 12 Geo. II., c. 28, s. 1, and 42 Geo. III., c. 119, s. 2." He adds, "Having referred not only to those statutes, but to others *in pari motu* with them, from 10 and 11 Wm. III., c. 17, downwards, I think that a scheme by which any valuable things, whether money, lands, or chattels, are offered as prizes, to be determined by lot or other machinery of chance, among parties who obtain a right to share in the chance by payment of money, is in the nature of a lottery, and within the penalties of the statutes." He adds—

"Secondly and Thirdly. I am, therefore, of opinion, that the managers and projectors, and the printers and publishers of these schemes, are liable to the penalties inflicted by 12 Geo. II., c. 28, s. 1 and 4, and 42 Geo. III., c. 119, s. 2 and 5; and that the parties subscribing to, or purchasing shares in, the proposed distributions, and who proceed to take their chances of prizes at the drawing of the lots, are liable to the penalties of 12 Geo. II., c. 28, s. 3. But although such, in my judgment, are the respective liabilities of these parties, I think these liabilities—except so far as a forfeiture of the prizes may be obtained by information—can only be enforced by the Attorney-General; for by 46 Geo. III., c. 148, s. 59, "all pecuniary penalties for an offence against any law touching or concerning lotteries, are directed to be applied to the use of the Crown; and all proceedings to recover or enforce them are prohibited, and made liable to be stayed, unless prosecuted in the name of the Attorney-General, in the Court of Exchequer. There is, however, a subsequent Act (6 and 7 Wm. IV., c. 66), entitled, "An Act to prevent the advertising of foreign and illegal lotteries," whereby it is enacted, that "if any person shall print or publish, or cause to be printed or published, any advertisement or other notice, of or relating to the drawing of or intended drawing of any foreign lottery, or of any lottery not authorized by some Act of Parliament; or if any person shall print or publish, or cause to be printed or published any advertisement or notice concerning or in any manner relating to any such lottery, or any ticket, chance, or share thereof or therein," the offender shall forfeit £50, to be recovered with costs in any of the superior courts, one moiety to the use of the Crown, and the other to the informer. Under this Act, I think any party, who can be proved to have published, or ordered the publication, of either of the three prospectuses before me, is liable to the penalty there created, at the suit of any person; so that each act of publication is made only the ground of one penalty. There will, no doubt, be a strong disinclination to apply the acts against lotteries to associations for the advancement of Art; but I think if they have a valid ground of exemption from the penal restrictions of the law, they should seek it from the legislature, whence only, in my judgment, it can be effectually procured."

So far this is conclusive; but let us have the dictum of other gentlemen "learned in the law," Mr. Fitzroy Kelly, Q.C., and Mr. Charles Clark, barrister, are questioned by the proprietors of the "Polytechnic Union." Both these authorities are high, fully on a par with that of Mr. Sergeant Talfourd. Their opinion is as follows:—

"Two questions have been submitted to consideration; first, whether the Royal Polytechnic Union of London, as described in its prospectus, is 'in violation of the several statutes against lotteries and gaming.' Secondly, if this Union is in violation of the statutes, then to what legal proceedings are the members liable? A careful review of all the statutes passed upon the subjects of gaming and lotteries, leads to the conclusion that it was the intention of the legislature to protect the unwary against fraudulent schemes of gambling set on foot by interested persons, who, offering what appeared to be the chance of tempting advantages to subscribers, such as should, in a few instances, give a great return for a small outlay, encouraged a spirit of gambling, but who yet arranged their whole schemes in such a manner, that though some subscribers might benefit to a large amount, most of them would lose all, or nearly all, that they subscribed, while the schemes themselves, even if all the nominal prizes were fairly distributed, would inevitably obtain a very considerable profit. In such cases there were two parties, having

\* The learned sergeant draws a marked moral, but no legal, distinction, between the Art-Union of London and societies established for private and personal profit. The following are his words:—"Societies like 'The Art-Union,' having for their direct object the encouragement of Art, were, doubtless, not contemplated by the Legislature, when providing, by repeated and cumulative enactments, against the temptations of gaming;—and possibly the good resulting from that encouragement, may counterveil the evil of the means adopted; but it cannot be concealed, that the lovers of Art have, in such a plan, condescended to borrow aid from the love of chance, the principle of gaming, which it was the object of the law to repress;—and I do not think that the end can, in the construction of the statutes, be holden to justify the means."

opposite interests, the schemers themselves on the one hand, the public on the other: the benefit to the former was certain, it was to be obtained at the cost of the latter. The Legislature has declared all such schemes, no matter by what means they are carried into effect, to be illegal. The statutes in which the Legislature has thus declared its intention do not apply to cases where no two parties with such conflicting and irreconcilable interests exist. A scheme such as that of the Royal Polytechnic Union does not appear ever to have been contemplated by the Legislature—certainly has never been prohibited by it in terms. If three men, each of whom was unable to purchase a certain picture, should agree together to subscribe the amount required for its purchase, and should further agree that, when purchased, they would determine by lot which of them should become the possessor of the picture, or which of them should obtain the credit of presenting it to a public institution, they might do so without incurring any of the penalties directed against those who infringe the provisions of the Lottery Acts. It makes no difference, in principle, that the subscribers, instead of three men are thirty thousand, nor that the purchase, instead of being confined to one picture, is made to extend to hundreds; it is the absence of the conflicting interests of schemers and of the public, and therefore the absence of any necessity for legislative protection, that renders the statutes inapplicable.

"The answer to the first question, therefore, is,—That the Royal Polytechnic Union, as its means and objects are described in its prospectus, is not in violation of the several statutes against lotteries and gaming—it consequently becomes unnecessary to answer the other question; but we may observe that, even if the letter of the statutes did extend to the Royal Polytechnic Union, we are satisfied that no proceedings against them within the control of the law officers of the Crown would be permitted."

For ourselves, we do not hesitate to express our opinion—and as two learned brothers so widely differ, we feel justified in doing so—that these societies infringe neither the spirit nor the letter of the law. But we take higher ground than either of these learned gentlemen have taken. We contend that they are in no degree lotteries, although certain contingent advantages are left to chance. That each society is neither more nor less than a JOINT-STOCK COMPANY for the publication of prints. They give, in every instance, twenty-one shillings in change for a guinea; in other words, they supply to each subscriber a print of the character and value of that for which one guinea—at least—has been always charged by an ordinary publisher; and the profit thus accruing by publishing for themselves, they divide among themselves, not in equal proportions, but (by consent previously obtained of the whole company) into "heaps" of various sizes; and determine by drawing (as the most convenient mode) to whom among the company each of these several "heaps" shall belong. The only feature in common with lotteries is the mode of dividing the profits made; but the essential difference consists in the fact that no risk of money is incurred; each contributor to the joint stock has the full value of the sum he subscribes; the profit that would have accrued to the publisher may by chance come to him, but at all events he will have lost nothing whatever, being not a penny loser if he gain nothing but his print for his guinea, or his fifty prints, if he think proper to subscribe fifty guineas.\*

We are perfectly willing to test the accuracy of our views by subscribing to any Art-Union, or by advertising the prospectus of any; although the case made out certainly applies more strongly to the Art-Union of London—and other societies having no view to individual gain—than it does to establishments devised for personal profit: more, yet not much more strongly, for all these institutions give the guinea's worth, or contract to give it; before the guinea is paid; and all profess to make over to the subscribers the profits realized

by the trade—deducting certain sums to cover incidental and necessary expenses.

That such institutions were not contemplated by the acts of the 12 Geo. II., c. 28, s. 1, and 42 Geo. III., c. 119, s. 2, or by the 46 Geo. III., c. 148, s. 59, 6 and 7 Wm. IV., c. 66—seems to be admitted, on all hands. These acts were passed to supply salutary checks to a spirit of gambling (the principle is well laid down by Mr. Fitzroy Kelly), and were in no degree designed to operate against a wholesome mode of distributing certain valuable articles, where there was literally no risk and no sacrifice. That they are not opposed to the spirit of the law Mr. Sergeant Talfourd himself thinks; although he considers they are so managed as to bring them within the letter of the law; and he evidently opines that no prosecution would follow the offence—"There will no doubt," he says, "be a strong disinclination to apply the acts against lotteries to associations for the advancement of Art." His addenda, for so it seems to us, about bringing them within the grasp of the common informer—by the 6 and 7 Wm. IV., ch. 66, amounts to nothing. Mr. Sergeant Talfourd indeed thinks that, "Under this act any party, who can be proved to have published, or ordered the publication, of either of the three prospectuses before him, is liable to the penalty there created (viz. £50), at the suit of any person; so that each act of publication is made only the ground of one penalty." It is by no means unlikely that one of these prospectuses will be published in our journal—we shall print it with our eyes open, and defy the informer.

The *Athenæum*, we perceive, takes an opposite view of the subject, and considers "discretion the better part of valour." We find this passage in that journal of March the 18th:—"Having read over again the passages which we formerly quoted from the several Acts of Parliament relating to Lotteries, we will take especial care that no informer shall have it in his power to try the question at our expense." It is somewhat singular that the very number which contained this announcement should have contained, also, an advertisement of the London Art-Union, which, according to the opinion here given, might have enabled "any informer to try the question at the expense" of the *Athenæum*. We dare swear, however, that no informer will do anything of the kind; and we might be equally positive in opinion, that the proprietors of the *Athenæum* know they incur no more risk of a prosecution in advertising the Art-Union of London than they do in advertising Mr. Bielefeld's 'Frames for the Saint's Day.' The hostility of the *Athenæum* to all projects of the kind is certainly a monomania—evidence of which would be of vast importance in case its editor should be tried for shooting a Prime Minister, and would secure an acquittal if the said Prime Minister could be shown to have paid his guinea into the funds of any one of the "societies." He is absolutely raving whenever his pen is dealing with the subject—mixing up hams and pictures, prints and little-goes, bronzes and plum-cakes, prizes and penalties, in one heterogeneous mass, and frightening himself, if not "the isle, from its propriety." The course adopted by the *Athenæum*, all along, has savoured indeed more of private spleen than of public duty; and the feeling manifested throughout has been anything but creditable. This is greatly to be deplored. If the source of these societies has been impure, the proper way to purify it has not been taken. If they are injurious to Art, the cause of injury is left unexplained. If such societies ought to be eradicated as mischievous, they are not to be destroyed by unmeaning ridicule, bitter sarcasm, and utterly groundless insinuations. The avowed object of the *Athenæum* is so to confuse "Art-Unions, Lotteries, and Little-goes" (we are quoting the title of a paper in the journal of March the 4th) in the public sight, that one shall be thought just as deleterious as the other; to establish (we quote from the same paper) "the identity of Art-Unions and Little-goes."—"The moral distinction between the projects is obvious enough," says the writer, "but we suspected from the first there was no legal difference;" and so he proceeds to argue that "the nuisances will now be abated," for "we cannot suppose that the parties will set the law at defiance, and hazard the penalties." This was on the 4th of March. On the 24th of March we find the "nuisance" triumphantly progressing to a

public meeting; courting subscribers; advertising its designs; setting, in short, "the law at defiance, and hazarding the penalties"—being actually advised so to do by the highest legal authority in the realm—the Lord Chancellor of Ireland, who, according to the following statement—which we copy from a Dublin newspaper, and which we know to be substantially correct—happens to interpret the law very differently from the "legal friend" at "the elbow" of the *Athenæum*.

"A short time ago Sir Edward Sugden, the present High Chancellor of Ireland, was at the Royal Irish Institution, examining some pictures about to be sold by auction. Mr. Stewart Blacker, the honorary secretary of the Irish Art-Union, being in the room at the same time, spoke to him relative to the assumed illegality of Art-Unions, when Sir Edward stated his opinion that the laws which have been referred to did not in any way apply to such societies. Mr. Blacker having expressed his gratification at hearing this, Sir Edward said 'If you like, I will give you that opinion in writing,' and, taking a pen, wrote an order on the Royal Bank to pay the Art-Union three guineas annually until further notice: thus giving his opinion in the most satisfactory manner, by joining the society.

If the *Athenæum* had drawn a distinction between Societies instituted for private gain and those which could have been actuated by no view but one that is generous and honourable, the journal might have assumed at least a show of liberality. But it has seen no difference, or, at all events, explained none; having treated the Committee of the Art-Union of London with quite as little courtesy as the party it styles the Polypicnic, and the managers of the project it decries as one for the sale of cast-off prints. This is most unjust; and we lament to say that a considerable portion of the London press has followed so unfair an example. Whatever suspicions may exist as to the motives, plans, and results of private bodies, striving for their own advantage, and actuated mainly, if not solely, by a desire of gain, no suspicion can be rightly directed against the Committee of the Art-Union of London. That body is composed of gentlemen of high standing and unsullied reputations—men who might be safely trusted with infinitely greater powers than they have assumed; for, in reality, their "powers" amount to nothing. They have no interest whatever in augmenting the list of subscribers; no patronage whatever to accord; no possibility of personal profit, honour, or distinction, by the bestowment of labour inconceivably large. The attacks that have been made upon them are disgraceful to the Metropolitan press. Our only astonishment is that they have not long since resigned their self-imposed duties in disgust that their exertions should have been either so shamefully misunderstood or so scandalously misrepresented. This view of the matter is strengthened by the fact that, during the five years they have been acting, the shadow of a charge of wrong-doing has never been advanced against them. Their proceedings have been closely and jealously watched throughout, yet no solitary case of partiality, favouritism, or injustice, has ever been discovered upon which to ground an excuse for hostility, or to urge as a reason for depriving them of the confidence of the public and the profession—the only recompense they have asked for or can, under any circumstances, receive. We say, without hesitation, that no body of men ever existed who were actuated by purer motives, or who have worked out a great plan with less liability to censure.

It is scarcely necessary for us to add that we are as independent of the "Art-Union of London" as the *Athenæum*, or any other journal; but we have had better opportunities of watching its progress, of ascertaining the mode in which it works, and of arriving at just opinions as to its ultimate results.

But we must resume the argument from which we have extensively digressed.

Let us examine the several acts, now on our table, upon which Mr. Sergeant Talfourd founds his "opinion" (always bearing in mind that Lotteries were authorized by the legislature, and a large income derived from them, long subsequent to the 46 George III.). The 12 Geo. II. is entitled "An Act for the more effectual preventing of excessive and deceitful gaming." The preamble recites the Act 10 and 11 William III., by which it is declared that "several evil-disposed persons having set up many unlawful games, called Lotteries, and had thereby most unjustly and fraudulently gotten to themselves great sums of money

\* It is vain to assert that the prints are not value for a guinea. Some of them certainly do not please us, and we would give very little for them. But we may say the same of many prints issued by publishers. On the other hand, may not this argument be met by the fact, that the print issued by the Irish Art-Union is worth more than the guinea paid for it? Nay, we understand that a good impression will find many purchasers at the price of three guineas. Sure we are that every copy of 'The Convalescent'—engraving by Doo, for the Art-Union of London, from Mulready's famous picture—will be of thrice the value of the guinea subscribed. It is sufficient to bear out our view that each of the engravings issued by Art-Unions have been of the size and character for which one guinea, at least, has been always charged by publishing houses.

from unwary persons, to the utter ruin and impoverishment of many families," such lotteries are "common and public nuisances." It recites also the Acts 9th Queen Anne and 8th George I., for the suppression of "unlawful lotteries." Yet both these acts were expressly passed "for raising money by way of Lottery." The lotteries they, and the 12th Geo. II. were designed to suppress, were "lotteries not sanctioned by law," the prizes in which were to be divided among the adventurers, "by the chances of the prizes in some public lottery established or allowed by act of Parliament," i. e., the prizes and blanks in the illegal lotteries were to be determined by the same numbers as the prizes and blanks in some legal lottery; in other words, it was a spirit of gambling that was to be suppressed; and so the act (12 Geo. II.) is styled "An Act for the more effectual preventing of excessive and deceitful gaming." The act of Geo. I. visited offenders with a heavy penalty—a forfeiture of £500 for every such offence. The act of 12 Geo. II. reduced that penalty to £200. But it is clear that the act 12 Geo. II. neither contemplated nor specified any such lotteries as those we are considering; and,

It is difficult to conceive how Mr. Sergeant Talfourd could have arrived at the conclusion that under this act "parties subscribing to, or purchasing shares in, the proposed distributions are liable to the penalties."

We proceed to consider the 42 Geo. III. It is entitled "An Act to suppress certain games and lotteries not authorized by law." By it all games or lotteries called Little-goes—"by which great sums of money had been fraudulently obtained from servants, children, and unwary persons, to the great impoverishment and utter ruin of many families"—were declared public nuisances; and it provides that "every person so offending shall be deemed a rogue and vagabond," and "be punishable as such rogue and vagabond accordingly." It confers a power upon all justices, on information, to break open, either by day or night, the doors of places where such offences shall have been committed, and it inflicts a penalty of £100 or six months' imprisonment.

We are still more at a loss to conceive how Mr. Sergeant Talfourd could have arrived at the conclusion that, under this act, "parties subscribing to, or purchasing shares in, the proposed distribution, are liable to the penalties."

The 46 Geo. III. is entitled, "An Act for granting to his Majesty a sum of money, to be raised by lotteries," and bears little upon this subject, except that, inasmuch as the former acts quoted, adjudged certain portions of the penalties to informers, this act provides that "all pecuniary penalties for an offence against any law touching or concerning Lotteries," are to be applied to the use of the Crown; and all proceedings to recover or enforce them are prohibited, and made liable to be stayed, unless prosecuted in the name of the Attorney-General, in the Court of Exchequer.

But there is another Act—the 6th and 7th William IV.—upon which the learned sergeant mainly grounds his case. This Act was passed in 1835—the very year, be it noted, preceding that (1836) when the formation of Art-Unions was deliberately recommended by the House of Commons, as we shall presently show. This Act is entitled, "An Act to prevent the advertising of foreign and other illegal lotteries." It is so brief that we may copy it entire. It is as follows:—

"Whereas, the laws in force are insufficient to prevent the advertising of foreign and other illegal lotteries in this kingdom, and it is expedient to make further provision for that purpose: Be it therefore enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that from and after the passing of this act, if any person shall print or publish, or cause to be printed or published, any advertisement or other notice of or for the sale, of any ticket, or tickets, chance or chances, or of any share or shares of any ticket or tickets, chance or chances, or of any such lottery or lotteries, as aforesaid, or any advertisement or notice concerning or in any manner relating to any such lottery or lotteries, or any ticket, chance or share, tickets, chances, or shares, thereof or therein; every person so offending shall for every such offence forfeit the sum of fifty pounds, to be recovered with full costs of suit, by action of debt, bill, plaint, or information, in any of his Majesty's Courts of Record, in Westminster or Dublin, respectively, or in the Court of Session in Scotland; one moiety thereof to

the use of his Majesty, his heirs, and successors, and the other moiety thereof to the use of the person who shall inform or sue for the same."

No one can read this Act without perceiving it to be merely "an act to prevent the ADVERTISING of foreign and other illegal lotteries." It says nothing whatsoever of the subscribers to any lotteries, or of the proprietors of them—unless they are also *advertisers* of them. Unless, therefore, Art-Unions are made "illegal" by previous acts, this act bears upon them no more than do the acts for preventing cruelty to animals. If then, they are not amenable to the 12th George II., and the 42nd George III., they are surely not amenable to this. We shall best test the sincerity of our conviction of the view we have taken by advertising the Art-Unions of Germany, the accredited agent for which is Mr. H. Hering, of 153, Regent-street.

One fact, then, is indisputable and is admitted—as it must be admitted—by Mr. Sergeant Talfourd, that SUBSCRIBERS to an Art-Union can be prosecuted only by the Attorney-General.

Is it necessary to point out to the intelligent reader the purpose of these enactments? Surely not. Unless he be a lawyer, "fee'd"—legitimately, of course—

"to make the worse appear  
The better reason,"

can he hesitate to perceive that the law interposed between the sharper and the victim; between "evil-disposed persons" (we quote the 12th George II.), "who have set up many unlawful games called lotteries," and the "children and servants" (again we quote it) "of several gentlemen, traders, and merchants, and other unwary persons;" between those "who" (we quote it again) "have most unjustly and fraudulently gotten to themselves great sums of money," and those who had been "the utter ruin and impoverishment of their families?"

In order that no doubt upon the subject should exist, when time had removed the fears of evil-doers, and the system had revived in all its dangerous strength, the Act of the 42nd George III., usually styled the "Little-go Act," was passed.

Of the design and purport of these enactments, then, there can be no question; but those who contend for the illegality of Art-Unions are content to stand upon the tottering and unstable ground supplied to them by the few words, "or any other lottery whatever, not authorized by Parliament." This occurs in the two acts referred to; but these arguers have altogether lost sight of the fact, that the passage is introduced merely as a provision against CASES OF A LIKE CHARACTER which may not have been distinctly laid down. In the Act 42 George III., the sentence follows immediately after an enumeration of the modes by which Little-goes are conducted; and in the 12 George II., the games of "the Ace of Hearts, Pharoah, Bassot and Hazard," are especially mentioned, as classing among lotteries which are "common and public nuisances"—and it is here added, "Whereas, in order to suppress all such lotteries," &c.—i. e., lotteries expressly characterized as deceiving "unwary persons," and "utterly ruining and impoverishing many families."

There are no precedents by which to determine a possible case of prosecution; and, if one were tried, it would be tried for the first time. Of the result of any such trial we do not entertain the remotest doubt; and we hereby, deliberately and advisedly, challenge, to a legal test of the matter, any person or party who, considering either the subscriber to, or the advertiser of, one of these Art-Unions alleged to be "lotteries," within the meaning of the Act, may look upon himself or themselves as aggrieved or injured by their establishment.

SURE WE ARE THAT THE CHALLENGE WILL NOT BE ACCEPTED.

At the outset of our remarks we assumed high ground; and that ground we are not disposed to relinquish. We maintain that Art-Union Societies are NOT ILLEGAL, inasmuch as they are NOT LOTTERIES; that they are not lotteries, inasmuch as they involve no hazard whatever, stimulate no spirit of gambling, and can prejudice neither the mind nor property of any subscriber—in a word,

Although there is a chance, there is NO RISK! But if we did admit—which assuredly we do not—that they are illegal according to the strict letter of the law, and the Attorney-General might

—if he saw fit so to do—prosecute the projectors, subscribers, or advertisers, by whom they are promoted, it will be obvious to all thinking men that he will do nothing of the kind. Such a step would be not only highly prejudicial to the interests of the Arts and the country, but directly opposed to the spirit of the age, and the explicitly declared wish of the House of Commons, by whose solemnly recorded recommendation such institutions were, if not established, augmented and promoted in this kingdom.\*

It is certain that the alarm created by the industriously-circulated statement that Art-Unions are illegal, and the carefully-studied rumour that each subscriber subjected himself to a penalty—such penalty to be enforced by any common informer—has had the effect of inducing many who intended to subscribe, to hold back; and we have little doubt that the list of "the Art-Union of London" will be materially affected by it; for unfortunately the Committee had arranged to close that list before the alarm had sufficiently subsided. This evil is greatly to be deplored.

By this time, however, the public are beginning to feel that the "OPINION" of Mr. Sergeant Talfourd is worth nothing, even to the publishers, who bought and paid for it; and within a very short period we have no doubt the effect of the three Acts quoted, including that terrible one of the 6th and 7th Wm. IV., which threatens vengeance upon ADVERTISERS, will neither frighten nor injure any person—save and except the proprietor of the *Athenæum*.

#### VARIETIES.

ROYAL COMMISSION OF FINE ARTS.—It will be perceived, by an advertisement in our first page, that the Cartoons for competition must be sent to Westminster Hall, during the first week of June—and that in Westminster Hall they will be publicly exhibited. It has, no doubt, been found impossible to find a place more desirable; for, as may be supposed, the drawings, many of which will be of huge size, will require immense space; and we are assured that this point has been duly weighed and considered. But, certainly, the light in the old Hall will not be such as to exhibit many of the competitors to advantage; and, as usual, there will be terrible complaints about the "hanging." The number anticipated is about 70; and, if each averages 12 feet (the minimum is 10 feet) in length, no less than 720 feet of wall will be required. Candidates are required to send in with their contributions "sealed letters containing their names." This is all very well, as a matter of form; but the subjects in hand, by all the principal competitors, are even now as well known as London-bridge. We might ourselves undertake to chalk the producers' names upon the corners of 50 out of the 70. The "Judges" are appointed. They consist of Sir Robert Peel, Bart.; the Marquis of Lansdowne; and Samuel Rogers, Esq.; and Sir R. Westmacott, R.A.; R. Cook, Esq., R.A.; and W. Etty, Esq., R.A. It is stated that "Sir M. A. Shee, P.R.A., and Sir A. Calcott, R.A.,

\* In 1836, a committee of the House of Commons was appointed "to inquire into the best means of extending a knowledge of the Arts and the principles of design among the people (especially the manufacturing population) of the country; also to inquire into the constitution, management, and EFFECTS OF INSTITUTIONS connected with the Arts."

The committee accordingly reported; and their report contains the following remarkable passage, to which we beg the particular attention of the reader:—

"Among exhibitions connected with the encouragement of Art, the attention of your committee has been called to the institutions established in Germany under the name of 'Kunst Vereine' (Art-Unions), and now becoming prevalent in this country. These associations for the purchase of pictures to be distributed by lot form one of the many instances in the present age of the advantages of combination. The smallness of the contribution required brings together a large mass of subscribers, many of whom, without such a system of association, would never have been patrons of the Arts."

Be it remembered that this was not the opinion of a single member, influenced by momentary feeling, but is that of a committee of fifteen members of the legislature—solemnly recorded and deliberately adopted as a basis of legislation by the House of Commons.

were asked, but declined—the latter on the score of ill health;” the former, cause not stated.

**THE ROYAL ACADEMY.**—The Professor of Painting—H. Howard, Esq., R.A.—has delivered three of his course of lectures. As we have intimated, finding it impossible to lay before our readers anything like a sufficient and satisfactory abstract of these lectures—and feeling that they would be materially injured by compression into our limited space—we prefer referring the reader to the *Athenæum*, where they will be found very fully and ably reported.

**THE VAN EYCK** will be added to the national collection in the course of a few days. The sum of £600 was paid for it; it will be a valuable addition to the gallery, especially to the student, who will have excellent opportunities of guessing at his “medium”—concerning which we, and others, have speculated so much—for the picture is said to be “in an almost immaculate condition.”

**ART-UNION OF LONDON.—PRIZE FOR TEN DESIGNS.**—In Oct. last the committee of the Art-Union of London advertised for a consecutive series of ten designs in outline, 12 inches by 8 inches, illustrative of some epoch in British history, or of the work of some English author. Simplicity of composition, beauty of form, and good drawing were the qualities desired. Sixty pounds were offered as a premium, with the understanding that if the selected compositions were engraved, the artist would receive a further remuneration for superintending the execution of them. The 25th of March was the day named for receiving them, and we are gratified at being able to say, that by that date THIRTY SETS OF DESIGNS, each consisting of ten or more drawings (in the whole, therefore, more than three hundred,) were sent in. There are six sets from Milton's “Paradise Lost,” four from “Comus,” three from the “Pilgrim's Progress,” three from “Early British History,” two from Shelley's “Prometheus,” and two from the “Fairy Queen;” the remainder of the subjects are, “Griselda,” “Polyphemus,” “The Rise and Progress of Religion in England,” “The First Psalm,” Scripture Subjects, “Ode to the Passions,” “The Tempest,” Scenes from Shakspeare, “Alexander's Feast,” and “Vita Æli-fredi.” The majority of the drawings have very considerable merit, and many of them are exceedingly beautiful. Without going into particulars, which the lateness of the date prevents, we would especially mention, as amongst the best, a series from the “Pilgrim's Progress,” marked with a lamp; “Prometheus Unbound,” marked with a triangle; two sets from “Comus,” one marked as the last, and the other with an S. within a C.; “Griselda,” “Polyphemus,” “The Rise and Progress of Religion in England,” and a set from the “Tempest,” marked with a star within a square: any one of which would form a most interesting publication, honourable alike to the artist and the Society. The committee will not decide until the 4th of this month. We shall look to their decision and its results with considerable anxiety, feeling assured that it will give general satisfaction.

**THE ELECTROTYPE.**—Although we propose in our next number to give a detailed history of the new invention, with all the information we can collect on the subject, we have it now in our power to communicate its entire and perfect success—so far, that is to say, as concerns the multiplying copies of an engraving. We have seen two of the Art-Union prints—one from the original plate, the other from the electrotyped facsimile. It is impossible to distinguish the one from the other; the closest scrutiny, with the aid of a powerful magnifier, leaves it impossible to determine “which is which.” Such is the result, not alone of our own comparatively limited experience; but to our knowledge (we have the fact on the safest authority) one of the best engravers of the age could not only not perceive any difference, but actually selected as the one he believed to have been from the original plate

the one that was taken from the electrotype. The only question now to be resolved concerns the number of good impressions that may be taken from the plate. We entertain little apprehension on this score; the impression we saw was after about 100: but, as by the end of next month the result will be no longer an “opinion,” we postpone our final “report” till then.

**BUST OF MISS HELEN FAUCIT.**—We have been rarely more gratified by any work of Art than by a bust which Mr. Foley has just completed of this accomplished actress. We have frequently observed the play and power of Miss Faucit's features, which, when in repose, have an expression of sadness, deepened almost into sorrow, as if the young face had a premature acquaintance with the hard ways of thought and knowledge, supposed to belong exclusively to riper years. Mr. Foley has not only preserved the likeness, but managed to impart a happy and yet thoughtful expression to the countenance—one of those which, though seen but once, is never forgotten. Miss Faucit's hair grows low upon her forehead, but the forehead, in reality, is full and expansive—a noble brow, and a deep thoughtful eye—which Mr. Foley has compelled his marble to express. He has managed the closed mouth and dimpled chin to admiration, and the disposal of the hair adds considerably to the beauty of the composition. He has in fact, in this instance, done with the chaste marble what Lawrence did on canvass—he has given the ideal of the real—without trick or seeming effort; and we sincerely congratulate him on a most perfect triumph.

**NEW HOUSES OF PARLIAMENT.**—Those who have not been over the works, can form no idea of the careful and revised study bestowed on every part of the design—the richness of the detail, and the beauty of the execution. What will be the general effect of the River-façade, as seen either from Westminster-bridge or the opposite shore, can hardly be judged, in the present unfinished and encumbered state of the building; but there can be little doubt that, viewed from the terrace, it will be highly satisfactory, whether considered as a whole, or with regard to particular portions. Most certainly it will be found to bear the minutest examination, for the details leave nothing to be desired, either as regards design or execution. Some of them are exceedingly rich in point of sculptured decoration—a species of it which is rarely suffered to appear at all in our modern Gothic buildings, or, if at all, as mere patches, and as a reproach to the parsimony shown in other respects. Some niches, with figures of ancient sovereigns, are in a style that would perhaps be thought too prodigal even in a mere fancy design. The tracery of the window-heads is not only very beautiful in itself, but also remarkable for the head of each window being not jointed together, but carved out of a single piece of stone—a mode which, while it affords proof of the great skill in workmanship now attained, will be attended with far greater durability than that hitherto practised. *The Tower, par excellence*, for there will be about 13 altogether, has been commenced, and is already several feet above the ground, although it will be yet sometime ere its lower part or the royal entrance porch will plainly show itself, since the arches will be 60ft. high. The central octagon hall (60ft. in diameter) has also been begun, but is not yet sufficiently advanced to enable us to judge at all what it will be. We question whether, for architectural beauty, it will at all surpass the vestibule (36ft. square) in the centre of the principal floor of the river front, which, although in a very unfinished state, there being, at present, no other floor than a few planks to walk upon, is a most exquisite architectural bit—all the more delightful, because we can safely take it as a promise of other merits and beauties which do not yet show themselves. One great excellence in all Barry's designs and buildings is that, let the particular style be what it may, they

are always all of a piece and consistent: nothing in them is passed over as of comparatively little importance. He always seems to accomplish whatever he aims at; which may, perhaps, be owing to his never aiming at more than can properly be accomplished under the circumstances of the particular case. And herein, if not in everything else, others might profit by his example. That they would do so is greatly to be wished, for then we should less frequently be offended by that mixture of parsimony and ostentation, which is, at least hitherto has been, one of the besetting sins of our modern architecture. As regards the “New Houses,” we suspect they will put us out of conceit with a good many other public edifices, and will provoke a good many comparisons not at all to the advantage of Windsor Castle, which we now think was rebuilt and improved a score of years sooner than it ought to have been.

**LINCOLN'S-INN.**—The building for the new dining-hall and library is about to be commenced forthwith on a site at the south-west angle of the garden, so that its west front, or side, will come upon the terrace overlooking Lincoln's-Inn-fields, and its south front, or that of the hall, will be towards “New-square.” The style adopted by the architect (Mr. Hardwick) is that of the latest Tudor, previous to the corruptions introduced into it by what is called Elizabethan; and will, therefore, resemble that of the older parts of Hampton Court. The materials also will be similar, viz., red brick, interlaced with darker glazed bricks, and with stone quoins and dressings; thereby producing both a good and characteristic effect as to colour, very greatly superior to that attending a mixture of either white or yellow brick with stone. The general plan of the building will run north and south, but not in a formal unbroken line; for the library at the north end will be placed transversely to the hall and other parts, in the direction of east and west, with an oriel and gable in each of those fronts, and three windows towards the north. The dimensions of this apartment will be 80ft. by 40ft., and 48ft. high; those of the dining-hall 120ft. by 45ft., and 54ft. high; and both will have open timber roofs, with carved beams, &c. Between these two principal portions of the general plan, there will be an intermediate one consisting of a corridor of communication, on the east side of which will be a council-room, and on the west a drawing-room, or benchers'-room. Thus there will be a good deal of contrast and play in the exterior, and also of variety of outline, owing to differences as to height in the roof, and to the gables being turned in different directions. That over the south end of the hall will be flanked by two turrets, between which will be a single large window, of “perpendicular” character. There can be no doubt that the whole will be a very great improvement, and will help to redeem the architectural credit of Lincoln's-Inn, although it is also likely to render the modern “gothicizings” in some of the buildings there still more offensive than they are at present.

**ROYAL INSTITUTE OF ARCHITECTS.**—The principal papers read at the last three meetings of the Institute were, on Church Building, by Mr. G. Godwin; on the Walhalla, near Munich, by Mr. Woolley; on the Principles of Architecture as laid down by Vitruvius, by Mr. W. Pocock; on the Holy Trinity Church, Hull, by Mr. Granville; on the Chapter House of Salisbury Cathedral, by Mr. T. Wyatt; and on a double spiral staircase at the Church of St. Editha, Tamworth, by Mr. B. Ferrey. Mr. Godwin's paper was an exposition of the present views on Church Architecture, as propounded by the Cambridge Camden Society; and as the subject is just now exciting some attention, it has been printed in several of the journals. Mr. Pocock's paper was in defence of Vitruvius, whose orthodoxy has been of late years questioned by Mr. Hosking and others. That we owe

much to Vitruvius there is no doubt; nevertheless, the study of that author alone would do but little towards making an architect. The investigation of the Holy Trinity Church at Hull, served to prove the use of brick buildings in England as early as the reign of Edward I., instead of Richard II., as supposed. From Mr. Wyatt's communication it appeared that the dean and chapter are about to restore the chapter-house at Salisbury, which is now in a bad state of repair. It is to be hoped they will not retain the present flat roof, which analogy shows cannot be original, but construct one of high pitch, in accordance with the spirit of the remainder of the building. Medals have been awarded to Mr. F. Saunders and Mr. Papworth, for Essays on the Synchronism of Architecture, and to Mr. A. Johnson for the design for a "Princely Palace," as described by Bacon.

"BARONIAL HALLS OF ENGLAND."—An advertisement in our journal announces a new illustrated work under this title—to consist of a series of prints, chiefly in lithotint, from the pencils of Harding, Pyne, Muller, and others, and accompanied by letter-press descriptions, by the Editor, S. C. Hall, F.S.A. We may, perhaps, be permitted to direct to this subject the attention of our artist friends in the Provinces. Although books, and, to some extent, practical knowledge may enable the editor to work out his plan, there are scattered throughout the country vast treasures, of the existence of which he cannot be aware; and our object in this brief notice is to state that he will feel much indebted to any artist or amateur who will point out for inquiry and examination such structures in their several neighbourhoods as they may consider it desirable to make him acquainted with. We feel that we need offer no apology for the introduction of this paragraph. The great utility of a journal such as ours is to bring knowledge to bear upon a given point, and to facilitate the attainment of a beneficial purpose by joining to it the many aids—that are willing and ready—in order to give it completeness. Secluded nooks of England comparatively unexplored by the writer are often familiar to the artist, who would gladly make them more generally known, if opportunity offered; and it is notorious that some of the richest graces of our island are not to be encountered by travellers upon highways. It is needless to say more than that Mr. Hall will be very thankful for any hints that may be conveyed to him concerning this matter.

CARTOON PENCILS.—A decided improvement in lead pencils has been produced by Messrs. Reeves and Co., of Cheapside. The lead is remarkably pure; but the main advantage consists in its being introduced into the cedar in a triangular shape, so as always to present a point without scraping. It is designed more especially for those who use the pencil with a bold free hand. A trial may be safely recommended: to us it seems unquestionably a great advance upon the material hitherto adopted, and we have no doubt there are many who will thank us for directing their attention to the subject.

THE "ART" OF WRITING.—We have received from Mr. Craik, a writing-master, or—according to the modern reading—"a teacher of calligraphy," in Dumfries, a series of specimens of his art. We had no previous conception of the extraordinary grace and beauty to which it was possible to carry it. We refer not alone to those portions which are "written," but to the ornamental designs introduced into his examples—produced with a degree of ease and facility absolutely wonderful. Some of the elaborated sheets submitted to us, he states, did not occupy his pen above five minutes each, including pictures of birds and animals, and "flourishes" that seem as grand as if they were those of a trumpeter. It is impossible for us to convey an idea of the exceeding delicacy and boldness of the style which characterizes the parts more immediately illustrative of penmanship; and it is really as-

tonishing to find such perfect accuracy attained by mere sweeps of the pen over the paper. Mr. Craik contemplates directing his skill towards more ambitious projects than the mere production of letters, and seeks to use it in the decoration of rooms, &c. Of his success in this respect we entertain strong doubts; but there are many "wants" which his ability might supply.

EARLY CHRISTIAN SCULPTORS.—In 1841 Mr. Godwin laid before the Society of Antiquaries some observations on the fact, that the stones, both inside and outside numerous ancient buildings in England and France, bear peculiar marks or symbols, apparently the work of the original builders. In a second paper on the same subject, recently communicated, and which proved that in Germany also the same marks are to be found, reference was made to the religious character of associated masons in very early times; and Mr. Godwin described a very curious MS. account (in the Arundel collection at the British Museum) of four sculptors, who worked "in the name of the Lord," during the reign of Diocletian:—they were called Claudius, Castor, Simphorianus, and Nicostatus. According to the MS., when they had completed one column and foliated capital, ordered by Diocletian to be cut out of the porphyritic rock, the philosophers of the day, who were indignant at their success, required them to cut another. To which the sculptors replied, "Do ye wish to learn the Art from us? Nevertheless, in the name of our Lord, in whom we trust, we will shape this other column like the first." And, applying themselves diligently, they finished the second column within 26 days: in consequence of which, the philosophers exclaimed, those mysterious words could only pertain to Art-magical.

SALES OF THE MONTH.—MANCHESTER.—COLLECTION OF THE LATE R. HICK, ESQ.—This collection has been sold by Mr. Winstanley. The sale occupied four days; during the two first, the pictures, 110 in number, were disposed of; on the third, the 101 drawings; and on the fourth, the 184 engravings. On the first day, 59 pictures were distributed. After some small pictures were knocked down, including Rhodes's 'Cobbler,' which fetched 10*l.* 15*s.*, and Barker's 'Children playing with an Ass,' 18 guineas—Beverley's 'Shipwreck' fetched 15 guineas; Linton's 'Caribbrook Castle,' 14*l.*; Poole's 'Bo-Peep' (a small but excellent picture), 32*l.* 11*s.*; Knight's 'Young Juggler,' 30*l.* 19*s.* 6*d.*; Bradley's 'Rosebud,' 26*l.* 15*s.* 6*d.*; H. Andrews's 'Lady Russell pleading to Charles II.,' 22*l.* 1*s.*; Herbert's (A.R.A.) 'Pardon,' 27*l.* 6*s.*; Stephanoff's 'Discovery,' 50*l.* 8*s.*; Howard's 'Oberon and Titania,' 50*l.*; and his 'Noma Pompilius and Egeria' (companion picture), 21*l.*; Eastlake's 'J. Contadini,' 46*l.* 4*s.*; Westall's 'Wayside,' 20*l.* 9*s.* 6*d.*; Patrick Nasmyth's 'Woody Landscape with Waterfall,' 39*l.* 18*s.*; Shayer's 'Girls at a Spring,' 33*l.*; C. R. Stanley's 'View at Amiens,' 45*l.* 3*s.*; a 'Sea Piece,' by Carmichael, 31*l.* 10*s.*; 'A Watery Place,' by F. R. Lee, 38*l.* 17*s.*; Boarden's 'Flower Girl,' 21*l.* 10*s.* 6*d.*; 'Cottages on the Banks of a River,' by Ewins, 23*l.* 10*s.*; Bradley's 'Bride,' 31*l.* 2*s.* 6*d.*; 'A Seaport with Vessels in a Breeze,' by John Wilson, 20*l.* 9*s.* 6*d.*; Tennant's 'Shrimpers,' 28*l.* 6*s.* 6*d.*; Drummond's 'Minna Troil,' 25*l.* 14*s.* 6*d.*; two 'Coast Scenes,' of Shayer's (companions), 31*l.* 10*s.* each; and Stanley's 'View of the Old Exeter Change, London,' 28*l.* 17*s.* 6*d.* There was considerable competition for some of the best pictures of the late William Liversedge, to whom Mr. Hick was a liberal patron. No fewer than nine pictures by this artist came in succession under the hammer, and most of them realized very good prices. His 'Captain Macheath,' which many, including ourselves, regard as this lamented artist's most finished picture, fetched 77*l.* 14*s.*; 'The Inquiry,' 57*l.* 15*s.*; and 'The Benediction' (a monk bestowing his blessing on a kneeling and veiled lady), fetched the sum of 94*l.* 10*s.* 'The Black Dwarf,' and 'The Popkins Family,' were knocked down at 34*l.* 13*s.* each; a sketch, 'Salvator Rosa in the Brigand's Cave,' 16*l.* 5*s.* 6*d.*; another, 'The Widow,' 17*l.* 6*s.* 6*d.*; and 'Travellers attacked by Banditti,' Liversedge's first exhibition picture, seven guineas. His 'Ghost Story,' the original sketch, was knocked down at 30*l.* 9*s.* The remaining five pictures, of larger dimensions, and all by celebrated English masters, fetched upwards of 90*l.* each. 'A beautiful Sunny Landscape,' by Sir A. W. Calcott, R.A., 94*l.* 10*s.* A sketch on panel, by the late Sir David Wilkie, of 'John Knox administering the Sacrament at Calder House,' being a sketch for a large picture of this subject, was knocked down at 99*l.* 15*s.*; Linton's 'Return of a Greek Armament' fetched exactly the same amount; and Martin's extraordinary companion pictures, 'The Rivers of Bliss,' and 'Pandemonium' (six feet wide by four in height) fetched each 94*l.* 10*s.*

On the second day, works by the old masters were sold. One of Cuypp's Landscapes, with Cattle and Figures, fetched 28*l.* 7*s.* 6*d.*; and another, 'A Young Man with a Hare,' 23*l.* 2*s.*; a 'Fête Champêtre' (Piattzer), 39*l.* 18*s.*; the 'Young Birdcatchers' (Gerard Poter), 40*l.* 8*s.* 6*d.*; a 'Cottage and Sheep in a Landscape' (Van Stry), 44*l.* 2*s.*; a 'Rocky Scene' (Louthborough), 59*l.* 17*s.*; 'Interior of a Stable' (George Morland), 43*l.* 1*s.*; 'Interior of a Cabaret' (Teniers), 63*l.*; a 'Landscape,' by Wouvermans, 60*l.* 18*s.*; a 'Sunny Landscape' (Paul Potter), 52*l.* 10*s.*; a 'Landscape, with Cabaret' (D. Teniers), 53*l.* 11*s.*; a 'Madonna,' by Jasso Ferrato, 81*l.* 18*s.*; 'Moses and the Midianite Shepherds' (Nicolo Poussin), 55*l.* 13*s.*; 'Cupid and Psyche' (Benjamin West), P.R.A., 94*l.* 10*s.*; 'An Italian Lake' (Richard Wilson), 84*l.*; and 'The Lake of Nemi' (its companion), 84*l.*; 'The Holy Family with St. John' (Carlo Maratti), 97*l.* 13*s.*; 'Italian Seaport' (Vernet), 63*l.*; 'The Wagon' (Rubens), 85*l.* 1*s.*; 'Virgin and Child' (Murillo), 73*l.* 10*s.*; Raphael Mengs's portrait, by himself, 49*l.* 7*s.*; 'St. Cecilia and Angels' (Carlo Cignani), 46*l.* 4*s.*; 'Dutch Seaport' (Backhuysen), 64*l.* 1*s.*; 'Italian Village Festival' (Jan Miel), 97*l.* 13*s.*; 'Painting,' an Emblematic Portrait of the Artist's Daughter (Carlo Dolce), at 52*l.* 10*s.*; 'Landscape, with Figures' (Louthborough), 112*l.* 7*s.*; 'View of Draden' (Canaletti), 262*l.* 10*s.*; 'Lake of Nemi' (Wilson), 46*l.* 4*s.*; 'Head of Christ' (Annibale Carracci), 136*l.* 10*s.*; 'The Virgin and Child, with the Magdalen' (Correggio), 189*l.*; 'The Virgin, with the Child in her Lap' (Raffaello), 115*l.* 10*s.*; 'Interior, with Figures Singing and Regaling' (Egbert Hemskirk the younger), 157*l.* 10*s.*; 'Caernarvon Castle' (Richard Wilson), 99*l.* 15*s.*; 'Horses in a Landscape' (Morland), 25*l.* 4*s.*; a 'Cabinet Picture, containing a number of Heads' (Albert Durer), in unusually fine preservation, 35*l.* 14*s.*

On the third day the drawings were sold. 'A Peasant Boy' (Poole), fetched 10*l.* 5*s.*; Henry Liversedge's original drawing of 'The Popkins Family,' 13*l.* 10*s.*; his 'Touchstone and Audrey,' 18*l.* 18*s.*; Martin's 'View on the Coast of Guernsey,' 6*l.*, and his 'Last Look at Paradise,' 14*l.*; one of Catermole's interior, 14*l.* 3*s.* 6*d.*; Stanfield's 'View of Tenerife,' 12 guineas; Liversedge's 'Old Falconer,' 18*l.* 10*s.*; his 'Falstaff and Bardolph,' 17 guineas; his 'Falstaff and Dame Quickly,' 23*l.* 10*s.*; one of T. S. Cooper's cattle pieces, 21*l.*; the original sketch of Sir David Wilkie's 'Presentation of the Keys to George IV. at Holyrood Castle,' 14*l.*; and his 'Studies of Three Hands,' 4*l.* Of the framed drawings, an 'Interior of St. George's Chapel, Windsor,' fetched 29*l.* 8*s.*; 'The Surprise of the Castle,' by Catermole, 42 guineas; 'A View of Cologne,' by Austin, 23 guineas; 'The Harvest Home,' by Stephanoff, 14 guineas.

Our informant—a safe authority—states, "It was highly gratifying to find in the sale (as indeed it is generally) that the modern pictures and drawings fetched exceedingly good prices, many much more than they cost the late proprietor at the time of purchase, but not more than their present worth—a circumstance, even in a pecuniary point of view, highly satisfactory to collectors of modern works, when selected with judgment, as showing them to be of increasing value."

On the 15th of March were sold the proofs, plates, and other effects of the late Abraham Rainbach, Esq., the engraver of Wilkie's pictures. Among these were progressive proofs of 'The Cut Finger,' 'The Parish Beadle,' 'Blindman's Buff,' 'The Chelsea Pensioners,' 'The Spanish Mother,' 'The Village Politicians,' and 'Distressing for Rent.' One proof of 'The Village Politicians' was sold for 13*l.*; one of 'The Rent Day' for 15*l.* 4*s.* 6*d.*; and another of the same for 16*l.* 5*s.* 6*d.* On the 17th were sold the pictures, etchings, &c. &c., of the late Rev. E. T. Daniell; among which was the 'Madonna di S. Sisto,' engraved by Müller after Raffaele, which realized 49*l.* 7*s.*; 'Harnes Terrace,' by Turner, R.A., 90*l.* 6*s.*; 'Sans Souci,' by Stothard, 50*l.* 8*s.*; and a Repose, previously supposed to have been a genuine Titian, 52 guineas.

The pictures, engravings, and antiquities of the late Sir Robert Ker Porter were sold on the 30th, among which were many valuable curiosities brought from various parts of the world by this distinguished traveller. Among the pictures by Sir Robert Ker Porter, were 'St. John Writing the Apocalypse,' and 'Christ Blessing the Cup and Bread,' together with specimens of modern and ancient masters; also, a variety of drawings made in different quarters of the globe.

SALES TO COME.—An extensive collection of pictures, etchings, &c., the property of Robert Bell, Esq., will be sold at Edinburgh on the 3rd inst. and following days, by Messrs. C. B. Tait and Co. This property is remarkable for the number and value of etchings, of which it principally consists; containing specimens in all stages, by Ostade, Paul Potter, Rembrandt, Swaneveldt, Bartsch, Guido, &c. &c.; and pictures by Bellini, Gainsborough, Jan Steen, Salvator, Cuypp, Domenichino, &c. This sale will occupy six days.—On the 1st inst., a small collection, the property of Mr. Sutherland, containing a landscape by Hobbema, the *chef-d'œuvre* of Van der Neer, a landscape by Camphuyzen, &c.—On the 7th, the pictures, &c., of Joseph Bond, Esq., containing the Ruysdael of the Earl of Lichfield; a fruit piece, by 'Rachel Ruysch,' from Sir Simon Clarke's collection; an interior by Jan Steen; a picture by Cuypp; 'Musidora,' by Gainsborough, &c. &c. This sale will occupy two days.

## MEMORIES OF PICTURES.

By Mrs. S. C. HALL.

NO. II.—EDWARD BIRD, R.A.

I REMEMBER, many years ago, being charmed by a picture painted by Mr. Edward Bird. I saw it in Bristol: it was one of the earliest works of Art that left a "memory" with me after I came to England, probably from its peculiarly English aspect. It was called "THE COUNTRY AUCTION." I was told it was not inferior, in any respect, to the more celebrated productions of that most amiable man and most excellent artist; that the persons in the pictorial drama were delineated with rare truth, and manifested most correct discrimination of individual character. To me it was a new volume of English rural life. I venerated the patriarchal soberness of the elder peasant, who had secured the volume he loved best—a Bible; the matronly providence of his partner, who wishes her son-in-law to bethink himself of the cradle rather than the punch-bowl; the meek joy of the young wife, proud of the provision for her tea-table; the hesitation amounting to suspicion of the gamekeeper—one of the bidders for a fowling-piece—contrasted with the blustering self-will of the butcher, resolved that the disputed weapon should be his; the exquisite coquetry of the little maid, who, before a looking-glass, places on her head a burnished cullender; the prying curiosity of the country connoisseur, examining the merits of an old picture. But the merry group of "little ones," amusing themselves with a kitten they had confined in a warming-pan, delighted me as much as "pussy" did them. The sportive character of that little episode was delicious; so full of life and child-like nature—so different in its moods and exercises from the grown-up nature of "big people." It was evidently painted by an artist who both understood and loved children—not as models, but as portions of his own heart. There were other pictures by the same hand, I remember, in the room: "The Surrender of Calais," "The Burning of the Bishops,"—a subject full of painful interest, one of the last the painter ever undertook; and it must have been a trying scene to a man struggling with illness and those distressing nervous affections, which shatter intellect and stimulate beyond the bodily power of exertion or endurance.

I transferred my interest, naturally enough, from the picture to the painter, and became anxious to see the artist who had afforded me so much pleasure. At that time to have looked upon a man capable of producing such works would have made me happy beyond conception; but they told me he was dead, that he had been benevolent to the poor, a devoted husband, an affectionate yet judicious father, a most admirable son, a faithful friend, and an earnest lover of, and labourer in, his Art, to which he had won his way by steady and undeviating perseverance, gaining respect by conduct in domestic life so praiseworthy that he commanded esteem no less than admiration. His genius was enshrined in home affections and home duties. The Bristol people (I was then informed) were so rightly proud of this good man and good painter, who had elevated the reputation—restored it, I may say, for it had been lost—of their moody city by his virtues no less than by his talents, that they—gentlemen of Bristol—had honoured his remains with a splendid funeral. I was shown the spot where he was buried in the cathedral, and assured it was their intention to erect a monument to his memory!

I rejoiced to think that this people had grown wiser as well as more generous, since the fate of Chatterton—

"The marvellous boy who perished in his pride"—

had left a blot upon their character. I rejoiced to learn that wisdom had followed experience, and that the warning bequeathed by the unhappy child of genius had produced its anticipated effects; that the "Bristolians," no longer the Boetians—though neither as wealthy nor as prosperous as in the times of yore, when Bristol sent forth and received her golden argosies—had rendered their sea-city a queen among the provinces for justice and liberality. We shall see!

It was not, however, until very lately, when recalling the "Memories of Pictures," that of Mr. Bird (although it had often floated over my mind) returned vividly before me. And what I had heard of his gentle nature contrasted so strongly with the resolute and stormy character of James Barry, that it was a relief to contemplate the career, despite its few gloomy passages, of a domestic painter—a man painting in the midst of his children: instructing and regulating their minds while conveying to his canvases the knowledge and power that supplied them with food; a man whose whole life proved the compatibility of high talent with the Christian virtues; a man who, like Sir David Wilkie, made his Bible his guide-book,\* whose life was an illustration of his faith—a faith without cant or severity.

I know one of Bird's oldest companions. It is pleasant to hear him talk of the friend over whom the grave has closed more than twenty years, and whom he characterizes as "straight-minded and sound-hearted among his fellow men." "Edward Bird," he tells me, "evinced his talent at a very early period. To keep him quiet, when not more than four years old, his mother would suffer him to have his liberty in a whitewashed garret, which he decorated according to his fancy with two armies in battle array—the one party drawn in red, the other in black chalk; and he would every now and then, as he executed a figure, start back, clap his hands, and

\* "I have shown you all my preparations for foreign travel," said this admirable man to one of his dearest friends, "and now I must show you my GUIDE-BOOK"—he produced his Bible.

exclaim, "Well done, little Neddy Bird!" But it was not only with red and black chalk that "little Neddy Bird" did well; his heart developed itself as much as his mind. Ned was sent to a dame's school about a mile from his home; and his tender mother, to prevent his walking too much, folded up his dinner in a little basket. One day the good school-dame came to inquire why her "favourite" was so frequently de-patched with an empty wallet; and "Neddy" was compelled to confess that whenever he met a hungry-looking beggar on the road, he parted with his dinner. In this it seems "the child was father to the man," for a touching story of a widow's child is recorded of him; and my venerable friend assures me the only incorrectness in the record is, that the incident occurred at Bristol and not at Wolverhampton, the painter's birthplace. The bereaved widow, after her child's death, brought a token of gratitude, a pin cushion and a pair of scissors, to Miss Bird, mementoes which her feeling mind appreciates to this day. What a heritage of high thoughts and heartfelt blessings does such a father bequeath unto his children—the noblest heritage of all!

"He died—and bequeathed to his child a good name!"

The early and industrious life of Mr. Bird calls for little notice. His first professional practice was with a tea-board painter in Birmingham; but he removed, after a brief novitiate, to Bristol—his home for the remainder of his days. Here he commenced a drawing-school. During intervals of teaching, he designed, and sketched, and painted, pouring out his thoughts, giving vent to his ardour, and at the same time disciplining his own mind. Sometimes he showed his productions to his friends, but not often. Mr. Murphy, the father of Mrs. Jameson, an artist whose heart was as warm as his judgment was sound, appreciated them as they deserved, and persuaded Bird to send them to the Bath exhibition, desiring him to mark their price. The modest painter noted them at ten guineas each; the judicious friend wrote them down at thirty, and they were immediately sold. His sketches were pictures—full of subject, and every figure true. The reputation of his genius brought around him friends; and strangers, who multiply, with prosperous men, into acquaintances. He was never extravagant, but shared unostentatiously with new and old the simple hospitality of his house; painting away while conversing gaily with those about him, and instructing his children while developing some historical event.

Of his "Chevy Chase" the old gentleman speaks with raptures; says it was far and away his finest historical picture; full of the appropriate mournful feeling—that there was waiting in the very atmosphere—that it was a wonderful picture—that people could not look on it for their tears. The Marquis of Stafford gave 300 guineas for it; and Mr. Bird gratified his own feelings by presenting the original sketch to Sir Walter Scott. The reply of the Northern Magician is surely worth transcribing, and has never been read in print.\*

Honours and money flowed in together; but though Mr. Bird received large sums for his pictures—the pictures were large. The "Chevy Chase," which the noble Marquis purchased for three hundred guineas, brought only two hundred to the painter, simply because three gentlemen of Bristol, friends, saw it when it was commenced, and agreed to give him for it two hundred guineas. Fair enough that; and there can be no doubt they wished to possess a work of his producing. Such, I believe, being the exact meaning which the term "Patronage" signifies, when applied to Art.

He finished the picture—they paid him the two hundred guineas—good honest men, that was in the bond—and they sold it for three hundred to Lord Stafford. Nothing wrong at all in their retaining the hundred realized by their picture-dealing speculation—it was perfectly fair "in a business-like point of view." Mr. Bird, who was generosity itself, was glad his friends profited by him, for he believed that in the first instance the burghers of Bristol wished to inspire him with confidence; and such was doubtless the case, but their business habits were stronger than their generousities. He declined a second "commission"—of a like nature—and the "Patrons" of Edward Bird only realized the sum of one hundred guineas; it appears good interest both for their money and their friendship. The same nobleman paid him five hundred guineas for the picture of "The Death of Eli," and the British Institution awarded him their three hundred pound prize for the same painting. The Princess Charlotte promised him her "protection," and accepted his offering of "The Surrender of Calais." In the heavy times that followed his death, Mrs. Bird applied to Prince Leopold for a loan of this picture to exhibit, and his

\* "Sir,—Two days before leaving Edinburgh for this cottage, I was particularly gratified by receiving the sketch of the 'Battle of Chevy Chase,' which, in my opinion, does the highest honour to the artist, in point of composition and effect. As I am merely an ignorant admirer of the Art, I should hardly venture to mention my own judgment were it not confirmed in the fullest extent by the friends to whom I have had the pleasure of showing it. I have destined it, when suitably framed, to hang over the chimney of my little library, among broadsword, battle-axes, and targets, to which it will form, from the subject and execution, a very appropriate companion. It would do me great pleasure, Sir, in any manner in my power, to acknowledge my sense of your kindness, but particularly if you should ever give me an opportunity of personally expressing how much I feel myself, dear Sir,

"Your obliged and faithful servant,  
"Abbotsford, near Melrose, "WALTER SCOTT.  
12th March, 1814."

Royal Highness generously returned it with a present of a hundred pounds. Am I wrong in the opinion that our greatest men have erred in straying out of their natural paths? One cannot imagine Thomas Carlyle writing "Pickwick," or "Boz" indulging "Hero-worship." Yet how wonderful are they in their several spheres. Will not the observation hold good with regard to painters? In rural English life, in pleasant scenes, in delineations of home and its affections, Mr. Bird was at that time alone. Such of his pictures have, I am told, an "original and unborrowed air, which mark an artist who thought and felt for himself, and sought the materials for his pictures in the living world around him rather than in the galleries of Art." In these he was eminently happy; but he was per-suaded into scripture and pageant painting, and the last picture of this kind he attempted was so vexatious in its progress, that it increased an illness brought on by the loss of one or two of his children, and terminated in his death. It was "The Embarkation of the French King and his Attendants." Louis and his courtiers were *sware*, and kind, and punctual; but our nobility were not so gracious; answering his applications and making promises of sittings which they never gave; thus retarding the completion of his labours, and depriving him of bread, by wasting his time.

But the painter's days were numbered. Fame soon grows weary of sounding her clarion, and those whose hearts are stirred within them at its earlier blasts, quickly discover that the sound is air. His spirit was saddened by illness, and he felt with all the acuteness of a sensitive mind the civil rudeness of many who ought to have understood what they owed themselves and others. The damps of our English November clung too closely around him; his manhood was in its strength, for he had just completed his forty-fifth year; yet his kindly voice was silenced—his soft and gentle smile was hardened into the marble of death—his children were fatherless—his wife a widow!

His old friend loves to discourse of his many virtues, proving the truth of the exquisite lines—

"Only the actions of the just,  
Smell sweet and blossom in the dust!"

I bethought me to inquire concerning the monument which more than twenty years ago I had heard was to be erected to his memory.

The good man shook his head. "Alack!" he said, "facts are facts, and should be plainly told. The truth is this, that many in Bristol really loved the artist; others mourned for the man, and regretted a loss which deprived their locality of a distinction. Others—but I would rather not talk about them, for I love the fair side of human nature, and somehow, whenever Bristol is mentioned, the fate of Chatterton strikes upon my heart; and the bitter rhyme of Savage and Lovel force their way into my mind." Yet the cutting and searing couplets of the poets are as milk and honey compared to the single fact that must be written or spoken by all who write or speak of Bristol and Bird in association.

The widow of Edward Bird designed that the funeral of the painter should be modest and plain, in virtuous and prudent accordance with her limited means, for they were narrowed to bare sufficiency. Moreover, she wished to lay the remains of her beloved husband, companion, and friend, in the churchyard grave, where her own might one day repose beside them—a natural and rational wish, which may not be abandoned without a hard struggle. But a proposal was made that he should be interred in the cathedral—that the funeral should be a public one, such as to honour dead genius and encourage living genius; and, above all, that a monument should be erected to his memory, to tell to aftertime that Edward Bird, the artist, was a glory and a benefactor to his kind. The widow felt it was her duty to yield; but she objected on the ground of the additional expense. That objection was overruled at once, by the assurance of it not falling upon her. No other presented itself, and she ceded the point; in melancholy pride that the husband she honoured with a full heart was to be thus honoured by others. Well, the "public funeral" took place; between two and three hundred "gentlemen" of Bristol followed the hearse, and stood about the aisles of the old cathedral while the "earthly tabernacle" of the painter was consigned to its last rest. It was a noble spectacle; one that might well have made us forget the doom of intellect in mercantile England, where it is too usually rated in precise proportion to the weight of the purse associated with it. It was a great chance for the city of sugar-bakers and ship-brokers, which half a century before had been marked with a black cross in "Fame's Eternal Volume." The name of Bird was to stand in the traders' ledger as a set-off against that of Chatterton—a debtor and creditor side of the account would appear in the same book. The two or three hundred "gentlemen" having performed the stipulated bargain, separated, and—what next!

The long illness of the artist, and the "hope deferred" that made the "heart sick" had left an embarrassed family, and not a small one. The widow sold her furniture—for the vast sum of £200—to augment her resources for payment of debts; she regarded as blots on her husband's memory; and she was rejoicing that, although homeless, these blots were, at least, to be removed, when—the undertaker's bill for the funeral expenses of Edward Bird was handed to her. IT WAS PAID AT ONCE—out of the proceeds realized by the sale of household rods—chairs, tables, and featherbeds—it was paid! There is no mistake at all about this matter. The burghers of Bristol had had their "show;" they had given loud and low expressions of sympathy to the young boy, the artist's eldest son, who attended as chief mourner; the ceremony and the liberal "givers" had been trumpeted by all the journals! The "gentle-

men of Bristol" loved the laudation, but they were unwilling to pay for it; it was an article that would not sell again, and realize a profit of 50 per cent.\*

So the widow paid for the honour of her husband's "public" funeral; and thus, most unwillingly, either deprived his creditors of their due, or his children of the weak staff that was to aid them in traversing the dark valley.

But the monument that was to perpetuate the name, commemorate the genius, and recompense the long labours of the artist—surely the monument was erected by the "gentlemen of Bristol," in accordance with a promise to the living and a pledge to the dead?

A monument, indeed, marks the spot; and this is the inscription it contains:—

"SACRED TO THE MEMORY OF  
EDWARD BIRD, ESQ., R.A.,  
WHO DEPARTED THIS LIFE  
NOV. 2, 1819,  
AGED 45 YEARS.

HIS DAUGHTER CAUSED THIS STONE TO BE PLACED  
AS A TESTIMONY OF RESPECT AND AFFECTION  
FOR HER REVEREND PARENT."

Reader, if ever you visit the cathedral of Bristol, look at that small and simple "slab," for it is nothing more; look well upon it, and do not shame to see it through tears; for, although a plain bit of unadorned marble, to me it seems the noblest and holiest mausoleum in broad England. Let me tell you why. His daughter earned by the labour of her own hands the money that paid for it! It was not much—many among the three hundred gentlemen expended a greater sum upon a dinner on the afternoon of the "public" funeral—but it was her all; the savings out of privations; the accumulated "heap" of days and nights of toil; the working out to completion of a high resolve, formed not long after her father was buried, when she was a young child, but with wit enough to perceive what might be looked for from those who had suffered the widow and the fatherless to sell their furniture, rather than let an "undertaker" protest that he was cheated into burying a man of genius upon credit.

Many years passed, indeed, before this solemn compact with her own heart and her dead father was fulfilled; but it was fulfilled at last; and let it be carved upon the corporate seal of Bristol city, that, although James Bird was interred with pomp in its cathedral,

The widow paid the funeral charges, and the daughter earned the money that placed a tablet over her remains.

#### LOCUS SEPULTURÆ.

"When Chantry was building the mausoleum in which his mortal remains now lie interred, he proposed to Allan Cunningham to make the vault large enough to contain those of his friend also. 'No,' said Allan, 'I should not like, even when I am dead, to be so shut up. I would far rather rest where the daisies will grow over my head.'"—ART-UNION, Jan. 1843.

When I am dead, I would not lie  
Within the stately tomb,  
Whose outward beauty seems to mock  
Its deep internal gloom.  
Dear as I love the sculptor's art,  
And rich cathedral-pile,  
For resting-place I covet not  
Marble, nor cluster'd aisle.

On fancy's wing my spirit roves,  
Like tenants of the air;  
O'er the wide world with glory fraught,  
And drinks in rapture there.  
From the bright forms on nature's face,  
The purest joys I reap:  
They must surround the narrow bed  
Where I may shortly sleep.

Give to the conqueror, whose sword  
Hath won himself a name,  
And link'd the record of his deeds  
Unto his country's fame:—  
Give to the noble, wise, and great,  
The "animated bust,"

Tablet of brass, and sepulchre,  
Which may survive the dust:—

Mine be the lowly, quiet grave,  
Far from life's busy hum;  
Where flowers appear in summer-time,  
And sounds harmonious come.  
Ambition seeks to lay her dead,  
Mid things of kindred worth;  
The child of nature only claims  
Part of his mother-earth.

J. DAFFORNE.

\* It is only just to state, that of those who followed the painter to his grave, many were in utter ignorance of the circumstances under which his funeral was a "public" one, and who, perhaps, to this day are not aware of the "arrangement" that had been made. Unfortunately, in such cases it is difficult to separate the innocent from the guilty; the reproach must fall, and it falls heavily, upon them all.

#### COMMISSIONS AND COMMITTEES "OF TASTE."

We are induced to the following observations by a letter\* addressed by John Bacon, Esq., F.S.A., to the Premier on this subject. The tone of this letter is temperate, and its substance is characterized by judgment, knowledge, and experience; but this it is scarcely necessary to remark, considering the reputation of the author, who has, as he states, laid aside "his professional chisel for twenty-five years"—a circumstance which at once warrants the perfect disinterestedness of his views, did he even yet mingle in the throng of artists and amateurs; but from this he has also retired. As his views on the subject of commissions are precisely our own, and ours are identical with those of every section of the profession of Art, we seize the opportunity of speaking rather through him than with him, because the manifest truths to which we would gladly open the eyes of all concerned in committees of Art, come more gracefully from one who has done with the interests of his profession—who seeks only to elevate its character—than from others whose position could in any way raise a supposition that they were quickened into debate by selfish motives.

In speaking of a committee under whose direction the author was working, he complains of their utter inefficiency—shows plainly enough their incapacity, and perhaps somewhat naively expresses surprise that they displayed in their direction so little mastery, although having made the grand tour of the cities where Art has rested and been fostered. Upon these committees appear the names of excellent and accomplished men; but with names we have nothing to do, and if we had, such names are not to be lightly dealt with—names of men who, (mark it, Cesario!) if they knew a little of Art, would know a little of everything. But it is this same seeing of sights which is so embarrassing to a judgment unprepared by what is called "the education of the eye," and uninstructed by the sympathies brought forth by cultivation.

It is matter of grave surprise to the committees themselves, and also to the public, that the names of artists of the highest rank do not generally appear upon the competition-lists; but these gentlemen are fortunate in having commissions enough to relieve them of the necessity of submitting their works to the root and branch emendations of a committee. They do not broadly state their reasons for declining competition; even were they to do so, the tribunal of taste would not believe them. We know perfectly the reply of all self-constituted committees to argument of this kind—"We are," say they, "self-appointed if you like; we claim the right of pleasing ourselves, in the fashion of that for which we are ready to pay"—a most athletic and straightforward English replication as applied to all matters of every-day life, but with respect to monuments in Art, a mere imbecility; for here they have clearly not the right they assume to themselves. It would be most difficult to persuade him who professes to have read the written principles of *το καλόν*; who, as he himself says, has "loured" through the most celebrated galleries of Europe; and who, thus qualified, is placed upon a committee of taste—it would be difficult, we say, to persuade such a one that he did not know anything of Art—but much more difficult to convince an artist that he did. There is, therefore, no reason to marvel that men who have taken honours, as it were, in their profession, will not place their hard-earned reputation at the mercy of those who, to sustain themselves in the opinion of their friends, think it necessary to cut somewhere, which they too frequently do in the wrong place. The artist of established reputation is above the necessity of competition; but with what heart can the rising sculptor or painter, whose bread, in so many instances, is scattered, as it were, in crumbs on the highways—with what confidence can he look forward to the judgment of such a superintendence? He knows, as we all do, that in a majority of instances he is obliged to send forth works of a character he is ashamed to acknowledge. There is truth, it is said, in the voice of the multitude; there must be, therefore, and is truth in these observations, which we put not forth as our own, but

\* A Letter to the Right Hon. Sir Robert Peel, Bart., M.P., on "The Appointment of a Commission," &c. &c.—Hatchard and Son.

as the sentiments of all who have been subject to the dictation of committees.

Mr. Bacon having retired from the profession, and all the members of the committee who directed the execution of his works being dead, he considers that seal removed from his lips, which prevents the complaints of others, yet in the exercise of their profession. Describing the prejudicial nature of interference, Mr. Bacon says—

"The twofold injury to which I unhesitatingly refer, arose from that right of dictation assumed by the committee, which went the length of commanding the sculptors to alter, to re-compose, to add, or to abstract from, to divide, or set adrift, what had purposely been combined; in short, to re-arrange, or rather disarrange, in certain instances, all, or much, that the artist had intended to convey in his design. And when this had been obediently submitted to, the interference referred to did not then cease, but the artist was followed into his study (at least so it was with me), and there he was subjected to the torture of doing violence to all his better knowledge of the principles of his own art, by making his work bend to the opinions of these gentlemen, without even being allowed a voice in the question. I do not recollect a single instance in which any alteration they suggested, either in a design presented or work in progress, was submitted to my consideration and my reply waited for; on the contrary, it was invariably communicated as the result of a previous determination formed on their part, and which must necessarily be obeyed with all dutiful submission. On one or two occasions, I remember venturing to point out wherein the alterations proposed would materially injure the composition, and consequent effect of my work; and one instance wherein the execution of their commands was all but impracticable; and was surprised to find my respectful representation instantly overruled in such terms as left me no hope of prevailing by any further argument. If the other sculptors were, in like manner, subjected to the dictation of gentlemen who, however intellectually endowed, had no practical knowledge whatever of the particular science on which they were now sitting in judgment, it will sufficiently account for the asserted inferiority of the sculpture in St. Paul's, compared with what I venture to assert it would have been, had the artists been left to the unfettered exercise of their own powers."

The leaven of a little learning in Art is not only a dangerous but a most obtrusive qualification; those who have not acquired it are yet reasonable creatures, while those who know a little are altogether unmanageable. This is forcibly illustrated by Mr. Bacon's experience. He speaks of a colossal group in honour of the late Marquis Cornwallis, sent to Bombay. The agents appointed to realize the views were military men, who, being diffident of their own qualifications for selecting a design, delegated this part of their duty to five members of the Committee of Taste.

"But it so happened that, as usual, they had sundry alterations to point out in the successful design; and, in visiting my study, to lay their commands upon me, I found I was required so seriously to dismantle and curtail my design, that, remembering I was responsible in that instance, not to the umpires, but to my military employers, I did not feel at liberty to follow the directions given me without their sanction; and, on submitting to them what had been proposed by way of alteration, they at once perceived the injury that the work would sustain, and therefore instructed me to follow the original design, remarking, 'We are indebted to the judgment of those gentlemen for selecting the design they considered preferable; but we now look to your knowledge and experience in your own profession, and to your regard for your own fame, as our best security that the work shall be what we are given to expect.'"

We would have it understood that we draw a marked distinction between this kind of affectation and opinions arising from feeling and conviction—to these artists are always ready to listen, and willing to profit by; they are always natural, and consequently valuable; while, on the other hand, the suggestions and transpositions of pretension are often absolutely impracticable, not because a composition might merely suffer in character, but because nothing short of utter disruption could reach them.

The motto of these committees was "Simplification;" and while they flattered themselves that they were "simplifying," they were cutting down the richest designs to the condition of poverty and insignificance. Of this the pages before us bring forward many examples and many comparisons, tending to show that, generally, the propositions of committees are regulated by no fixed principle; indeed the author complains that, for proposed alterations, no reason could ever be given, but that it was the will of the Committee that such should be done. Every artist can afford a reason for his manner of treating his subjects; and if no sufficient argument can be adduced against his composition,

he is decidedly right, however lame his deductions—and the critic is wrong. If an artist think deeply, to afford narrative and effect in his works, the labours of the human mind cannot be so readily followed and construed as to be pronounced upon in anything like the impromptu criticism professed by committees; indeed, in the whole round of human nature, one mind, however refined, is not so much raised by cultivation above another, albeit in a state of barbarism, as at once to define its operations from external signs at a mere glance. Mr. Bacon gives an instance of the criticism from which he suffered. A certain part of one of his designs was disapproved and condemned to be altered; but he, knowing the injury which the work would sustain, left it *unimproved*, in which state it was afterwards approved, as if altered. He says—

"After some hesitation I adopted the latter alternative, founded on the perception that they had no fixed principles of criticism,\* and I therefore deemed it possible that what they thought offended them at one time might not displease them at another, provided the interval should be long enough to allow of their forgetting their previous objection; and so, in this instance, it fortunately turned out—my disobedience was never discovered; I had the pleasure to meet with their entire approbation of the monument when completed."

It is to be apprehended that the spirit of existing committees differs but little from this; yet complaints are not loud, for obvious reasons. Such are the causes why the names of our most celebrated artists do not appear upon the lists of competitors, and they will continue to operate as long as similarly-constituted tribunals exist.—It is not with the desultory application of the amateur that the artist has qualified himself into distinction, but it is by laborious study from youth upwards, not only in the production of his own works, but in deeply considering the operation of the mind in the works of others—by investigating the causes of excellence in some and of failure in others; works therefore resulting from such a course of education and laborious effort, cannot be critically estimated by mere pretension.

#### SOCIETY OF BRITISH ARTISTS.

##### TWENTIETH ANNUAL EXHIBITION.

THE Exhibition this year is certainly an improvement, manifesting not only an advance on the part of the members, but a better judgment in selection and arrangement, and a fairer spirit in "hanging" the collection. We do not regret to perceive that the contributions of strangers to the advantages and "responsibilities" of the Society are fewer in number than heretofore. The exhibition is gradually approximating to an exclusive character, which it will be the better, all circumstances considered, of assuming altogether; inasmuch as the chances in favour of volunteers are marvellously small. This has been so obvious from year to year, that their appearance above doors, behind doors, and in other hidden places, can excite no surprise. Such contributors are, or ought to be, fully informed as to what they are to expect; and if they send, in spite of repeated warnings, they must take the consequences. We make this remark because, as heretofore, we have received several complaining and angry letters on the subject. The writers demand some sympathy, inasmuch as they are, for the most part, thus literally excluded from every means of showing their works in the Metropolis. Driven from the British Institution "from want of room;" from Suffolk-street, from want of will; and from the Royal Academy from want of sufficient merit—where are they to go? Landscape-painters and painters of history cannot even do as some portrait-painters have done—hire a shop-window in the Strand, and write up "Painted in this style." We know there are many who meet this difficulty by exclaiming, "Let them break stones;" but such counsellors forget that, as we have before said, genius will be mediocrity during its first essays. There is wanting in this great and wealthy city a *permanent* exhibition-hall;—and such we hope yet to see.

The twentieth annual exhibition of the "Society of British Artists" was opened to the public on

\* "Of this I was persuaded, from the fact that they never gave a reason for any alteration they required. They did not seem to know why a thing displeased them, or for what reason any proposed alteration would be an amendment. At least they did not condescend to favour me with any explanation."

Monday, the 27th of March. At so late a period of the month we are unable to review it in detail, and must content ourselves with noticing only the more prominent pictures it contains. During the past year the number of "members" has increased, although two losses have been sustained—one by the death of Mr. Hofland, the other by the retirement of Mr. Linton. The artists recently elected are C. BAXTER, T. CLATER, A. CLINT, R. J. HAMERTON, J. HOLLAND, A. MONTAGUE, H. I. PIDDING, and J. WILSON, jun. New and healthy blood has therefore been infused into the constitution.

The collection, as a whole, although certainly above the average merit, cannot claim rank far beyond that of the respectable. There are among the members several artists of very inferior ability, and as they are prone to send their full number, and have a right to prominent places, the perpetual blots to be encountered, let the eye turn where it will, grievously deface the aspect of the gallery. This is an evil inseparable from the present state of the Society; but if it be true that greater discrimination is to be exercised over future elections, it is also an evil that will, in time, wear itself out. Still there are many pictures exhibited of very high excellence, and a large proportion of them are pleasant and meritorious works. The number amounts to 749, of which 15 are in sculpture, and 142 in water-colours.\* We shall not be sorry to see water-colour drawings excluded; they are out of place here. The best professors in this branch of the Art belong to one of the two "Societies;" and it is not likely that good examples will be often contributed. A manifest improvement, however, has this year been introduced into the water-colour room. The drawings are not now, as they used to be, mixed up with oil paintings. The entrance to the gallery has also undergone a change for the better; and in all respects a more rational and sensible spirit seems to have come over the working of the Society.

No. 6. 'The Country Bait Stable,' J. F. HERRING, sen. The most has been made of the simple materials composing the picture; the horses are extremely well painted, and in perfect consonance with every thing around them—they are clearly the property of utilitarian masters. The horse, of whatever character he may be, is always an interesting object when thus naturally painted. It would be a perfect picture of its class, if the artist would paint out the stable-man.

No. 7. 'A Blowing Day on the Sands at Whitby,' A. CLINT. In the lower part of this picture, the windy effect is as well described as we have ever seen it. The sea—figures—vessels and appropriate toning, all contribute powerfully to the effect; but the sky is of that kind which more frequently precedes wind than accompanies it—there is too much repose in this part of the picture.

No. 10. 'A Sponge defined,' J. PRENTIS. It must be admitted that, such as it is, the popular satire of this artist is sufficiently piquant—few, we apprehend, will dispute with him his pre-eminence in this walk of Art. We have here the farce, "Where shall I dine?" in four acts—that is, in four distinct pictures, wherein are shown the proceedings of a "sponger" (according to Johnson, "One who hangs for a maintenance on others,") in search of a dinner. Anent this style of subject we have a few words to say. It is true that Hogarth, and, since his time, others of our school (with what success, in comparison with him, we will not now inquire), have bitterly lampooned prevailing vices and follies; but every tale of depravity, of self-degradation, is wound up with a moral so profound and heartfelt, that such works would take rank among the didactic classics of any school: they are remotely distinct from unredeemed coarseness and pointless vulgarity, which, however pungently rendered and pithily elicited, can by no means command a place by the side of much humbler attempts at poetic narrative.

No. 14. 'Beach Scene, with Figures,' W. SHA-

\* The total number exhibited this year is less by 55 than last year, and the great room contains fewer by 70 works. We notice this fact chiefly because it supplies an unanswerable comment upon the repeated statements of the *Athenæum*—that the establishment of Art-Unions would have the effect of inundating exhibition-rooms with small and cheap pictures, such as prize-holders would be likely to buy. It is clear that the Society of British Artists have not acted upon this principle, although it is notorious that there the great mart of prize-holders is expected to be held.

YER. The composition is not so *uniquely* his own as that of many other works we have seen. The effect is injured by a deprivation of lights—a default observable to a certain extent in many pictures by the same hand. If this is a progressive change, it is decidedly for the worse.

No. 25. 'On the Tal-y-bont, North Wales,' J. WILSON, jun. A muddy stream is rushing down amid rocks, and overhung by trees of various foliage, which are finely made out without anything like offensive individuality; but it must be observed that the rocks in the water fret the eye and break the unity of the picture.

No. 31. 'The Rescue of Madame Dunoyer,' J. DANBY. A painful but interesting story, cleverly and even eloquently told. It is the promise of fame hereafter.

No. 34. 'Dorothea,' J. HILL. The subject is unfortunately far too hackneyed. Genius itself could not give it originality. There is here, however, much ability; the tone of the picture is rich, deep, and harmonious, its texture varied in a masterly manner, and the figure is chaste and graceful.

No. 43. 'A Ravine in the Neath Vale,' J. B. PRYKE. In such scenes this artist is powerful and effective. Distance is entirely shut out, and the whole composition is laid in with a breadth and harmony of feeling which place the reality before the spectator.

No. 46. 'A Magdalen,' C. BAXTER. This picture would have been benefited by being called by any other name. The expression is very sweet, the colour modest and natural; but the model is unfortunately commonplace, at variance with all preconceived notions of the penitent Magdalen, and does not rise above the simple country or servant girl.

No. 48. 'A Scene and Characters in a Spanish Posada in Andalusia,' F. Y. HURLSTONE. This is a large picture, composed of many figures, all kept down in their character respectively to simple life. A party of guests are playing cards, while the hostess, a dark-skinned woman of Moorish descent, superintends the supply of their wants. Without any essay at extravagant circumstance, the author of the work succeeds in describing men who do not live by the recognised avocations of more civilized communities. Among such men one could not feel otherwise than among those whose motto in political convulsions is "War to the knife," and whose more *peaceable* calling may be that of smuggler or bandit. The style of this artist is by no means what it has been; he has seen too much to remain original.

No. 54. 'Going to Market,' H. J. BODDINGTON. This picture exhibits a marked improvement in the feeling and execution of its author. A fine group of trees, a rustic bridge, a shallow stream of water, about to be crossed by cattle and sheep going to market, are the every-day items of the work; but the whole are, we may say, exquisitely put together.

No. 67. 'Cappella del Rosario, Chiesa dei SS. Giovanni e Paolo, Venice,' J. HOLLAND. This chapel is painted with simply its own sober light, which is managed with a success equal to Peter Neefs; the gilded ceiling and marble floor are most effective studies.

No. 70. 'Portrait,' J. J. HILL. To say that this is the finest portrait in the gallery, would be saying very little. To say that it is one of the finest portraits that have of late appeared, is justly due to a masterly outlay of talent, which has produced so admirable a disposition of pictorial forces as appear here. The flesh is of a full, yet clear tone.

No. 71. 'Outskirts of a Country Fair,' A. MONTAGUE. The colouring is extremely harmonious; fresh without coldness, vernal without being too green. The broken lights streaming through the foliage, and their consequent shadows, are expressed in an easy, natural, and playful manner. The figures are far too unfinished, with regard both to correct action and detail, for a subject of low life in particular.

No. 74. 'Hungarian Fruit Girls at Devotions,' J. ZEITZER. They are adoring before a road-side image of the Virgin. This usually loose and easy manner of worship is well portrayed. The picture would have been improved by a little warmth in the sky.

No. 77. 'Interior of a Country Stable,' J. F. HERRING, sen. Life-like, and very striking; a remarkable advance in the Art. The horses are capitally painted.

No. 84. 'Scene in the Isle of Dogs, Thames,'

**J. B. PYNE.** Another of the familiar views of this artist, painted with his usual skill, delicacy, and judgment. We have here literally nothing but a dilapidated house and a broken-up boat; yet see what talent of a high order can make of such poor materials. There are few pictures in the exhibition we should more earnestly covet.

No. 85. 'Landscape and Cattle,' **J. WILSON**, jun. There is a truth and unqualified earnestness about this picture, which pronounce its author gifted with rare talent for landscape-painting. This is a picture to which time will give value.

No. 104. 'A Light Breeze,' **J. WILSON**. The title is unnecessary, for the wind seems to be felt by every object in the composition. There is movement in the clouds and in the water, the cross-cutting waves of which give the appearance of a powerful current, such as is seen at the *embouchures* of rivers.

No. 106. 'The Enchanted Garden of Armida,' **F. Y. HURLSTONE**. A large picture, the subject of which is from Tasso—that part of "Gerusalemme" wherein Rinaldo is described as in the power of the enchantress, Armida. The arrangement of colour and the effect of the picture are good, but its better qualities are deteriorated by a certain degree of hardness. Although the magic power of Armida be understood, yet we would have had her painted with dark hair, for many cogent reasons we could advance. All compositions are faulty which do not at once convey to the mind the tone of the subject.

No. 128. 'Shillingford Bridge,' **J. TENNANT**. Painted with all the force and sweetness which give value to so many works by this excellent artist.

No. 135. 'Scarborough Town and Castle,' **A. CLINT**. One of several pictures in a different tone of colour from those by which we know and admire this artist. The general character of the picture in colour is scorched, unpleasant, and deficient in the harmonies necessary to render a hot picture a pleasing one. We much prefer No. 7, which is in his usual mode—grey, clear, and forcible.

No. 140. 'Corn-field,' **A. MONTAGUE**. A fine mellow tone of colour pervades this very beautiful little work, which is thrown together with a masterly and rapid execution.

No. 144. 'Edinburgh and the adjacent Country, from Leith Roads,' **J. WILSON**. The distance of this picture is in colour quite equal to anything that has been done in this country even by the great *Richard Wilson* himself.

No. 149. 'The Story of Cosmo de Medici and Don Garzia,' **J. F. HEAPHY**. A work of very high merit, manifesting great power; the subject is, however, a revolting one—and scarcely within the province of Art.

No. 150. 'Emigrants receiving News from England,' **R. J. HAMERTON**. The character of the scene and of the people, with their avidity to hear the contents of the letters, tell at once of comparative solitude, a father-land, and distant friends. The work is far too unfinished, and must be judged only as a design.

No. 158. 'Wreck on the Coast of Normandy—stormy Sunset,' **H. LANCASTER**. If we can turn Mr. Lancaster aside from this repulsive arrangement, or, we should say, non-arrangement of colours, we may save him the loss of many years' labour. He had better throw away red from his palette than prostitute it in this manner, without either its natural or pictorial equivalents.

No. 165. 'Devonshire Scene,' **J. W. ALLEN**. The foliage in this picture is wrought into somewhat of stiffness; and the distant heather is as strong in hue as that of the foreground; there are, however, many beauties in the work, of which the background is, perhaps, the most striking.

No. 175. 'Hayradden, the Bohemian Guide,' **J. ZEITZER**. The famous Guide in "Quentin Durward" is conducting the hero of the novel and the two ladies through one of the defiles in their route. Few artists could so well have imparted to this figure the character by which it is distinguished; it bears out well the description of the text.

No. 186. 'A Scene in the Middle Ages,' **A. J. WOOLMER**. This is decidedly the best picture by this artist. The composition is one of much grace, and the figures are woven together with an elegance which, if not wholly Mr. Woolmer's, is seldom reached by the practised figure-painter; while a tendency to more natural tones than is usual with this painter, furnishes an unlooked-for charm to the work. Still, even here, we have to urge the

objection we shall urge more strongly in noticing others of the artist's productions.

No. 201. 'Going to Water,' **J. TENNANT**. Very like Albert Cuyp done into English. The subject is the herd driving the cattle to their evening draught; the whole is most effectively made out; but the purity and tenderness of the toning suffers from the hardness and determination of manner with which the trees are painted.

No. 219. 'Portrait of James Montgomery,' **T. H. ILLIDGE**. A capably-painted portrait, and a striking likeness of the estimable poet.

No. 227. 'London, from Greenwich Park,' **J. B. PYNE**. The view is presented to us in a warm summer afternoon; and London, the Thames, and distant objects, lie in the sunshine gleaming through the veil of smoke which is thrown over them. One well-defined purpose is obvious, and it is prosecuted throughout the picture with the best results. We have often seen this view painted, but never so felicitously as in this production.

No. 254. 'Scene from the Devil on Two Sticks,' **A. SOLOMON**. A clever picture of an insane lady, but a palpable copy from a French wood-cut.

No. 274. 'Tour de Marché Rouen,' **E. HASSELL**. The town itself is firmly and substantially painted, but it stands alone—it is unsupported by the other parts of the picture.

No. 285. 'Gipsies,' **R. HUSKINSON**. This work is distinguished by much nature, even such as is most appropriate. It is well coloured and composed.

No. 316. 'Basse Ville, Ronen,' **C. F. JENKINS**. Too great an attention to finish has destroyed the breadth of this work; but it yet affords a valuable description of Norman street-architecture as it may have existed for centuries. It is very like the place.

No. 327. 'The Goatherd,' **W. SHAYER**. Throughout the whole of the works of this artist one form of grouping prevails, which we believe is termed the pyramidal. Years ago this was his favourite arrangement, and is so still; it is undoubtedly effective, but looks artificial, and is certainly monotonous when so often met with in the composition of one painter. This picture is more pure and less mannered than usual.

No. 334. 'Calais Roads—a Fresh Breeze,' **F. A. DURNFORD**. Fort Rouge has been a subject for every French and English sketcher "time out of mind;" it is easily recognisable here. The water is too much cut up; had it been painted with more volume, the main circumstance had been better supported.

No. 353. 'Cattram Common, Surrey,' **J. W. ALLEN**. The objects here compose admirably, and the picture generally is painted with a clear apprehension of some of the best points of landscape-painting; but some passages of the work exhibit an over-anxiety for cleanliness and flatness of tone, which has been productive of insipidity and tameness.

No. 370. 'Earning a Pound,' **R. B. DAVIS**. This is a horse story, and the *pound* is earned by the animals breaking into a corn-field. The last to cross the fence is a miserable jade, nearly akin to some of Morland's. This artist discusses very tritely the equine *physique* and *morale*, but his pictures would gain in value by more breadth.

No. 371. 'Brighton Boats, Fishing,' **J. C. GOODEN**. A mackerel breeze is here described, but the water is too much fretted into ridges. The colour is clean, and the picture throughout carefully studied.

No. 421. 'The Valentine,' **W. TAYLOR**. A pleasant composition—wrought with much ability.

No. 427. 'Study of a Head,' **J. BAXTER**. A simple but most beautiful work—though small, of very great value. We augur from it the future fame of the painter.

No. 451. 'Anty M'Queen asking a Blessing of Gray Lambert,' **T. CLATER**. A subject from Mrs. S. C. Hall's "Irish Sketches"—treated with truth and feeling.

No. 467. 'Dogana da Mare, Venice,' **J. HOLLAND**. We have in this picture one of those subjects from fallen Venice, which, from incessant repetition, must be considered as always overdone, if ill-done; but with the pearl of the heaven and the emerald of the sea, as given here, bursts upon us with all the charms of novelty and natural beauty.

No. 479. 'On the Coast of Dieppe,' **H. LAN-**

**CASTER**. The old chateau is a prominent object in the picture. The distant mist under the sun is very blue—too cold, and the foreground is much broken, otherwise the work possesses many merits.

No. 490. 'An Awkward Playfellow,' **H. J. HAMERTON**. A beach scene, with a group of children in the foreground, with near and distant circumstances telling of the occupation of those whose bread is gathered from the waters: the foreground is painted with much firmness, and puts the middle and remote distances in their places with the best effect. The awkward playfellow is a newly-caught lobster, with which a puppy is amusing himself.

No. 507. 'The Fifth of November,' **T. CLATER**. A capital and highly characteristic group; the interest of which is rather too much scattered.

No. 511. 'Lady—there is the Prisoner,' **J. GRAY**. This picture is placed too high; it is well worthy of a lower place. The incident is common enough in novels and romances: the visit of a lady to her lover or husband, who is confined in a dungeon. It is not only easy of interpretation, but conveys perfectly the sentiment intended.

No. 512. 'Tower on the Rhine, near Andernach,' **C. F. TOMKINS**. This tower is a very old acquaintance of the picture-loving public. Every river has peculiarities in its scenery, and that of the Rhine is not to be mistaken; the identity is sufficiently marked in this picture, which is of great excellence.

No. 516. 'Moonlight,' **Late J. B. CROME**. This work is better worthy of a lower place than many which have been so favoured; it is characterized by a tenderness and poetic feeling which proclaim a deeply-seated veneration for the beautiful.

No. 544. 'Maria—vide Tristram Shandy,' **F. STACKPOOL**. The old subject, and with no originality; but still a very pleasing picture, painted in a very able manner.

No. 553. 'Peasantry of the Kingdom of Naples,' **A. W. ELMORE**. A man and woman, the former drinking wine from a *fiasca*, in the manner of the people of Naples, that is, by holding the bottle at some distance from the mouth, and directing the stream into it. The picture is somewhat flat in colour, but the description is accurate and complete.

No. 557. 'Footway over a Marsh,' **A. MONTAGUE**. This is in treatment very like a water-colour work, or a low-horizoned Dutch picture, which surprises because so much is made of materials so slight. There is a degree of flatness in the colour, unlike nature, but, as a whole, the production is a successful effort.

No. 562. 'Morning,' **W. A. KNELL**. This is a marine composition; the sea is in shadow, telling against the morning light in the distant sky. A pilot is about to board a ship, which bears evidence of having passed a very stormy night.

No. 566. 'Relieving Guard,' **W. BARRAUD**. The scene is laid amid the wild haunts of the buck and the roe. A full-grown antlered stag has been shot, and left upon the heather in charge of a terrier until means of transport could be obtained; and the dog welcomes his master, whom he sees approaching. The incident is impressively related.

No. 578. 'A Coast Scene,' **W. H. BACK**. In short, a portrait of a huge rock, looking like one of the natural bastions of a perpendicular sea-wall. It seems to have been copied from nature, and has, consequently, sufficient substance and weight. The "scene" is by no means interesting, although much has been made of it.

#### WATER-COLOUR ROOM.

No. 612. 'May Day,' **A. D. FRIPP**. This we consider one of the most extraordinary work of a young artist produced this season. The great difficulties are completely overcome (varied modification of the expression of delight, and structural variety in the faces acted on). There are one or two faces here which resemble a nest of smiles, which are all at home, and all "lending a hand" to light up an expression, of more naturalness and vitality than one often sees expressed on paper.

No. 688. 'Lake of Geneva,' **J. HOLLAND**. A drawing on which much care has been bestowed with the most profitable results.

In commencing this notice we referred to our inability—at so late a period of the month—to render to the exhibition the full justice it deserved. We have been compelled to pass over many pictures, which merit not only comment but high commendation.

## REVIEWS.

WILKIE'S SKETCHES IN TURKEY, SYRIA, AND EGYPT. Lithographed by JOSEPH NASH. Published by GRAVES and WARMSLEY.

These sketches, twenty-six in number, are a selection from Wilkie's Eastern portfolio, and among them are many pictorial indices directly pointing to recent events in Turkey and Egypt; but their chief value is centred in their striking "character." The subjects, it may be conceived, are brought forward in the very purity of their nature; and, inasmuch as they are different from everything else of the kind that has been attempted, so are they proportionably more excellent. Although we consult the finished picture for the true calibre of genius, yet the slightest sketch may abound with evidences of vast power; and thus it is with the series before us, every line of which is in close relation with temperament and habit. Rembrandt was much struck with the personal points of the Osmanli, and he painted those that fell in his way with such truth, that Wilkie no sooner had opportunity of commencing his observations than he exclaimed, "Surely Rembrandt must have been in Turkey."

Had Sir David Wilkie lived to execute his contemplated works, this tour would have afforded another marked epoch in his career, as he purposed painting religious subjects from such fitting materials as he should collect; and the soundness of his views on the subject are incontrovertible, for the characters in almost all scriptural compositions are, according to circumstances, Italian, French, German, or English. This single circumstance—though only one of a hundred—proves that there is yet much to be done. To show with "how little wisdom the affairs of Art are managed," it is only necessary to observe, that any originality of character exhibited in a work is immediately transferred, under various modifications, to others. If, throughout the human race, there were no distinctive national characteristics, then might the European stand for the Asiatic; but since national distinction is so strong, he who seeks particular impersonations on that soil to which they are indigenous, must approach truth as nearly as can be done by human means.

The sketches are lithographed by Nash with all the force and spirit of the originals. We know no other artist who could have followed Wilkie with greater success.—No. 1 is 'Mehemet Ali' (a portrait exhibited in the Royal Academy), in whose cat-o'-mountain eye we read the last chapter of the history of Egypt. Assuredly no man has ever been better portrayed, morally and physically. A portrait of the present Sultaun was exhibited at the same time; and this also is in the selection. 'The Turkish Letter-Writer' consists of a public scribe of Constantinople, and two women—one Greek, the other Turkish—to whom he is reading a letter. The composition is most effective, and all the incident novel and striking.—No. 7 is 'A Portrait of Halakoo Mirza,' a Persian Prince resident at Constantinople; it is one of the most remarkable heads we have ever seen,—of a character altogether unknown in Western Europe. On this drawing Wilkie has bestowed much care, with the intention of painting from it a head of the Saviour. In seeking an impersonation of Christ from the region of his birth, he was much more consistent than the great masters, who have never gone beyond accepted classicities.—'Group in a Café at Constantinople.' This is a quiet *conversazione*, at which coffee and the chibouk assist.—'The Travelling Tatar to the Queen's Messenger,' the man who brought to Constantinople the news of the fall of Acre. There is much that is picturesque about him, being presented in the full Tatar costume.—'Sotiri, principal Albanian to the Consulate at Bucharest,' and a fine fellow he is—so much so, that Wilkie, on meeting him in the streets of Constantinople with Mr. Colquhoun, the British Consul at Bucharest, immediately requested permission to sketch him.—'Dragoman of Mr. Moore, British Consul at Beyrout.' This is an admirable figure; its character would render it, perhaps, the most remarkable in any composition in which it might sustain a part.—'Christ before Pilate.' This drawing is composed under the impressions which Sir David Wilkie entertained of religious painting. Pontius Pilate is here correctly drawn with Arabian features: we find him constantly painted as a Roman. If the artist wish thus to point out his country, it were better to do

it correctly, as Wilkie has done, for he was an Idumean.—'The Tatar relating the News of the Capture of Acre.' The scene of the Tatar's narrative is a *café*, wherein he is surrounded by an audience of diverse nations and creeds. This is indeed a picture; the Tatar is the only composed figure of the group, and the centre to which all eyes are directed. Such faces could never be conceived; they are only to be found on living shoulders.—'Hebrew Women reading the Scriptures.' This sketch has been intended for a picture, without, perhaps, any change in the composition; and, had it been executed, it would have been one of the gems of our school.

Of the twenty-six sketches, we mention but a few; and we do not speak especially of these because they surpass the others in beauty, for every one would form a prolific subject for a lengthened essay. They are unlike everything that has preceded them; each is in itself an achievement, and yet the whole constitute but the foundation of a structure which can never now be perfected.

PAUL AND VIRGINIA. Two Prints. Pient par SCHOPIN. Gravé par EUGENE JAZET. Publishers, GOUPEL and VIBERT, Paris. HERRING and REMINGTON, London.

The importation of foreign prints is a new feature of the age. It is one of the signs of the times; a sure token of the onward "march of Art." We shall rejoice to welcome them, as opening another source of intellectual enjoyment and profitable study. However ready we may be to dispute with continental schools their claim to pre-eminence as colourists—a claim, we think, which admits of no question—we must concede to them supremacy in the art of drawing—the foundation of all excellence. Many of our artists are in the position of "scholars" who write books before they have learned the grammar of the language; the natural consequence being, that they commit perpetual blunders, which are insufficiently atoned for by brilliancy of imagination, boldness and vigour of composition, and even grace and elegance of style. We may render, therefore, very essential service to the British artist by directing his attention to these acquisitions, which are now arriving in numbers from abroad; and for the due and proper circulation of which, a depot has been, at length, established here—the depot of Messrs. Hering and Remington, 153, Regent-street. This salutary arrangement will, we trust, have the effect of preventing the unscrupulous robberies that have been perpetrated, from time to time, in this country, and which arose solely out of the fact that hitherto the things coveted here were not to be obtained here, without considerable and embarrassing difficulties.\* It is only just that we raise our voices against a system which strikes at the root of all just dealing. In literature, there has been a general outcry for international copyright: surely it is only equally right that the principle should be applied to the Arts, and that a dishonest person should be liable to punishment for appropriating what does not belong to him, whether he picks his neighbour's brains or his pocket. For our own parts, we shall do our utmost to prevent such thefts for the future; thefts which are no longer to be excused, even upon the weak argument of necessity. The best productions of the Continent are now within our reach, and at prices scarcely larger, if at all larger, than the forgeries.

The two prints under more immediate notice are illustrative of the famous story—perhaps the most popular of our translations from the French, and as universally known in England as it is in France. "Paul and Virginia" has originated a vast number of pictures in every country. These conceptions of M. Schopin are from the gentler episodes.

\* As examples, we have now before us the two prints, engraved by Martinet and Dupont on the two famous pictures of Delaroche—'The Death of Lord Strafford' and 'Charles the First in the Guard-room' (transmitted to us by the courtesy of Messrs. Goupel and Vibert); and two base copies of them—which have been, to our knowledge, extensively circulated in England—engraved by Mr. Sanders. We prized the bad copies until we examined the original prints. The former are now, to our minds, worthless; while the latter will class among the most cherished and valued adornments of our home. They are line engravings of the most exquisite order, and may give practical lessons in the art. It is impossible, indeed, to praise them too highly, or to recommend them too strongly.

In the one, the boy and girl lovers are lost in the forest; in the other, the separation is about to take place, the farewell being indicated less by the vessel in the offing than by the mournful countenance of the young maiden as she presses the youth's hand. They are touching readings, such as appeal to memories and reach the heart. Although, as works of Art, they do not reach the highest grade, they are beautiful and interesting, true in design, and finely executed in mezzotinto, and will be desirable acquisitions to all by whom excellence in painting and engraving can be estimated.

COSTUMES. Par A. DEVERIA. Publisher, GOUPEL et VIBERT, Paris; HERRING and REMINGTON, London.

This series comprises 100 coloured lithographic prints, and exhibits the costumes of the various countries of the world. It forms a rich treasure-store to the artist, the amateur, the dramatist, the author, and—strange medley—the milliner; for those who call to mind the immense variety of draperies, and the highly picturesque dresses of the several European and Eastern states, will readily believe that an almost inexhaustible fund of information is supplied by the collection. Even to those who may not be able to estimate these prints as interesting and valuable works of Art, they may be strongly recommended as furnishing a continual source of instructive amusement; a delightful companion for the drawing-room during our dark winter evenings, and a pleasant aid to render profitable the long twilights of summer.

In the production of coloured prints the French have very far surpassed us; such a series as this could not be "got up" in England at less than thrice the cost; we have a case in point in "The Clans," by R. R. M'lan, noticed in this number, the price of which is necessarily governed by the estimated amount of sale and the expense of colouring.

Turn over this collection where we may, we are sure to meet a print of rare interest and value, a fine and accurate display of national character skillfully drawn, and the colours carefully and minutely laid upon the paper. They are not mere dry examples of portraiture; each is arranged as a picture; and though in most instances the print consists of a single figure, taste and judgment have been exercised in giving to it a pictorial effect by which its worth is enhanced considerably.

The number of female portraits is greater than are those of the other sex, obviously because the dresses are more peculiar and more picturesque. Here we have "Dames" of the several leading epochs of France; Spanish ladies in all possible varieties; fair Florentines, Venetians, Bohemians, Belgians, Greeks, Chinese, Polonaise, Swiss, Russians, Portuguese, Turkish, Flemish, and our own English maidens and belles Ecossais. We might advantageously fill a page with descriptions of the different costumes; indeed if we entered upon the task at all, a page would hardly suffice. We must content ourselves with referring the reader to the "Series;" he may select according to his fancy or his want, at a sacrifice of money marvellously small, considering the profit and enjoyment to be derived from the collection either as a whole or in parts.

ETCHINGS BY W. COLLINS, R.A. Published by J. HOGARTH, Great Portland-street.

Six is the number of the subjects, and they are wrought in the genuine and acknowledged manner of etching. Amid all the fluctuations of style and straining after novelty, the author is one of the few who are faithful to themselves. These figures are excellent examples of the life with which he qualifies his compositions—the simplest items in the whole category of humanity. 'The Fisher Boy' is a gem pure in its nature and beautiful in its execution. 'Fishermen waiting the Tide' is composed of two figures and accessories, the one seated and the other standing. 'The Landing Net,' another beach scene, wherein three children, having captured some small fish, are busied in removing them from their little net. In the next plate, 'The Begging Dog,' there is more finish; it exhibits a child seated at a cottage-door, and feeding "the begging-dog" with a spoon. 'Girl by the Fireside,' another is entitled, being a child seated looking at the fire, but there is a roundness and substance in the figure rarely to be found in works of

greater pretension. 'Buying Fish' brings us again to the seaside: the vendor is the fisherman himself, and the buyer is she who lives by the retail; these, with the two children of the fisherman, constitute such a group as we should covet in a picture. There is a fine feeling united to the simplicity of these etchings which imparts to them an inexpressible charm.

**THE POETICAL WORKS OF JOHN MILTON.** Two vols. Publishers, TILT and BOGUE.

This is unquestionably the most beautiful and the most perfect of all the editions that have been issued of the works of the great Poet. It is a brilliant specimen of typography, printed with exceeding accuracy—a credit indeed, to the English Press. It is prefaced by a valuable critical memoir, from the pen of James Montgomery—a kindred spirit; and it is very extensively illustrated by the pencil of William Harvey. The wood-cuts number 120; and are engraved by Thompson, Smith, Linton, and the brothers Williams. It is evident that no cost has been spared to render the volumes in all respects admirable. The drawings of Mr. Harvey are not of equal merit—in such an extended "set," how could they be? But they are worthy of his high reputation and uphold it. He is not perhaps the artist to illustrate the sterner scenes and characters in the "Paradise Lost," and is more "at home," where his imagination is less fettered, in the "Paradise Regained" and the minor poems; if such compositions as the "Comus," the "L'Allegro and Penseroso," and the "Lycidas," can be termed "minor." Few things in Art are more exquisitely beautiful than some of his illustrations; but the grand features of the grandest of all poems, are yet to be dealt with. In grappling with the mighty subject, how many have failed? how few have succeeded?

**THE CLANS.** From Sketches by R. R. M'LAN; with descriptive Letter-press, by JAMES LOGAN.

Part 1. Publisher, BOSLEY, Regent-street. There have been few more interesting works, in modern times, than this—which pictures the Clans of the Scottish Highlands, in the heroic and picturesque garb, which they have kept comparatively unchanged for centuries—preserving also their ancient language, manners, and customs with a degree of constancy absolutely wonderful. To render "pictorial" justice to our gallant and singular neighbours was not easy; poetical justice they have received often; but, the artist to describe them accurately, must be himself one of the "children of the mist," and must have studied the subject deeply, as well as have been an accurate observer. Such is Mr. M'lan—a Highlandman "to the backbone." He has, therefore, produced a series of portraits, the fidelity of which will not be questioned; and the design is to picture the particular costume of each of the leading clans; varied by several important details, for the particulars of which we must refer to the Introduction. The part before us—Part 1—contains three prints: 'Campbell of Breadalbane,' 'Macgillivray,' and 'Macdonnell of Glengarry.' They are capably drawn and skilfully coloured; while the accompanying letter-press explains to the uninitiated all the forms and ceremonies of the antique and honoured dress, and is full of racy and original anecdote.

We shall have other opportunities of noticing the work, when we may be able to afford larger space in order justly to describe it. We recommend it strongly, not only to our brethren of the North, but to those of the South, as a valuable and most interesting addition to our store of illustrated books.

**THE HERO AND HIS HORSE, ON THE FIELD OF WATERLOO.** Painted by B. R. HAYDON. Engraved by THOMAS LUPTON. Publisher, M'LEAN.

This print is far more satisfactory than our memory of the picture. Few modern works, indeed, possess so powerful an interest from a fortuitous combination of fancy with reality. It was a happy idea; and will be universally valued as a pictured poem—a far from unworthy tribute in honour of the great man who has lived to receive the homage usually postponed until death has rendered the ear "deaf to the voice of the charmer." The posthumous fame of the Duke of Wellington cannot sur-

pass that he has enjoyed in his lifetime. The artist has here imagined him visiting the latest field of his glory, twenty years after he fought and won it. The Duke stands by his old horse, "Copenhagen," who carried him on the memorable day; and, by a stretch of imagination, pardonable at least, if not laudable, the gallant steed is made to show a momentary triumph, as if "some vague ideas of the day have come back to him, while again finding himself on the scene of his former excitement." The attitude and expression of the horse are joyous; those of his noble master are contemplative, almost to sadness, as he looks upon the setting sun—setting over the tranquil plain of Waterloo, "in the presence of those monuments which forcibly recall to his recollection the features of many a warrior, who had fought by his side on other fields, but found in this a soldier's grave; the gallant chief may be supposed to meditate on the calamities of war, and contrasting them with the present aspect of the scene of deadly strife, where the contented peasant reaps his harvest unmolested, to reflect with satisfaction that such at length has been the consummation of a war, begun and prosecuted on the part of his own enlightened and powerful country, with equal honour, skill, and courage."

The subject was carefully studied; the Duke afforded the artist all facilities for the just completion of his work; and it is not too much to say that, taken altogether, it is the most interesting and characteristic portrait of his Grace that Art has yet produced. It might have been better engraved; there is a confused "muddiness" in some of the parts, which materially impairs its general effect.

**THE COLLEGIATE CHURCH, MANCHESTER.** Drawn by G. W. ANTHONY. Lithographed by G. HAWKINS. Published by the Artist, Manchester.

This is a very elegant copy of one of the most interesting structures in England. It is wrought with elaborate accuracy, yet with so much skill as to make a striking and pleasing picture. Several figures are introduced in the foreground; they are minutely pencilled, but by no means interfere with the leading purpose—a portrait of the venerable edifice. The artist is probably an architect, but he manifests a close and intimate acquaintance with pictorial effects, and does not neglect the minor accessories which so frequently now-a-days are made to render the exterior of a building attractive to a spectator. Mr. Anthony deserves much credit for the mode in which he has managed his materials, doing away with the unpropitious character of a long modern wall, which, of course, he could not remove. The drawing has been cleverly lithographed.

**THE NATURAL PRINCIPLES AND ANALOGY OF FORM.** By D. R. HAY, &c. &c. W. BLACKWOOD AND SONS, Edinburgh.

This is a treatise on the relations of sound, colour, and form, purposing to show that the last is subject to the same laws as the two former; and in order to prove that form, like sound and colour, has its three primaries; the elements of harmony in form, as here proposed, are reduced to a system, and compared with the scales of the harmonies of sound and colour. Without a combination of these primaries, which are the circle, the triangle, and the square, no perfect harmony can exist; and this quality is affected according to the predominance of the one or the other of these elementary parts. Such propositions lead of course to a consideration of harmony in architecture, prefaced by the statement of a fact so common as to be too commonly overlooked. "The melody"—we admit the term in the spirit of the author's application of it—"The melody of an edifice may enter into combination with surrounding objects, or the ground upon which it is placed, or it may form an independent melody of its own."

In illustration of his theory, the author reduces to the elements of their forms, some of the most remarkable buildings, as the Parthenon, the Pantheon, &c.; albeit with such and other examples architectural harmony seems with us to diminish in an inverse ratio to our increasing experience, leaving us to believe that the beautiful in early architecture owes much to a happy combination of accidents.

**THE SAINT'S DAY.** Painted by J. P. KNIGHT, A.R.A. Engraved by W. CHEVALIER. The print presented to subscribers (1841) by the Art-Union of London.

If we cannot describe this work as ranking among the class-perfect, either in design or engraving, it is at least of a very interesting character, and that character is purely and essentially English.\* It was not commenced expressly for the Society; the committee accepted the offer of it, when it was partly finished, in order to secure the ability to supply the subscribers—of 1841—earlier than they considered they could have done by placing a new work in hand. Notwithstanding, two years have elapsed, and it is only now issued—an evil for which the committee are not to blame, although it has, no doubt, very materially interfered to disarrange their plans, and has been to them a subject of considerable annoyance and vexation. We look forward to a rich recompense when either of the three plates, now in progress, shall be laid before us: 1st, 'Una entering the Cottage,' engraved by Mr. J. W. Watt (nearly ready for the printer); 2nd, 'Raffaello and the Fornarina,' engraved by Mr. L. Stocks; and 3rd, 'The Convalescent,' engraved by Mr. Doo; the last will be, indeed, a gem of the purest water.

**GUIDES TO PUBLIC GALLERIES.** Publisher, H. G. CLARKE, Old Bailey.

Little books published at a cheap rate for "the million;" a very desirable plan, seeing that during the year 1842, upwards of 540,000 persons visited the National Gallery; and that among them there was no doubt a very large proportion to whom the saving of a few pence was an object. Here we have a "Guide to the National Gallery" for *three-pence*—a neatly and clearly printed little book; with a sensible Introduction, and a brief but succinct history of each picture. It appears to be accurately arranged. The same publisher has issued Guides to Hampton Court, and the collection at Dulwich.

\* "The picture illustrates a custom still maintained in some parts of England, where, on a particular day in the year, the occupants of almshouses sit at the gate in their best apparel, to receive the gifts of the benevolent."

**TO READERS AND CORRESPONDENTS.**

With our next number—the number for MAY—we design to issue an EXTRA HALF-SHEET of eight pages, to contain about 30 specimens of wood-engraving from "THE BOOK OF BRITISH BALLADS," edited by S. C. Hall, Esq., F.S.A.; and for which drawings were supplied by various accomplished artists, engraved by the best wood-engravers.

We believe this publication will exhibit a collection of examples of the Art, of high excellence and great value; and contribute to establish proof that our English artists may excel the schools of other countries even in this department of the Arts.

We shall deliver this extra half-sheet WITHOUT ANY EXTRA CHARGE; but as its value will be considerable, and, no doubt, many persons will procure it for the mere sake of the prints, our regular subscribers will do well to take especial care to obtain their copies on the day of publication; and if more than one copy be required, that they will previously signify their desire to the publisher.

The extra half-sheet will be stamped, so that it may be transmitted with the ordinary part through the post. The engravings will be printed on fine paper and with the utmost care of which the typographic art is capable. We think it desirable to give due notice of this arrangement, because, as the half-sheet will be detached from the usual number—although ranging with it in pages—the purchaser may find it necessary to see that it is regularly delivered to him.

**DISTRIBUTION OF PRIZES BY THE ART-UNION OF LONDON.**—The distribution of prizes will take place at Drury-lane Theatre on the 25th of April; Mr. Macready having kindly and generously lent the theatre for that purpose. The Report will be given fully in this Journal, to be published on the 30th; the proceedings will be accurately reported, and a complete and ENTIRE LIST OF ALL THE PRIZEHOLDERS WILL BE PUBLISHED.

Persons who may desire to procure early copies of this list, will, perhaps, take the trouble to order the number from the publisher; otherwise—for the reason above alluded to—they may find it impossible to obtain them.

We must postpone our answers to correspondents until next month.

Third Edition, revised, 2 vols., royal 8vo., £2.  
**HISTORY OF ARCHITECTURE.** Illustrated with nearly 100 Plates. By the late THOMAS HOPE, Esq.  
 John Murray, Albemarle-street.

Now ready, with a large Travelling Map, post 8vo., 15s.,  
**M. MURRAY'S HAND-BOOK for CENTRAL ITALY;** including the Papal States, Rome, and the Cities of Etruria.

Also, just published,  
**MR. MURRAY'S HAND-BOOK for NORTHERN ITALY—The States of Sardinia, Genoa, and the Riviera, Venice, Lombardy, and Tuscany,** with a large Travelling Map. Post 8vo., 12s.  
 John Murray, Albemarle-street.

Now ready, post 8vo., 12s.  
**HISTORY OF PAINTING—ITALY.** From the Age of Constantine the Great to the present time. Translated from the German of Kugler, by a Lady; and edited, with Notes, by C. L. EASTLAKE, R.A.

"This Work is intended to supply a want long felt by persons endeavouring to acquire a knowledge of the Early History and Progress of the Art of Painting, which no other English work supplies, viz., a short and easily intelligible guide, pointing out to the unlearned the leading styles of Art."

John Murray, Albemarle-street.

Just ready, with a Portrait, 3 vols. 8vo.,  
**LIFE OF SIR DAVID WILKIE;** with his Journals, and Critical Remarks on Works of Art during his Tours in France, the Netherlands, Italy, Spain, Germany, Turkey, the Holy Land, and Egypt. By the late ALLAN CUNNINGHAM, Esq.; and a selection from his Correspondence with the following distinguished persons:—

The Prince Regent.  
 Late Duke of Sutherland.  
 Late Earl of Mansfield.  
 Late Earl of Mulgrave.  
 Countess of Mulgrave.  
 Lady Beaumont.  
 Earl of Leven.  
 Sir Robert Peel, Bart.  
 Late Sir George Beaumont.  
 Late Sir Wm. Knighton.  
 Sir Thomas Lawrence.  
 Sir Francis Chantrey.  
 Sir Martin Archer Shee.  
 Sir James M'Grigor.  
 Sir W. W. Knighton.  
 Sir William Allan.

Benjamin West, P.R.A.  
 Mathew Baillie, M.D.  
 J. Julius Angerstein, Esq.  
 Lady Baird Preston.  
 Sir Peter Laurie.  
 Samuel Rogers, Esq.  
 Thomas Phillips, R.A.  
 William Collins, R.A.  
 Dr. Buckland.  
 John Abel Smith, M.P.  
 Mrs. Joanna Baillie.  
 Abraham Raimbach, Esq.  
 Samuel Dobree, Esq.  
 Andrew Wilson, Esq.  
 Andrew Geddes, Esq.  
 &c. &c.

John Murray, Albemarle-street.

8vo., price 1s. 6d.,  
**A LETTER TO THE RIGHT HON. SIR ROBERT PERL, Bart., M.P.,** on the Appointment of a COMMISSION for Promoting the CULTIVATION and IMPROVEMENT of the FINE ARTS; with some Suggestions respecting a former Commission, denominated "The Committee of Taste."

By JOHN BACON, Esq., F.S.A.

London: J. Hatchard and Son, 187, Piccadilly.

In royal octavo, price 4s. 6d.,  
**A MANUAL OF PERSPECTIVE,** for the USE OF AMATEURS. By J. WOOD, Jun.

"A neat, clear, and concise explanation of the leading principles of Perspective as exemplified in familiar scenes and objects; forming a very serviceable introduction to the science for the class of persons for whose use it is designed."—Spectator.

"Its elucidation of the principles of the science is so clear and comprehensive, as to facilitate greatly the studies of the young artist."—Worcester Journal.

Whittaker and Co., London.

Just published, in foolscap 8vo., price 1s., or, post-free 1s. 2d.,

**A GLANCE at the TEMPLE CHURCH,** with Eight Illustrations and ornamental borders taken from the decorations of the Church; printed in colours, in a novel combination of lithography and type. By FELIX SUMMERLY.

Hand-Books, by the same Author.

For Holydays; being a Guide to the London Sights, 6d.  
 For Westminster Abbey, 7s., 3s., 1s., 6d.  
 For Hampton Court, 2s. 6d.; pictures separate, 1s.  
 For Free Picture Galleries, 1s. 6d.

George Bell, 186, Fleet-street.

One thick volume 8vo., containing 1100 pages, and illustrated by upwards of 1000 Engravings on Wood, £2 12s. 6d. cloth,

**AN ENCYCLOPÆDIA OF ARCHITECTURE,** Historical, Theoretical, and Practical. By J. GWILT.

"This elaborate and learned work constitutes a complete body of Architecture, and gives such information concerning its history, theory, and practice, as students and practitioners should acquire, and which the amateur and general reader may wish to refer to. The vast mass of matter is admirably arranged, put into a condensed and clear form, and illustrated with woodcuts, that of themselves are valuable examples, independently of the text."—Spectator.

London: Longman, Brown, Green, and Longmans.

**JOHN RUSSELL SMITH** has this day published PART II. for 1843, of his CATALOGUE of 2000 Choice, Curious, and Useful Books, including Collections on Angling, Anglo-Saxon, Irish History, Shaksperiana, some splendid Missals, &c. &c. GRATIS, on application, or sent by post on receipt of four penny stamps to frank it. Booksellers will please to apply for it through their agents, otherwise J. R. S. has the trouble of sending it, and paying 2d. to have it enclosed in their parcels.

No. 4, Old Compton-street, Soho.

This day is published, in One Volume royal quarto, with 18 Engravings and several Woodcuts, handsomely bound in cloth, price 15s.,

**THE NATURAL PRINCIPLES AND ANALOGY OF THE HARMONY OF FORM,**

Dr. D. R. HAY,  
 Decorative Painter to the Queen, Edinburgh.

By the same Author, the Fourth Edition of  
**THE LAWS OF HARMONIOUS COLOURING,** adapted to Interior Decorations, &c. With Eight Coloured Diagrams, price 7s.  
 William Blackwood and Sons, Edinburgh and London.

TO PAINTERS IN WATER COLOURS.

Just Published, price 1s.,

**THE HAND-BOOK OF WATER COLOURS**

By WM. WINNOR and H. C. NEWTON, Artists Colour-makers to the Queen. Being a brief treatise on their qualities and effects when employed in Painting, with some account of the general nature of Colours: of Colours obtained from the mineral world—of pigments from the animal world—of vegetable Colours—on the choice of Colours for use. Together with a

DISCRIPTIVE LIST

of all the Cake Water Colours now in use—Seventy-six in number: of Blues, 10; of Reds, 15; Yellows, 14; Purples, 3; Browns, 13; Greens, 8; Orange, 2; Neutrals and Blacks, 6; and Whites, 3.

Detailing the peculiar qualities of each, and its value in combination.

Tilt and Bogue, Fleet-street.

**CLARKE'S HAND-BOOK GUIDES to FREE GALLERIES of ART** in and near London.

1. HAMPTON COURT PALACE: its Pictures, Tapestries, and Gardens—a Hand-Book Guide for Visitors, illustrated with 12 Engravings on Wood, by DELAMOTTE. Imperial 16mo., gilt edges, price 2s.; stiff covers, 1s.; abridged editions, 6d. and 3d. each.

2. THE NATIONAL GALLERY: its Pictures and their Painters. Imperial 16mo., price 3d.

3. THE DULWICH GALLERY: its Pictures and their Painters. Imperial 16mo., price 6d.

4. THE NAVAL GALLERY, GREENWICH HOSPITAL, with a Description of the Painted Hall and Chapel, price 3d.

Foolscap 8vo., cloth, gilt edges, 4s. 6d.,

**THE LADIES' WORK-TABLE BOOK;** containing clear and ample instruction for Plain and Fancy Needlework, Knitting, Netting, Crotching, and Tatting.

**CLARKE'S LADIES' HAND-BOOKS.** Imperial 32mo., gilt edges, price 1s. each, illustrated with numerous Engravings.

1. Fancy Needlework and Embroidery—2. Knitting, Netting, and Crotchet—3. Knitting, Netting, and Crotchet, second series—4. Plain Needlework—5. Baby Linen—6. Embroidery on Muslin and Lace Work—7. Millinery, Dressmaking, and Tatting—8. The Toilet.  
 H. G. Clarke and Co., 66, Old Bailey.

Just published, Parts 1 and 2, of a new and unique Work (under the patronage of the Highland Society of London), entitled,

**THE CLANS;** consisting of highly-coloured Lithographic Plates, representing full-length Figures of Chiefs and other Personages in their respective Costumes; from Original Paintings made expressly for this Work. By R. R. M'IAN, Esq., with Descriptive Letter-press, by JAMES LOGAN, Esq., F.S.A. Sc., Corresponding Mem. Soc. Ant. Normandy, &c. Author of "The Scottish Gael."

The object of the Publisher, in the production of this Work, is to give accurate representations of the Tartan, Arms, and Insignia peculiar to each of the Scottish Clans, with requisite Descriptions and Historical Notices of each.

It is intended to be published in Parts, each containing Three Coloured Plates, with Letter-press, in a Wrapper, to appear on alternate months, and is expected to be completed in Fifteen Numbers. The size will be imperial quarto, and the price,—

To Subscribers ..... 12s. each Part.

A few Copies will be printed on imperial folio, price 21s. each Part.

It is requested that Subscribers will forward their names and addresses to the Publisher as early as possible, as a Printed List of them will be given.

London: Published by W. Bosley, 322, Regent-street, opposite the Polytechnic Institution; also, Adam and Charles Black, Edinburgh.

Published this day, in one handsome vol. royal 8vo., price 16s., cloth lettered,

**THE PHILOSOPHICAL WORKS of JOHN LOCKE.** With a Preliminary Discourse, Introductory Prefaces, and Notes, by J. A. ST. JOHN, Esq., Author of the "Manners, Customs, Arts, &c., of the Ancient Greeks."

"An edition of the Philosophical Works of Locke has long been wanting. It is in fact matter of surprise, that a body of writings, in which the most popular metaphysical system of modern times is developed, should never before have been presented to the world in a collected form, and detached from all miscellaneous compositions."—Preliminary Discourse.

London: George Virtue, Ivy-lane, Paternoster-row.

On the 1st of April, Part V. (to be completed in Seven Parts) of

**CHRONOLOGICAL PICTURES of ENGLISH HISTORY.** Designed and Lithographed by JOHN GILBERT, and beautifully tinted. The literary portion of the work by ELIZA CARTWRIGHT. With fac-similes of the Autographs of the Sovereigns and Distinguished Characters; and accompanied with a tabular descriptive sheet of Letter-press, carefully compiled.

CONTENTS.—Mary—Elizabeth—James I.—Charles I.—Oliver Cromwell, Protector.

Size—Imperial folio. Price—Each Part, in a Wrapper, containing Five Plates, 7s. 6d.

\* Each Plate illustrates a Reign.

Thomas Varty, York House, 31, Strand.

**EMINENT CONSERVATIVES AND STATESMEN.**

This day is published, Part XIX., of

**RYALL'S CONSERVATIVE PORTRAITS,** containing Portraits and Memoirs of the RIGHT HON. THE EARL OF RYON, the RIGHT REV. THE LORD BISHOP OF ROCHESTER, and FREDERIC THESIGER, Esq., M.P., with the addition of a Memoir of GENERAL GASCOYNE.

The Portraits are all beautifully engraved from the pictures in the possession of the distinguished individuals whom they represent. Size of the Engraving 9½ inches by 7½ inches, and the Memoirs supplied by a gentleman of high literary attainments, and sound Conservative principles. Royal folio, India Proofs, 31s. Royal folio, French Proofs, 18s. Imperial quarto, prints, 13s.

As only a limited number of impressions of the entire Work have been reserved, and several of the parts are nearly out of print, the Publisher begs, therefore, to suggest to those subscribers who may not have completed their sets, the propriety of doing so as early as possible.

London: George Virtue, 26, Ivy-lane.

Now ready, in fcap. 8vo., cloth, 6s.  
**CRITICISMS on ART, and SKETCHES of the PICTURE GALLERIES of ENGLAND.** By WILLIAM HAZLITT. And now first collected, CATALOGUES of ELEVEN of the PRINCIPAL GALLERIES.

"An invaluable work: if we wished to give any person a correct and exalted idea of Art, we should say, read Hazlitt's Criticisms."—Tait's Magazine.  
 "HAZLITT'S MATCHLESS and UNRIVALLED CRITICISMS.—The Catalogues alone are worth twice the purchase-money."—Monthly Magazine.

"Its delicacy of perception is only equalled by its strength of diction: the pen may be said to paint, and words to have the effect of colours."—Times.

"Does he describe a Claude, and we feel the very atmosphere of the landscape—a Raffaele, and we are impressed with a religious awe—a Titian, and we touch the living flesh—a Hogarth, and we read more life and nature in his pictures."—Court Journal.

"The Catalogues of the Public Galleries are purchasable; the private ones are unattainable."—Spectator.

John Templeman, 248, Regent-street.

**ETCHING CLUB.—ILLUSTRATIONS of the DESERTED VILLAGE.**—The five-guinea copies of this work have been disposed of, and the plates destroyed. Eleven of the 13-guinea proofs, before letters, and nineteen of the 10-guinea proofs remain, and may be obtained on application to the Secretary, Mr. Redgrave, Hyde-park-gate, Kensington-gore; or to Messrs. Longman, Paternoster-row.

The Illustrations of Milton's "L'Allegro and Il Penseroso" are in progress.

**TO ART-UNIONS.**—Their legality being fully established, the Advertiser begs to acquaint the Managers of Art-Unions, that he has just finished an ENGRAVING, from a beautiful picture (painted by a MEMBER of the ROYAL ACADEMY of LONDON), of a popular character, and peculiarly adapted for a presentation Engraving to the Subscribers of an Art-Union. The size of the Engraving, including a suitable margin for framing, is 24 inches by 19; the Engraving is on Steel, in the highest style of the Art. The Advertiser would either sell the Plate and Copyright, or he would undertake to supply any number of impressions at a price to be agreed upon per hundred. For further particulars, apply to A. B., 34, Leicester-square, London.

**TO ARTISTS.**—Immediate Profitable and Permanent Employment may be obtained by Clever Draftsmen, capable of getting up Original Book Illustrations. — Personal application, with Specimens, to be made between Nine and Ten o'Clock, any morning, at 103, Newgate-street, London.

**NOTICE.**—**SPLENDID STOCK of GLASS and PICTURE FRAMES**, the most modern and elegant patterns ever offered to the public, may be had at J. RYAN'S extensive Manufactory, 13 and 14, LONG-ACRE, at prices that will defy competition. Console Tables, Girandoles, Brackets, Cornices, and every article connected with the trade; Fancy Wood Frames of every description, of a superior quality, in great variety. Frames joined in the gold in the first style. A few fine Pictures for Sale.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET of DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**PICTURE-FRAMES, CHIMNEY GLASSES, CONSOLE TABLES**, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regilt, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

#### REGISTERED 1843.

**TO ARTISTS AND AMATEURS.**—The CARTON PENCILS, for the rapid production of Drawings and Designs in the style of the Old Masters.—The attention of the Profession, and all engaged in the delightful Art of Drawing, is particularly directed to the above Lead Pencils, which have been manufactured for the production of Designs, &c., in that bold and effective style so much desired by the present taste. For the execution of both large and minute work, they will be found to stand unrivalled. Their quality and peculiar form adapting them for the deepest and most delicate tints, while the absence of the numerous degrees (these pencils being only of four distinct shades) gives the essentials positively required, doing away with superfluity and confusion. Their peculiar feature is, they REQUIRE NO POINTING, but by cutting away the cedar, the means of producing Line and Shade of various breadths is immediately presented. The Lead of which these Pencils are manufactured is pure and genuine, and by extreme care and attention, every gritty particle is removed, which allows them to be used with that freedom and sweetness so essential for the production of fine drawings. In conclusion, they will be found a desideratum long required, and must, upon trial, obtain a decided preference and extensive patronage.

Manufactured and Sold by REEVES and SONS, at their Superfine Permanent Water Colour, and Black Lead Pencil Manufactory, 150, CHEAPSIDE, London.

DEGREES:—No. 1, Hard; 2, Hard and Black; 3, Soft; 4, Soft and Black.

**INTERESTING AND CLASSICAL EXCURSION.**—STEAM to CONSTANTINOPLE, calling at Gibraltar, Malta, Athens, Syria, Smyrna, Mytilene, and the Dardanelles. For Passengers, Goods, Specie, and Parcels. The Peninsular and Oriental Steam Navigation Company will despatch the TAGUS (900 tons and 300 horse power), on her next Trip to the above places from SOUTHAMPTON, on FRIDAY, the 28th of APRIL, at Nine o'Clock a.m.

Goods and Parcels must be at Southampton by the 26th of April.—Programme of the Route, Rates of Freight and Passage, and other particulars may be obtained at No. 44, Regent-street, Piccadilly; also of Earle Langston, Manchester; F. McGowan, 3, Burgh Quay, Dublin; and to secure passages apply at the Company's Offices, 57, High-street, Southampton; and 51, St. Mary-axe, London.

**THE CHINESE COLLECTION**, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 225 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve, 1s.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR.**—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lanqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**ORNAMENTS for the DRAWING-ROOM, Library, and Dining-room**, in Italian Alabaster, Marble, Bronze, and Derbyshire Spar, consisting of Groups, Figures, Vases, Inkstands, Candlesticks, Tables, Obelisks, Watchstands, Paper-weights, &c., imported and manufactured by J. TENNANT (late Mawe), 149, STRAND.

Students in Geology, Mineralogy, or Conchology, can be supplied with an extensive assortment of Shells, Minerals, and Fossils, or with Elementary Collections, carefully arranged and described, at 2, 5, 10, 20, to 50 Guineas each; together with Geological Models, Maps, Hammer, Books, Blowpipes, &c., by J. TENNANT, Mineralogist to her Majesty, 149, Strand.

**THE ART-UNION OF LONDON.**—The 'SAINT'S DAY.'—P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane, begs respectfully to inform Subscribers he has finished, and ready for inspection, a rich elegant FRAME (26½ inches by 21½ sight) for the above Engraving, ornamented emblematically expressly for the subject, and gilt in a very superior manner in burnished gold, in imitation of Or-inolu, with the best flatted glass, £3 15s.; the same frame, in imitation of old carved oak, or in oil gold, and glass, £3; a handsome ornamented swept-gilt frame, and glass, £2; a fancy wood frame, either rosewood, maple, satin-wood, Russian maple, &c., 3-inch moulding, with gilt inside, and glass, £1 8s.; a gilt bead moulding, frame, and glass, £1. The above prices include mounting of Engravings in an accurate manner. A list of the prices and drawings of different Frames for the Engravings of the 'Saint's Day,' and those being issued by the National Art-Union, sent, pre-paid, to any part of the kingdom. Every article connected with Carving and Gilding, Plate-glass, &c., supplied cheaper than by any other house in the trade.

All goods purchased at this Manufactory carefully packed, and the loan of cases free of extra charge.

**NOTICE.**—**PATENT RELIEVO LEATHER HANGINGS** and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures. L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**PAINTERS' ETCHINGS.**—Just published, Part I. of a Series of Etchings, by Wm. COLLINS, R.A. Price 10s. 6d.

The work will be complete in six parts, each containing six subjects, and, in order that no bad impressions may be issued, the plates have been destroyed after 500 copies only have been worked off.

Published by Hogarth, Great Portland-street; and to be had of all Printsellers.

**THE HISTORICAL ENGRAVING of the DEATH of the SULTAN TIPPOO SAIB at the CAPTURE of SERINGAPATAM by SIR DAVID BAIRD;** from the Original Picture by Sir David WILKIE, R.A.; engraved in the highest style of Art by JOHN BURNET. Private Plate, price £10 10s.

The Impressions being limited for private Subscribers, early application must be made.

F. G. Moon, Printseller to her Majesty, 20, Thread-needle-street.

**SCHOOL of ART**, No. 6, CHARLOTTE-STREET, BLOOMSBURY.—This School, established and carried on many years by Mr. SASS for the education of Artists, and the instruction of Amateurs in Figure and Landscape-drawing, and Painting in Oil and Water-colours, Modelling, Etching, &c., possessing every requisite as a Probationary School for the Royal Academy, is now conducted on the same principles as heretofore by Mr. F. S. CARY, with the aid of Mr. REDGRAVE, R.A., who is engaged as Visitor.

The Studios contain an extensive collection of Casts from the Antique, Drawings, Works of Art, and folios of Prints from the old Masters.

There is a separate Establishment for Ladies.

Mr. F. S. Cary may be spoken with from Nine till Eleven, at the School, where printed particulars of the terms are to be had.

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE**, 25, PALL MALL, LONDON.

Capital £500,000.

F. G. P. NEISON, Esq.

THIS OFFICE is provided with very accurately constructed Tables, by which it can Assure UNSOUND Lives on Equitable Terms.

The Extra Premium discontinued on restoration of the Assured to permanent Health.

A portion of the Extra Premium may remain as a Debt on the Policy.

Survivorship Assurances where the Life in expectation suffers from Disease, effected at Cheaper Rates than at any other Office.

Similar Tables enable the Society to grant INCREASED ANNUITIES on Unsound Lives—the amount varying with the particular Disease.

Members of Consumptive Families Assured at Equitable Rates.

HEALTHY LIVES are Assured on Lower Terms than at most other Offices.

ILLUSTRATED WORKS, PUBLISHED BY  
WM. S. ORR, and CO.

In Imperial 4to, price 25s., half-bound morocco, and 30s. morocco gilt.

**THE ROYAL GALLERY OF PICTURES;** being a selection of Thirty-two Pictures from her Majesty's Private Collection at Buckingham Palace, and engraved by eminent Artists. With descriptive Letter-press by LINNEL.

Price One Guinea and a Half in cloth, Thirty-eight Shillings plain morocco, and Forty-eight Shillings morocco elegant, both bound by Hayday,

**GREECE; Pictorial, Descriptive, and Historical,** by CHRISTOPHER WORDSWORTH, D.D. Illustrated by Twenty-six highly-finished Line Engravings on Steel, after FIELDING, CRESWICK, COX, and SARGENT; Two Maps of Greece; and upwards of Three Hundred and Fifty highly-finished Engravings, drawn on Wood by HARVEY, SARGENT, MEISSONIER, PAUL HUET, DAUBIGNY, STANLEY, and JACQUES.

**PICTURES OF THE FRENCH; A Series of Literary and Graphic Delineations of French Character.** By JULES JANIN, BALZAC, CORMENIN, and other celebrated French Authors. The Drawings by GAVARNI, H. MONNIER, and MEISSONIER.

Reduced price 15s. cloth lettered; 26s. plain morocco, and 32s. morocco elegant, both bound by Hayday,

**PAUL AND VIRGINIA; BY BERNARDIN DE ST. PIERRE;** with an Original Life of the Author by ST. BEUVE, and illustrated by upwards of 330 magnificent Engravings on Wood, by JOHANNOT, FRANCAIS, and MEISSONIER, and engraved by the First Artists of France and England.

**THE COMIC ALBUM, in Verse and Prose,** with upwards of 300 Illustrations, beautifully printed on tinted papers; and bound in splendid arabesque pattern of colours and gold. Large 4to., price 12s. "Every page is mirth-exciting, and the Comic cuts are as many and as irresistible as the thwacks and tumbles of a Pantomime.

**WALKER'S MANLY EXERCISES;** containing instructions in Rowing, Sailing, Swimming, Riding, and Driving.—To which are now added, for the first time, instructions in Racing, Hunting, and Shooting, by CRAVEN, with Sixty-four Plates by HOWARD, and numerous engravings on Wood by LANDSEER and SARGENT.

**THE EARTH; its Physical Condition and most remarkable Phenomena,** by W. M. HIGGINS. Illustrated by Ten Coloured Engravings by FELIX BLUNT.

**THE NATURAL HISTORY AND ANTIQUITIES OF SELBORNE.** By the Rev. GILBERT WHITE, A.M. A new Edition carefully revised, with Notes, by EDWARD BLYTH. A Map of the Locality, beautifully engraved on Steel, and copiously illustrated with highly-finished Engravings on Wood, and an interesting account of the state of Selborne in the summer of 1836, by Mr. MUDIE.

**PAXTON'S MAGAZINE OF BOTANY, and REGISTER OF FLOWERING PLANTS.** Each Volume contains forty-eight Plates beautifully coloured from Nature. The text comprises botanical descriptions of the Plants figured; the Time of their Introduction; the best mode of Culture; and every other particular essential to their perfect growth. Every beautiful plant newly introduced worthy of notice and general cultivation, is described, and, if of sufficient importance, accurately figured.

**CUVIER'S ANIMAL KINGDOM,** arranged according to its Organization. By the late BARON CUVIER, Member of the French Academy, and of the Royal Societies of London, Berlin, Petersburg, &c. &c. Translated from the last French Edition, and brought down to the present state of knowledge.

**THE PICTORIAL HISTORY OF FRANCE,** and of the French People; from the establishment of the Franks in Gaul, to the period of the French Revolution. Enriched by 400 Designs on Wood, by JULES DAVID. To be completed in Two Volumes.

## ILLUSTRATED WORKS

PUBLISHED BY

JEREMIAH HOW, 132, FLEET-STREET.

I.

This day, price Half-a-Crown,

PART I.,

(To be completed in Eight Monthly Parts.)

**MRS. S. C. HALL'S SKETCHES OF IRISH CHARACTER.** Illustrated by the following eminent Artists:—W. H. Brooke, F.S.A.; N. T. Crowley; George Cruikshank; W. Evans, of Eton; J. Franklin; J. Gilbert; W. Harvey; J. R. Herbert, A.R.A.; D. Maclise, R.A.; R. M'lan; Mrs. M'lan; H. M'Manus; A. Nicholl, A.R.A.; G. F. Sargent; J. C. Timbrell; J. H. Townsend; C. H. Weigall; and S. West. Engraved on Steel and Wood. This Work will correspond in size and appearance with "Ireland; its Scenery and Character."

II.

This day is published,

**IRELAND: ITS SCENERY AND CHARACTER.**

By Mr. and Mrs. S. C. HALL.

Three vols. Imperial octavo, price £4. Illustrated by 48 Engravings on Steel; 18 County Maps; and 491 Engravings on Wood.

This work being now completed with the 27th Monthly Part, issued on the 1st of January, 1842, subscribers are requested to complete their volumes without delay.

As an illustrated work it is believed few publications of modern times have been so satisfactorily sustained from its commencement to its close. The best artists have been engaged in its production—the "scenery and character" are, in every instance, pictured from sketches taken on the spot—and the engravings have been executed by the most competent engravers.

The History and Descriptions of Ireland, from the justly popular pens of Mr. and Mrs. S. C. Hall, have obtained the universal approbation of the public press; and the very large circulation which the work has enjoyed, affords the most unequivocal proof of its great and extended popularity.

III.

Just ready, in One Vol., imperial 8vo., price 31s. 6d., elegantly bound,

**THE BOOK OF BRITISH BALLADS.** Edited by S. C. HALL, F.S.A.

The Work consists of British Ballads taken from the collections of Percy, Evans, Ritson, Pilkington, Scott, Motherwell, Jamieson, Buchan, Herd, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has, hitherto, been made to select, and arrange in a popular form, the best of these Ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior, or objectionable, compositions.

'Chevy Chase,' illustrated by J. Franklin.  
'The Children in the Wood,' illustrated by J. R. Herbert, A.R.A.  
'Fair Rosamond,' illustrated by J. Franklin.  
'The Demon Lover,' illustrated by J. Gilbert.  
'The Nut Brown May,' illustrated by T. Creswick, W. B. Scott, and S. Williams.  
'Kempion,' illustrated by W. B. Scott.  
'The Child of Elle,' illustrated by J. Franklin.  
'The Two Brothers,' illustrated by W. P. Frith.  
'The Blind Beggar,' illustrated by J. Gilbert.  
'Robin Goodfellow,' illustrated by R. Dadd.  
'Sir Patrick Spens,' illustrated by J. Franklin.  
'Gil Morice,' illustrated by K. Meadows.  
'Sir Aldingar,' illustrated by J. Gilbert.  
'Sir Launcelot du Lake,' illustrated by E. Corbould.  
'The Heir of Linne,' illustrated by E. M. Ward.  
'King Arthur's Death,' illustrated by J. Franklin.  
'Lord Soulis,' illustrated by R. M'lan.  
'Lord Thomas and Fair Annet,' illustrated by H. J. Townsend.

'Fause Foodrage,' illustrated by T. M. Joy.  
'Genevieve,' illustrated by J. Franklin.  
'Fair Margaret and Sweet William,' illustrated by H. Warren.  
'The Birth of St. George,' illustrated by W. B. Scott.  
'The Mermaid,' illustrated by J. Franklin.  
'Lord Ullin's Daughter,' illustrated by E. Corbould.  
'Johnie of Breadislee,' illustrated by Sibson.  
'The Dowie Dens of Yarrow,' illustrated by J. Franklin.

**DECORATION OF THE NEW HOUSES OF PARLIAMENT.**—DIMES and CO., 91, GREAT RUSSELL-STREET, BLOOMSBURY-SQUARE, beg to inform those gentlemen who intend to compete for the Prize offered by the Royal Commission of the Fine Arts, that they are now preparing a CARTOON, agreeable to manner recommended by C. L. Eastlake, Esq., and invite an inspection of the same.

## PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES,** for COLOURS, OILS, VARNISH, MARGOLP, ASPHALTUM, &c.—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre, uninjured by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz.:

Pale and Deep Yellow.	Pale and Deep Brown.
Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

## MILLER'S SILICA POWDER.

## MILLER'S GLASS MEDIUM FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

## MILLER'S VENETIAN OIL.

## MILLER'S VENETIAN VARNISH.

## MILLER'S VENETIAN GROUND CANVASS.

## MILLER'S COLOURS FOR PAINTING ON GLASS.

## MILLER'S GLASS MEDIUM

## FOR WATER-COLOUR PAINTING.

No. 1. For first colouring or laying on masses of colour.

No. 2. For second colouring, glazing, and finishing.

## MILLER'S SKETCHING COLOURS.

## MILLER'S ANTHYDOR.

## FOR SKETCHING AND PAINTING.

## MILLER'S MINIATURE TABLETS.

## MILLER'S DRAWING-PAPER.

Made of pure linen only, without undergoing any chemical process.

## MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

T. M. has great pleasure in informing Painters that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

MANUFACTORY, 56, LONG-ACRE, LONDON.

MESSRS. HENRY GRAVES AND COMPANY,  
HER MAJESTY'S PRINTSELLERS AND PUBLISHERS IN ORDINARY,

Have the honour to announce that they have now ready for delivery, the following very beautiful and important Works of Art, and which have only been completed during the present season:—

SIR DAVID WILKIE'S SKETCHES IN  
TURKEY, SYRIA, AND EGYPT,

Lithographed in the finest style of Art by JOSEPH NASH, Esq.

This splendid Work, consisting of fac-similes of the original drawings Sir David Wilkie intended as studies for composition, but which his untimely death prevented, includes the beautiful subjects of 'The Letter-Writer,' 'The Tartar announcing the Fall of Acre,' 'Portraits of the Sultan,' 'The Pasha of Egypt,' and many others not less beautiful in costume than striking for Eastern character.

Price: Twenty-six plates, imperial folio, half morocco, £4 4s. . . . Coloured and mounted, in exact imitation of the original Drawings, £10 10s.

A few Copies printed uniform with 'ROBERTS'S HOLY LAND,' price £6 6s.

THE MAGNIFICENT ENGRAVING, FROM THE GRAND HISTORICAL PICTURE OF  
HER MAJESTY'S CORONATION,

Dedicated to and Painted by her Majesty's command, by Sir GEORGE HAYTER, M.A.S.L., her Majesty's Principal Painter in Ordinary, and Engraved in the finest style of Art, by H. T. RYALL, Esq., her Majesty's Historical and Portrait Engraver.

Price: Prints, £4 4s. . . . Proofs, £8 8s. . . . Proofs before Letters, £12 12s.

THE FOURTH EDITION OF HAGHE'S BEAUTIFUL LITHOGRAPHIC WORK OF THE  
PASSES, FORTS, AND CITIES OF THE SCENE OF WAR IN INDIA;

Drawn on the Spot by Dr. JAMES ATKINSON, Superintendent Surgeon of the Army of the Indus, Including Views of Caubul, Candahar, Ghuznee, Kwettah; The Bolan, Siri Bolan, Koojah, Siri Kajoor, Kojak, and other celebrated Passes; The surrender of Dost Mahommed to Sir William Macnaghten, &c. &c.

Price: Twenty-six Plates, imperial folio, half morocco, £4 4s. . . . Coloured and mounted in Portfolio, £10 10s.

THE HAWK AND THE FALCON.

Engraved in Mezzotinto by C. G. LEWIS, Esq., as Supporters to the beautiful plate of the 'HAWKING PARTY IN THE OLDEN TIME,' from the Original Pictures, painted by EDWIN LANDSEER, Esq., R.A., and now in the possession of William Wells, Esq.

Prints, £1 1s. . . . Proofs, £2 2s. . . . Before Letters, £3 3s., each plate.

LANDSEER'S LASSIE HERDING SHEEP.

Most exquisitely Engraved in the Mezzotinto style of Art by JOHN BURNET, F.R.S., from the Original Picture in the possession of William Wells, Esq.,

Prints, £2 2s. . . . Proofs, £4 4s. . . . Before Letters £6 6s.

THE WIDOWED DUCK.

Painted by EDWIN LANDSEER, R.A., and Engraved by JOHN BURNET, F.R.S. From the Original Picture, in the possession of W. Ellis Gosling, Esq.

Prints, £1 1s. . . . Proofs, £2 2s. . . . Before Letters, £3 3s.

MESSRS. HENRY GRAVES also beg to announce, that they have ready for publication  
THE SECOND SERIES OF THE SCENE OF WAR IN INDIA,  
CONSISTING OF THE  
CHARACTER AND COSTUME

A F G H A U N I S T A N,

Most beautifully Lithographed by CHARLES HAGHE, Esq., from the Original Drawings made on the Spot

By CAPTAIN LOCKYER WILLIS HART, of the 22nd Regiment of Bombay Infantry, and DR. JAMES ATKINSON,

Including authentic resemblances of all the most celebrated Chieftains who were engaged during the recent Campaign in that Country, viz., Mahomed Ukbar Khan; Shah Shoojau-ool-Moolk; Sufter-jung; Shahzadu Timoor; Hajee Khan Kauker; the Civil and Military Functionaries, and Costumes of the Inhabitants of the Country beyond the Indus, depicted with equal accuracy, and uniform with "ATKINSON'S celebrated Work of the Passes, Forts, &c., in Afghaunistan." The Second Series also includes, THE CELEBRATED SANDAL GATES removed by order of Lord Ellenborough from Ghuznee; Views of the Kyber Pass, Jellalabad, Palace at Candahar, &c.

Price: Twenty-six plates, imperial folio, half morocco, £4 4s. . . . Coloured and mounted, in imitation of the Originals, in Portfolio, £10 10s.

London: Published by HENRY GRAVES and COMPANY, Publishers in Ordinary to Her Majesty, and His Royal Highness Prince Albert, 6, Pall Mall.

LONDON: MAY 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**BRITISH INSTITUTION, PALL MALL.**  
The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS is OPEN daily, from Ten in the Morning till Five in the Evening, and will be CLOSED on SATURDAY, May the 6th. Admission, 1s. Catalogue, 1s.  
WILLIAM BAERNARD, Keeper.

**THE THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER-COLOURS, at their GALLERY, PALL MALL EAST, IS NOW OPEN.**  
Open each day from Nine till dusk.—Admittance, One Shilling; Catalogue, Sixpence. R. HILLS, Sec.

**SOCIETY of BRITISH ARTISTS, SUFFOLK STREET, PALL-MALL EAST.**—The TWENTIETH EXHIBITION is now OPEN to the Public Daily, from Nine till Six o'clock.  
Admittance 1s. Catalogues 1s.  
EDWARD MASSEY, Sec.

**BIRMINGHAM SOCIETY OF ARTISTS.**—THE ANNUAL EXHIBITION of PICTURES (in Oil and Water Colours), SCULPTURE, &c., will OPEN in AUGUST next.

Mr. GREEN, 14, Charles-street, Middlesex Hospital, will collect, pack, and forward Works of Art up to the 31st of July.  
The Society will defray the expenses of carriage of those Works contributed by Artists to whom their Circular has been addressed.  
The attention of Artists is drawn to the circumstance of this being the year of the Triennial Musical Festival.

**ROYAL MANCHESTER INSTITUTION.**—The ANNUAL EXHIBITION of PICTURES in Oil and Water Colours, Specimens of Sculpture, and Casts, Architectural Designs, and Proof Impressions of Modern Engravings, will OPEN on the 1st JUNE next (instead of in the Autumn). Works of Art intended for exhibition must arrive at the Institution not later than the 10th to the 20th May. No carriage expenses will be paid by the Institution, except on works from those artists to whom the exhibition circular has previously been forwarded.

Artists in London are referred to Mr. GREEN, 14, Charles-street, Middlesex Hospital.

The following Prizes are offered:—  
The Heywood Medal in gold, to the artist of the best oil-painting, size not less than 4 feet, by 2 feet 10 inches.

The Heywood Medal in silver, and £10 in money, to the artist of the best water-colour or ornamental drawing, size not less than 30 inches by 20 inches.

T. W. WINSTANLEY, Hon. Sec.

**SIR GEORGE HAYTER'S PICTURES.**—EGYPTIAN HALL, PICCADILLY.—In consequence of the numerous applications for tickets to view these Pictures (1100 within two days), notice is hereby given, that the public will be admitted for a few weeks to the EXHIBITION, from Nine till dusk, every day, on payment of 1s each. The pictures—'The House of Commons in 1833,' 'The House of Lords,' 'The Trial of Lord William Russell,' 'The Queen,' &c., containing upwards of 800 portraits, for which the persons have sat to the artist—have already been visited by Prince Albert, almost all the Royal Family, the Ministers, Ambassadors, Nobility, &c.

ESTABLISHED 1829.  
**THE ART-UNIONS OF GERMANY:**  
Under the Patronage of  
H.R.H. THE DUKE OF SUSSEX,  
H.R.H. THE DUKE OF CAMBRIDGE,  
AND THE NOBILITY.

BERLIN, DÜSSELDORF, and DRESDEN.

The price of the Subscription Ticket, in either of the above Associations, will be 20s. each, which will entitle the holder to one copy of the Annual Presentation Engraving, which will be delivered IMMEDIATELY after the drawing, free of duty and carriage, and also the chance of obtaining a work of Art, value from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the Presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 153, Regent-street.

A Prospectus, detailing the plans of management of the German Art-Unions, and explanatory of the advantages afforded to the Subscribers, can be obtained, or forwarded free, upon application.

Office, 2, Crane-court, Fleet-street; and may be had of all Booksellers in town and country.

Recently published, royal 18mo., 7s. cloth,  
**HAND-BOOK for WESTMINSTER ABBEY,** with Fifty-six Embellishments on Wood, engraved by Ladies; four Etchings by D. Cox, Jun.; an Illuminated Title, representing the Arcades in the Chapter House, and a Specimen of the Eucastic Tiles. By FELIX SUMMERLY.

"Its pages are not disfigured by the usual Guide Book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well-arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice; pointing out very judiciously the more remarkable portions, and leaving the reader to appreciate for himself the extreme beauty and harmony of the whole."—From the "Ecclesiologist," published by the Cambridge Camden Society. A Cheaper Edition, without the Illumination and the Tiles, 3s.

SYNOPSIS, separately, 6d., or with 4 Engravings, 1s. On a Sheet, 1s. 6d.; in Case, 2s. 6d.

**CHRONOLOGICAL CHART OF ECCLESIASTICAL ARCHITECTURE,** illustrated from Westminster Abbey, with 35 Wood Engravings, principally taken from the above Hand-Book.

Second Edition, 12mo., eight illustrations, 1s.,  
**A GLANCE at the TEMPLE CHURCH.** By FELIX SUMMERLY.

"Tasteful brochure, briefly describing the antiquities and magnificent restoration of the venerable Structure."—Spectator.

"Printed with considerable taste."—Christian Remembrancer.

12mo., 1s. 6d.

**FREE PICTURE GALLERIES,** being a Guide to the National Gallery, Dulwich Gallery, Society of Arts, Soane Museum, &c.

XI.

On the 30th inst., price 25s. royal 8vo., cloth lettered,  
**THE PICTORIAL HISTORY OF FRANCE,** and of the French People; from the establishment of the Franks in Gaul, to the period of the French Revolution. Enriched by 400 Designs on Wood, by JULES DAVID. To be completed in Two Volumes.

## IMPORTANT NEW WORKS.

This Day, Price 2s. 6d.,  
Copiously Illustrated with Woodcuts by JACKSON,  
THE SECOND MONTHLY PART OF

## A CYCLOPEDIA OF BIBLICAL LITERATURE;

By JOHN KITTO, Editor of "The Pictorial Bible,"  
Assisted by numerous able Scholars and Divines (both of this Country and the Continent) whose Initials will be attixed to their respective Contributions.

The design of the Editor is to produce an *Original* Work, which, within reasonable limits and at a moderate price, shall present a comprehensive digest of all the information considered necessary in a Dictionary of this description, and embracing the results of those modern researches in Biblical Literature and Science with which it is so important that English readers should be acquainted.

This Day, PART II., Price 6s., of

## A NEW EDITION OF BLACK'S GENERAL ATLAS OF THE WORLD.

TO BE COMPLETED IN EIGHT MONTHLY PARTS,  
Comprehending Sixty-One Folio Maps, engraved on Steel in the first style of the art, by SIDNEY HALL, HUGHES, and others, with Geographical Descriptions, Statistical Tables, and an Index of all the Names occurring in the several Maps, amounting to upwards of 50,000, with their Latitude and Longitude, and the No. of the Map in which they will be found.

The work having been revised and corrected throughout, the Publishers are satisfied that in every respect it is accommodated to the present advanced state of geographical research, and *scholarship on the ground of accuracy, beauty of execution, or cheapness, they invite a comparison with any other work of the class.*

This Day, PART II., Price 3s., of

## A NEW EDITION OF A SYSTEM OF UNIVERSAL GEOGRAPHY; FOUNDED ON THE WORKS OF MALTE BRUN AND BALBI.

To be completed in Ten Monthly Parts.

This work having now received the general approbation of the Press, as one of the most comprehensive and best compiled Systems of Geography in the English language, the Publishers are induced to bring out the new and improved Edition in a form which renders it accessible to all classes.

The Volume embraces a Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of all the Countries in the World, with numerous Statistical Tables, and an alphabetical Index of 12,000 names.

In Two Volumes, Post 8vo., Price 21s.,  
With 20 Etchings on Steel, and numerous Woodcuts.

## A VOYAGE ROUND THE COASTS OF SCOTLAND AND THE ISLES.

By JAMES WILSON, F.R.S.E., M.W.S., &c.,  
Author of the Treatise on Angling in "The Rod and the Gun."

"Written in a flowing and animated style. \* \* \* Those who wish to know Scotland in its Coasts and Islands will derive from this work both instruction and pleasure; those who desire to know the value of their country, and its institutions, as shown even in the most inaccessible parts of its remotest provinces, will ponder over its contents; and the general reader, who seeks only for that rational amusement which the personal narrative of a lively and intelligent tourist never fails to yield, will find it in these volumes."—*Edinburgh Review.*

In a handsome Volume, Post 8vo., Price 12s.,  
With numerous Illustrations on Wood and Steel, after Drawings by COOPER, ALKEN, BARENGER, and FERNELEY of Melton Mowbray,

## THE HORSE AND THE HOUND.

Their Various Uses and Treatment In-doors and Out, including PRACTICAL INSTRUCTIONS IN HORSEMANSHIP. To which is added, a TREATISE ON HORSE DEALING, wherein is enforced the necessity for "Careful employ," and a recital given of some of the first Legal and Veterinary Authorities on the question of SOUNDNESS and UNSOUNDNESS of Horses.

By NIMROD.

\* \* The Engravings on Steel include Portraits of a RACER—a HUNTER—a HACKNEY—and of a celebrated FOX HOUND. Among the other Illustrations (after designs by Alken), are THE FINISH OF A RACK—UNHARBOURING THE STAG—HORSEMAN MOUNTING—THE GOOD and BAD SEATS—THE FAULTY HOUND—SELLING A HORSE, &c. &c.

Adam and Charles Black, Edinburgh. Longman and Co.; Simpkin, Marshall, and Co.; Whittaker and Co.; and Hamilton, Adams, and Co., London.

## NOW PUBLISHING,

**THE PICTORIAL TIMES.** A Weekly Newspaper, each Number containing upwards of Thirty beautiful Wood-Engravings, illustrating the chief occurrences and subjects of interest recorded in its columns. Price 6d., stamped.

The Projectors of the PICTORIAL TIMES would put forth a poor claim to public credence and attention, did they for a moment hesitate to acknowledge the services already rendered to Newspaper Literature by Wood-Engraving; but, whilst they allow this, they at the same time feel the strongest conviction that what has as yet been tried bears no more relative excellence to what may be still further achieved, than do the first rude letters—the infant type—cut in the pear tree of the 15th century, to the sharp, clear, brilliant beauty sparkling from the press of the present time.

It is this conviction—this firm knowledge of the hitherto unrevealed capabilities of Wood-Engraving as illustrative of the events of the day—that animates the Projectors of the PICTORIAL TIMES with the fullest belief that, with the agency they have at their command, they shall be enabled to lay before the world a work at present equally unapproachable for the comprehensiveness of its typographic design (as applicable to a record of Weekly News), as for the united boldness, delicacy, and fidelity of its Pictorial Illustrations!

When Printing was an undisciplined craft, the man of wealth had nevertheless his volumes; his mind could still be elevated by the communion of higher intellects; for he had his collectors of manuscripts, his copying scribes. John Gutenberg pulled his first proof in the city of Mentz, and from that moment all men of all conditions became equal heritors of the imperishable legacies of the immortal mind. In like manner, Painting painted only for the rich. Then came Wood-Engraving—the painter for the poor; and all men felt their faculties enlarged, and their sympathies quickened, as they gazed upon the graven types—the speaking symbols of hidden things. This goodly influence has extended—will extend; and to this purpose the Projectors of the PICTORIAL TIMES will unceasingly apply their particular resources, so that they may become the acknowledged Painters to the Million.

In these times it is no mean mission to make the beautiful not only the luxury of the few, but a thing necessary to the world at large: for in proportion to the true influence of the beautiful on the minds and hearts of a nation, is its social gentleness, its best humanities.

And how can this influence work so surely as when associated with the domestic want of all society—the necessity of a Newspaper? How can it be so valuable, so unerring in its application, as when made ministrant to the feelings and sympathies of the man—and are there not tens of thousands such?—who buys his Weekly Journal not so much to travel over "the burning marle" of party politics, as to satisfy the better cravings of his higher nature by associating himself with the hopes and fears, the speculations and the activities, of his fellow-men? It is with this view that the Projectors of the PICTORIAL TIMES will make Art the Handmaid of Truth. They will put forth no elaborate pictures of "castles in the air," made to represent real castles of granite; no dreams of an artist intended to portray the truths of life: but every scene, every circumstance, pictorially illustrated, will be—at any pains and at any cost—executed from the object itself. Thus the reader will possess, so to speak, a Picture Gallery of the events of his time; a gallery executed with the precision, force, and delicacy heretofore the peculiar merits of works exclusively produced for the wealthy few. Nor will the excellence of the Engravings be purchased by a begrudging limitation of their number; on the contrary, they will be found interspersed through every page, set in a frame of novel and peculiar beauty.

As to Politics, the Politics of the PICTORIAL TIMES will be the Politics of the Human Heart; no feverish querulousness of party spirit will be heard crying from its columns, but the Voice of Justice, Tolerance, and Humanity towards all men.

The interests involved in Agriculture, its meetings, its fluctuations in the price of Corn and of Cattle, together with the doings of the Money Market and other matters pertaining to Commerce, will be found faithfully recorded.

In a word, the PICTORIAL TIMES will be, in every respect, a Newspaper! Fiction will be duly treated as a Fairy guest, a teller of pleasant things; but Arab stories will not be given to the shredding down of Parliamentary debates, or "Poetry from the Persian" in lieu of the iron doings of the Courts of Law, the Criminal Courts, and the Police.

The Illustrations of the PICTORIAL TIMES will embrace every available subject. Foreign and Domestic scenes, so far as they are connected with the events of the day, and Portraits of eminent living men celebrated in Politics, Literature, Arts, or Arms, will obtain a prominent place. New important Public Buildings and works of Art in the Metropolis and the Provinces, Country Sports and Agricultural Meetings, Races, Rowing and Sailing Matches, the Theatres, Military Reviews, Festivals, Assemblies, and State Processions, whether at home or abroad, will all in turn be introduced.

Office 135, Fleet-street, London.

This Paper may be obtained at any town throughout the kingdom by previous application to a Bookseller or Newsmen.

## THE STORY-TELLER;

OR,

TABLE-BOOK OF POPULAR LITERATURE.

A COLLECTION OF TALES, TRADITIONS, AND POETICAL LEGENDS OF ALL NATIONS; Embracing the Choicest Productions; and forming a Comprehensive

LIBRARY OF MINOR FICTION,

EDITED BY ROBERT BELL,

Author of "Lives of the Poets," "Mothers and Daughters," &c.

WITH INCIDENTAL NOTES, CRITICAL AND ILLUSTRATIVE.

## OPINIONS OF THE PRESS.

"We have much pleasure in welcoming back to our weekly literature, this graceful critic and always agreeable writer. His plan is full of promise, being every way much above the ordinary compilations of that kind which have hitherto been attempted. Its purpose is to collect and preserve the best specimens of the fugitive literature of Europe, to which, as to a worthy feast, the editor invites his friend the reader, giving him the advantage of a rare experience and judgment in selection, and of a most kindly and enjoying spirit in criticism. We shall be heartily glad of the success of THE STORY-TELLER. The stories of the number are admirable, and the occasional introductions of old verse will be particularly welcome."—*Examiner*.

"The object of THE STORY-TELLER is to rescue from oblivion the best specimens of romantic fiction at home and abroad, to preserve 'those exquisite touches of fancy and imagination which,' as the editor so truly observes, 'so rarely find their way into the large collections of national fiction, and so often perish in the evanescent periodicals to which they are consigned.' Valuable notes and observations are prefixed to some of the articles, and the original sketches and tales are intermingled with rich gleanings from the wide field of ancient and modern literature. A pleasant literary gossiping-paper, after the manner of Christopher North's celebrated 'Notes,' in 'Blackwood,' forms the introduction to the present number. It is called 'Festivals of the Story-Tellers—Gathering the First,' in which much sound sense is heightened by flashes of merriment and sparkles of rare wit. When we add that Mr. Robert Bell, the author of 'Marriage,' 'Mothers and Daughters,' &c., is the editor of the work, we need offer no better guarantee that the task he has undertaken will be performed with taste and scholar-like ability."—*Sunday Times*.

"We are exceedingly glad to see any publication under the sanction of the name of this acute critic and graceful writer. The title of the publication, full as it is, does not suffice to expound the true nature of the editor's labours. This weekly publication is not to be the vehicle of any commonplace matter, or things of vulgar notoriety. The editor has imposed upon himself a very laborious occupation. His task will be to dive into books of bygone periods, and examine the literary remains in the various literatures of Europe, and from them to glean fitting materials for the contents of his very interesting pages. He is, in every respect, competent to the undertaking."—*Atlas*.

"Our weekly contemporary bids fair to make a prominent stand in our light, or, as it is better called, our polite literature. The opening dialogue touches on many literary topics, and is very spirited. The purport is to form a library of minor fiction, romance, &c., and Mr. Bell is precisely the man to execute such a task in a judicious and agreeable manner."—*Lit. Gaz.*

"THE STORY-TELLER is altogether of so superior a character to the ephemeral periodicals that every week gives birth to, that we should regret to see it conjoined with them. The editor is Robert Bell, the author of the charming comedy of 'Marriage,' and one of the chastest writers and most elegant critics of his day. In his name the public have a security that nothing will be admitted into the pages of THE STORY-TELLER but has not a tendency to elevate the mind, as well as to amuse it."—*Britannia*.

Now ready at all the Libraries, in Three Volumes, post 8vo.,

## THE PASTOR CHIEF;

OR, THE ESCAPE OF THE VAUDOIS.

A TALE OF THE SEVENTEENTH CENTURY.

Avenge, Oh Lord! thy slaughtered saints whose bones  
Lie scattered on the Alpine Mountains cold;  
E'en them who kept thy truth so grave of old,  
When all our fathers worshipped stocks and stones,  
Forget not."

## MODERN PAINTERS:

Their superiority in the Art of Landscape Painting to all the Ancient Masters proved by examples of the True, the Beautiful, and the Intellectual, from the Works of Modern Artists, especially from those of J. M. W. TURNER, Esq., R.A.

By a GRADUATE OF OXFORD.

LONDON: SMITH, ELDER and CO., 65, CORNHILL.

SIR DAVID WILKIE'S SKETCHES IN  
TURKEY, SYRIA, AND EGYPT,

Lithographed in the finest style of Art by JOSEPH NASH, Esq.

This splendid Work, consisting of fac-similes of the original drawings Sir David Wilkie intended as studies for composition, but which his untimely death prevented, includes the beautiful subjects of 'The Letter-Writer,' 'The Tartar announcing the Fall of Acre,' 'Portraits of the Sultan,' 'The Pasha of Egypt,' and many others not less beautiful in costume than striking for Eastern character.

Price: Twenty-six plates, imperial folio, half morocco, £4 4s. Coloured and mounted, in exact imitation of the original Drawings, £10 10s.

A few Copies printed uniform with 'ROBERTS'S HOLY LAND,' price £6 6s.

London: Published by HENRY GRAVES and COMPANY, Publishers in Ordinary to her Majesty and his Royal Highness Prince Albert, 6, Pall Mall.

THE SECOND SERIES OF THE SCENE OF WAR IN INDIA,  
CONSISTING OF THE  
CHARACTER AND COSTUMEOF  
AFGHANISTAN,

Most beautifully Lithographed by CHARLES HAGHE, Esq., from the Original Drawings made on the spot by CAPTAIN LOCKYER WILLIS HART, of the 22nd Regiment of Bombay Infantry, and DR. JAMES ATKINSON; including authentic resemblances of all the most celebrated Chieftains who were engaged during the recent Campaign in that Country, viz., Mahomed Ukbar Khan; Shah Shoojau-ool-Moolk; Sufter-jung; Shahzadu Timoor; Haje Khan Kauker; the Civil and Military Functionaries, and Costumes of the Inhabitants of the Country beyond the Indus, depicted with equal accuracy, and uniform with 'ATKINSON'S celebrated Work of the Passes, Forts, &c., in Afghanistan.' The Second Series also includes, THE CELEBRATED SANDAL GATES removed by order of Lord Ellenborough from Ghuznee; Views of the Kyber Pass, Jellalabad, Palace at Candahar, &c.

Price: Twenty-six plates, imperial folio, half morocco, £4 4s. Coloured and mounted, in imitation of the Originals, in Portfolio, £10 10s.

London: Published by HENRY GRAVES and COMPANY, Publishers in Ordinary to Her Majesty, and His Royal Highness Prince Albert, 6, Pall Mall.

## PREPARING FOR IMMEDIATE PUBLICATION,

THE

## PRINCIPLES AND THE PRACTICE OF ART,

BY J. D. HARDING,

AUTHOR OF "ELEMENTARY ART."

When the "Elementary Art" was published, the Author promised that it should be followed by another volume, which should carry out and complete a view of Art, founded on the closest observation and study of Nature. Many circumstances have, however, occurred to prevent him from executing his design until now.

In this, as in his former volume, the great object of the Author is practical utility, attainable only through a knowledge of Nature, and the rationale of Art. It has already been proved, that even the earliest steps in practice cannot be safely or usefully taken but by continual reference to Nature's laws, and these will be here shown in their more comprehensive, but equally practicable, operation, as well as the necessity of a perpetual recurrence to them, whether for the acquisition of power for ourselves, or for the appreciation of it in others.

The subjects theoretically and practically treated of, will be Beauty of Form, Imitation, Composition, Light and Shade, Effect, and Colour.

The Work will form a volume of the same size as "Elementary Art."

Subscribers' Names will be received by the AUTHOR, 4, Gordon-square, London University; by the Publishers,

CHAPMAN and HALL, 186, STRAND,

And the principal Book and Print Sellers.

## IN PREPARATION.

THE BARONIAL HALLS,  
PICTURESQUE EDIFICES,

AND

## ANCIENT CHURCHES OF ENGLAND.

FROM DRAWINGS

BY J. D. HARDING, W. MÜLLER, J. B. PYNE, &c. &c.  
Executed in Lithotint by Mr. HARDING; with Descriptive Letter-press, and numerous Engravings on Wood.

EDITED BY S. C. HALL, F.S.A.

The size of this Work will be Royal Quarto; and the mode of its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic arts. Each Part—of which one will be issued on the first of every alternate month—will contain Three Subjects of a large size, executed in Lithotint—the patent invention of Mr. Hullmandel,—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

The Lithotint Drawings will be entirely executed by Mr. HARDING, either from his own sketches, or from those of other popular artists, made exclusively for this work. Woodcuts, when desirable to elucidate the text or to convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of Twelve pages,—sufficient, it is believed, to furnish all necessary information to the general reader.

\* \* A full Prospectus and Specimens of the Work will be issued in due course.

LONDON: CHAPMAN and HALL, 186, STRAND.

## NOTES ON BRITISH COSTUME.

## PART THE FOURTH.\*

BY FREDERICK W. FAIRHOLT.

## YORK AND LANCASTER.

Henry VI., of whom it was declared that he would have made a much better priest than king, was succeeded by a monarch the very reverse of himself in taste and manners. Henry throughout life preserved the external traits of his contemplative mind and ascetic disposition; his dress was invariably plain, and we are told that he refused to wear the long-pointed shoes, so commonly patronised by the nobility and gentry of his court and era. Edward IV., on the contrary, was gay and dissipated, a man of taste and elegance, fond of the frivolities of life, and ever ready to indulge in the pleasures proffered to one in so exalted a station; he therefore gave no personal check to the dandyism of the day by his example.

We have no monumental effigy of Edward; there is, however, a representation of this monarch seated upon his throne, with his queen and the young Prince Edward, afterwards Edward V., and of whom this portrait is the only existing representation,† receiving from Earl Rivers (and, it is supposed, Caxton, the printer) a copy of the "Dictes and sayings of Philosophers," which was translated by the Earl; and this illumination occurs in the manuscript so presented, at present kept in the archbishop's library at Lambeth. It has been engraved by Walpole as a frontispiece to his "Catalogue of Royal and Noble Authors of England," and also by Strutt, in his "Regal Antiquities," who has engraved another delineation from Royal MS. 15, E 4, and which depicts a similar book presenta-

tion. The king is seated on his throne, attended by his brothers and officers of the court. There is also a very curious portrait on panel in the possession of the Society of Antiquaries, to whom it was presented by Mr. Kerich. It has been engraved for the original edition of the "Paston Letters," and it may be fairly presumed to be a likeness of the monarch, as it was probably executed shortly after his decease, or, if not before the reign of Henry VII., it bears marks of authenticity sufficient to warrant the belief that it was copied from a genuine and older portrait.

The two figures here engraved are an illustration of the general costume of the period, which, capricious as ever, one day clothed the gentlemen in long gowns and wide sleeves, and the next arrayed them in tight, short jackets, that scarcely reached the thigh. The latter fashion was the prevailing one, and is seen to advantage in both

the figures here delineated. That to the left is copied from a curious painting that formerly existed on the walls of the Hungerford Chapel, Salisbury Cathedral, but which is now destroyed; it has been engraved in Gough's "Sepulchral Monuments." In the original painting he is not confronted by so pleasant a figure as the gentleman in our cut. He is holding argument with Death in a fruitless endeavour to avert his power, by advising him to visit the sick and wretched, and leave himself untouched. Death, however, is not at all disposed to listen to the

"Graceless gallant in all his luste and pride," as he terms him. As this figure was intended to "point a moral," we may be sure that he may be taken as a good specimen of a dandy of the period. He wears a tight jacket, very short, and confined at the waist by a narrow girdle, to which is appended a dagger. His sleeves are large, and open at the sides, to display the shirt beneath, which is loose, and projects from between the lacings of the opening. In some instances we find the sleeves slit immediately above and beneath the elbow, with a few inches of cloth to cover it, the whole being held together by a lace, which leaves some inches' space between each portion of the sleeve, which is padded with a large quantity of wadding to give the shoulders a broad appearance; these sleeves were prohibited by a law of the third year of Edward's reign to be worn by any yeoman, or person under that degree, under a penalty of six and eightpence, and twenty shillings fine for the tailor who manufactured them. The hat he wears, with the single feather, is one of common occurrence; and the profusion of hair, which we may also observe in the other figure, forms a striking and not unpleasant contrast to the close crops of the previous reign. His tight hose are similar to the ancient chausses, and his long-pointed toes, now called *poulaines*, are as indicative of dandyism as the profusion of rings on his fingers. Against these poulaines the same law was levelled, and they were prohibited to all persons under the estate of a squire or gentleman, who were not permitted to wear them more than two inches in length. Paradin

speaks of them as being sometimes two feet long, and Monstrelet declares the boys wore them in 1467 an ell in length, for they were all the rage in France as well as in England. When these fashions had lost their attraction, men ran into the opposite extreme, and obeyed the law by widening the shoes across the toe to an absurd degree, similar to those worn by the other gentleman in our cut, copied from Royal MS. 15, E 2, dated 1482, and which may also be taken as a specimen of the male costume of the reign of Richard III., who came to the throne the year following.

The ladies during the whole of this period adhered with an obstinate pertinacity to their ridiculous head-dresses, in spite of all that could be said by satirist, preacher, or moralist. Their horns became exalted, and shot forth more luxuriantly than ever, witness the example engraved from Royal MS. 15, E 4, dated 1483.

They were, however, generally superseded by the tall steeple cap, as worn by the lady beside her, and which lingers even now among the peasantry of Normandy. The form of the dress, too, is different from that worn in the reign preceding, being open from the neck to the waist in front, and having a turn-over collar generally of a dark colour surrounding it. The gowns are frequently bordered with fur to a considerable depth, and are so capacious as to be generally carried over the arm in walking. The toes of the shoes are long and sharp.

Among the middle classes who could not afford the extravagant head-dresses indulged in by the upper ones, we find a hood worn with projecting sides "like an ape's ears," having the old pendent tippet, or liripipe, attached, which hung down the back and gave a peculiarly grotesque appearance to the figure when viewed behind, as the reader may judge from the above engraving.

Monstrelet, in the 53rd chapter of his "Chronicles," relates a long and edifying story of a perambulating preaching friar, one Thomas Conecte by name, who commenced so determined a crusade

\* Continued from page 83.

† It is the authority from which Vertue engraved his portrait of this prince.

against the steeple head-dresses of the ladies in France, that none dared appear in them in his presence, "exciting the little boys to torment and plague them, giving them certain days of pardon for so doing, and which he said he had the power of granting." These young rascals were no doubt in no great need of so powerful an excitement to impudent mischief, and, stimulated by the circumstance, "endeavoured to pull down these monstrous head-dresses, so that the ladies were forced to seek shelter in places of safety," and many were the tumults between the ladies' servants, the boys, and their other persecutors. In the end the holy father triumphed, and at a grand *auto-da-fé* he sacrificed all the head-gear that the ladies would bring in a fire before his pulpit in the principal square. "But this reform lasted not long," says the chronicler, "for, like as snails, when any one passes by them, draw in their horns, and when all danger seems over put them forth again, so these ladies, shortly after the preacher had quitted their country, forgetful of his doctrine and abuse, began to resume their former head-dresses, and wore them even higher than before."\*

The short reign of Richard III. presents no striking novelty of costume, unless we except the pretty general adoption of another fashion of head-dress for the ladies, of which an example is

here given from Mr. Waller's very accurate and beautiful work on "Monumental Brasscs." It is from the effigy of Lady Say, in Broxbourn Church, Hertfordshire, A.D. 1473, the 13th year of Edward IV.'s reign, about which time the fashion became usual, and in the time of Richard was pretty generally adopted. The gentleman also had begun to wear the long gowns and soberer costume that distinguished the reign of Henry VII., until which period we shall postpone our description, when it will more properly be admissible.

The most curious representations of Richard III. we possess, are those now in the possession of the Society of Antiquaries, one of which, evidently by the same hand as that of Edward IV., already described, is exceedingly interesting for the strong and characteristic portraiture it exhibits. It has also been engraved in the "Paston Letters," and appears fully to carry out the accounts left us of Richard by the old historians, who describe him as a restless spirit, always sheathing and unsheathing his dagger while in conversation, as if his mind would not allow quietude to his fingers; a habit that would seem to be displayed in the picture to which allusion is made, which represents him drawing a ring on and off the finger. The face might have delighted Lavater.

It may surprise some of my readers to be told that Richard was remarkable for his love of splendid dresses, and that his favourite Buckingham was no whit behind him. I cannot here

\* The two magnificent volumes of Froissart's Chronicles in the Harleian collection, numbered 4379-80, may be referred to as containing fine specimens, in great variety, of the costume now described, having been executed about this period; fac-similes of the principal illuminations are given in the edition by Johnes of this historian's work, which may be advantageously consulted when access to the originals is difficult.

print the inventory of the king's dresses that exists among the Harleian MS., No. 433, and must content myself with a mere reference to a list, which, as Mr. Sharon Turner justly remarks, we should rather look for from the fop that annoyed Hotspur, than from the stern and warlike Richard III.

The ecclesiastical costume during the whole of this period does not appear to have undergone any change to warrant the necessity of giving cuts or descriptions, which may be better devoted to more important matters. A glance at any of the plates in the works of Stothard, Hollis, Cotman, Waller, and others who have given plates of effigies and brasses, will display this, or a look through the volumes of Gough's "Sepulchral Monuments." The gradual changes produced by civilization, and the "division of labour" both of mind and body, consequent to it, had disjoined the legal profession from the Church, and gave its functionaries a distinct costume, yet sufficiently clerical in appearance to distinguish the origin from which it had sprung. Two examples are selected for engraving, the

first from Stothard's "Monumental Effigies," supposed to represent Sir Richard de Willoughby, Chief Justice of the King's Bench, in the eleventh year of Edward III.; and it is therefore not too far removed from the early part of the period of which we are now treating, to be inadmissible here, as an interesting illustration of early legal costume. He wears a plain gown, with a close collar, which is buttoned down the front, and has wide sleeves, displaying the tighter ones of the under-clothing, with their rows of buttons from the elbow to the hand, which is partly covered by them; his waist, like that of Chaucer's sergeant-at-law, is

"Girt with a cinct of silk with bars small."

The second figure is that of Sir William Gascoyne, Chief Justice of the King's Bench, immortalized by Shakspeare and the older historians as the judge who punished "Prince Hal," afterwards the great Henry V. He died 1419, and is buried in Harwood Church, Yorkshire, and our copy is made from the effigy given by Gough from that tomb; the principal variation in costume from the other effigy being the addition of a long mantle buttoned on the right shoulder, and a close-fitting hood instead of the coif or small cap, and which is said by some writers to be commemorated in the small circular piece of black silk still placed in the centre of the judge's wig.

The military costume of the reigns of Henry IV. and V. had arrived at a perfection of richness and beauty unsurpassed by that worn at any other period. The effigies of those knights remaining to us, whose prowess "stirred the nations," and achieved immortality for themselves and honour for their father-land, are worthy examples of the heroes of chivalry, supplying all

that the painter can wish to possess in the way of material for a resuscitation of the days that saw their noble achievements. Nothing, for instance, can be more beautiful than the effigy of the Earl of Westmoreland, in Staindrop Church, Durham, or that of Michael de la Pole, Earl of Suffolk, in Wingfield Church, Suffolk, as given by Stothard. The one here selected as a favourable example is copied from Mr. Hollis's etching of the effigy of Sir Humphrey Stafford, who died 1450, and is buried in Bromsgrove Church, Worcestershire. A rich jewelled wreath called an *orle* now surrounds the bascinet, which is pointed at the summit, where a small tube is sometimes placed for the reception of the *panache*, or group of feathers, that now most gracefully tops the head-piece.\* Sir Humphrey

wears the collar of SS., and is literally

"cased from head to foot in panoply of steel."

By comparing this figure with that of Sir Thomas Caune, engraved in the last part of these notes, the distinctive variations of the two epochs will at once be detected, such as the absence of the camail, &c., and save much unnecessary verbosity.†

Long and wide sleeves are sometimes worn over the armour, upon which they are fastened at the shoulder, their edges being frequently cut into the shape of leaves or escallops.

The pride of the English army, at this period, were the archers and cross-bowmen. To expatiate upon them or their deeds would be a work of supererogation; they were much cared for by our monarchs. Henry V. ordered the sheriffs of several counties to procure feathers from the wings of geese for his archers, plucking six feathers from each goose. Swan feathers were also in request. In the fine old ballad of "Chevy-chase," mention is made of the death of Sir Hugh Montgomery, and it is said of the archer who struck him:—

"The swan-feathers that his arrow bore,  
With his heart-blood were wet."

Their arrows, "a cloth yard long," were of the

\* A fine example of such a plumed head-piece may be seen in the figure of Robert Chamberlain, Esquire to Henry V., in Cotton MS., Nero, D 7, and which has been engraved by Strutt in his "Regal Antiquities."

† The effigy of Sir Richard Vernon, in Tong Church, Shropshire, may be cited as another very fine example of the military costume of the period. It has been engraved and coloured after the original effigy, by Mr. Shaw, in his beautiful work on dress and decorations.

ordinary standard, and their power of flight very great. The cross-bow was powerful enough to send the "quarrell,"—as their arrows were termed, a distance of forty rods. The most interesting figures of these bowmen with which I am acquainted, are the two here given from

Willemin's "Monumens Française inedita." The archers are clothed in jazerine jackets, a species of defence so named from the Italian *ghiazzerino*, owing, says Meyrick, to its resemblance to a clinker-built boat; it is mentioned as early as the latter part of the thirteenth century, and was formed of overlapping pieces of steel, fastened by one edge upon canvas, which was coated over with velvet or cloth, and sometimes ornamented with brass. One of the figures above delineated carries his bow over his shoulder, and has suspended from his waist a "moulinet" and pulley for winding up his bow. This operation the other is performing by fixing one foot in the sort of stirrup at the bottom, and applying the wheels and lever to the string of the bow, and so winding it upward by the handles placed at its top.

The helmets they wear are those termed *salades*, which became usual for soldiers to wear about the reign of Henry VI. They sometimes cover the head and eyes, as shown in figs. 1 and 2, or else have moveable visors, one of which is engraved above, fig. 4; and in fig. 3 we see the visor lifted. The specimen in Goodrich Court, and has been engraved in Skelton's Illustrations of the ancient Arms and Armour there.

A novel shield was also introduced at this period, a specimen of which is engraved above, from the same work. It is of square form; "it is a mean or middle weapon," says Giacomo di Grassi, in the English edition of 1594, "between the buckler and the round target, some persons holding it on the thigh, and others with the arm drawn back close to the breast;" but he recommends its being held at arm's length, so that one angle be elevated just above the sight.

A very fine example of the armour of this period is to be seen in the effigy of Richard Beauchamp, Earl of Warwick, in the Beauchamp Chapel, St. Mary's Church, Warwick. His will is dated 1435, and the Chapel of our Lady, or Beauchamp Chapel, was commenced 1442, and finished 1465. The late Mr. Stothard found that the figure was moveable, and engraved in his "Effigies" both sides; and they are the most valuable views of an armed warrior of the period we possess; the back in particular is unique, and Mr. Kempe justly remarks, that "the view of the figure about the shoulders is particularly fine, and must be of the highest value to the historical painter for its boldness and truth."

The group of arms here engraved, have been selected so that they may give a fair general idea of the offensive weapons of the period. Fig. 1 is a mace of the time of Henry V., and which was much used by the cavalry from the period of Edward II. All heavy cavalry were supplied with them during the fifteenth and sixteenth centuries; they were lunged at the saddle bow, and used to break the armour of an opponent, and destroy him by the blow, or afford passage for a sword; in lieu of them they sometimes had a

horseman's hammer, or short battle-axe. Fig. 2 is the hand-cannon of the earliest form, with the touch-hole at top; these cannons are the originals of our modern musquetry. Fig. 3 is a hand-gun and battle-axe united, with the next improvement, a pan at the side by the touch-hole, to prevent the escape of the powder. Fig. 4 is the Guisarme, a most deadly weapon, used by foot soldiers very commonly in attacks on cavalry, its scythe and spear being horribly efficient in such encounters. Fig. 5 is a Bill of the time of Edward VI.; fig. 6, one of the reign of Edward IV.; and fig. 7, one of that of Richard III., having a hook at the side to seize the bridle of a horse. These last three figures clearly show any variety of form that occurred during these periods.

Fig. 1, in this second group, gives us the form of the large two-handed sword of the time of Richard III., when it received some improvements not visible in No. 2, which delineates that in use in the previous reign of his brother, Edward IV. De Grassi must again supply us with a description of how they were used. He says the swordmen always struck edge blows downward, "fetching a full circle with exceeding great swiftness, staying themselves upon one foot;" the hand towards the enemy taking fast hold of the handle near the cross, while the other was fixed near the pommel. Meyrick adds, that these swords are so well poised as to excite astonishment on trying the ease with which they may be wielded. Fig. 3 is an ordinary sword, for the better contrasting of the relative sizes, the two-handed sword being as long in the blade alone, as the other one was in its entire length, and this was the general standard. Fig. 4 is a horseman's hammer of the time of Edward IV., the handle of steel, and perforated to receive a cord, that it might pass around the wrist and prevent its being beaten out of the hand; it has a pick on one side for penetrating armour. Fig. 5 is a mace of iron, of the time of Edward IV., with a pike at its end for thrusting. Fig. 6 is a Raneur of the time of Edward IV., distinguished from the Partisan, fig. 7, in having a sharper point and side-projecting blades. Fig. 8 is a Spetum of the time of Richard III., distinguished from the Raneur by having its lateral blades bow-like, and sharp in the concave curve.

[The first half of these notes is now concluded. They will be continued up to the year 1800, in as many more papers as have already been published. The next will be devoted to a description of the costume and arms in use during the reign of the Tudor family.]

## THE LEGALITY OF ART-UNIONS.

TIME gives strength to our opinion as to the Legality of these Societies. It is scarcely necessary to add, that Mr. Sergeant Talfourd's "settler" has been followed by nothing; the parties interested in their destruction remaining content with the alarm they have produced, and the consequent diminution of the funds to be expended in the purchase of pictures. Our columns of to-day afford conclusive proof that the Directors of the Art-Union set at nought all foolish or selfish threats, in London; and we have been furnished with evidence equally convincing, that they are as much disregarded elsewhere. At a meeting of the Royal Irish Art-Union, during the month, Mr. Stewart Blacker, the honorary secretary, "handed in three guineas, the subscription of Richard Moore, Esq., Q.C., late Attorney-General for Ireland." In doing so he made the following remarks:—"He need scarcely remind the Committee that it was not by thoughtless persons, or men ignorant of the law, that the Art-Union system was first introduced into those countries from the Continent. It was first adopted in Scotland, at the suggestion of Mr. Glasford Bell, Mr. Patrick Robertson, Lords Jeffrey and Meadowbank, the most distinguished lawyers of that country, assisted by Professor Wilson, Bishop Sandford, and others equally distinguished for their learning and piety; since which period almost all the supreme judges of Scotland, and all the law-officers of the Crown, had been and are (as is the case with us) members; and in looking over their reports, we find that in several instances some of the most distinguished of these persons have presided on the occasions of the annual distribution of works of Art purchased out of the common fund. With regard to our own society, it is only necessary to look to the distinguished list of our supporters to show that—view it in any light it might be wished, whether politically, legally, or morally—we could not have higher testimony in our favour than the junction and co-operation of such men. Take it politically, and we have Earl Fortescue, Earl de Grey, Lord Morpeth, Lord Eliot, with a host of others in both Houses of the Legislature, lending us their best support. Take it legally, and the names of Plunket, Sugden, Bushe, Pennefather, Doherty, Burton, Torrens, Blackburne, Stock, Pigot, O'Connell, Moore, Smith (the present Attorney-General\*), with numerous others, comprising the *élite* of the bench and the bar, shed the influence of their high character, learning, and attainments on our cause."

The *Athenæum* (which, by the way, has again placed itself "at the mercy of any common informer," if its reading of the law be correct,) is again fiercely assailing these Institutions; chiefly, by printing notices of a "lot of lotteries" which defrauded unwary persons during the reign of Queen Anne. They are valuable witnesses to sustain the case we published last month. The "Little-goes" described by the *Athenæum* are precisely those we pictured as in contemplation by the Legislature when the Acts were passed for

\* Of these the first named is the late Lord Chancellor, the second the present Lord Chancellor, the next six are judges; and the others hold or have held the highest law offices. The secretary (J. A. Bell, Esq.) of the Association for the Promotion of the Fine Arts in Scotland, has issued a circular, from which the following passage is extracted.

"The Committee are advised, and feel perfectly satisfied, there is no part of the constitution of the 'Association' which gives it the character of a Lottery in the statutory or ordinary sense of the word. And further, that the Committee are right in this conviction, appears to be sufficiently testified by the fact that almost all the supreme judges of Scotland, and the first law-officers of the Crown, have been and are members; and that, in several instances, some of the most distinguished of these persons have presided on the occasion of the annual distribution of the works of Art, purchased out of the common fund."

"It was perhaps unnecessary for the Committee to notice thus publicly an imputation which, so far as they know, has never been seriously entertained by any one in Scotland; but they were unwilling that even a momentary suspicion of illegality should be allowed to attach to an institution which has been fostered by the purest feelings of patriotism; which has already done so much for the Arts of this country; and which, if it proceeds as it has begun, is likely to give a permanent elevation to the national character in a department of intellect hitherto too little cultivated among us."

the suppression of schemes by which "persons had unjustly and fraudulently gotten to themselves great sums of money from unwary persons, to the utter ruin and impoverishment of many families," and which bear about as close a resemblance to Art-Unions as apples do to elephants. The summary in the *Athenæum*, copied from "Knight's London," contains this remarkable passage, written as if to show the entire ignorance of the writer on the subject; he is explaining the mode in which Art-Unions originated in London:—

"An imitative association (imitative of the Edinburgh Society) was set on foot here (i.e., in London), either by picture-fanciers who had a mind to get pictures, or by artists who wished to get their unsaleable stock out of their studios—no matter which. So far these associations were what they gave themselves out for."

It is really too bad to find the *Athenæum* circulating a statement so completely without foundation. The Art-Union "set on foot" by artists and picture-fanciers (!) who had a mind to get pictures, or wished to get rid of unsaleable stock! Such are the arguments by which the ruin of these Societies is expected to be brought about; and the *Athenæum* really imagines its readers may, upon such grounds, be persuaded to destroy them! An apparently less absurd suggestion is conveyed by the following paragraph, which we extract from the same journal:—

"If, as Mr. Kelly asserts, these Art-Unions are legal, why was Alderman Boydell obliged to obtain a special act of Parliament, to enable him to dispose of his pictures and prints, and why was an extension of the act sought for in successive sessions, till he had filled his subscription list? Why were other parties in like manner obliged to obtain acts of Parliament before they could dispose of Tomkin's works, Macklin's Bible, &c.?"

To these questions we answer—first, it is not proved that there was a necessity for procuring special acts of Parliament to enable Messrs. Boydell and Tomkin to dispose of their stock; and next, these projects differed essentially from the Art-Unions, inasmuch as they did not profess to give the full value—(according to previous charges)—of the guinea for every guinea subscribed. With regard to the third case, that of "Macklin's Bible," we have a word or two to say.

No act of Parliament has been obtained, or sought for, in order to dispose of this valuable work. Its owner, Mrs. Parkes, several years ago, devised a plan for disposing of it, precisely similar to that since adopted by Mr. Boys to dispose of his stock—i.e., every purchaser, to the value of ten guineas, of prints from the stock of Mrs. Parkes obtained gratis one chance in the lottery by which "Macklin's Bible" was to become the property of one of the shareholders.

If the *Athenæum* opposed Art-Unions upon just, fair, and reasonable grounds, no objection could be urged against such a course. But in condescending to malversation it forgets the great duty of a public journalist. It is to be regretted—inasmuch as out of these continual attacks has, no doubt in a great degree, proceeded the comparative paucity of funds now at the disposal of the Art-Union of London; the *Athenæum*, therefore, has most materially prejudiced the interests of the British artist. At the same time, its own reputation for integrity and fair-dealing has been considerably diminished; for it will be very difficult to imagine that its assaults, amounting almost to ferocity, have been the results of a sense of public duty. It is sufficiently notorious that the *Athenæum* considers the British Artist unable to paint—the transition is easy into a belief that he is also unworthy to live.

They will paint and live in spite of the *Athenæum*; and British Art, notwithstanding the mighty efforts of the *Athenæum* to discourage it, is advancing towards perfection.

We are not likely to hear any further opinions concerning "the illegality of Art-Unions," except from the *Athenæum*; and these are now conveyed only by side-winds. For the present, the purpose has been answered—the receipts of the year are infinitely less than they were expected to have been; but the evil will not again occur.

THE LEGALITY OF ART-UNIONS MAY BE NOW CONSIDERED AS FULLY ESTABLISHED.

## THE ARTS IN CONTINENTAL STATES.

ITALY.—ROME.—*Gallery of Cardinal Fesch*.—The first sale by auction of this famed collection commenced on the 17th of April, to continue all the following days of the month. The pictures to be sold in this first sale consisted of 93 pictures of the Dutch and Flemish schools, including the following masters—Cuypp, Ostade, Jean Steen, Ruysdael, Teniers, Wouvermans, Vandyk, Vander Moulin, &c. In this list we see no Rembrandts, and for those this gallery was especially celebrated. Of the French school the catalogue reckons 50 pictures. Sebastian Bourdon, Coypel, Greuze, N. Poussin, S. Vouet, Vanloo, Le Brun, Vernet, &c., are named among the masters. Of the paintings of the various Italian schools the number amounts to 450. Further information of the sale we shall be hereafter able to give. It was at one time intended, as we announced, that the pictures of Cardinal Fesch should be divided, and sold at successive periods—We presume this plan has not been followed.

BOLOGNA.—*Elisabetta Sirani*.—The life and wonderful genius of this gifted being surpass, for her rare accomplishments, the ordinary course of things, and her early death was involved in mystery. It was believed she died from poison, and, as our readers are probably aware, she was regarded as so worthy a follower of Guido Reni, that she was buried in the same tomb. The learned Signor O. Toselli, in his researches in the archives of the city of Bologna, has found the criminal process which followed the death of E. Sirani, when a female servant of her family, suspected of administering poison to her, was tried and finally acquitted, the proofs of her guilt being imperfect. This curious and most interesting document is published from the literal text, examination of witnesses, &c. &c., illustrated by notes drawn from the great stores of erudition of Signor Toselli, and most useful to the reader. It throws some curious lights on the simple manner of living of those times; and the impression it leaves of Elizabeth's genius and charming character is quite affecting. The work is accompanied by a sketch from the portrait of E. Sirani, painted by herself, in the possession of Prince Hercolan, of Bologna. She is in the act of painting her father's portrait, and is, herself, extremely beautiful.

*The Sculptress, Properzia Rossi—Count Guido Pepoli's Portrait*.—This sister genius, as famous in sculpture as Elisabetta Sirani in painting, like her, died very early, in consequence of an unhappy attachment. So celebrated was she, that when the Emperor Charles V. and the Pope Clement VII. arrived at Bologna, they both immediately desired to see Properzia Rossi; but Properzia was already gone—she had died in the height of her fame the day before they arrived at Bologna. Some of her works have just furnished the subjects of a clever little treatise by the accomplished poet, Count Marchetti. The superb bust of a warrior, seen in the sacristy of the church of St. Petronio, by Properzia Rossi, was believed to be the portrait of Count Guido Pepoli—which it is mentioned by Vasari and by various authors that she had executed. A bas-relief, with several figures, which had been concealed in a neglected apartment of one of the Palazzi Pepoli, has just been discovered, and proves, without doubt, to be the portrait in question. The magnificent bust in the sacristy is, apparently, that of his son. Count Filippo Pepoli, under whose auspices many repairs and improvements were made in the church of St. Petronio. The work of Count Marchetti is accompanied by engravings of the above-mentioned works of Properzia Rossi, and of an ancient medal by Sperandio. We trust Count Marchetti will continue to give us other similar works as serviceable to the history of Art as this is.

FRANCE.—*A Grecian Bronze*.—Our readers may have in recollection an interesting account of the discovery, in cleaning the interior of a Grecian bronze statue, of a piece of lead, on which was stamped the names of the artists, and the occasion of its casting, taken from a memoir presented by M. Letronne to the Academy of Inscriptions. It is now the subject of discussion whether the lead really came out from the aperture of the eye of the statue, with the sand, &c., which the body contained; or whether, in the course of the process, it was surreptitiously introduced among them afterwards—why, we cannot well comprehend.

The statue was always believed to be a work of the brightest era of Greek Art. This inscription gives it a much later date, and quite confuses all received theories as to the dates of the works of Grecian sculpture. It is, we think, justly suggested that lead could not have continued, after immersion in salt-water for ages, which was the fate of this statue, in the unchanged state in which this lead was found; but surely, if it be a hoax, it is worth the attention of the learned to expose so unworthy a trick. See *Cabinet de l'Antiquaire*.

**PRUSSIA.—BERLIN.**—*The Royal Museum—M. von Waagen.*—The Museum has received many rich additions, both in painting and sculpture, purchased by M. von Waagen during his journey in Italy. The paintings belong chiefly to the Venetian, Umbrian, and Florentine schools. There are several fresco paintings, which have been successfully transferred to canvas in the collection: among these, perhaps the most interesting is a series of six subjects, on the mythus of Europa, painted by Bernardino Luini in 1521 and 1522, for a house belonging to the spiritual brotherhood of the Holy Crown, in Milan. The sculpture belongs to every epoch, from the days of Greece and Rome. Many specimens of the best sculptures of antiquity are to be found in Venice, from its earlier relations and conquests in Greece; and some of these have been purchased by M. Waagen. Several interesting sculptures of the middle ages continue the series in this branch of Art. One of the ships, containing the marbles, was wrecked on the English coast, but the marbles were saved. Many decorative works of the middle ages—doors, capitals of columns, &c., are also among the well-selected acquisitions of M. Waagen.

*Portraits of the Most Celebrated Prussian Men.*—Professor Begas has received from the King a commission to paint the portraits of the men in this kingdom who are the most distinguished in science and Art. In what manner this interesting work is to be executed seems as yet undecided. Some consider that forming groups, combined by some pleasing invention, would give greater variety and more pleasure to the spectator than merely a succession of single portraits. Examples of this style of portrait-painting by Holbein are to be seen in the Barbers' Hall and Bridewell Hospital, in London. A painter can have no difficulty in finding a suitable motive for these groups, and this style gives much greater scope for the display of his own powers, and varies his task agreeably.

**BAVARIA.—MUNICH.**—*The Pompeian House.*—We mentioned in our last the project of the King to erect a Pompeian House near his residence of Aschaffenburg. This plan advances towards realization; the Director of Buildings, Von Gartner, is instructed to employ the drawings brought by Prof. Zahn from Pompeii in 1839, for its construction. It was in this house that the beautiful painting on the walls was found, representing Achilles found by Ulysses among the daughters of Lycomedes; also the groups of Fauns and Bacchantes, on a blue ground; Hypolitus and Phædra, Ceres, Hygeia, Venus, and Adonis. All these will be carefully copied for the Pompeian House at Aschaffenburg, with the rich bronze altars, marbles, and inscriptions found in the house of Castor and Pollux; so that the visitor will find himself completely in the *domus* of an ancient Pompeian.

*Hess.*—Professor Hess is occupied with the cartoons for the Basilica of St. Bonifacius, assisted by J. Schraudolph, of Algau, and Kock, from Ham-burgh. Besides these Hess is drawing a cartoon for the great window of the Isaacschurch, at St. Petersburg; the subject is a 'Christ,' in colossal dimensions, giving the benediction; he has also the execution confided to him of the four painted windows which the King of Bavaria means to present to the Cathedral of Cologne.

[We shall have much to say next month concerning THE ARTS IN FRANCE; having just returned from a visit to Paris, in order to be enabled to judge for ourselves, and to form safer opinions than can be procured at second-hand. It will be our duty to treat the subject at some length, and we therefore postpone the publication of a notice of the EXHIBITION AT THE LOUVRE until we can bring the matter in a more complete form before the English reader.]

### THE ELECTROTYPE.

**ELECTRO-METALLURGY** has its origin in one of those accidental philosophical revelations which so frequently occur in researches instituted in prosecution of other objects, or, it may be, under no inquiry at all. But although a self-revealed fact, there is yet all honour due to him whose philotechnic devotion had prepared him to profit by such a communication. It is another genius arisen subservient to the will of man, to labour for his profit and instruction—summoned by the talisman of Professor Daniell—his constant battery, and, like the wonder-working familiar somewhere mentioned by Sir Walter Scott, seems to be capable of everything in his own walk of Art, although not yet having been proved by the tentamen of forming ropes of subtle sand. It is impossible to divine the multifarious uses to which electro-metallurgy may be applicable: we shall attempt to show its power of diffusing a taste for high-class Art. Many are labouring arduously in attempting it—a docile ministrant of commercial enterprise and the utilities of life. It has not been without its share of the cold-water incident to all beneficial discoveries; and had it been an expensive affair, would probably have been attempted as a monopoly by a company. This country is the El Dorado of mendicant continental speculators, numbers of whom are continually in quest of the inventions and improvements effected by British science, industry, and perseverance. It is to be lamented that those who make valuable discoveries should be compelled, in order to call attention to them, to seek the countenance of a learned body, who, in such cases, delegate the consideration of all papers to referees; who, their office being gratuitous, very often, to say the least, report very loosely upon their merits. A case in point is that of Mr. Spencer, who was the first in this country to announce the execution by electric agency of *fac-simile* medals in copper. A paper on the subject by this gentleman was, it appears, refused a reading at the British Association—one simple fact exhibiting the want of some responsible authority appointed to examine the merits of scientific discovery. The observation drops from us merely *à propos* of Mr. Spencer's rejected paper: many remedies for this might be proposed, but its consideration is not within our present scope. Mr. Spencer's paper was perhaps not examined; if examined, the value of its communications was not understood; if it was examined and understood, those by whose fiat it was rejected were in every way unfitted for the confidence reposed in them; in short, under any point of view, the refusal of such a communication could not be palliated. It is unaccountable that societies instituted for the express purpose of fostering science, should have done so little for electro-metallurgy; it owes its advancement to individuals, who, at once seeing the value of the discovery, have sought to turn it to profitable account.

The electrotype was suggested by the constant battery of Professor Daniell, who, in a course of experiments, observed, on disengaging a portion of the reduced metal from the negative electrode, that it bore a surface inversely corresponding to that to which it had attached itself; but this fact did not attract the attention of the Professor, who was interested solely in his battery. In 1836, Mr. de la Rue particularly observed that the deposition of copper presented the exact counterpart of every mark of the plate on which it had been reduced. Some two years afterwards Professor Jacobi published the results of his operations with galvanic agency, which were, in fact, the repetition in copper, of surfaces either incised or in relief; and in 1838, Mr. Spencer announced that he had succeeded in copying some medals in copper. To this gentleman, therefore, is the British public indebted for the electrotype. As the fact whence it has its origin was known to many men of science, it could not much longer have remained in abeyance; it seems to have been acted upon simultaneously by Spencer and Jacobi.

The electrotype was, however, yet limited. The range of non-conducting substances was opened to it by the discovery of Mr. Murray, that the application of plumbago to such surfaces was followed by deposition, and but for which, the electrotype must yet have been devoid of its greatest utility. We beg to disclaim the pretension of treating this subject scientifically, wishing to eschew as much as possible even its technicalities;

and from the plainest description of the various apparatus and their management, to proceed to one main object in this notice—a brief consideration of its prospective effects in extending a taste for Fine Art. The practical querist, whether pleasure or profit be his object, must consult some of the treatises published on the subject. We recommend him to Smee's "Elements of Electro-Metallurgy," wherein he will find abundant working details, and whence he will acquire a knowledge of galvanism, which is indispensable to the accomplished electrotypist. One of the first questions presenting itself to an inquiring mind is the direct cause of the voltaic current; but it is a power which can be created and employed at will, but not explained in a manner to satisfy the various schools of science; therefore, like every other debatable point of economy, philosophical or otherwise, its uncertainty has given rise to different theories. By the best English authorities, it is held that the action of the zinc on the water of the acid solution is the cause of the current, but by the German section of the chemists of Europe, and with these all who profess the opinions of Volta on this subject, it is believed that the chemical action is produced by the electric current, and that the power arises from the contact of two different metals.

Considering our object—such as we have stated it—we keep it straight before us—we cannot diverge—how acceptable, nay necessary, soever it might be to notice a few of the very important results of countless experiments instituted by individuals, whose names are now associated with the origin and progress of the electrotype—the typography of Art, which promises to do for it almost as much as the invention of printing has done for letters.

A Daniell's battery\* consists of a copper cylindrical vessel (C), containing a solution of sulphate of copper (S), in which is immersed another inner porous vessel (P), containing zinc (Z) and dilute acid (A). The height of this vessel, as recommended by Professor Daniell, may be from eight inches to two feet. The simplest apparatus to which this principle is applied for the precipitation of metals may be constructed within a pound jar. Half fill this vessel with a solution of sulphate of copper, in which place the inner earthen vessel with the dilute acid and zinc, and here is at once an apparatus. In order to procure a *fac-simile* of a medal or cast; this may be effected by connect-

ing the cast by means of wire to the zinc, and action will commence immediately on the immersion of the cast in the solution contained in the larger vessel. The operation may be extended to several medals at the same time. In order to maintain the metallic solution in a state of saturation, some of the salt in a linen bag may be kept suspended in it.

Another form may consist of a box divided into two compartments by a partition

of porous earthenware. One of these divisions, as before, will contain the solution of sulphate of copper, together with the casts (m m) intended to receive the deposit, and the other the dilute sulphuric (A) acid and zinc (Z). The advantage of this apparatus is the greater facility of manipulation which its construction offers.

The apparatus here described is the simplest in use, and is employed only for small objects. The process upon a larger scale is carried on by means

\* The cuts which illustrate this article we have borrowed from 'Smee's Elements of Electro-Metallurgy.'

of a galvanic battery and a precipitating trough, an arrangement attended with many very important advantages. The operation is but little affected by the distance or proximity of the trough and the battery; for, provided the conducting wires are sufficient, they may be separated to any reasonable distance, and they are even sometimes placed in separate rooms. Copper should be the conducting medium; and, although a very thin wire may answer for a small compact apparatus, yet, when the battery and the trough are apart, the substance of the conductor should be increased to that of a rod. There are, it will be understood, a thousand contingencies incidental to a course of operations, even on the limited scale which we have attempted to describe with all possible brevity; none of these can be anticipated in the space devoted to these observations, which, it will be remembered, are addressed to those who may, with peculiar and ulterior views of their own, wish to avail themselves of a power which must be of incalculable service to Art in every shape. Others by whom the electrotype is already at all understood must be advanced beyond these very simple elements; and those who are not so, we need not say will not be long content with the little information we can here afford them—for so seductive, pregnant, and comprehensive is the science, that they must insensibly be carried onward until its utmost phenomena shall be familiar to them.

In speaking of the formation of the battery, the solution prescribed was that of the sulphate of copper; that metal being in more extensive use for ordinary purposes than any other. It may be reduced from almost all its salts, but that most in use is the sulphate, from its being of less cost than the others, a consideration which must have weight in a series of experiments. It will be sufficient for our purpose to say, that the sulphate of copper will yield deposition at a ratio of about twenty-six per cent., and thirty-two grains of the zinc will dissolve for the same quantity of the copper reduced.

For general purposes an excellent fluid may be formed of a saturated solution of sulphate of copper diluted with one-third its bulk of dilute sulphuric acid, to which mixture for most cases nitric acid in the proportion of two drachms per pint of the fluid may be added.

In working from non-conducting substances covered with plumbago, this solution will answer extremely well.—Dissolve one pound of the salt in four pounds of water, to which add something less than one-half this bulk of dilute sulphuric acid, which must be formed of eight parts water and one of sulphuric acid.

The utility of plaster of Paris to the electrotypist must be sufficiently obvious: its qualities, when prepared, render it serviceable in a great majority of ordinary purposes. For taking casts and moulds of objects in metal, other substances are also used, as white wax, bees'-wax, stearine, &c. &c., but it is singular that sulphur cannot be employed in metallic solutions.

Plaster of Paris may be thus prepared for taking casts:—Throw into a basin or cup as much as may be deemed sufficient, and pour water over it until it be entirely covered. The air will rise in bubbles, and when that is all expelled, and the water and plaster well mixed, it is ready to be applied to the object of which a mould is to be taken, the surface having been previously prepared by rubbing over it a very small quantity of salad oil. Should it be delicately wrought, a small quantity of the plaster must be poured on it, and with a brush, rubbed into finer parts. This precaution insures a perfect impression. To give the necessary substance to the mould, a sufficient quantity of the plaster must now be added; it will then become rapidly consolidated, after which it may be disengaged from the medallion, or cast, and gently heated, in order to expel superfluous moisture.

Before the mould can be used, its absorbent quality must be destroyed—which is effected by means of melted tallow or wax, oil, varnish, or some other of the many materials adapted for this purpose. Place the cast in a plate, or some similar flat vessel, into which must also be put the curing material, which, on being melted over a lamp or stove, or by the side of the fire, must flow round the cast to half its height. From twenty minutes to an hour, according to circumstances, is the time allowed to cure casts, the former of the two periods being generally sufficient. If this be properly performed, the plaster will assume a

smooth and even surface, without any superfluities to injure the character of the mould.

Perhaps the simplest method of rendering plaster casts non-absorbent, is to saturate them with boiled linseed oil, which should be applied to the cast until it is thoroughly filled; this may be known by the rejection of the oil, which will ultimately settle on the surface. The cast may then be allowed to dry in the sunshine, if that can conveniently be accomplished; and the operator must be especially careful that the mould be perfectly dry before it is immersed in the solution, otherwise it will be destroyed. This mode of making plaster non-absorbent is well adapted for taking other casts in plaster; but it is well adapted for electro-metallurgy as the mode of filling by wax.

The best method of qualifying non-conducting substances is by covering them with the thinnest possible layer of black lead, which is done by brushing this material over them until they have received a fine and smooth coating. With this process terminates the preparation of the cast—it may be then subjected to the operation of the voltaic current.

We have described the construction of the electrotype apparatus in its simplest form, as also the method of setting it in action with a view to procure the copy of a medal: the apparatus is to be purchased\* in this and other more complicated arrangements, but the object of our particular description is to render the construction and operation plainly intelligible. From one or two essays, it is scarcely necessary to observe that infinitely more may be learnt than can be gathered from theory; and, as we have already observed, there is not in the space we can devote to the subject, a possibility of providing in anywise for those incidents of varied operations, with which an entire volume would scarcely be sufficient to deal. Many productions of the electrotype may be highly advantaged in appearance by being bronzed, which gives age and value to medals, bassi-relievi, &c. &c. The simplest method of effecting this, is to apply to the object black-lead, on its removal from the solution, after which, it must be heated over the fire and then cleared of the black-lead with a small painting-brush, very slightly moistened.

The electrotype has opened an inexhaustible field of speculation, embracing not only the refinements of life, but affecting also many of its necessities. The first blush of the discovery presented an embarrassing multitude of benefits, and changes so decided, as to bid fair, in every case to which it was applicable, to revolutionize the routine of production. It is our province to watch its effect upon Fine Art—and this we do the more closely, auguring everything favourable to the result from what we have already seen brought forth by comparative inexperience.

All surfaces, whether relieved or intagliated, are practicable by means of the electrotype: we cannot here even enumerate the purposes to which it is already applied—and less can we consider those to which it may be applicable. Its singularly subtle imitation of the relief surface of wood-engraving is admirably shown in the recent edition of "Thomson's Seasons," as illustrated by the Etching Club. It is true that in a comparison between an impression from the original wood-cut and another from the electrotyped copy, there is a somewhat of hardness in the latter, but by no means so obtrusive as in comparing impressions of steel and copper-plates. We cannot, however, doubt, that still leaving something to be desired, the metal fac-simile will ultimately be made to yield cuts characterized by all the sweetness of those from the wood. The electrotype has arisen a giant at its birth, but this little fineness is wanting to its vast and creative power as far as concerns wood.

With respect to the engraved copper-plate, the same difference cannot exist. It is constituted of the same metal as the original plate—is produced line for line from it, and consequently yields an impression which is not to be distinguished from that of the original. This we know is doubted, disbelieved, but we shall follow the assertion with the proof.

The engraved copper-plate may be thus reproduced. There are various methods of taking the mould—this process is performed with wax, plaster of Paris, and lead, but the best of all by form-

\* At the establishment of Mr. E. Palmer, 103, Newgate-street.

ing an electrotype mould. With the two former materials the operation must be performed with the utmost care and nicety, and some practice will be necessary to arrive at perfection. The operator having succeeded in procuring a perfect mould, it must be covered with black-lead in the manner already described, and placed in the solution. It is scarcely necessary to observe that the lines in this mould will be in relief; but on the plate to be reduced upon this, the lines will re-appear incised as upon the original.

An impression may also be taken in lead by means of a printing-press. The lead used for this purpose must be prepared with a perfectly clean and even surface. In being put through the press (which must have an iron bottom), place it below the plate, and over the latter, to prevent its being bent, place another plate of the same size, and a perfect impression will be obtained. The best method, however, of repeating the copper-plate is to procure the relieved surface from the original by means of the electrotype itself, which, in its turn, being employed to reduce upon, a copy of the prototype plate, unquestionably accurate, is obtained.

In connecting the plate with the zinc of the battery, it is customary to solder it; but, to the tyro in electro-metallurgy, it would be more simple, and not less effective, to place a wire in contact with the back of the plate. The battery best suited for this purpose is thus constituted:—The size of the vessel must be according to the length of time the battery is required to be in action, for the quantity of liquid must be in proportion to this period; therefore the vessel may contain from a pint to many gallons. It is of the ordinary

cylindrical form, and across the top is extended a piece of wood shaped like a small beam (*w*), from which, and attached to it, a piece of silver (*S*) descends into the vessel. On each side of the wood, and descending thence and also into the vessel, is a strip of zinc (*Z*), simply connected with the wood by a binding screw (*b*), which at once grasps the whole, confining the beam between the two pieces of zinc, between which also is the silver, but without contact: to the last is soldered a binding-screw, for the purpose of connexion in working. This is Mr. Smee's battery for the electrotype. The precipitating trough employed may be either vertical or horizontal. The vertical trough is oblong, consists of wood, and is cemented inside. Within and near one side of this is placed the plate (*N*) intended to afford the *fac-simile*, and near the other a sheet of copper to be dissolved; the former being connected with the zinc (*Z*) of the battery by means of wire soldered to it, and the latter put in con-

nexion with the silver (*S*). The battery is to be charged with dilute sulphuric acid, proportioned as one pint of strong sulphuric acid to two gallons of water. The trough must be filled with a saturated solution of sulphate of copper, diluted with somewhat more than one-third of dilute sulphuric acid. The copper connected by the wire to the battery should be of the same size as the plate, and its immersion in the trough must be the last part of the preparatory operation. The time requisite for the formation of a plate must depend upon the substance deemed necessary; this matter is therefore discretionary with the operator. The time may extend from two or three days to a week,

and even much longer. The back and every part of the plate not intended to receive deposit must be covered with wax, grease, or some other non-conducting substance. It will occur under certain circumstances, that the two plates will adhere as in one inseparable mass: this would take place if it were put into the trough to receive deposition immediately after the process of soldering. To prevent this, after having been acted upon by heat, it should be left in a cool place twenty-four hours or more. When the plate is of the requisite thickness, it will separate readily. Should the two be bound together by accidental deposit at the edges, this must be removed. The back of the new plate will be somewhat rough, and must therefore be filed before put under the press. Should it occur that the plate is too thin, this may be remedied by its being backed by another plate; iron will answer for this purpose, but it is better that the plate should come from the trough of the necessary substance. To the operator the cost of the plate thus produced is nearly two and sixpence per pound.

The two last figures represent a battery with a horizontal trough, and Mr. Smee's "odds and ends" apparatus. The horizontal trough (B) is employed for large plates, wherein the positive pole (C) or metal to be dissolved, is placed above the negative or pole to receive the deposit (P), and thus an equable distribution is effected. The odds and ends battery has been admirably contrived by Mr. Smee, for the purpose of working up remnants of zinc, which are here made the positive pole of a battery by being placed at the bottom of a vessel and covered with mercury. "A silver wire is then placed down a glass tube into the quicksilver, so that the wire may nowhere touch the dilute sulphuric acid, with which the vessel is filled, but simply make a good metallic communication with the mercury. At the other end of the wire a binding screw may be attached for the convenience of the operator. The platinised silver wire (S) is then to be immersed in the fluid, and placed as near to the mercury as possible, without actually being in contact; whilst no part of it should be more than three inches from it, as a considerable reduction of power would then ensue."

The repetition of engraved copper-plates was of course early suggested by electro-metallurgy, but never have its capabilities in high Art been so tested until recently by the National Art-Union. If fine engravings be of any value, and they can be multiplied in a manner to satisfy, at a reduced rate, the wholesome craving for them, assuredly the world must remain the debtor of that source whence this end has been promoted, without reference to the direct objects in the case, for it is sufficient that these go hand-in-hand with general benefit. In considering this means of promoting Art, under all its phases, we cannot discover a probability of injury to any interest whatever. Great changes have always been regarded with suspicion—if a great change be impending here, the horizon is sufficiently clear to let us see the distant result. We have had an opportunity of inspecting, at the office of the National Art-Union, in Soho-square,

impressions from electrotyped plates of Turner's two pictures, 'Ancient and Modern Rome.' We have collated impressions from the original plate, and from the electrotyped plate—examined portions of them line by line; but such is the rigid similarity of the two, that it is impossible to distinguish them. With respect to the precision of the electrotype, here it is set beyond all question; the only point as yet open to debate, is the number to be thrown off from one plate. Now, the electrotyped plate of the London Art-Union, has, in the hands of Mr. McQueen, yielded upwards of four hundred impressions, and will, to all appearance, do the same amount of work as the ordinary engraved copper-plate. It is asserted that the plates are sometimes found soft; but it must be remembered that the results we speak of can be considered as little more than experiments: practical men are confident of being able to obtain a texture of metal in every way capable of favourable comparison with anything in use. With respect, therefore, to the qualities of electrotyped plates, we have evidence that they afford impressions of excellence equal to that of the original plate, and that, even to a high number of impressions, they work as well; but a little more, therefore, is necessary to effect the desired object—the best prints at a low price. As we have before observed, no interest can be injured by this; the engraver receives his own price, and the publisher is recompensed by increased numbers. Prints and proofs from the original plate will still, by prestige, command high prices, while those rendered by the factitious plate may be circulated at a lower price, but with not less comparative profit, to the improvement and advantage of thousands who have a taste for Fine Art.

#### MEMORIES OF PICTURES.

By MRS. S. C. HALL.

##### NO. III.—THOMAS GAINSBOROUGH, R.A.

THERE are many benevolent persons, venerable old ladies more particularly, who, sitting with half-closed blinds at windows of suburban villas, consider it a duty to pray that every Sunday may be sunny. They are too feeble to walk to church, but they love to see well-dressed congregations hastening thither, to the sweet inviting music of the church bells, and they especially delight in observing town-soiled artisans—pallid men, their industrious wives and delicate-looking children—trooping along the dusty roads, stopping at garden-gates to look over and inhale the perfume of early sweetbriar and purple violets, while their children pillage the hedges of budding hawthorn or dawning primroses, not scorning even long tufts of willow grass, which they twist in unceasing sportiveness, lashing each other into unusual mirth. I wish the same generous and kindly folk would pray that the early days of April might be as sunny as the sunniest Sabbath that ever joyed the world; for the painter-prisoners are at large on those days of all days in the year. The last-last touch has been given to their works—the pictures are gone to the Academy to await their doom: whatever may be the result, the toiling man of genius, or of patience, hopes he has done his best; the darling one—the produce of thought and care, of labouring days and wakeful nights—has left his roof, be it lofty or humble, accompanied by some heart-beatings and regrets; not that he wishes to see it back again, but he thinks he might have treated it better while it remained. Still it is gone, and he breathes more freely. Night though it be, he throws up the window, and, if he does not accompany the porter, watches it down the street until both man and picture are lost to his view, or only recognised as they pass beneath a distant lamp. He leans his hot brow against the glass, and thinks, and hopes; if he is yet young and unknown, and has dared a loftier path than hitherto, he shudders; but, if the true spirit is in him, that soon passes; though no encouraging word has been spoken—though it may be (for the world is hard, and portions of it are sadly unsympathizing), no cordial voice has told him he is in the right way, and must triumph—still he feels the impulse and dignity of *INNATE* power, and though standing alone in the awful solitude of London, he stands erect, strengthens his faith—a wise thing to do—and then looking up at the April clouds, careering half in play and half in petulance above his head, he hopes the next day may be fine, for he will cast away care and spend it among distant meadows. His landlady hopes it also, for then she will open all the windows, and let in the "air"—as she calls the thick, indigo-toned atmosphere—and she will set "things" to rights, and "tidy" the "rubbish," and make all "straight," so that the "poor young gentleman who has worked all the colour out of his cheeks, shall not know his room again." A pleasant arrangement for artist or author!

Surely all who love Art should pray that the early days of April may be bright and sunny, for of all created beings the artist needs fresh air and exercise the most; the more intense the feeling that has created "his picture," the

more he needs relaxation—not crowds, or heated rooms, or exciting theatres—but the companion ship of fields, and trees, and brooks—fresh air, such as can be inhaled in our own beautiful prairies, the downs of Sussex or Surrey, or among the woods of Hampshire, and the parks of Suffolk. Suffolk! where Gainsborough made such dear acquaintance with Nature—where his heart and mind became stored with the treasures of English landscape and rural character.

His 'Cottage Girl,' with her dog and pitcher, is one of those delicious "memories" that can never be thought of without a thrill of the deepest enjoyment—it is so real; the grace is so simple and rustic, without a trace of affectation or vulgarity; there is a pensive expression in her face, and a look about her tattered sleeve, that makes you fear she is an orphan, dwelling with her grandam in that far-off cottage, having nothing to tender (for be sure the distant sheep are none of hers) but the soft, fat, half-sleepy puppy, so clean and well washed, that will soon be too heavy for her to carry.

Gainsborough has left ample testimony of his sympathy with, and affection for, the calm and holy beauty of English scenery. His life must have been a pleasant one to live; for, on the whole, it is pleasant to think over. Nature had made him in the first instance her debtor, by gifting him with manly beauty, and it was accompanied by gracefulness and good address. Handsome persons are rarely ill-tempered; the consciousness of possessing an agreeable exterior creates an ease and self-satisfaction which mesmerises others to similar moods, and the beautiful are seldom inclined to be fractious. Few in his day were more admired than the young Suffolk artist—the melodious Gainsborough, the most easy and gentlemanly painter of sylvan England; his family were respectable; he could not be sneered at, either for low birth or forlorn fortunes; he married young—a rare but decided advantage to a man who marries wisely; and the first sight of his bride is described as a meeting belonging rather to Arcadia than to England: it was richly and purely poetical. In one of the young artist's pictorial wanderings amid the woods of Suffolk, he sat down to make a sketch of some fine trees, growing just where they ought, with all their accessories, a clear rivulet cooling the meadows, sheep dotting the scene; there was the bleat of lamb and coo of dove, and suddenly a nymph, the kind and gentle Margaret Burr, who had just numbered sixteen summers; she came like a sunbeam to his heart, and secured a lover who soon became a husband; prudence sanctioned affection, and the course of true love for once ran smooth, for Margaret added to the charms of good sense and good looks, a clear annuity of two hundred pounds a year. The case, which is a certainty, however small, gives at once to its possessor, is an astonishing sustainer; and, though a young couple would find it very difficult to live, as it is called, even at Ipswich, which is rather a cheap town, on two hundred pounds per annum, yet it was an independence; and the aspiring artist felt he must work to gain the comforts and luxuries which his refined taste prompted him to desire. His wife seems to have been one of those loving and lovable beings who bring far more happiness to the domestic hearth than women endowed only with high-sounding beauty and talent. She had also implicit faith in her husband's love, and her husband's genius, and an abundance of prudence. Before his marriage he had journeyed from Sudbury, his native place, to London, where he studied for four years, and then returned, when just eighteen, to be the beloved of his home, the idol of society. Thus he was circumstanced when the fair Margaret won his heart and he her hand. Nineteen and seventeen—mere boy and girl!—living and loving each the other until, in the sixty-first year of his age, he passed to "fairer fields" than he had ever painted. Happy, happy days, they must have passed together. He, so enamoured of her and his Art; she, loving whatsoever he loved, for his dear sake; watching the progress of his pencil, and feeling that his name would carry hers down the stream of time!

Truly an English landscape-painter ought to be a happy man! In perpetual commune with bright nature—sweet nature—peaceful nature! Camping, like a gipsy, amid the shelter of green lanes, rioting, a modern Robin Hood, in forest glades—making acquaintance with rivers, establishing friendships with lakes—a man, whom the deer do not fly from, and whom the partridge scans with her large soft eye without suspicion; over whose head the poised skylark sings—who is welcome at every cottage hearth, while his landscapes are "the country" of many a city palace.

In Thomas Gainsborough the love of music and of painting were so united as to form one passion. When he lived at Ipswich he devoted almost as much time to the one as to the other; and there, although not yet acknowledged a master in his art, he would have been deliciously happy. If not alternately disturbed, interested, and gratified by the fussy patronage of the Governor of Landguard Fort, a kind-natured vain man, who loved Gainsborough as long as Gainsborough permitted himself to be considered the Governor of Landguard Fort's pet painter.

Vain friends make bitter enemies: a truism the artist felt in after-life. The scenery and the characters at Ipswich soon wore out, while Gainsborough's fame extended far beyond, and he tried a residence at Bath before venturing to London. Governor Thicknesse endeavoured to "gold refine gold"—to make his patronage appear to do the business which the painter's talent had done; and there seems to have been a feverish contention going on in Gainsborough's own mind between his remembrance of Thicknesse's kindness and his own frank independence.

Mr. Thicknesse wanted his portrait painted, and Gainsborough hesitated and delayed; and neglecting a man's portrait is tantamount to neglecting himself. Bit by bit the habits and circumstances upon which so many trifling friendships are created, crumbled away, and at last the painter was freed from caresses which, however well intended, seemed more likely to suffocate than support their object. Every one has a real or imaginary "John Jones," a person or annoyance in his way; and, whatever fits of vexation the exquisite taste and refined feeling of the painter might have experienced from other sources, the Governor of Languard Fort was his "rock ahead." His excellency's bitterness found at last vent in a pamphlet, which perpetuates his name and his pompous nature. Still Gainsborough's was, as I have said, a happy life. If he was at times depressed, he was generally buoyant—of a bright, truthful nature—careless of his wealth, and enthusiastic! and what stock so good to work upon as enthusiasm? An honest man, adding enthusiasm to his honesty, will triumph, where a man of only genius will flounder and fail. He talked of music while he painted, and passed many of his happiest evenings in the very brightness of the London success that followed his sojourn at Bath, sitting by the side of his wife, sketching his thick-coming fancies, not one in ten of which he preserved. It is said that at one of the Academy dinners, speaking of Gainsborough, Sir Joshua observed to a friend, "He is the best English-landscape-painter." "Not so!" exclaimed Wilson, who overheard the conversation, "he is not the best landscape-painter, but he is the best portrait-painter in England." Great compliments to the versatility of his talents, but full of bitterness each to the other party. Perhaps this very sentence rankled and festered in Sir Joshua's mind, and assisted the coolness which crept in between himself and Gainsborough. I cannot fancy the elegantly rural Gainsborough living in that ruddy old house of Duke Schomberg's, in Pall-mall, a portion of which is now occupied by Harding's most perilous bonnets and Parisian fineries. Yet there was his gallery; there some of his portraits were said to rival the President's, and displayed a Vandeykean force and freedom which commanded popularity; there was exhibited a domestic sort of display—of the King, Queen, and three of the Royal sisters; there the dazzling beauty of the all-beautiful Duchess of Devonshire so bewildered the painter, that he drew his wet pencil across lips, which all who saw declared to be lovely as life, and confessed, "Her grace is too hard for me!" Garrick, too, and Foote tormented him: he could not catch their faces. Though not fond, like Sir Joshua, of literary society, Johnson—as great in literature as Cromwell in the state—was sometimes his guest, with the eloquent Burke, and the man

"Whose humour, as bright as the fire-fly's light,  
Shone round every object, and shone as it played;  
Whose wit in the combat, as gentle as bright,  
Ne'er carried a heart-stain away on its blade!"—

Sheridan. He was his brilliant, yet tender friend. The painter was as susceptible of gentle emotions to the last day of his life as a young girl is at seventeen. Melodious sounds entranced him as with a spell. Giardini and his violin, Abel and his viol-d-gamba, Fischer and his hautboy, all fascinated him in their turn; and if he had but the perseverance necessary to acquire the grammar and construction of the science, there is little doubt but his eloquence in music would have equalled his eloquence on canvas: as it was, he was a delicious musician. It is really cheering, after turning over the pages that illustrate alternately the struggles of genius with misery, and misery with genius, to meet one who, from his cradle to his grave, never had a bout with poverty—who pictured forth the pleasant places of our own land, so as to make us love it all the better, and who united in his own person few eccentricities and many perfections; his imagination never betrayed him into the unreal, though it exalted and beautified the real; or rather he saw nature through the "Lorraine"-glass of his bright and sunny mind. His ready and rapid hand was accelerated by his ardent temper, and not only Art but affection bound him to his native country.

Gainsborough did not create a paradise and leave it untenanted. He cherished deep human sympathies, and peopled his scenes not with the many but the few. There is no purely rural sentiment in crowds: so he delighted most in woodland figures, such as are still frequently met with on the outskirts of Fakenham Wood, or wandering along the banks of the Burn. There are spots in Suffolk shown still as having been selected by this charming transcriber of nature as his sketching-points, and truly, above all others, his landscapes are English. For this I dearly love him! He felt his country's beauty, and made others feel it—he was a PAINTER-PATRIOT! and this deserves our gratitude. Where can be found more bosky dells, more deep rich valleys, than in our own beloved England!—where cultivation beautifies, where the earth displays her tangled treasures—tangled in their abundance: soft gentle waters and blue eddying pools, round whose margins the deep green moss sleeps in sunshine and the rush bends her tasseled blossom. There you are sure to find some ancient pollard willow, still sending forth tufts of green sappy stems, where reed-birds and finches hide; the garbled trunk shelters countless multitudes of curious insects, creeping and winged; the merry woodpecker taps the old bark, while from some rooty hole the silent kingfisher darts across the stream. Sweet English scenes! which Gainsborough so exquisitely rendered, feeling and depicting every little beauty, and imbuing the fragrance of nature into his own being. His kin-

dred bear testimony to his being a kind and generous relative, who anticipated the wants of others, and bore his prosperity with the ease of a gentleman who feels that he is not indebted to affectation or display for his position in society. His memory is beloved, and his name recalls the music of soft waters, that fertilize and beautify without storming the senses or bewilder the imagination. The freshness of spring, the fullness of summer, the peopled abundance of autumn—our glens, and forests, and cottagers—life and life-loving scenes—were all given to him for an inheritance; he was, and is—OUR OWN—a pure English painter.

While attending the trial of Warren Hastings, Gainsborough was suddenly seized with a pain in his neck, which eventually proved to be cancer; at that time he was residing in Pall-mall, though he had previously occupied houses at Kew and Richmond. His bodily sufferings were augmented on his deathbed by a terror which took possession of his mind, that after his wife's death his daughters would be left without provision, as his thoughtless extravagance and generosity never allowed him to lay by any portion of his earnings. On this point his gentle wife soothed him by the information, that "As he always threw his money about, leaving it at the mercy of every one, she had taken, in the course of twenty or thirty years, as much as had enabled her to secure £10,000 in the funds; and with that, and the sale of 'The Woodman,' and other pictures, doubtless their children could subsist in comfort. He thanked and blessed her warmly, saying, 'She had done perfectly right; that it was true he had sometimes thought he had more bills than he found, and been puzzled about it, but never suspected that any one had made free with what now made his deathbed one of tranquillity and peace.' He then sent for Sir Joshua Reynolds, resolved that he would cherish no unkindness in his last moments towards any one; and these great men were reconciled in the eighth week of his affliction; Gainsborough exclaiming, with much joy, 'We are going to heaven, and Vandye is of the company.' He is buried in the spot he loved best—at Kew.

EDWARD BIRD, R.A.—The Bristol journals have waxed marvelously rash concerning our comments upon the conduct of some of its citizens to the widow and family of the painter Bird. From one of these newspapers—*The Bristol Mercury*—we extract the following passages:—

"It is very much to be regretted that a work which stands so deservedly high in public estimation as the *Art-Union*, should have incautiously been made the vehicle for disseminating this second-hand slander, the groundlessness of which, upon its original publication by Allan Cunningham, in his erroneous memoir of the artist, in the tenth volume of the 'Family Library,' was fully exposed by our distinguished fellow-citizen, the Rev. John Eagles, in his articles under the signature of 'The Sketcher,' in *Blackwood*. We have not the means of ascertaining whether any portion of the costs of Mr. Bird's funeral was paid to the undertaker by Mrs. Bird (although we believe that such was not the case); but the statement, that she was called upon to defray the additional expenses, if any, consequent upon the respect paid by the public to the memory of her deceased husband, is, we are assured by all who are conversant with the matter, most entirely untrue."

The best answer we can give to these remarks is to print the receipts for the "costs of Mr. Bird's funeral." Here they are:—

"Bristol, Nov. 1819.

"Received of Mrs. Bird, by the hands of Mr. Estlin, the sum of £9 2s. 10d., for funeral fees, mason's bill, &c., for the funeral of the late Mr. Bird.

"WILLIAM PHILLIPS, Subsacrist."

"Bristol, 5th May, 1820.

"Received, May 5th, 1820, of Mrs. Martha Bird, administratrix of the late Mr. Edward Bird, the sum of £52 4s., being the funeral expenses of the above-named Mr. Edward Bird, deceased.

"£52 4s.

"THOS. WILMOT."

Concerning these receipts Mrs. Bird has thought it just to address the following letter to the *Bristol Gazette*:—

"I feel it right to inform you that, both as to the undertaker's bill, and of the interment in the Cathedral, I am in possession of receipts, which I invite you to inspect. It has been said I had no funds to defray the funeral charges, or my poor husband's debts. I had them, to the amount of nearly £800, arising from the sale of the greater part of my furniture, and of the picture of the 'Embarkation of Louis XVIII.,' purchased by the Earl of Bridgewater for 600 guineas. These united sums I placed in the hands of a friend, and from them the funeral expenses were fully paid, and the claims of Mr. Bird's creditors—I do not say to the full amount—but as far as the means would meet them."

The *Bristol Mercury* further intimates, that not only was the widow not called upon to pay for the honour accorded to the memory of her husband, but that "his friends, without loss of time, exerted themselves to make some permanent provision for his family." If this had

• This anecdote I have received from an old and beloved friend of the family. The honours of the Arts have been continued in the line. Mr. Richard Lane is one of the grand-nephews of Gainsborough. Another of his nephews—Mr. Edward Lane—has been equally distinguished as a traveller and a man of letters. His publications concerning Egypt rank among our standard English works; and his translation of the "Arabian Nights" has obtained a reputation throughout Europe.

been the fact, we should have rejoiced to record it. But such is not the case. Mrs. Bird has no annuity save that which she receives from the Royal Academy as the widow of one of its members. But a small sum—we believe about £500—was realized by the public exhibition of Mr. Bird's pictures, and the sale of some unfinished sketches, and that sum was augmented by a hundred pounds subscribed by Mr. Bird's pupils—this, we understand, was placed at interest for the benefit of the children. If the citizens of Bristol advance any claim to merit on this score, we refuse it to them altogether.

The case remains as we originally put it. The facts cannot be contradicted. The past is frightfully discreditable to the Bristolians; but the future may make some amends.

Since these remarks were written we have received the *Bristol Gazette*, containing a long article, headed "Bristol Vindicated." Its spirit is so bad—the language adopted so disreputable, and the style altogether so personally offensive—that we are compelled to consider it to have emanated from a person conscious that he has not only earned, but received, a degrading immortality. The article, indeed, bears intrinsic evidence of proceeding from one of the "Friends," who, under the pretence of honouring dead genius and aiding afflicted survivors, abridged the small pittance of the widow and the fatherless; and obtained additional notoriety for Bristol city. We require no proof other than is supplied us in this article, to induce a belief that the writer, who, screened by the anonymous, can offer gross insults to a lady through the columns of a newspaper, is fully capable of degrading the memory of the dead, and injuring and calumniating the living.

The article is a mass of special pleading from beginning to end; it proves nothing and disproves nothing; it substitutes vituperation for argument, and supplies foul words in lieu of facts; it is a gross libel upon Allan Cunningham, who is removed from the means of self-defence, and an unmanly attack upon a lady, who is, happily, not without a defender, but whose character is proof against assaults far more dangerous than those of one who would apologize for cruelty by the perpetration of falsehood.

What a heart of ice must the man have who can write thus of the latest tribute paid to the memory of his friend!—"Had Bird been carried on four men's shoulders to his grave—(and it might have been more prudent, as a trifle more might have gone to the creditors), the gentlemen would have followed as readily." Hear, too, how he speaks of the poor source out of which the funeral charges were liquidated:—"The widow had literally no funds whatever to be lessened; the funeral expenses could not touch her, for the property from which they were shown to be paid was not hers,"—meaning that it belonged to her creditors. But it was out of her £800—out of the sale of her furniture—that they were paid; and if she had had "literally no funds whatever," Bird might have been buried by the parish as Chatterton was. Read also the brief but heartless paragraph in which the promised "monument" is dismissed.

"As to the monument, it was never seriously, that we know of, proposed; and we think it a very idle cost, in all cases where the family of the deceased want its amount for their support."

"Idle" was the "cost" of a single mourning-coach—there was but one—and "idle" would have been the "cost" of a marble slab, to let others than cathedral vergers know where the painter Bird was buried. So the idle cost was in the one case "shirked," and in the other avoided.

It would be very easy for us to show that the alleged facts of the writer of "Bristol Vindicated" are utterly unsupported by truth; but to go deeply into the matter would be to bring into the discussion, and, consequently, expose to the scurrility of this "writer," two unprotected ladies—the widow and daughter of Edward Bird. As, however, the whole point of the defence turns upon the assertion that "Bristol generosity" formed an exhibition of Bird's pictures, and that, out of the produce realized by this exhibition, "the widow and children of Bird daily feed" (delicate reading), let us see how the case stands. At Bird's death the widow's pension was £50 per annum from the Royal Academy, since augmented to £75. By the said "exhibition," and the sale of twelve unfinished pictures or sketches, a clear sum, after paying the expenses of the room, &c. &c., of £241 was realized! The mighty merchants of Bristol, with its "130,000 inhabitants," certainly did this! Fifty pounds were added to the fund by the payment of the Earl of Liverpool for two small portraits; £160 were subscribed and added to the fund by the pupils of Mr. Bird—ALL LADIES SAVE ONE! These three sums, added to the munificent gift of Prince Leopold—honour to the name!—of £500 (including the donation of £100 and the sum brought by the 'Surrender of Calais'), amounting in the whole to NINE HUNDRED AND FIFTY-ONE POUNDS, bought an annuity of—say £47 11s., upon which—i.e. the "bounty" of which—"the widow and children daily feed!" Bounty! But much more than the half of it is the "bounty" of Prince Leopold, who never professed the hollow friendship of a bad heart.

Reader, set the receipts and the widow's statement—as we have printed them—against the coarse slander of a conscience-stricken man, stung to the quick by the self-reproach that has been created by exposure.

SIR AGILTHORN.

THE BOOK OF BRITISH BALLADS. EDITED BY S. C. HALL, F.S.A.—The first volume of this richly illustrated work being completed, we are induced to print, in a supplementary sheet of "THE ART UNION," some examples of the drawings and engravings it contains. Our principal object is, to show that English artists are capable of high excellence in this department of the Arts, as well as in every other. It has been, of late, the fashion to "cry up" the pencils of Germany and France as altogether unapproachable in this particular style: some modern critics, indeed, have sought not only to exhibit the comparative incapacity of those who *draw* upon the wood, but have attempted to prove, also, the incompetency of English engravers. Although we shall, presently, offer some comments upon such assertions and the evidence by which they are supported, they are best refuted by the specimens we here publish. The "Book of British Ballads" we shall consider merely as a work of art; of its literary contents it will suffice to say, that the Editor has prefaced each ballad by such "explanatory remarks as communicate all the information he could obtain concerning its history." The prose pages are illustrated by objects of interest referred to in the text; and in order to render this sheet as complete a transcript of the volume as we can, we shall transfer several of them to our columns: we may, however, be permitted to state that the Editor, in his Preface, refers to the singular fact, that this is almost the only neglected department of our "polite literature," no attempt having been hitherto made to select and arrange the best of the ballads "from the several volumes in which they are scattered;" and where they are "mixed up with a mass of inferior or objectionable compositions." "Yet," he adds, "it is not too much to say, that in 'uncivil ages' no source of instruction was so fertile,—and no missionary so effective in moulding the general sentiment, as 'the blinde crowder—it may have been,—who, with no rougher voice than rude style, stirred up the sympathies of the multitude, and moved even the great heart of Sidney more than with a trumpet.' Nor can he be considered a visionary, who would draw conclusions as to the pre-eminently moral character of Great Britain, from the fact, that the songs which encourage virtue and justice, uphold heroic fortitude, and inculcate, as an axiom, that 'God defends the right,' have been, in all ages, the chiefest 'darlings of the common people.'"

ROBIN GOODFELLOW.

REAT difficulties have been encountered in bringing this work so far on its way; for several of the artists who contributed to form it here made their first essays, and were, previously, entirely unacquainted with certain rules and restrictions—trammels, we may term them—necessary as guides to the engravers. Mr. GILBERT, Mr. FRANKLIN, Mr. WARREN, Mr. KENNY MEADOWS, Mr. SCOTT, Mr. REDGRAVE, and Mr. CRESWICK, were sufficiently familiar with the technicalities of the art; Mr. HERBERT, Mr. TOWNSEND, and Mr. SIBSON, were but slightly acquainted with them; and we believe we are justified in stating that Mr. E. CORBOULD, Mr. WARD, Mr. M'LAN, Mr. JOY, Mr. DADD, and Mr. FRITH, had never made a drawing upon the wood until called upon to co-operate in the formation of this volume. Their capabilities are, therefore, to be judged rather from what they might do than from what they have done. We do not hesitate to affirm, that with somewhat longer experience and more matured study they would completely bear out the anticipation of the Editor—if, indeed, they do not even now—in supplying proof that “the embellished publications of Germany and France are not of unapproachable excellence, in reference either to design or execution.” The volume consists of

piece and tail piece, nearly covering the first and last pages; the other pages being illustrated by slips. In most cases, the air to which the old ballad was sung has been introduced: as, for example, the air to “The Children in the Wood.” The book is of a peculiarly elegant size and form; and is “done up” in a novel and graceful binding. The engravings are executed by Messrs. Armstrong, Bastin, Branston, Evans, Folkard, Green, Jackson, Landells, Linton, Nicholls, Orrin Smith, Vizetelly, Walmsley, Whimper, S. Williams, J. Williams, and, “though last not least,” Miss M. A. Williams. The list comprises, indeed, with one exception, the names of all the leading English engravers.

T. CRESWICK, A.R.A. Del.

BE it right, or wrong, these men among  
On women do complayne  
Affermyng this, how that it is  
A labour spent in vayne,  
To love them wele; for never a dele  
They love a man agayne:  
For lete a man do what he can,  
Theyr favour to attayne,  
Yet, yf a newe do them persue,  
Theyr first true lover than  
Laboureth for nought: and from her thought  
He is a banyshed man.

W. J. LINTON, Sc.

LORD SOULIS.

HEVY CHASE—the book opens with that old heroic ballad—is illustrated by J. Franklin; to whom, indeed, has been assigned a very large proportion of the labour of producing the work. It has been objected, that his style is too near an approximation to the German. We cannot so consider it. An apparent similitude may be induced by the fact that many of the subjects have required similar treatment; aided by the “manner” adopted by the artist, who has drawn rather in the “liney” method used in Germany, than in that to which we are more accustomed, where “prettiness” of effect is more aimed at than severe truth. The “woeful hunting” has never been more admirably illustrated. The ten embellishments describe so many striking scenes; and the concluding print is a noble and masterly picture. It describes the mournful train which follows the body of the slain Percy. The best of the engravings here have been executed by Linton—the head and tail pieces are both his; and they are of unrivalled excellence. Into the introduction the Editor has introduced “the Pennon of the

Percy” and “the Banner of the Douglas;” and his copy of the ballad has been collated with one in the Peppysian Collection at Cambridge, by which, and by comparison with others, he has been enabled to correct several inaccuracies in the usually received text. The ballad of *THE CHILDREN IN THE WOOD*—“one of the darling songs of the common people”—has been illustrated by Mr. Herbert, A.R.A. The head and tail pieces are both fine and effective; but the side pieces are failures—thin and poor, and utterly inartistic. *FAIR ROSAMOND* is, again, by Franklin; and does him high honour. The head piece which surrounds the page of letter-press is a rich gem of fancy and pure art; it is admirably engraved by T. Williams. The tail piece by Walmesley is also finely executed. *THE DEMON LOVER* is by Mr. Gilbert—a practised hand; engraved by Folkard and Bastin. Of *THE NUT-BROWN MAYD*—the most venerable composition of its class—the head and tail pieces are by Mr. Creswick, A.R.A. The first is unquestionably one of the most exquisite examples of landscape drawing and engraving that has ever been produced.

GERRIT SMITH, Sc.

GIL MORRICE.

EMPION is the work of Mr. Scott, engraved by Linton—a wild and singularly romantic composition, to which the artist has rendered full justice.

THE CHILD OF ELLA, which follows next, is the work of Franklin, engraved by T. Williams. The introduction contains a copy of the famous bugle horn of Strawberry Hill. THE TWA BROTHERS has been illustrated by Mr. Frith—and not so successfully as others. It is marked by that etching-like character into which “a new hand,” drawing on the wood, is likely to fall; but may be easily avoided by a little practice. THE BROTHER'S DAUGHTER OF BEDFORD GREEN is the work of Mr. Gilbert; and not only sustains, but enhances, the reputation he has acquired in a department of the art to which he has devoted much attention. The head piece is engraved with much ability by Mr. Vizetelly: not so the tail piece, in the production of which he has altogether failed. In the introduction there is a small cut of the “angell,” the famous coin of the period. ROBIN GOODFELLOW is very beautifully engraved by Green from exquisite drawings by Mr. Dadd—who in his first attempt to draw upon wood has entirely and perfectly succeeded. SIR PATRICK SPENS is again by Mr. Franklin: engraved with high excellence by

Armstrong. GIL MORRICE is from the practised pencil of Kenny Meadows. SIR ALDINGAR is by Gilbert. SIR LANCELOT DU LAKE

is by Mr. E. Corbould—who, in this, his earliest, effort, has manifested rare power in dealing with the new material. KING ARTHUR'S DEATH is by Franklin. A richly poetical series of embellishments of THE HEIRS OF LINNE follow; it is one of the best of our old ballads: the illustrations are all capitally engraved by Bastin from the drawings of Mr. E. M. Ward—an artist who, although advancing high claims to eminence in other departments of the art, essayed these as his first efforts in this style. He has succeeded to the fullest

extent; combining fertility of fancy with accuracy in execution, and powers of conception with minuteness of touch. The ballad of LORD SOULIS, illustrated with great ability by Mr. M'lan, was also, we believe, his first attempt of the kind.

work in this ballad appears to manifest disadvantage beside that of all the other engravers. THE BIRTH OF ST. GEORGE contains the illustrations of Mr. Scott. Into the descriptive letter-press, the Editor has introduced a representation of the Saint from "a folio volume of Romanus," presented to Henry VI. by

enumeration of the contents of the volume. The whole of a ballad has been illustrated by one artist; and, in most instances, by one engraver.

ORD THOMAS AND FAIR ANNET is illustrated by Mr. Townsend; the subjects are perhaps too full for wood-engraving, but they are drawn with exceeding skill, and the designs manifest considerable power. FAUSE FOODRAGE is from the drawings of Mr. Joy—good and graceful and effective compositions, which have been engraved with force and delicacy by Miss Williams. GENEVIEVE—the touching ballad of Coleridge—is by Franklin; the engravings by Armstrong and Nicholls. FAIR MARGARET AND SWEET WILLIAM, designed by Mr. Warren, is engraved by Jackson, whose work in this ballad appears to manifest disadvantage beside that of all the other engravers. THE BIRTH OF ST. GEORGE contains the illustrations of Mr. Scott. Into the descriptive letter-press, the Editor has introduced a representation of the Saint from "a folio volume of Romanus," presented to Henry VI. by

Talbot, the great Earl of Shrewsbury, now among the royal MSS. in the British Museum; and the badge of the order worn by the knights of the garter. THE MERMAID is illustrated by Franklin; LORD ULLIN'S DAUGHTER by Mr. E. Corbould; SIR AGILTHORN by Mr. Redgrave, whose excellent drawings have been satisfactorily engraved—all but the last, which is a blot upon the volume. JOHNIE OF BREADISLEE is capably illustrated by Mr. Sibson. THE DOWIE DENS OF YARROW—which closes the book—is from the pencil of Franklin. Our notice is limited to little more than a bare

## THE BEGGAR'S DAUGHTER.

OR a long period the art of drawing on wood has been "monopolised" by a very few artists, who derived from experience considerable facility in supplying the demands of publishers, but who, having perpetual calls upon their invention, had fallen into a mannerism that was rapidly degenerating into mere prettiness. Our more distinguished painters — with but one or two exceptions — have not considered it "worth their while" to pursue, even occasionally, this branch of the profession: their abstaining from so doing has been attributed to their inability so to do; and while the Germans have been "cried up" as super-excellent in this department, the British have been "cried down" either as incompetent draughtsmen or mere imitators. No conclusion can be more erroneous or unjust. The "Nibelungen," which contains the most famous collection of wood-cuts of Germany, supplies a mixture of good and evil: some of them are, beyond question, inferior to the majority of those published in the work under review; while others are far beyond the best of those it contains. It must be recollected, however, that those which are truly excellent, are the productions of one of the greatest of Continental painters; and that in the "Book of British Ballads," although many of its contributors are eminent and distinguished, there is no one of them who can be classed among the MASTERS of British Art. We do not entertain a doubt, that if any enterprising individual, possessing sufficient capital, will set himself to the task of producing a publication that shall rival the best works of Germany, he may be assured of succeeding. The material is at our command; judgment only is required to give it the desired bias, and money to bring it properly forth. We offer these remarks because it has been the fashion to fancy that we can do nothing great in this way: and the mistake — a mistake *à toto* — has been forced almost into a positive conviction by some critics, who would fain persuade the world that British Art is a poor thing, and that British artists are models of mediocrity. The work under notice has contributed somewhat to remove this impression; it will be for others to develop with greater certainty, and more beneficially, the resources we possess within ourselves. We have referred to five or six artists who have here given evidence of power in design and execution, and of possessing the requisite skill for communicating their ideas through this particular medium; and we hope to see, hereafter, examples of the genius of many others. Indeed, we have reason to know that such examples are "in progress."

FROM Oberon in fairye land,  
The king of ghosts and shadowes there,  
Mad Robin I, at his command,  
Am sent to viewe the night-sports here.  
What revell rout  
Is kept about,  
In every corner where I go,  
I will o'ersee, and merry bee,  
And make good sport, with ho, ho, ho!

THE CHILDE OF ELLE.

SUCH specimens of drawing and engraving upon wood, as we here publish, are, as we have said, amply sufficient to exhibit the high capabilities of our English artists in a department of the arts to which their attention has been, hitherto, directed only in a very limited degree. It is more than probable that a continuation of this "BOOK OF BRITISH BALLADS" will show a manifest improvement on the part of those who have already done well, and will supply examples of the genius of others whose co-operation has not been, as yet, obtained. We know that many of them undertook the task purely with a view to try experiments with a new material: the success they have achieved will be the surest stimulus to additional exertions. We repeat our entire conviction that these specimens may be safely contrasted with the best productions of the French and German schools — not only in the executive but in the creative of the art; and that we may undoubtedly surpass them in excellence if inducements be held out to our artists to compete fairly with Continental masters. Such "Inducements" can be the result only of public appreciation and patronage. If this volume shall eventually answer the hopes and expectations of the publisher — and that it will do so we have no doubt — it will be followed by other publications of the class, that may go infinitely beyond it. The work will be resumed hereafter — and, we trust, before long — as a second series; when the abilities of the several artists will be brought into fuller play, for the advantages of experience will be added to those of genius. We have, however, in this collection above 230 examples of designs and engravings on wood; for every page contains an illustration; and it is not too much to say that, although we meet with, here and there, one we would rather see away, as a whole the volume is honourable to the art, and highly creditable to all parties engaged in its production. The benefits to be derived from circulating pure art, through this medium, are sufficiently apparent. It is, indeed, the only channel through which it can be conveyed to "the multitude." Book illustrations have largely increased of late years; and it is, above all things, essential that they should be so executed as to contribute to the great purpose of educating the eye, mind, and heart. They will, inevitably, be seen by tens of thousands from whom more costly productions of the burin are necessarily excluded. And, assuredly, if our more competent artists will not consider that they condescend too much, or stoop too low, in co-operating with the many other means of instruction which the present century has greatly strengthened and increased, they will augment the glory of their country, the honour of their profession, and the utility of the arts. Illustrated newspapers are indeed rife enough in our day; every shop-window of every lane and alley teems with them, catching the eye by every possible device; and in some respects they are useful, — but we regard them rather as hopes of the future, than satisfactory of the present. They will unquestionably induce an appetite for what is really good, valuable, and beautiful: something better will be, ere long, eagerly and generally demanded. It will be for enterprise and forethought to provide against the time when it comes.

THE  
BIRTH OF ST. GEORGE.

F. M. JOY, DEL.

M. A. WILLIAMS, SC.

FAUSE FOODRAGE.

chivalric times, and may be regarded as peculiarly suited for illustration by the pencils of British painters. They are, indeed, full of "subjects" for the artist; containing incidents which powerfully develop every aspect of human passion, admitting all varieties of costume, allowing free scope to fancy, and recalling the OLDEN TIME in its most exciting and seductive features. The whole range of literature may be searched in vain for more desirable themes for Art than will be supplied by this single volume. Again we may be permitted to express a hope that it is but the forerunner of still greater excellence; and that, excellent as it unquestionably is, and as a whole surpassing any illustrated work of the age and country, it will be cast into the shade by productions that will be issued hereafter.

HIS "BOOK OF BRITISH BALLADS" we may, then, venture to recommend, as a contribution of great value to our store of illustrated works — not alone as proving the high capabilities of English artists, in design, and the unrivalled perfection to which engraving on wood has been brought in this country, — but as collecting some of the rarest and best treasures of our literature — the old heroic songs that, ages ago, stirred up the sympathies of the multitude, and have been, for centuries, "the darlings of the common people" and the "delight of most Englishmen in some parts of their age" — songs which combine the deep interest of story with national glory and the dazzling heroism of

## VARIETIES.

**THE CARTOON COMPETITION.**—Westminster Hall is in course of preparation for receiving the Cartoons. The public exhibition of them will take place probably about the 20th of June, the 10th of that month being the last day for their reception. We have little intelligence to communicate on the subject; public curiosity will be soon gratified; but it would be unwise to raise expectation too high. For ourselves, we anticipate an exhibition that will not be many removes from failure. It is known, that few or none of our leading artists will be among the contributors; the competitors will consist chiefly of young aspirants for fame, in whom ambition is, as yet, stronger than knowledge. We may not consequently look for a display of which the Nation will be justly proud. It is, however, the first step in advance towards the high eminence of which British Art is capable in its more elevated branches; and should be regarded only as the first lesson in a great school. We may be pretty certain that none of those who gain prizes will be appointed to do the actual work of fresco-painting; although it is not improbable that some of them may be sent abroad at the public expense, to obtain the necessary experience—with an understanding that they are to submit to a second trial after their return. This "second trial" will be held, probably, on terms similar to the first; and then, we have no doubt, our more competent painters will all contribute; for many of the reasons that now hold them back will have been removed. A third trial may ultimately be looked for—at which selections of the actual painters will be made. Meanwhile the attention of our artists will have been directed to the great purpose; and of the result we have no fear. At the expiration of three or four years, the artists of Great Britain will be as capable of excelling in this style, as they are in others to which their thoughts and studies have been addressed. Under any circumstances, immense benefit will arise out of this national step. If it do not, suddenly and without labour, enable our artists to produce historical designs and paint them on prepared walls, it will at least give a right bias to labour, and direct genius into a healthy channel, while it will influence the public mind to a more just appreciation of the nobler objects of the Art. In our next number we may have some observations to offer—preliminary to our "Review of the Cartoons."

**THE ROYAL ACADEMY.**—The opening of the exhibition, which was to have taken place to-day (Monday, May the 1st), has been postponed, we presume, to Monday, May 8, in consequence of the lamented death of his Royal Highness the Duke of Sussex. We anticipate a collection that will be in all respects worthy of the age and country; and have reason to believe that, taken altogether, it will be entirely satisfactory, more especially in reference to the productions of junior candidates for fame. As we shall elsewhere observe, it is our intention to review the exhibition at considerable length; and, in order to do so effectually, we mean to issue two numbers—Nos. 53 and 54—of the ART-UNION on the 1st of June.

**PAINTERS IN WATER-COLOURS.**—The two societies of Painters in water-colours also open their galleries to the public to-day—May 1st. In the number referred to we shall, of course, bring the collections under detailed review.

**WILL OF SIR DAVID WILKIE.**—The will of the late Sir David Wilkie has been proved in Doctors' Commons. The property was originally sworn in Doctors' Commons under £30,000, but was re-sworn at Somerset House under £40,000. A large portion of the property is bequeathed to his sister Helen, and the remainder (after a few legacies) to his two brothers, nephews, nieces, and other relatives. He gives to his executors "all my paintings, prints, copperplates, designs, and copyright of designs." The following re-

markable bequest occurs, placing the generosity of the deceased in a strong light. His brother, James Wilkie, Ordnance Store-keeper at Kingston, had become embarrassed, and unable to keep his accounts clearly, and they had been subject to a searching investigation. Sir David and a Mr. Crookatt had become sureties to the amount of £1000 each. The deceased in his will alludes to the circumstances in the manner above stated, and declares that Mr. Crookatt is wholly exonerated, and that the whole sum is to be paid by his executors out of his estate.

**THE BRITISH INSTITUTION.**—The exhibition of works of deceased masters will be opened towards the end of May, or perhaps at a period somewhat later, in order to give the Art-Union prize-holders opportunities of selecting from this gallery, in which the "sales" this year have fallen short. The *Athenæum* states, in reference to the gathering of old masters, that "three grand divisions will form the total array, viz., one saloon will be assigned to ancient masters, properly so called; a second, to Sir Joshua Reynolds, himself a host, whose works, though modern by their date, are antique by their merit; a third, to divers other British painters, deceased, who, we hope and trust, will vindicate their right to take, at all events, rear rank with the mighty men of old just mentioned."

**FREE EXHIBITIONS.**—One of the many encouraging signs of the times has been recently given in the House of Commons. In the course of a debate Lord Francis Egerton

"Thought that not only public institutions, but that private collections, might be opened with perfect security. If danger was to be apprehended in consequence of throwing them open, it was more from that undefinable class who had been termed half-gentlemen; and he might go farther, and say, from the whole gentlemen too, rather than from the mass of the community. He believed that the labouring classes, when admitted into collections, acted as a sort of police upon each other; but he knew, by experience, that the other classes, to which he had just referred, when permitted to visit private collections, went prying about, reading the books in one's library, opening doors, and going wherever they ought not to go."

This may be considered a public announcement, that Bridgewater House will be ere long accessible to all who desire to examine one of the finest collections of works of Art in the kingdom. We have stated, we believe, that Robert Vernon, Esq., of Pall Mall, some time ago resolved to open his glorious galleries, filled with the rarest productions of the British school. These examples will, no doubt, be followed by the Lords Westminster, Sutherland, Lansdowne, Ashburton, and a long list of *et ceteras*.

**THE NAPOLEON MUSEUM.**—An exhibition thus entitled has been opened at the Egyptian Hall, Piccadilly; it is the property of a gentleman of the name of Sainsbury, by whom the collection has been made at a vast expense, and by exertions which must have extended through a series of years. In it are found letters, memoirs, histories and associations, state and personal, bearing upon all periods from that of Louis XIV. to the time of the death of Napoleon. The marbles, bronzes, enamels, and drawings present an assemblage of reminiscences of all who became known with him and through him during the republic, the consulate, and the empire, and among these Napoleon is pictured from his youth upwards, and every remarkable epoch of his life commemorated. One of the latest *moreaux* of his penmanship is upon a card, his ominous nine of diamonds, we believe: it is better spelt and better written than some of the earlier specimens we have seen. It is a simple memorandum of the difference in meaning between the English words hungry and angry, written down in an attempt to pick up a few words of our language, and appears thus upon the card:—"Are you hungry?"—"Avez vous faim?" "Are you angry?"—"Etes vous en colère?" Almost every word of English is a shibboleth to a Frenchman; and Bonaparte has laboured under the common difficulties: though to make the proper distinction between those two words is a marvellous triumph. We would dwell

with greater satisfaction upon his autograph reliques than all the rest in the collection, since these bring us nearer to the man than all else. We cannot, in a short notice like this, do justice to the enterprise and perseverance of the proprietor of this valuable collection, which contains every description of memento of the military life and domestic habits of Napoleon.

**BURFORD'S PANORAMA OF BADEN.**—This celebrated spa is marked by an interest different from that which has distinguished the views exhibited here of late. The view will prove full of penetrating interest to those who, we may say, have fed upon its Bruhbrunnen, or brothspring. The view is taken from a hill rising above the Conversation House, and comprehends the greater part of the town. The spectator finds himself one of a pic-nic party, which occupies a portion of the foreground, and sustains in every way the *sans souci* character of the "Queen of the German Spas." It is, of course, a close scene, Baden being situated among hills; we have however, in point of situation, a choice of the hotels, a most important consideration to English people, to whom the "ease of their inn" is so dear. We do not find in this picture the undeniable reality which so often characterizes the works generally of this artist.

**THE CHRISTENING OF THE PRINCESS ROYAL.**—This beautiful and interesting work is now exhibiting at Mr. Moon's, in Threadneedle-street. We have already described it at some length—and we perceive our description has been adopted by Mr. Moon as his prospectus; it is, therefore, unnecessary for us to do more than direct to it the attention of all lovers of the Arts. We cordially agree with the *Spectator* in considering that "a finer picture of its class no living artist could have produced;" and that "the Queen could not have made choice of an artist better qualified for the task than Leslie."

**DESIGNS FOR THE ART-UNION.**—We have had an opportunity of examining the several designs submitted to the Art-Union of London, in competition for the prize of 60 guineas, offered by the Society some time ago. They reflect the highest credit on the respective artists, all, or nearly all of whom are young men; and these works may be regarded as the first efforts of the majority of them. The series selected—from the "Pilgrim's Progress"—is unquestionably the best, although it does not so greatly surpass others as to have made the selection a matter of course; consequently, the Committee very properly resolved upon awarding honorary premiums to three other artists—to Mr. Joseph Noel Paton, for his designs from the "Prometheus Unbound;" to Mr. John Tenniel, for his from the story of "Griselda;" and to Mr. F. R. Pickersgill, for his from the "Masque of Comus." The illustrations of the "Pilgrim's Progress" are of the very highest merit, and, if carefully engraved, they may be placed in juxtaposition with the best outlines of Retch, without fear of prejudicing the Arts of England. They are drawn with the nicest accuracy, and as compositions manifest great ability; exhibiting skill and judgment in arrangement, and a rich and fertile fancy. Those by Mr. Paton are of almost equal value; indeed, but that the choice of subject was not fortunate, it would have been very difficult to determine the prize between these two. They are destined to be engraved and published, although not by the Society. The next, "Griselda," is in some respects superior to either. The beautiful and touching story has been pictured in a manner worthy of old Chaucer. We earnestly hope that this series will also find a publisher; they will be understood, felt, and appreciated by all who examine them. Those by Mr. Pickersgill are also admirable; and among the remaining twenty-seven there are several to which prizes might have been safely awarded. It is only necessary to inspect these works to be convinced that in the very highest department of the Arts we have the power to achieve undoubted excellence, if circumstances

contribute to summon latent power into existence; and that, ere long, our claim to superiority in drawing will be as readily acknowledged as our supremacy in colouring. It is highly to the credit of the Art-Union of London that they have given this stimulus to British Art; we augur immense results out of an arrangement comparatively trivial, for it will supply evidence of what we can do and may do.

**HAYTER'S HOUSE OF COMMONS.**—At the Egyptian Hall, in Piccadilly, is exhibited a very large picture of 'The Meeting of the First Reformed Parliament in 1833,' painted by Sir George Hayter. On looking at the mere surface of canvas—one hundred and seventy square feet; on considering the difficulty of thus dealing with hundreds of portraits—there is even yet little to declare the innumerable and vexatious obstacles to be surmounted in the execution of an enterprise of such magnitude. We have never seen a work, of a nature so complicated, wherein the artist has bound himself so rigidly to bare fact: he has assuredly achieved here what has never been before attempted—a picture containing nearly four hundred portraits, for the whole of which, the persons represented sat to him, with one exception—Mr. Cobbett, whose decease prevented the fulfilment of his promise of sitting. The point of time chosen is that of moving the address to the Crown, which has afforded the occasion of a full house, and the opportunity of introducing portraits of the most accomplished statesmen of the time; consequently, in the foreground are disposed groups of peers, standing, where they were usually seen during debates, near the stairs leading to the House of Lords and the Committee Rooms. The subject of the work is not one to afford occasion for varied expression; but the artist has succeeded to admiration in conveying into his heads thought and intelligence; and with respect to the likenesses, as far as we have a knowledge of the persons of those composing the assembly, they are unquestionable. The foreground is occupied by many distinguished persons, among whom there is no key necessary for recognition of the Duke of Wellington, Lord Lyndhurst, the Archbishop of Canterbury, the Marquises of Anglesea and Lansdowne, Lords Holland and Melbourne, besides a host of other noble and eminent individuals equally well known to the public. This picture, commemorative of one of the most remarkable political events in the recent history of the country, must increase in value with each coming year. There are two other celebrated compositions by Sir George Hayter exhibited with this picture—'The Trial of Lord William Russell' and 'The Trial of Queen Caroline.'

**VOTES FOR THE NATIONAL GALLERY, &c.**—The sum of £1600 has been voted by the House of Commons for the purchase of pictures for the National Gallery, and also for the payment of the expenses of the Gallery.—For the British Museum, exclusive of the ordinary and necessary works for the maintenance of the building for the year ending in 1844, £37,485; and in order to enable the trustees of the British Museum to purchase certain collections, £5275.—For the Royal Hibernian Academy, £300 was voted.—Sir Robert Peel, in proposing the vote for the British Museum, said, "It would be seen that there was an excess of the grant, for this year was £2640 above that of last year, which was caused by the completion of new apartments, including £400 for binding books, and £1500 for completing the collection of scientific works in the English language. It appeared that there had been an increase of 220,000 visitors during the past year, the numbers for 1841 being 319,000, and those for last year 547,000. There had been a rapid increase in the number of visitors during the last three years. In 1840 the number was 247,000; in 1841, 319,000; in 1842, 547,000. In the year 1815 there were 4300 visitors to the reading-room; in the last year, 71,000. It was

gratifying to observe that thousands and tens of thousands of persons passed through the Museum, because the habits of order there observed would extend beyond the mere walls of the building, and have an effect upon the character of the visitors. The exertions of Mr. Fellowes, who had brought some valuable marbles from Asia Minor, had been so successful that he was going out again. It was impossible to conceive that greater advances could be made under any system of management."

**MR. HULLMANDEL**, the lithographer, has been honoured by the Emperor of Russia with a massive gold medal, having the profile of his Imperial Majesty in bold relief on the obverse, and the inscription *Premia Digno* on the reverse, as a reward for his invention of lithotint. This is the third continental Sovereign from whom the inventor of this new and beautiful Art has received valuable tokens of approbation, of which he has just reason to be proud. We cannot but regret that similar honorary marks of distinction are not bestowed on meritorious persons by the Sovereign of our own country. They manage these things far better abroad. A list of presents given by Louis Philippe, as tokens of his approval of worth, during any single year of his reign, would fill a page of our Journal. He is indeed a Prince who knows how to encourage genius, and is ever ready to recognise its claims to national honours. Respecting the invention of Mr. Hullmandel, we shall have much to say ere long.

**NATIONAL GALLERY.**—We announced, some time since, the addition to the National Gallery of a valuable picture by John Van Eyck. This is the most estimable picture lately added to the gallery, inasmuch as works of such quality, coeval with the earliest practice of oil-painting, are so rarely attainable. It consists of two figures, evidently portraits, supposed to be those of John of Bruges and his wife; they are standing in a chamber, the furniture and objects in which are made out with singular fidelity and care. A picture like this of its period is a marvel in the art of painting; it exhibits in its *chiar'oscuro* the most masterly management, and in minor beauties equals the works of those who have formed their styles on the best works of the best schools. The male figure wears a hat of an uncouth fashion, which gives sharpness to features naturally thin; his upper garment is a dark brown furled mantle, open at the sides. The lady is dressed in green, her arms coming out of wide and hanging sleeves; in short, the costume of the time is perfectly described throughout. We counsel all who know John of Bruges only through the wretched forgeries circulated in his name, to examine this work and say if he, in this single picture (and alone in his art), does not surpass many whose names are lauded to the stars. In the centre of the composition is seen this inscription—"Johannes de Eyck fecit hic, 1443." Sir Hugh Evans was no friend of Van Eyck's, otherwise we should have found him more perfect in his *hig-hog-hog*. The price paid for his picture was £600; it was exhibited a year or two ago at the British Institution. A small Rubens has also been added to the collection; it is the original sketch for the ceiling at Whitehall. This little picture was in the possession of the Scottish family of Clerk, of Eldin. It was sold at a public auction, on which occasion some part of the building wherein it was held gave way—an accident that caused the death of several persons present, among whom was the purchaser of this picture. The friends of the gentleman thus unfortunately killed took a dislike to the sketch, from the associations and reminiscences it called forth; in consequence of which it came into the possession of Sir David Wilkie, who presented to the family, in return for it, a very beautiful picture of his own. It was disposed of at the late sale of Sir David Wilkie's pictures for £80, and subsequently purchased for the Gallery for £200. It seems to be painted on panel, and

is in the highest state of preservation, but is seen to disadvantage in a hanging position.

**SALES OF THE MONTH, PAST AND TO COME.**—The pictures and drawings of the late Mr. F. W. Wilkin have been sold by auction. This artist was well known as a copyist, in water-colours, of ancient masters, and his better works bore considerable prices. We quote the prices realized by a few of his works from the hammer:—'Virgin and Child,' after Vandyke, 10 guineas; 'The Three Marys,' after Annibale Carracci, 10 guineas; 'Snake in the Grass,' after Reynolds, 12½ guineas; 'Lady Waldegrave and Child,' after Reynolds, 10 guineas; 'Queen Henrietta,' after Vandyke, 10½ guineas; 'St. Catherine,' after Raffaele, 40 guineas; 'The Salvation,' after Del Piombo, 35 guineas; 'Pan and Syrinx,' after Rubens, 38 guineas; 'The Brazen Serpent,' after Rubens, 30 guineas; 'Portrait of Andrea del Sarto,' after that master, 30 guineas; 'Portrait of Annibale Carracci,' after Carracci, 29 guineas; and a 'Portrait of Leo X.,' after Valesquez, 30 guineas; 'St. Bruno,' after Andrea Sacchi, 29 guineas; 'Sophonisba,' after Titian, 30 guineas; 'St. John Baptizing Christ,' after Murillo, 28½ guineas; 'Dr. Johnson,' after Reynolds, 19 guineas; 'Disputation with the Doctors,' after Leonardo da Vinci, 124 guineas. On the same day were also sold, 'View of a Dairy Farm,' by Camphuyssen, 120 guineas; 'The Lying-in Visit,' by Egdon Van der Neer, from the Lockhurst Collection, 155 guineas; 'Landscape,' by Hobbema, 355 guineas; 'View at the Mouth of the Avon,' by P. Nasmyth, 71 guineas.

**ARMOUR.**—A Collection of Armour has been sold at Oxenham's Rooms, in which were many valuable and remarkable suits, and pieces of various periods. Of the ordinary suits, some were perfect in fabric and in excellent preservation; the collection, however, was by no means so extensive as that of last year, but much more interesting from the rarity, beauty, and association of many of its items. Of the fashion of about the period of our Henry VIII., there was a Knight's Suit of Heavy Tilting Armour, on the *mentonnière* of which were graven the bearings of Bavaria. One of the most valuable of these remnants is a Page's Demi-Suit of engraved Milanese Armour, richly inlaid with gold, and having on the breast the Maltese Cross with the arms of the Medici; also a curious Suit of Knight's Armour, engraved with figures and scrolls by Albert Durer. From the Royal Collection at Segovia, there was a very fine Suit of Spanish Armour of the best taste, of the sixteenth century; and from the Royal Collection of Spain, the beautiful Horse Armour and Trappings of Charles V., consisting of the saddle, chafron, pottinal, and croupière, the whole of which are in embossed steel, damasquined in gold and silver, and worked in the most elaborate manner in arabesques, masquerons, figures and panels, with subjects from the heathen mythology, bordered with a deep scalloped edging. In the catalogue, lot 329, is described a *rare and unique* casque of the time of the Crusaders, believed to be the identical one taken from the tomb of Sir Robert de Bois (vide Stoddert, plate 57). The exhibition, previous to the sale of this armour, attracted a host of lovers of antiquities of this kind, and also the agents of the Board of Ordnance, and the Russian Government, who purchased the celebrated suit of armour from Strawberry Hill, ornamented by Cellini, and worn by Francis I.

**M. BROWN'S COLLECTION OF DRAWINGS IN PARIS.**—A rare collection of drawings—chiefly by Bonington—was sold in March last, in Paris. They were the property of an English gentleman. The series consisted of 105; among them were 29 by Bonington, 3 by D. Roberts, 2 by Stauffeld, 4 by Cattermole, 3 by Prout, and several by the eminent French artists—Paul Delaroche, Isabey, Granet, the Joannots, Deveria, &c. The following are the principal of those by Bonington, and the prices they brought:—'The Marine Calm,' fine drawing, sold at 25*l.*; 'Marquis of Hertford; 'Le Malade,' ditto, 17*l.*; ditto; 'View, Ducal Palace, Venice,' fine, 42*l.*; ditto; 'Wagon in Storm,' very fine, 34*l.*; 'Conversation,' well-known drawing, 47*l.*; 'Marquis of Hertford; 'View, Rouen,' 32*l.*; ditto; 'Turk seated on a Divan,' very fine, 23*l.*; ditto; 'Interior of an Apartment, Man and Woman near an open window, Child leaning out,' beautiful drawing, 38*l.* 10*s.*; 'The Staircase,' 14*l.*; 'Marquis of Hertford; 'View, two Columns on Place St. Marc, Venice,' 15*l.*; 'Interior, three Persons conversing at a Table,' 17*l.*; 'Dutch Family promenading near a Chateau,' 15*l.*; 'Torrent,' 15*l.*; 'View of Canal, Venice, from the balcony of a window,' 15*l.*; 'Banks of a River,' 14*l.*; 'The Prayer,' 12*l.* 12*s.* The collection sold well, producing considerably more than its original cost.

On the 29th March, was sold a small collection of Prints, many of which were from the collection of the Duke of Buckingham. Among these was 'The Pistol-man,' by Vischer, a rare proof, which sold for £31 10*s.* On the 10th of April, was sold a collection of Water Colour Drawings, containing fine specimens of the most distinguished artists in that department. 'The Castle of St. Maloes,' by Stauffeld, sold for £10 10*s.*; 'Two Monks at the richly-decorated Door of a Cloister,' by Cattermole, £21; 'The Lago Maggiore and Isola Bella,' a beautiful drawing by Stauffeld, which has been engraved, 26 guineas; 'A Girl Sleeping in a Barn,' by Hunt, £21; 'The Pass of Killiecrankie,' by Robson, 35 guineas; 'Periwinkle Bay, in the Isle of Staffa,' by Nessfield, 15½ guineas; 'An extensive Landscape with a fine clouded sky,' by Turner of Oxford; 'The Fall of Foyers,' by Nessfield, 10½ guineas.

## THE SCHOOL OF DESIGN.

THE Council of the School of Design have laid their Report before Parliament, whence is afforded a highly satisfactory review of the progress of the parent and branch institutions. It is by no means yet to be expected that this document could dwell upon any improvement in the taste of our manufactures, but it is sufficiently shown that the best means is adopted in order to secure the best results. Our manufacturers have sustained themselves in the market by the science and energy exerted in their productions; but when legitimate Art shall have raised the character of our designs, the question of superiority becomes then but a simple arithmetical thesis; for everything has already been done for foreign manufactures—but everything is yet to be done for our own.

It appears from the Report that the number of pupils attending the morning school was 47 in October 1842, and at the end of six months, March 1843, the number was 76. At the former date the number attending the evening school was 170, and at the latter, 220; exhibiting, during the six months, an increase of 29 in the morning school, and of 50 in the evening: thus it is sufficiently evident that the institution is appreciated—that the want of such a school has been felt. The programme of instruction comprehends drawing in outline, shadowing, drawing from the round and from nature; modelling from the antique and from nature; instruction in colouring, including oil and fresco; instruction in the history and principles of ornamental Art, in the antique, medieval, and modern styles; and instruction in design for manufactures, as silk and carpet weaving, calico-printing, and paper-staining. In aid of these branches of study such books as bear upon the respective subjects are circulated among the pupils, who have also the benefit of a series of lectures on calico and silk printing, weaving by hand and by power, figure weaving, lace-making, type and stereotype founding, printing, framing of machinery, engraving and sculpture by machinery, and pottery and porcelain; and moreover, for the promotion of emulation among the students, prizes are proposed for given subjects.

In 1841, the Council contemplated the institution of a school for the instruction of females in the art of ornamental design, for many branches of which the tastes and habits of well-informed women so eminently qualify them. This project of the Council was carried into effect last October, when the female school was placed under the superintendence of Mrs. M'Ian, a lady well fitted, as her works testify, to realize the best hopes in this department.

In Spitalfields, also, a School of Design has been formed, and is carried on under the direction of a local committee, consisting partly of masters and partly of operatives. This establishment has, from time to time been visited by members of the Council. The Director of the School at Somerset House has made a report of the state of this School wherein he says—"The drawings which are herewith submitted to the Council, seem to me to be executed in a bold and artist-like manner, and not only to augur well of the future utility of the school, but to reflect credit on the exertions of the master, Mr. Hudson, and his assistants of the normal class." When this school was visited at the end of the last year, the number of pupils was 116, but they have since increased to nearly thrice that number; they were principally the children of weavers, carpenters, stone-masons, cabinet-carvers, &c. &c.

The Council have assisted, and established schools at Manchester, York, Coventry, Sheffield, Nottingham, Newcastle-on-Tyne, Norwich, and Birmingham, and have received applications for the establishment and promotion of others at Dublin, Cork, Belfast, Liverpool, Paisley, and Glasgow. The Council have not, however, extended the same assistance to the latter places, for sufficient reasons which they state, and as waiting reports of the progress of those already established.

In the autumn of 1841 and the beginning of 1842, arrangements were effected for procuring from Paris the collections of casts of ornaments at the *Ecole des Beaux Arts*: from these a selection has been made and placed in the principal room of the school.

Copies of the 'Arabesques' of Raffaele, in the Loggia of the Vatican, have also been purchased at a cost, including carriage, of £510. The ex-

pense of procuring the casts from Paris, that is, the purchase and charges of transport, was £321 ls. 3d.

Considering the increase of the duty attendant upon the growth of this establishment, the Council recommend the increase of the salaries of the director and the master of the evening-school. To that of the director, being £500 per annum, it is proposed to add £100; and that of the latter gentleman, Mr. Herbert, it is also proposed to augment.

This Report, on the whole, is of the most favourable kind; indeed more has been effected than the most sanguine expectation could have looked for; and one of the best guarantees for the success of these institutions, is the numbers who seek the benefits of the instruction they afford. We have already lamented the inferiority of our designs as compared with those of France; but there are now the best grounds to hope that, in this particular, our productions will shortly compete in this respect with those of the Continent.

Various other essential improvements are either in progress or in contemplation; among them is the appointment of a competent teacher of wood-engraving, more especially in reference to the Female school. And from this female school we anticipate very valuable results; we have reason to know that Mrs. M'Ian is unremitting in her efforts to render it practically beneficial, and that already it has been productive of great good.

THE NEW HOUSES OF PARLIAMENT,  
AND FURTHER IMPROVEMENTS IN CONNEXION  
WITH THEM.

In a report made to Prince Albert and the Commission of Fine Arts, Mr. Barry has explained, at some length, his views in regard to the system which should be pursued for the interior decorations of the "New Houses;" and it is such, that the architectural or general character—the effect of the *ensemble*, cannot fail of being truly regal—not merely splendid, but majestic and august. The excellence of the paintings and other works of Art is what it is utterly beyond the power of the architect to warrant or pledge himself for, more especially at present, before any trial has been made on the part of artists, in order to satisfy themselves and the public that they possess the talent and energy requisite for successfully achieving so arduous and important a task as that of worthily decorating this national structure. We think, however, that the structure itself will in some degree inspire them and warm their ideas, when it shall have been sufficiently advanced to be ready for them to commence their labours. Till then we must control our impatience, for many years must yet elapse ere the work of embellishment can begin; that, at least, of painting on the walls, for sculpture and statues can be put into progress much earlier, and, indeed, require to be so, because more tardy in their operations. Of the mere manual labour, consequently of the time it is likely to occupy, some general idea may be formed, when we are told that, exclusively of larger paintings in the principal halls and galleries, there will be altogether, in the corridors alone, an extent of wall very nearly four thousand feet in length (3900 feet), by seven in height, which it is proposed so to fill up. Which calculation it may be presumed, since it is not otherwise expressed, is not that of the entire length of wall, but only of the spaces to be appropriated to painting.

On another occasion we may probably, when we can do so more leisurely, enter more fully into the subject of the apartments and their proposed decorations; but we will now confine ourselves to the further improvements which Mr. Barry now contemplates. The work certainly seems to grow upon his hands; for his plans are so very extensive, that to many they are likely to prove quite startling. "It has ever been considered by me," says Mr. Barry, "a great defect in my design for the new Houses of Parliament, that it does not comprise a front of sufficient length towards the Abbey, particularly as the building will be better and more generally seen on that side than any other. This was impossible, owing to the broken outline of the site with which I had to deal. I propose that an addition should be made to the building, for the purpose of enclosing New Palace-yard, and thus of obtaining the desired front. This addition would

be in accordance with the plan of the ancient Palace of Westminster, in which the Hall was formerly placed in a quadrangle, where, in consequence of its low level, it must have been seen and approached, as it would be under such circumstances, to the best advantage. The proposed addition, too, in my opinion, would be of considerable importance as regards the increased accommodation and convenience that it would afford, in addition to what is already provided for in the new buildings as hitherto proposed."

The architect then goes on to state how (the plan being so extended) that portion might be appropriated to the Law Courts, should it be decided that they are to be retained at Westminster, or to some of the Government offices, &c. And were this all, or even the chief addition, he now proposes, it might not be thought at all extravagant, although, as far as effect is concerned, it may be questioned if his original design ought not to satisfy both the architect and the public. One question deserving some consideration, is what effect will the so greatly extending the west front of the building be likely to have upon the Abbey. Will it not tend to diminish the latter, in some degree, to the eye, by comparison? and, the line of front being so prolonged, will it not be found requisite to vary its outline more, to introduce bold breaks, in order to obtain masses and relief by shadows, and also to give it greater loftiness in parts by means of towers?

In such cases it is difficult to know where to stop; an architect's ideas are apt to accumulate, and one improvement begets another. New Palace-yard being enclosed, the sweeping away all the houses forming the south side of Bridge-street follows as a matter of course; and it is accordingly at the south-west angle there that Mr. Barry proposes "a magnificent principal entrance to the entire edifice." Then, again, all the houses between Parliament-street and King-street ought to be cleared away, and the two united into a single street, of the same "noble width" as at Whitehall.\* One highly important improvement, as regards both public convenience and architectural effect—at least as far as the river-front of the Houses is concerned—is the rebuilding Westminster-bridge, which Mr. Barry strongly urges should be done, in order to reduce it as nearly as possible to a level, and thereby lower it considerably. Unless this be done, that front of the building which may, at present at least, be considered the principal one, must be seen to considerable disadvantage, the bridge being so much higher than the terrace, that the building is almost looked down upon from the former, and appears quite sunk—to say nothing of the view itself being greatly obstructed by the excessive height of the parapet of the bridge. Mr. Barry accordingly recommends that a new bridge should be erected upon the piers of the present one, which are now in course of being repaired by Messrs. Walker and Burgess; and that it should have low-pointed arches, not only in order to reduce its acclivity, but to bring it into keeping with the style of the "Houses" themselves: a very desirable object, considering how nearly the two structures are connected.

The architect further suggests the necessity—at any rate the desirableness—of forming an embankment on the opposite side of the river, with terraces and houses of a superior kind, facing the Houses of Parliament, and, in fact, to be carried on as far as London-bridge in one direction, and Vauxhall-bridge in the other. Neither is this all:

\* In this respect "nobleness" may be carried too far. Were streets intended for either carriages or pedestrians exclusively, it would matter little how wide they were; but as they are for the use of both, such width of street as at Whitehall is anything but a convenience for foot-passengers, unless means are adopted to provide safe crossings at intervals. In case Parliament-street and King-street should ever be united, as proposed, the inconvenience of so great a breadth for such a distance, would be no small one; still it might be obviated, and that too in a way that would produce a very noble effect. Besides the foot-pavements, here might be a series of lofty pedestals at regular intervals, on each side of the carriage-way and within it, so as to divide the entire crossing into three, or moderate breadth. On these pedestals might afterwards be erected public statues, as occasion for doing so might occur, by which means there would, in the course of time, be a noble avenue of such statues, forming a very suitable and dignified approach to the Houses of Parliament. At present what statues of the kind we have, are so placed, and so scattered about, that they do not produce half the effect they might be made to do.

"Old Palace-yard is proposed to be considerably increased in size by the demolition of the houses which now occupy that site, as well the houses on both sides of Abingdon-street, by which means a fine area for the convenience of state processions, &c., will be obtained." Truly, the "demolition of houses" would seem to be a mere trifle, an insignificant item hardly worth taking into the account of building the new "Houses." No doubt, Mr. Barry's plans are all very excellent and very desirable, yet they are likely to be thought upon too gigantic scale to be carried into effect, except very gradually. He seems to ask a perfect *carte-blanche* for them, one and all; whereas it would perhaps have been better policy not to bring them forward in a lump, but confine himself, in the first instance, to Westminster-bridge, the rebuilding it as he proposes being a matter that requires to be decided upon almost forthwith, "in order that the works in hand may not be proceeded with further than is necessary, should his views be ultimately adopted."

#### ART IN THE PROVINCES.

**IRELAND.**—The annual meeting of the Royal Irish Art-Union has been held. The proceedings possessed the highest interest, and are reported at considerable length in the Dublin papers. We must, however, content our readers with abridging them considerably.

The Report commences by referring to the engravings in progress—those by Sangster, after Rothwell; by Golding, after MacIose, and by Bacon, after Burton. Another choice, for the subscribers of 1844, will be made immediately. The Report alludes to the establishment of a second exhibition in Dublin, to consist of the works of Irish artists exclusively. With respect to the probable funds of the present year, the Report states they "are most promising. The various local secretaries have not as yet sent in their remittances, but already considerably upwards of £2500 has been substantiated. We have as yet our best harvest-time before us—the months of May and June—and we hope by your united exertions this sum will be nearly if not quite doubled."

The Committee of Selection was altered, "to supply the places of members going out by rotation. It now consists of the following:—Lord Viscount Adare; Colonel Birch, R.A.; Robert Callwell, Esq.; Alexander Carroll, Esq.; George Cash, Esq.; J. R. Cooke, Esq.; Capt. Chidley Cooté; Wm. Dent Farrer, Esq.; Charles Fox, Esq.; Wm. Vicars Griffiths, Esq.; Henry Hamilton, Esq.; Surgeon John Hamilton; Sir George F. Hodson, Bart.; Marquis of Kildare; Hon. and Verv Rev. Dean Maude; Stephen Simpson, Esq.; Aquilla Smith, Esq., M.D.; J. Huband Smith, Esq.; William Stokes, Esq., M.D.; Dr. Woodroffe; Bache Right, Esq."

This Society therefore, we rejoice to say, continues to prosper. It is working vast good for Ireland—forming neutral ground upon which all parties meet in harmony. It is gratifying to find the services of the Hon. Sec., Stewart Blacker, Esq., recognised on all sides. We cordially respond to the opinion of the Chairman, Sir Thomas Deane, that Mr. Blacker "had done more for the Arts than any other man for one hundred years, and be trusted that they would live to see him completely consummate his benevolent views for the advancement of the Fine Arts in Ireland."

Mr. Blacker is continuing his exertions with a view to establish a National Gallery in Ireland, a subject upon which we shall have much to say hereafter. He stated that "the project was merely in abeyance for a short time, to be brought forward at a future period, in such a manner as to increase the triumphant success of the undertaking."

**SOCIETY OF IRISH ARTISTS.**—A new Society has been formed in Dublin, with a view chiefly to the establishment of a second exhibition in that metropolis, to consist exclusively of the works of Irish artists. We regret this for two or three reasons—first, because it may weaken the one already formed; next, because it cannot be expected to be creditable to the country; and next, because it supplies evidence of that spirit of disunion, unhappily ever the bane of Ireland, and which is likely to extend its pernicious influence even to the Arts. The Secretary, Mr. M. A. Hayes, in his "address," protests, indeed, against the new Society being considered as an opposition to the Royal Hibernian Academy; but he adds emphatically, "We wish it to be known that many causes for complaint exist."

The "Address" exhibits some anger against us of the Art-Union, for the view we took of the last exhibition of the Royal Hibernian Academy. We have no space to reply to these attacks; but we cannot resist our desire to quote some observations by George Carr, Esq., one of the committee of the Royal Irish Art-Union, at a meeting of the committee held a few days ago—on April 13. He said "he felt it his duty to say, that in taking into consideration the exertions that were publicly making by this Society, and the anxiety evidenced by the public generally on the subject of the Fine Arts, the efforts of the artists themselves, as appeared by the late exhibition, were not at all commensurate to the efforts made in their favour. The leading artists connected with this country had borne little or no part in increasing the interest of the exhi-

bition. Several English and Scotch artists had contributed either works that had been going the rounds of other exhibitions, or such as they could not exhibit elsewhere without loss of character. There was certainly a considerable degree of improvement amongst the junior artists of this country; yet, taking it as a whole, it was no proper exhibition to warrant the expenditure of £2000, the sum given by this Society for their selection, much less £6000, the price which was modestly expected for the collection by the artists themselves. He (Mr. Carr) hoped that this would be remedied this year. It was not a natural state of things to say, that there was an ardent desire to promote Art, and plenty of money ready to be expended on good works, if produced or attainable—yet that works of a sufficiently high character should not be forthcoming to meet this demand. It showed that there must be some mismanagement in the getting up of the exhibition, or neglect in some department, which, if not looked to, would be ruinous to the cause they had at heart. He (Mr. Carr) then adverted to the selection of prizes—he thought the last committee had been too lax in the admission of several very inferior works, the purchase and dissemination of which could be no advantage whatever to high Art, which should be ever their first and greatest object."

**WEST RIDING ART-UNION.**—We beg to direct attention to the advertisement on another page, of the Art-Union of the West Riding of Yorkshire. The allotment of the prizes will take place on the 3rd inst. The method whereby subscriptions may be conveyed is described in the advertisement, as up to the time of the determination of the prizes the list is open for names. In addition to the chance of obtaining a picture, each subscriber is entitled to the choice of one of two valuable engravings—'May Day in the Reign of Queen Elizabeth,' engraved in line by Watts, after Leslie, R.A.; and the 'Return to Port,' engraved in mezzotint, by Lucas, after Isabeau. Mr. Leslie's work is so well known, that no description from us is necessary, and in the engraving it forms one of the finest plates of its time.

#### CORRESPONDENCE.

##### STEAMING CARTOONS.

SIR,—As more than one youth has forgotten to fix his cartoons by steaming, and some have omitted to size their paper, so that fixing their charcoal may be effected by steam—a hint or two may be useful.

In the first place, according to Eastlake's Report, Cornelius prepares his cartoons as follows:—

"Sheets of paper are glued to a stretched cloth, the paper is then sized twice with pure parchment-size alone; the composition is worked in principally with charcoal, and then the back of the cloth is wetted, and the front steamed by a steamer, which, affecting the size for a moment, fixes the charcoal."

The inconvenience of sheets of paper is very great, for, in spite of the most careful rubbing of the edges where the sheets overlap, it never flattens the surface sufficiently to prevent the effect of the junction.

It appears to me to be much more judicious, after the cloth be covered with one coating of cartridge, to cover it with a thinner paper, of a good tint, as they cover drawing-room walls, so that the cloth be divided only in perpendicular divisions, and no horizontal mark is at all visible. The paper-hanger can provide the candidate, and cover his cartoon-cloth as if it were a wall, from top to bottom, according to the width of the paper. This being accomplished, let the student place a handful of parchment slips, which he can get at the law-stationers, in a saucupan, and just cover it with water, let it boil and then simmer about four hours or six; strain it off, and if it cool into a jelly, it is fit for use. When he is ready to size his cartoon, let the jelly be heated till it melt, then thin it with hot-water, and go over his whole surface; when the first coating is dry, let him repeat, with a flat-brush, the operation; and when the second coating is dry, it is ready to work on.

I would, by no means, in a London atmosphere, advise delaying to fix your proceedings; but, having settled your composition, I would advise, after the whole is got in, to steam every figure as completed, twice; and when the whole cartoon is done, to steam the whole again, making three times; and if the paper be pasted and not glued, it will be dangerous to loosen the paste by wetting the back of the cloth, for the steaming in front will be found to be quite sufficient for the purpose. But if your paper be glued, there will be no danger.

The water should be first boiled in a kettle and poured in at the spout, and the steamer not more than half full, as there is danger of spilling the water over the cartoon.

Boiling the water saves time: the lamp keeps it boiling, but it is tedious to wait for the boiling by the lamp only.

Cornelius (says the report) mixes alum with the size; there is no absolute necessity for it: if the size be too thick, it becomes slippery without; but if properly thinned, it is quite fit for working, and no alum is wanted.

A simple cloth, with paper as described, makes a ground sufficiently firm for charcoal, but certainly not for chalk. When chalk only is used, it will be found most beneficial to turn up the wrong side of a cloth with an oil ground, fit for oil-painting, and to paste

your paper on that side, by which means, when dry, you have a firm body of paste, paper, and oil-ground, which resists the chalk, and is sufficiently strong to enable the artist to make a deep, dark and vigorous line, without the risk of going right through the canvas, of which there is danger in the simple cloth.

As you expressed a desire to have a sketch of the steamer I have used, thinking it might be of use to the student-competitors, I comply with your desire, adding some remarks; though I question if every competitor be not really better informed than myself.

Yours, &c., B. R. HAYDON.

[It was intended to have illustrated this letter by a cut of the steaming apparatus; but, in consequence of an accident, it has necessarily been omitted.]

#### THE ART-UNION OF LONDON.

ANNUAL MEETING, APRIL 25th, 1843.

For the Allotment of Prizes.

ON this occasion, as on the last, the Annual Meeting was held in the Theatre Royal Drury Lane; for which accommodation the members are indebted to the kindness and liberality of W. C. Macready, Esq. The house presented a most interesting and gratifying aspect: it was crowded to excess; several thousands having attended to hear the Report and to witness the distribution of the prizes.\* In consequence of the demise of the Duke of Sussex, his Royal Highness the Duke of Cambridge, the President of the Society, was prevented from presiding; the chair was consequently filled by the Marquis of Northampton, the vice-president, who kindly responded to the call of the Committee, although himself suffering under an affliction that might have justified his absence.

Precisely at twelve o'clock the Noble Marquis and the other officers of the Society appeared upon the stage, and were received with enthusiastic plaudits. His Lordship briefly addressed the meeting—alluding to the importance and value of the Society, his deep regret at the circumstance which deprived the Society of the presence of their President, and called upon one of the honorary secretaries, George Godwin, Esq., F.R.S., to read—

#### THE REPORT.

Since the date of the last Report various circumstances have occurred to create a difference of opinion in the public mind on the subject of Art-Unions, and to induce many, who were previously satisfied of the good results which they promised, to withhold for a time their support and co-operation.

Not the least weighty amongst these was the establishment of some commercial speculations in the guise of Art-Unions, which led to an opposition on the part of individuals who deemed themselves aggrieved by them, and, though friendly to the Art-Union of London, considered themselves bound to include the whole in one category, and dissuade or frighten the public from becoming subscribers.

Your Committee, however, are able to state, and it is a source of much real gratification to them, that notwithstanding this and other occurrences referred to hereafter, the subscription for the present year amounts to £12,388 11s.

This sum, although not so great as it might otherwise have been, is nevertheless sufficiently large to afford considerable assistance in the promotion of Art. It is a convincing proof that our countrymen comprehend the value of such an Association, and that it is now firmly established in public confidence.

To enlarge on the advantages of Art-Unions, properly so called,—to say that they spread a knowledge and induce a love of works of Fine Art throughout the community, and multiply and elevate their enjoyments—that, by forming a centre to which suggestions may be addressed, or from which they may issue—registering the names of eleven or twelve thousand persons in various parts of the empire, all more or less anxious to aid in the great object of the Association, much good must be effected, and the road prepared for much greater results,—ought not now to be necessary: any more than it should be to show that they are in no way contrary to any legislative enactments, either in spirit or letter. On both these points, however, the question has been lately raised, and those who are impressed with the soundness of the prin-

\* "The numerous artists who were present could have witnessed few spectacles more worthy of their skill than the picturesque appearance of the crowded house, as seen by the lighted chandeliers, while the sun-beams struggling through some apertures above the gallery, shed in reality a natural halo on the stage, which in the palmiest days of ancient Art would have been hailed as an auspicious omen of the favourable regard to the proceedings of its patron deity."—*Morning Herald*.—"The coup d'œil of the theatre from the stage was picturesque in the extreme, and we would suggest to artists as a subject, the annual meeting of the Art-Union in Drury-Lane Theatre."—*Sun*.

ciple, and are anxious to aid in its development, should be prepared with a reply.

A chief characteristic of the present age is a tendency to association and diffusion. Men have learnt that an individual can do comparatively little; but that union with many at the proper time, will, under Providence, ensure success.

It is not that our day is more remarkable than others which have preceded it for persons of extraordinary and supereminent ability—Michael Angelo, and Shakspeare, and Newton, are not likely yet to lose their high position. But the advantages, which formerly were obtained only by a few, are now possessed by the many. The knowledge which was hoarded a secret, to give power to one man over his fellows through their ignorance, is now made common property, and applied to advance the every-day comforts and the enjoyment of the multitude.

By the principle of association, exhibited especially in Art-Unions, the ability to obtain and study works of Art—works which leave,

“Deposited upon the silent shore  
Of memory, images and gentle thoughts,  
Which cannot die, and will not be destroyed,”

is no longer confined to the wealthy, but brought within the reach of all; and these *silent teachers* will speedily find their way into the humblest dwellings to make home attractive, raise the character of their occupants, and one time, perchance, incite to exercise a latent genius fitted to administer to the improvement of a nation. In the Report of a Committee of the House of Commons on Arts and Manufactures in 1836, these associations for the purchase of pictures and their distribution by lot, are pointed out as one of the many instances, in the present age, of the advantages of combination—“The smallness of the contribution required, brings together a large mass of subscribers, many of whom, without such a system of association, would never have been patrons of the Arts;” and, what is more important still, as your Committee will venture to add, who might not have had their own minds opened to the enjoyments and benefits resulting from their cultivation.

Touching the *legality* of the Art-Union of London, no one will venture to say it infringes, in any degree, the *spirit* of the laws passed “to protect the unwary against fraudulent schemes of gambling, set on foot by interested persons”—of laws wisely interposed between artful adventurers, who had “unjustly and fraudulently gotten to themselves great sums of money” (such are the words of the Act, 12th Geo. II.); and unwary victims, who, by yielding to the temptations offered, had been “the utter ruin and impoverishment of their families.” As regards the *letter* of the laws, the question has been set at rest by those well qualified to give an opinion.

Last year 269 pictures, and one piece of sculpture (a list of which was printed), were purchased at the cost of £10,036 9s., being £1136 9s. more than the amount apportioned for that purpose by the Society. These were exhibited for four weeks in the Suffolk-street Gallery, by the kind permission of the Society of British Artists, in the first instance to the members and their friends by tickets, and afterwards gratuitously to the public. In order to afford all the subscribers an opportunity of availing themselves of the exhibition, the gallery was illuminated for eight evenings; and there is reason to believe that this arrangement enabled many to see it who could not otherwise have done so. In the whole, it is supposed that nearly one hundred thousand persons visited the rooms.

The selection was unquestionably superior in character to that of former years, and included many works of very great merit. Again, however, the Committee would impress upon such of the subscribers as may obtain the right of choice, the importance of using the greatest care in exercising it judiciously. They would urge upon such of them as may not have had opportunities of acquiring a knowledge of what constitutes excellence in works of Art, to seek the aid of others, and so improve their own judgment. Knowledge on which good judgment must be founded cannot be obtained without effort. To enter fully into the merits of a work of high Art, requires a course of study which, though full of interest and delight, is not generally pursued. To the eye which is ignorant of a higher effort of mind, even a gaudy worthless drawing possesses attractions; but these speedily disappear when superior works have been contemplated and are understood; though the latter, viewed in the first instance, had, perhaps, been less pleasing. Sir Joshua Reynolds describes the mortification he endured when he discovered how little was the effect produced upon him by the first sight of Raffaele's paintings in the Vatican,—knowing full well that this resulted simply from his own comparative ignorance, and his want of capacity at once to understand and feel them.

In this country, it cannot be denied, the study of the Fine Arts has been much neglected, and very serious evils, even in a manufacturing point of view, have arisen in consequence. A better spirit, however, has fortunately been awakened, and the reproach will not remain with us.

The engraving due to the subscribers of 1841, ‘The Saints’ Day,’ after Mr. J. P. Knight, by Mr. Chevalier, has been successfully electrotyped by Mr. Geo. Barclay, of Gerrard-street, Soho; impressions will be ready for delivery on and after the 9th of May next. The process of electrotyping promises—by rendering

fine works of Art cheaper, and so spreading them abroad universally in lieu of inferior productions—to raise the standard of taste, and assist the general advance of Art.

Complaints have been made as to the length of time occupied in the preparation of this plate, and the Committee are led to believe that the delay has been very injurious to the Society. They are compelled to regret that they did not receive that hearty cooperation from the engraver, which they had reason to expect. A bond was entered into by the engraver, entailing certain penalties in the event of non-completion of the plate by a time stipulated, and it yet remains for your Committee to take such steps in the matter as they may consider expedient.

The plate for 1842, ‘Una entering the Cottage,’ engraved after Hilton, by Mr. W. H. Watt, is now in the hands of Mr. Palmer, of the Polytechnic Institution, to be electrotyped. No time will be lost in obtaining the requisite number of impressions.\*

For the current year, Sir Augustus Calcott's picture, ‘Raffaele and the Fornarina,’ has been in the hands of Mr. L. Stocks for some time past, and the plate is considerably advanced towards completion.

Arrangements have been made with Mr. G. T. Doo to engrave the ‘Convalescent,’ painted by Mr. Mulready, R.A. By the kind permission of the proprietor, and of the artist himself, Mr. Stanfield's picture, ‘Castello d'Ischia,’ will be engraved for the Society, and has been entrusted to Mr. Goodall for that purpose.

Your Committee have been desirous “to call the attention of our artists generally to that dignified simplicity of composition, that calm expression, that purity and correctness of drawing, and severe beauty of form—abstract qualities, which, apart from colour and all effect of light and shade, exist in the compositions on the fictile vases of the ancients, in the outlines of our own Flaxman, and in the compositions of Riepenhausen, and some later Germans.” They therefore advertised their willingness to give a premium of £60 for a consecutive series of ten designs in outline, illustrative of some epoch in British history, or of the work of some English author; and a further remuneration for the artist's superintendence, if it should be deemed expedient to engrave the composition selected.

In reply to this advertisement, thirty sets of designs were received. After due consideration, a series was selected, illustrative of the “Pilgrim's Progress,” which was afterwards found to be the work of Mr. H. C. Selous, already known to the subscribers by a device for the Society, engraved in the last Report. These designs are of a very high order of merit: and your Committee propose, therefore, that they should be engraved, and that a copy of the series should be presented to each subscriber in some ensuing year, in lieu of the customary print.

Many of the other designs displayed great talent, and were highly creditable to their authors. Your Committee thought it due to the artists to exhibit their sense of this, and to acknowledge, in a proper manner, the satisfactory response made to their call. They therefore awarded honorary premiums of £20 each to a series from “Prometheus Unbound;” a series from “Griselda;” and a series from “Comus;” the authors of which were afterwards found to be respectively, Mr. Joseph Noel Paton, Mr. John Tenniel, jun., and Mr. F. R. Pickersgill.

The amount thus expended is not deducted from the subscriptions of the present year, but will be charged to the engraving account for the year in which the designs will be made use of.

It will be remembered, that at the last distribution a sum of money was reserved for the production of 20 bronzes, the ownership of which was then decided by lot.

Miss Denman's permission was obtained to model Flaxman's fine group of ‘Michael and Satan,’ for this purpose, and Mr. Edward Wyon was employed to execute it.

The model was completed several months ago, but the modeller has experienced so much difficulty in finding parties competent to cast it in a perfect manner, that they are even now hardly finished. This circumstance, annoying as it has proved, tends to show the good which may result from the Society's operations, even in this department. By forming a school of modellers, and inducing the practice of artistical casting, a branch of Art may probably be established, which at present requires great improvement even in a mechanical process.

For the present year Sir Richard Westmacott kindly afforded the Committee the use of his group known as ‘A Nymph and Child,’ which has been placed in the hands of Mr. Woodington to be reduced and cast. The same difficulties occurred in the one case as in the other, but, the latter being a measure in advance, no inconvenience has resulted. The bronzes are nearly ready, and the right to the possession of them will be decided to-day. The Committee propose to engrave an outline drawing of both the groups for the illustration of the Report.

As regards the bronzes for the ensuing subscription, your Committee deemed it advisable to advertise that they would be willing to purchase for thirty pounds a

\* It is estimated that they will be ready for delivery in July next.

† See Report of Sub-Committee, appointed to consider the most efficient mode of working the enlarged means of the Association.

figure or group, from the metropolitan exhibitions for 1843, calculated for casting in bronze. The result of this intimation will, it is to be hoped, prove satisfactory. For the encouragement of sculpture generally, to which elevated Art the Committee are anxious to direct public attention, it has been considered necessary to alter an existing regulation, and to give prizeholders liberty to commission the execution in marble of any model exhibited in the public galleries, the price of which, if so executed, was left at the first opening of the gallery with the proper party. In consequence of the expense of the material and labour, many young sculptors are unable to execute their works in marble; and to such this alteration will be advantageous.

Mr. Wyon, R.A., has completed his model of the head of Chantrey, for the medallic series in honour of British artists, and is now engaged in transferring it to the die. The Committee propose to distribute to-day, to thirty subscribers, the right to receive an impression of the medal in silver. They further announce, that any subscriber who may desire to receive an impression in bronze, in lieu of the engraving of ‘Raffaele and the Fornarina,’ shall be entitled to do so, by forwarding to the office a note to that effect, on or before the 29th day of September next.

In continuation of the series, your Committee propose forthwith to obtain a medal commemorative of Sir Joshua Reynolds, the first President of the Royal Academy.

Since the last meeting, death has deprived the Art-Union of the services of an early and valued member, Mr. Charles Palmer Dimond, who had acted as Treasurer for six years, and had greatly furthered the interests of the Association. Benjamin Bond Cabbell, Esq., F.R.S., was elected Treasurer, and Charles John Dimond, Esq., son of the late Treasurer, has been appointed to fill the vacancy in the Committee. Other vacancies have been caused by the resignation of T. C. Harrison, Esq., Thomas Mint, Esq., and John Ivatt Briscoe, Esq., and have since been filled up by the appointment of Henry Thomas Hope, Esq., the Very Rev. the Dean of Westminster, and Thomas Bell, Esq., F.R.S. The Most Noble the Marquis of Northampton, P.R.S., has accepted the office of Vice-President.

The number of Provincial Honorary Secretaries is now increased to 237. Your Committee beg leave to tender their warmest thanks to all the gentlemen who have acted in that capacity, and to solicit them to continue their active and disinterested exertions in the good cause in which we are mutually embarked.

By their means, the operations of the Society have been extended not merely into nearly every part of this kingdom, but into very remote quarters of the world. It was with great gratification that the Committee received a list of forty subscribers from Hobart Town, who have formed themselves into an Association there to advance the Fine Arts through the medium of this Society.

The Society is indebted to Mr. H. W. Collard for a reduced engraving of the device for office purposes; nor can the Committee terminate their list of acknowledgments without expressing, in the strongest terms, the gratification afforded them by the receipt of a special resolution in December last, conveying to them and all the officers of the Society, spontaneous expressions of “cordial approbation” from a very numerous and influential body of artists, who held a meeting at the Freemasons’ Tavern in December last.

The amount set apart for the purchase of works of Art, after payment of the necessary expenses, and sufficient reservation for the preparation of engravings and medals, is £8000, and will be allotted as follows:—Fifty works of Art, value £10 each; thirty of £15; forty of £20; twenty-eight of £25; twenty-three of £30; eighteen of £40; twelve of £50; ten of £60; eight of £70; six of £80; five of £100; two of £150; two of £200; one of £300; and one of £400.

To these are to be added, twenty bronzes of Sir Richard Westmacott's ‘Nymph and Child;’ and thirty medals of Chantrey; making in the whole 266 works of Fine Art. To save time, the medals will be allotted to the first thirty names, drawn consecutively at the close of the distribution.

At the date of the last Report, the reserved fund arising from the interest on subscriptions, the profit on the sale of catalogues, the sums unexpended by prizeholders, &c., amounted to £265 8s. 6d. It has now increased considerably, without in any degree trenching on the amount actually subscribed. To this fund your Committee look hopefully, as promising powerful means hereafter for the encouragement of the highest branches of Art. To return twenty-one shillings to each subscriber for his guinea, in the shape of works of Art, is not to be considered as the extent of the purpose for which we are associated; the Society has higher ultimate ends in view, and will seek the earliest opportunity legitimately to advance them.

Artists in England have been reproached for allowing historical compositions, with which they often commence their career, to be speedily superseded by works of much less elevated character. And why has it been so? Not simply because the former coursed to little pecuniary advantage, but because it did not even gain for its purser sufficient consideration and respect. To obtain the utmost for Art, the character of the artist must be raised, his station in society must be appreciated, and his works must be honoured. He who devotes himself

to the study of the beautiful, spread throughout a multitude of examples—in order to embody perfection in an individual—who, pursuing and seizing the graceful or sublime, transfers it to the canvas or the marble for the enjoyment and improvement of thousands—who expresses high and ennobling thoughts, whether with the pencil, the chisel, or the pen,—deserves the highest rewards which his fellows can confer:

"Blessings be with them,—and eternal praise,  
Who give us nobler loves, and nobler cares."

Never was there a time when it was more necessary to exalt the Fine Arts, and spread abroad a love for their productions, than it is now. Science is every day elevating trades into professions, and liberating men from the necessity of manual labour. The greatest activity of mind prevails with increased leisure; it should, therefore, be the endeavour, as it is the duty, of all who are interested in the progress of society, to wean it from the petty interests with which it is too apt to interweave itself, supply pursuits which will tend to develop the thinking man, refine his intellectual enjoyments, and suggest the noblest aims.

GEORGE GODWIN, } Hon. Secretaries.  
LEWIS POCOCK, }

The adoption of the report was moved by Lord Prudhoe, and seconded by Sir William Chatterton. Sir James Lushington moved, and the Rev. H. Penny seconded, a resolution, "That the cordial thanks of the Association be presented to the Committee and the Officers of the Society, for their past exertions and services; and that they be requested to continue them, with power to fill up such vacancies as may occur."

Thomas Mist, Esq., and J. Inderwick, Esq., were appointed to act as scrutineers; and two young Ladies—Miss James and Miss Cole—"consented to preside at the wheels and draw from thence the decrees of Fortune respecting her expectant votaries."

The drawing of the prizes then commenced; and the lots fell to the following fortunate persons. We print the list in the order in which the names were drawn:—

No. Drawn.	SUBSCRIBERS' NAMES AND ADDRESSES.	Prize Drawn.
1	Joseph Prior, Corn Market-street, Bristol	70
2	Mrs. Prideaux, 2, Marlborough-place	20
3	J. A. Scott, 14, Pall Mall East	15
4	Rev. W. J. Wise, Stanton Lacey, Ludlow	70
5	J. E. Cooks, Brasenose College, Oxford	15
6	G. Goodbody, Chancery Library	25
7	C. Burcham, London-road, Lynn	30
8	M. Buzzard, Lutterworth	10
9	Miss Black, Camden-road Villas	30
10	Thomas Cullis, Glamorgan	20
11	C. Frazer, jun., Charing-cross	15

THOMAS MIST,  
J. Inderwick, } Scrutineers.

The distribution of the prizes occupied about two hours. On the close, it was moved by Capt. Baque, and seconded by Alderman Wilson, 3. "That proof impressions of the engraving, 'Una entering the Cottage,' be presented to Miss James and Miss Cole, with the thanks of the meeting, for their kind assistance in the distribution of the prizes."

H. T. Hope, Esq., F.R.S., then moved, 4. "That the best thanks of the meeting be given to William Charles Macready, Esq., for his great kindness in affording the use of Drury-lane Theatre for this day's proceedings."

B. B. Cabbell, Esq., F.R.S., in seconding the resolution, highly eulogized the efforts of Mr. Macready to restore and uphold the character of the stage, and expressed his regret that they had not been responded to as they ought to have been by the public.

The Noble Chairman next read a letter from Sir Martin Archer Shee, P.R.A., addressed to George Godwin, Esq., Hon. Sec., expressing his regret that in consequence of indisposition he was unable to attend the meeting.

The Noble Marquis then left the chair, and Sir William Chatterton was called to it; when it was moved by George Godwin, Esq., F.R.S., and seconded by J. S. Gaskoin, Esq., "That the best thanks of the meeting be offered to the most Noble the Marquis of Northampton, for his kind and able conduct in the chair this day, and for the interest his Lordship constantly manifests in the prosperity of the Society."

The Noble Chairman, having briefly returned thanks, resumed the chair, observing, that one very important part of their duty had in the hurry of their proceedings been forgotten; upon which Mr. Alderman Wilson moved "That the thanks of the Society be given to the Honorary Secretaries for their indefatigable and zealous services."

The resolution was received with enthusiastic plaudits.

In returning thanks for himself and his excellent colleague, Mr. Godwin said if he were to state that the office they filled entailed no labour and anxiety, it would be untrue. For the last month the greatest efforts had been needed, and nothing but a strong conviction that they were doing good and aiding, although slightly, in the erection of a temple to the fame of England, would have led them to continue their efforts with unabated good-will.

Mr. Godwin's few words were received with cheers from all parts of the house, and must have afforded some reward for the labour and energy to which the prosperity of the institution is mainly owing.

At this late period of the month we can give no more than a meagre outline of the proceedings. Our comments upon the whole must be reserved for our next.

#### PICTURES SOLD AT THE BRITISH INSTITUTION SINCE THE LAST NOTICE.

7. 'A Pastoral,' H. Le Jeune; John Gibbons, Esq., 15 guineas.
98. 'Fruit Piece,' G. Lance, 30 guineas.
202. 'A Wiltshire Peasant Boy,' J. P. Drew; F. Davis, Esq., 3 guineas.
96. 'The Flower Girl,' J. F. Pasmore; A. S. Perkins, Esq., £20.

73. 'Stony Ford Castle,' F. R. Lee, R.A., 65 guineas.
384. 'Curtius,' B. R. Haydon, 200 guineas.
146. 'Scene from James's Novel of Philip Augustus,' C. S. Brockey.

#### REVIEWS.

THE LIFE OF SIR DAVID WILKIE, WITH HIS JOURNAL, TOURS, AND CRITICAL REMARKS ON WORKS OF ART; AND A SELECTION FROM HIS CORRESPONDENCE. BY ALLAN CUNNINGHAM. In 3 vols. JOHN MURRAY.

Wilkie and Cunningham!—the great Scottish painter, and the pure sunny poet of Scotland! It is a rare and, in this instance, a melancholy combination. The ink on Cunningham's pen was hardly dry, when he was summoned to join Wilkie whose biography he had just concluded. No stronger illustration of the uncertainty of life was ever placed before us. This noisy, feverish-working world of ours—where thoughts and feelings are perpetually jostling each other, where duties to the living obliterate the memory of the dead—compels us soon to dry our tears, and, forgetful of the past—too frequently neglectful of the future—to live only with the present. But we have been alone with these volumes for many hours in the deep solitude of our silent room; they have awakened the past, and will awake it to many. The waves of the blue sea have closed over the painter, and the young spring grass is now green on the poet's grave! While living, few men occupied a larger portion of the thoughts of England; the painter's fame and the poet's song were echoed from lip to lip, and though they are no longer with us, their essence, as it were, still sanctifies our world.

Allan Cunningham was, in many respects, the best suited for the task of arranging Sir David's letters, selecting portions of his journal, illustrating what might otherwise have seemed obscure, and giving us glimpses of the man, so as to keep him with us from first to last.

Whatever may be the claims of this work on the attention of the general reader, it is one of deep interest to the artistic world. The high rank which Sir David Wilkie attained in his profession; the respect in which he was held as a man, and so truly merited; his upright mind; his straightforward honesty; his modest, yet moral courage; his enduring friendships; his patient and determined study; his appreciation of the beautiful; his honour of the true; show how deserving he was of universal homage, and how, despite the apathy towards Art—which was far more difficult to overcome at the commencement of his career than it is at present, when the pulses of the country are beating with something like generous sympathy towards what they have so long neglected—talent and industry, when supported by such character as the son of the Scottish clergyman brought into his profession, must triumph.

When a child of seven years old, at Pitlessie-school, "Wee sunny haired Davie," as his school-mates called him, was fond of sketching the likenesses of his companions instead of learning his grammar, or working his sums. "I mind him weel," said an old man from the banks of Edenwater, "and I mind his brithers too, but he was a quieter and kindlier lad than his elder brithers; and liked better to stand and look at his companions in their games than join in their play. I think I see him now standing, smiling, wi' his hands in his pouches! Ay, but he liked best to lie a grouse on the ground, wi' his slate and pencil, making queer drawings." Such was "Wee sunny haired Davie"—and such was Sir David Wilkie; he was ever "quiet and kindly"—his clear, lucid, observing eyes, seeing all things—and a smile, half mirth, half mischief, lurking about his mouth—his sense of the ridiculous, chastened by his benevolence. Allan Cunningham observes, "that those who only knew Wilkie as a great painter knew only a bit of the man"—and this is certainly true. His biographer gives a most interesting account of his early mechanical fancies, which endured but for a time, and details his sketches, a volume of which are preserved, all evincing wonderful observation and truth of delineation—but not one the result of imagination; another proof that "the boy was father to the man." He was the great master of realities—would enact scenes from the "Gentle Shepherd," and arrange his companions into pictures; but we never find him in his boyhood illustrating his imaginings—his imagination was never sufficiently vivid to create a *data*, and in aftertimes he illustrated only what he had seen. After delay and difficulty, the youthful aspirant succeeded in entering the Scottish Academy, which, it would seem,

in many respects was like our School of Design. Burnet was his fellow-pupil, and his testimony is of exceeding value. "It was not enough," he says, "to tell Wilkie 'draw that antique foot,' or 'draw this antique hand.' No; he required to know to what statue the foot or the hand belonged, *what was the action, and what the sentiment.*" Nor would he copy anything until he understood the meaning of the whole. He carried this principle into conversation, and would never suffer a recital to proceed without understanding its commencement. He was slow both in study and comprehension, yet his untiring application made him outstrip those who caught ideas with ease and rapidity. He was fortunate, when he came to London, in his early acquaintance with Haydon, whose imagination was a good stimulus; and the personal friendship and judicious criticism of the good Sir George Beaumont, was valued by him to the last hour of his existence. Indeed, Sir G. Beaumont's correspondence is amongst the most valuable in these volumes, both for its high-mindedness and its detail; and the advice he gives the young painter, as far back as the year 1807, concerning the engraving of his celebrated picture, 'The Village Politicians,' is eminently curious, showing how much we have multiplied able engravers—for Sir George wishes Wilkie could "etch the hands and faces," and doubts if a "man can be found capable of giving truth and life to the hands and faces." Wilkie was insured success, for his friend John Burnet was to be his translator. The single-minded gentleman also warns him "of engaging in a traffic of any kind," enlarging on the necessity of preserving liberality of mind inviolate. All Sir George Beaumont's opinions should be written in letters of gold; it is difficult not to envy Wilkie so true a friend—a friend whom he never would have had, had not his deserts been equal to Sir George's high estimate of moral and intellectual worth.

The deepest interest is with his early days; when once fairly afloat, we are certain of his success; and the details most valuable to the student is not different, save in its simplicity, from other diaries and journals. We know that his pictures are the acknowledged pictures of national character, and it is amusing to find THE PRINCE of Princes bidding against the King of Bavaria for a picture; "the Duke" seeing and arranging with Wilkie as to the grouping of the "Chelsea Pensioners;" and when, at last, satisfied that he should like the picture—never wasting a word, but telling the painter to "go on," as if he had said, "March." A great portion of the natural interest felt in the "sunny haired lad" is lost in the pomp and circumstance of his elevation. You know he has achieved his young ambition; and, as far as regards his fortunes, your chief curiosity is to know how he endured the change. To his honour be it spoken, he was the same simple and single-minded man from first to last: thrifty, but not mean, and yielding to the taste which desired his portraits, rather than seeking it; the more because he found that he *could* barely live if he pursued his first plan. "Rapid painters" would do well to ponder over how he studied, and changed what had been done, regardless of trouble; and how he laboured to make "even the hands like," never thinking of the time spent in this way.

All this time his health was painfully precarious; and while abroad there can be little doubt but his sufferings, borne with so much patience, tamed the delight he must have felt at much that he saw. His criticisms are calm and just, but seldom eloquent; sometimes he is peculiarly graphic in his descriptions, not only of pictures but of persons; for instance, at Vienna, when he dined with Prince Metternich, he describes his appearance as a "mixture of Lord Castlereagh and the Duke of Wellington." He continues: "The Prince had been riding, had spurs on, is light made, active, but composed in manner; withal a younger man than I expected—scarcely above fifty."

We wish we could extract all the interview, but we must send our readers to the volumes; only adding, that his Highness took a great interest in the Arts, showing Wilkie some engravings in aqua tint, which he had just got, and explaining the process. One of his most deeply interesting letters is to Mr. Bigge, from Rome, in 1827; after speaking few but telling words, on some matters of Art, he speaks of fresco:—

"It has frequently occurred to me that the restoration and introduction of fresco-painting in England

would yet give a chance for the cultivation of the higher styles of Art. We that possess so much, know nothing of fresco—know nothing of that, the only mode known to the ancients, with which modern Art grew from its revival to its greatest perfection, and with which the finest works are found identified, and must ultimately perish; its qualities are essentially different from oil-painting; it is more abstract, less deceptive, can be seen farther in any light and in less light, though equally ornamental; it has not the palliatives of oil, though advantageous for the display of beauty, grandeur, and style; it cannot, like oil, give interest by softening or concealment to the mean form or to the low subject. An oil picture is a piece of furniture to be changed or removed at pleasure, while the fresco is a part of the fabric itself, combining historical truth and poetic fiction in one wide range, to illustrate the purpose of the building, which, be it the gorgeous palace or the solemn temple, derives from fresco a most impressive splendour and dignity."

Sir David was determined to visit Spain, and his Spanish wanderings are recounted with the same gravity and quiet humour that characterize his Italian and French doings; the print-publishing at the time hanging like a millstone about his neck, which, however, seems to have been removed when he became connected with Mr. Moon, of whom both he and his biographer speak in terms of the highest praise. After the success of his Spanish pictures had been considered so unequivocal, he attempted to break fresh ground in Ireland, and his 'Peep o' Day Boy' and 'Irish Whisky Still' were most splendid pictures; not Irish, certainly, for although Sir David seems from his letters to have caught the pictorial idea of the peasantry, it has not, we imagine, been granted to a Scotchman to understand the character which gives life and truth to the costume or situation.

There are in the third volume a series of remarks on painting, which we wish Sir David had continued. They are divided into five sections, and are clear and vigorous.

The cause of the painter's sudden departure to the Holy Land is briefly dismissed by a biographer, who was always guarded in his expressions, intimating more than he says; and this we feel to be especially the case after Allan takes leave of Wilkie's early days. The poet's heart was more true to nature than the biographer's head. As long as

"his foot was on his native heath,"

he was in every respect delightful: his touches on the young painter's early struggles—his anxieties—his domestic home-loving nature—his blending of duty and affection towards his parents, and that beloved sister Helen, who so well requited and deserved his tenderness—his triumphs—his unaffected piety—his visits to Abbotsford—his stamping the moors and mosses to visit Hogg in the "ingle nook"—his deep love of country,—all are given and illustrated *con amore*; but towards the latter end, in the biographical portions, there is a certain restraint and stiffness, an occasional bitterness towards the members of the Royal Academy, unaccounted for and unaccountable, which renders the reader restless and uneasy—a string loose somewhere, which jars the harmony of much that would otherwise have been as gentle and peaceful as the great painter's self. This is our sole fault with the editor's task; and when we look at the mass of letters, of pictorial events stretching over nearly forty of the painter's fifty and six years of existence, we wonder that so much is brought so harmoniously together. The end is known to all; and the volumes wind up with a catalogue of the pictures of Sir David Wilkie and their possessors. We recommend this work to all who feel an interest in Art, but to the artist it is invaluable. When the wealthy of England have exhausted the present edition, we hope that Mr. Murray will issue one the price of which will be such that every young artist can possess a copy. The portrait at the commencement of the volume does not recall to us the man; we think it has a peevish *distrait* expression, very different from that of Sir David. The most like of any we have seen is Mr. Joseph's statue, which we have again inspected: the sculptor has caught not only the features but succeeded in depicting the habit and position of his body, and the patient penetrating character of his mind. One word in conclusion. However disappointed a certain Royal lady may have been in one of the great painter's efforts, she evinced her regret at his loss in the kindest manner, and sent his sister a diamond ring as a token of her sympathy.

This review is necessarily brief; but we shall recur to the subject, in order chiefly to lay before the young painter some of the "GOLDEN OPINIONS" of the great artist, which we find so abundantly scattered through the volumes.

**COLUMBUS IN THE CONVENT AT LA RABIDA.**  
Painted by Sir DAVID WILKIE, R.A. Engraved by H. T. RYALL. Publisher, F. G. MOON.

Of all the works appertaining to History, produced by Sir David Wilkie, this has ever been our especial favourite. The subject is one of the deepest interest, and it has been treated with simple truth.\*

The great voyager is a happy portrait, and a beautiful expression is conveyed into the countenance of his young boy. The whole group is indeed admirably managed, and the "story" is most effectively told. Our business, however, is rather with the print than the picture. The execution is a triumph of the art; it confers great honour upon the engraver, whose skill, taste, and judgment cannot be to highly lauded. Mr. Ryall has accomplished his object in his own peculiar style, producing a marvellous effect by the judicious mixture of stipple and mezzotint. The result, while it gives unequivocal satisfaction to the artist, is such as to insure general popularity, for the force and delicacy of the work can be entirely appreciated by those who will feel rather than comprehend its merit. We have never seen a painting more thoroughly copied, so as to preserve all the characteristics of the original; any fragment of the engraving will tell it to be the produce of Wilkie, while, in the more important parts, the eloquent and expressive faces, that either maturely reflect, or eagerly inquire, have been rendered with the nicest care. Mr. Ryall will add largely to his reputation by this work; the only really fine picture, by the way, it has fallen to his lot to engrave; for his abilities have been too generally lavished upon productions that were meant to serve little more than the purposes of a season. We sincerely trust that this print will have, as it ought to have, a very wide circulation. It is one of the great achievements of British Art, and may supply another test as to what extent the public will prefer the really excellent to the gracefully meretricious. When such publications become profitable to their publishers, and "kennelled dogs" and "stable-interiors" are valued at nought, we shall be allowed to take pride out of our national character in reference to Art.

**PORTRAITS OF THE PRINCES AND PEOPLE OF INDIA.** By the Hon. E. EDEN. Drawn on Stone by LOWES DICKINSON. Published by DICKINSON and SON, Bond-street.

These portraits are well-timed, for at this moment everything relating to India is deeply interesting; and the more so that which bears the impress of unquestionable veracity. We have been favoured with a view of the original drawings, which are generally characterized by great artistic feeling and skilful execution. They are the work of a lady, and she seems to have laboured arduously, and with a full measure of success, in imparting character and description to her figures. These drawings we have inspected with much interest, as the series comprehends portraits of personages famed in the latter chronicles of India, of whom we read in every paragraph of Indian news, and whose names are almost as familiar as those of our celebrities at home.

The work will consist of four parts, each of which will contain six plates. No. 1 is before us. The first plate contains four portraits: those of Dost Mahomed, Mahomed Akram Khan, Hyder Khan, and Gharee Khan.

The features of Dost Mahomed are as perfectly Jewish as can be well conceived. It is conjectured that the last tribes of Israel settled in Cabool, and are merged in the modern Affghans. Whether this be true or not, there is strong physical evidence in favour of the presumption; of the same strongly-marked countenance is Gharee Khan, his cousin. These are followed by the Maha-Raja Shere Singh, the present sovereign of the Sikhs,

\* It was painted in 1834, and commissioned by Mr. Ritchie, of Edinburgh,—"a gentleman," writes Mr. Cunningham, "of taste, both in Art and Literature." He did not, however, live to see his commission complete. It subsequently became the property of Robert Holford, Esq., and Wilkie received for it the sum of 500 guineas. Its size—in height, 4 ft. 9 in.; in width, 6 ft. 1 in.

differing entirely from the preceding, as being of veritable Indian mould. He is drawn at full length, and apparently seated in state. A group of Akalees, or Sikh religious devotees, formerly employed in the armies of Runjeet Singh, are extremely well drawn, and form in themselves picturesque figures enough; they are armed "to the teeth," with a diversity of formidable weapons. Another plate is 'The Raja of Putteealla on his state elephant'; and, little as there is in it besides the Raja and his huge elephant, it is strongly Oriental,—we mean, that such a composition could not be made out otherwise than from the life. Having had an opportunity of inspecting the original drawings, we are bound to do justice to the manner in which the artist, Mr. Dickinson, has transferred them to the stone; their remarkable character and form are admirably preserved, and the lithography is executed with a masterly power.

**LASSIE HERDING SHEEP.** Painted by EDWIN LANDSEER, R.A. Engraved by JOHN BURNET. Publishers GRAVES and WARMSLEY.

This is one of Landseer's remote pastorals, wherein we in vain seek for anything allusive to polite life. In a far away nook among the heathery hills, a "lassie" stands leaning against the broken acclivity, spinning simply with her fingers, and in the manner practised by maidens a thousand years before her. There is extreme ease in the position of the figure, and the limbs are, as usual, admirably rounded; but there is one incident above all others which at once marks the nation of the damsel and proclaims the close observation of the painter: that is, the manner in which the lower part of the dress is confined by the legs, which is nowhere seen as a habit, save in Scotland. Near her lie some of her flock, and a blackfaced ram, tethered by the horns, is struggling to free himself. Her dog is crouching by her side, with his ears pricked up and alive to every sound and movement; he is a meagre, lank-boned animal, following out one of Abernethy's prescriptions—living upon a little and earning it. This plate is engraved in mezzotint, with the known points of excellence which distinguish the engraver; the flesh shadows are beautifully tender and clear, and nothing in this style of Art can surpass the manner in which the fleeces of the tethered veteran and his mates are described.

**TITIAN, a novel in three volumes.** By SHELTON MACKENZIE, LL.D. BENTLEY.

This is, as the author modestly states, "an attempt" to introduce the "Art-Novel" into England; we wish that all "attempts" were equally successful. This species of story is a favourite sort of composition with our foreign brethren, and having once entered upon it, Doctor Mackenzie will doubtless draw other masters from their stately canvasses, and make them more familiar to the million by his pen-and-ink sketches; though truly the "Titian" on our table has far more the grace and softness of crayon than the wiry hardness of pen and ink. The author has been most happy in the *atmosphere* (if we may use the term) of his narrative; it is "Sunny Italy"—yet he has kept free from every thing that could render his page too glowing for English tastes. It is pure both in design and execution, sanctified by a fine and yet vigorous judgment; deep as the Doctor's reading must have been, and true and varied as are the characters he brings into appropriate action, there is nothing pedantic or over-strained in his delineations; and the character of the great master is faithfully and nobly rendered, the progress of his mind, its aspirations, its energies, its endurance, and the unboastful yet deeply felt triumphs towards the conclusion, convey hopeful and useful lessons to all who, moved by a holy ambition, choose a right path to greatness. If the tale had been more concentrated, we should have only to praise from the first page to the last. Episodes have been introduced, which, however beautiful in themselves, disturb the interest of the principal narration; doubtless for the purpose of working out into three volumes what would have been really more important in two; but this is the bookseller's plan, and it has wrought the destruction of many a work of fiction—it has only *disturbed* "Titian," but we wish Doctor Mackenzie had fought a fight in favour of a two-volume novel. We ought to be and are thankful for what we have, and we are certain that all who love to think

of the mighty in Art will appreciate the grace and feeling of Doctor Mackenzie's "Art Novel." There are some most exquisite poems scattered through the tale, far beyond what is generally met with in works of fiction, deserving of themselves all honour, and proving the poetic temperament of an author who has written from the fulness to overflowing, of his own heart.

**THE NEW PUNCTUATED STENOGRAPHIC SYSTEM OF EMBOSSEING;** by which the Blind of all Nations will be able to Emboss for themselves on any Paper without the Use of Type, &c. By G. A. HUGHES. Published by the AUTHOR, 408, Strand.

This is a very ingenious species of embossed *short-hand*, invented by Mr. Hughes, who lost his sight in the twenty-ninth year of his age, and who is most kindly anxious that those who are similarly affected should be enabled to instruct and amuse themselves. The system consists merely of two dots, one smooth and the other rough, which, with the aid of a sign line, are so methodically arranged that much can be effected with ease and distinctness.

The subject is one of intense interest to all who feel for such of their fellow-creatures who are deprived of the blessing of light, and is worthy of the attention of all who are interested in the great business of education. The embossing instrument, cushion, and formula, may be seen at the inventor's, and are at once simple and effective.

#### TO SUBSCRIBERS.

Our subscribers will observe that, with our journal to-day, we present to them an extra half-sheet, containing illustrations of "The Book of British Ballads." The sheet is paged with the number, but as it is necessarily detached, it will be proper to see that it is regularly delivered with it; of course, *without any extra charge*.

We shall keep the number at press until the 10th of the month, so that those who require a second copy may obtain one by order; but it will be expedient to transmit it to the publisher before that day.

The Royal Academy will open on the 7th of May; the two Societies of Painters in Water Colours will be then open. It will be our duty to notice at some length the Exhibition at the Louvre (which, with that view, we have personally visited). Moreover, in the course of next month the Cartoons will require mature consideration and extensive space in our journal.

Now, it seems to us absolutely necessary to meet this enlarged demand upon our columns. It is impossible to render anything like justice to these several exhibitions, without adopting some increased means. It is therefore our design to issue on the first of JUNE TWO NUMBERS OF THE ART-UNION, *i. e.*, Nos. 53 and 54—one of which we shall devote exclusively to THE EXHIBITIONS. We shall be compelled to make the customary charge for these two numbers—as two numbers—an arrangement of which, we believe, none of our subscribers will complain.

We hope thus to be enabled to produce a *Catalogue Raisonné* of the Royal Academy, and a useful key to the other collections, without abridging our usual intelligence and information.

**HAMPTON COURT.—BOARD and LODGING** for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at TWO GUINEAS per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFIELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFIELD'S London made Table Knives, at BLOFIELD and Co.'s, 6, Middle-row, Holborn.

**THE CHINESE COLLECTION,** Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 225 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve, 1s.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR.**—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lamqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**GARDENING.**—The FRUIT, FLOWER, and KITCHEN GARDEN, by PATRICK NEILL, LL.D., F.R.S.E., Secretary to the Caledonian Horticultural Society. In post 8vo., illustrated with upwards of 60 Woodcuts. Price 6s.

"One of the best modern books on Gardening extant.—*Loudon's Gardener's Magazine*. Adam and Charles Black, Edinburgh; Longman and Co., Simpkin, Marshall, and Co., Whitaker and Co., and Hamilton, Adams, and Co., London.

**THE JESUITS' PERSPECTIVE, BY CHAMBERS.**

**PRACTICAL PERSPECTIVE;** or, an Easy Method of representing NATURAL OBJECTS according to the RULES of ART, applied and exemplified in all the variety of cases, as Landscapes, Gardens, Buildings, and Figures; a work highly necessary for Painters, Engravers, Architects, Embroiderers, Statuaries, Jewellers, Tapestry Workers, and all persons concerned in Designing. Translated from the French, by E. CHAMBERS, F.R.S. In One Volume, 4to., with 150 Copper Plates, price £1 11s. 6d.

London: Sherwood, Gilbert, and Piper, Paternoster-row.

**MR. COLLOT** begs to announce the publication of the TRANSLATION, into Fifty-four Designs, of MILTON'S PARADISE LOST. By J. J. FLATTERS, Sculptor. This splendid Work, the fruit of eleven years of labour, illustrates in a most striking and impressive manner the finest Poem England can boast of. The vigorous and correct design of Mr. Flatters partakes of the suppleness and grace which reign in the sublime compositions of Michael Angelo, with which it can only be compared. Every copy will be signed by the Author. Price, imperial folio, half-bound morocco, 10 guineas.

London: Published by A. G. Collet, 36, Bruton-street, Berkeley-square.

Now Publishing,

**BAXTER'S OIL COLOURED PORTRAITS** of the MISSIONARIES WILLIAMS and MOFFAT. Price of each Portrait in Oil Colours, 10s. 6d. each; Proofs, 15s.; Mezzotint proofs, 3s. 6d.; India proofs, 5s.; Gold Frames and Glass only 10s. 6d. each, if required. Just before Mr. Moffat left England to resume his arduous duties in Africa, he said, "Mr. Baxter, the Portrait you have in hand is a very faithful likeness, and the scene of the Bechuana Parliament most true; indeed, I fancy myself again in Africa."

London: Published by George Baxter, Patentee of Oil Coloured Printing, 3, Charterhouse-square; and to be had, by order, from every Book and Print Seller throughout the kingdom.

A NEW EDITION OF A

**TREATISE ON LANDSCAPE PAINTING** and EFFECT in WATER COLOURS, from the first rudiments to the finished picture, with Examples in Outline, Effect, and Colouring, by DAVID COX, Esq., Member of the Society of Water Colour Painters. In a Series of Twelve Numbers, folio super royal.

The First Four Numbers consist of Pencil Sketches, in a series of Seventy Examples of Landscape Practice, in Soft Ground Etching, by Mr. Cox. Six Plates in each Number. Price 5s. each.

The Second Four Numbers comprise Shadow and Effect, in a series of Thirty-one Examples, in imitation of Sepia Drawings. Price 7s. 6d. each number.

The Third Part, consisting of Four Numbers, will comprise Sixteen Imitations of Drawings of Effects of Landscape Scenery, containing a letter-press Description, having reference how these effects are produced. Price 10s. each number.

The whole half-bound, price £5 10s.

London: Published by S. and J. Fuller, 34, Rathbone-place.

## WEST-RIDING ART-UNION;

Under the distinguished Patronage of

SIR JAMES WIGRAM, VICE-CHANCELLOR.  
THE HON. JOHN STUART WORTLEY, M.P.  
EDMUND B. DENISON, Esq., M.P.  
GEORGE BANKS, Esq.

THE MASTER CUTLER OF SHEFFIELD.  
THE WORSHIPFUL the MAYOR of DONCASTER.  
THE REV. W. F. HOOK, D.D., VICAR OF LEEDS.  
THE RIGHT HON. THE LORD MAYOR, and  
THE SHERIFF FOR THE CITY OF YORK.

Mr. GILBERT begs to announce, that the  
DRAWING OF THE WEST RIDING ART-UNION  
is intended to take place on the 3rd of MAY,

AT THE

MUSIC HALL, IN SHEFFIELD,

Under the Superintendence of a Committee of the following Gentlemen, who have kindly consented to undertake its management:—

WILSON OVEREND, Esq.  
THE REV. B. T. STANNUS  
MR. W. F. DIXON  
MR. W. J. DIXON  
MR. H. WATERFALL  
MR. H. JACKSON  
MR. J. BROWN  
MR. T. ALDAM  
MR. G. REEDALL  
MR. J. SIMPSON  
MR. J. CRAWSHAW  
MR. S. HOWARD.

To this Art-Union, for every Guinea subscribed, parties subscribing will, in addition to their chance of obtaining a valuable Picture at the drawing, receive, at their option, a copy of Watt's splendid Line Engraving, after Leslie, R.A., of 'May-Day in the reign of Queen Elizabeth,' or the Mezzotint Engraving by Lucas, after Isabeau, of 'The Return to Port.' These Plates, it may be asserted without fear of contradiction, have never been surpassed in their respective styles by any that have yet been published. As the Plates will be delivered when the subscriptions are paid, Mr. G. would impress upon those parties intending to subscribe, the advantage of sending in their Names at as early a period as possible, in order to secure the best impressions. In order to convey to the public some idea of the high character of the Engravings, Mr. G. may state that he has been honoured by receiving, in the course of a very short time, the Names of upwards of Two Hundred and Fifty Subscribers, in London, many of whom are eminent for their taste and skill in connexion with the Fine Arts.

Subscriptions are received in London by Messrs. A. H. Baily and Co., Publishers, 83, Cornhill; Mr. How, at the Office of the ART-UNION, 132, Fleet-street; and in Sheffield, by Mr. James Gilbert, Fargate.

With the view of increasing the number of Subscribers, all persons who take an additional Share will also receive a Copy of the splendid Engraving of

THE EVE OF THE DELUGE;

THE LAST ENGRAVING BY MARTIN,  
FROM THE

ORIGINAL PICTURE IN THE POSSESSION OF  
H.R.H. PRINCE ALBERT.

### WORKS OF MR. JOHN VARLEY.

Plain Needlework—5. Baby Linen—6. Embroidery on Muslin and Lace Work—7. Millinery, Dress-making, and Tatting—8. The Toilet.  
H. G. Clarke and Co., 66, Old Bailey.

### POETRY, PAINTING, AND MUSIC.

**TREATISES ON POETRY, MODERN ROMANCE, and RHETORIC,** being the Articles under those Heads in the Seventh Edition of the *Encyclopædia Britannica*. By GEORGE MOIR, Professor of Rhetoric in the University of Edinburgh, and WILLIAM SPALDING, Esq., Advocate.  
"The Article 'Poetry,' by Professor Moir, is prefaced with an eloquent and perspicuous exposition of the mental and moral qualities requisite to its production; and the distinction between the province of imagination and of fancy evinces discrimination at once accurate and profound."—*Exeter Gazette*.

**PAINTING AND THE FINE ARTS.** By B. R. HAYDON and WILLIAM HAZLITT. Forming the Articles under those Heads in the Seventh Edition of the *Encyclopædia Britannica*.  
"Mr. Hazlitt's clever Treatise, written for the 'Encyclopædia Britannica,' has come under our notice. We have read no work of that author with anything approaching to the same gratification."  
"We must add a similar testimony in favour of his fellow labourer, Mr. Haydon. His Treatise seems to us the result of study and observation extensive and profound."—*Quarterly Review*.

**AN ESSAY ON THE THEORY AND PRACTICE OF MUSICAL COMPOSITION,** with an Introduction and Appendix, including the Article "Music," in the current Edition of the *Encyclopædia Britannica*. By G. F. GRAHAM, Esq.

"A masterly and comprehensive Essay."—*Athenæum*.  
"A lucid and harmonious arrangement of the principles of the art."—*Musical World*.  
"We never saw so much sound, practical, intelligible information on the subject compressed into the same space."—*Spectator*.

Adam and Charles Black, Edinburgh; Simpkin, Marshall, and Co.; Whittaker and Co.; and Hamilton, Adams, and Co., London.

### ILLUSTRATED WORKS

PUBLISHED BY

JEREMIAH HOW, 132, FLEET-STREET,

This day, price Half-a-Crown,

#### PART II.

(To be completed in Eight Monthly Parts.)

**MRS. S. C. HALL'S SKETCHES OF IRISH CHARACTER.** Illustrated by the following eminent Artists:—W. H. Brooke, F.S.A.; N. T. Crowley; George Cruikshank; W. Evans, of Eton; J. Franklin; J. Gilbert; W. Harvey; J. R. Herbert, A.R.A.; D. Macdise, R.A.; R. M'lan; Mrs. M'lan; H. M'Manus; A. Nicholl, A.R., H.A.; G. F. Sargent; J. C. Timbrell; J. H. Townsend; C. H. Weigall; and S. West. Engraved on Steel and Wood. This Work will correspond in size and appearance with "Ireland; its Scenery and Character."

#### III.

This day is published,

**IRELAND: ITS SCENERY AND CHARACTER.**

By Mr. and Mrs. S. C. HALL.

Three vols. Imperial octavo, price £4. Illustrated by 48 Engravings on Steel; 18 County Maps; and 491 Engravings on Wood.

This work being now completed with the 27th Monthly Part, issued on the 1st of January, 1842, subscribers are requested to complete their volumes without delay.

As an illustrated work it is believed few publications of modern times have been so satisfactorily sustained from its commencement to its close. The best artists have been engaged in its production—the "scenery and character" are, in every instance, pictured from sketches taken on the spot—and the engravings have been executed by the most competent engravers.

The History and Descriptions of Ireland, from the justly popular pens of Mr. and Mrs. S. C. Hall, have obtained the universal approbation of the public press; and the very large circulation which the work has enjoyed, affords the most unequivocal proof of its great and extended popularity.

#### III.

In One Vol., imperial 8vo., price 31s. 6d., elegantly bound,

**THE BOOK OF BRITISH BALLADS.** (Edited by S. C. HALL, F.S.A.)

The Work consists of British Ballads taken from the collections of Percy, Evans, Ritson, Pilkington, Scott, Motherwell, Jamieson, Buchan, Herd, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has, hitherto, been made to select, and arrange in a popular form, the best of these Ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior, or objectionable, compositions.

'Chevy Chase,' illustrated by J. Franklin.  
'The Children in the Wood,' illustrated by J. R. Herbert, A.R.A.  
'Fair Rosamond,' illustrated by J. Franklin.  
'The Demon Lover,' illustrated by J. Gilbert.  
'The Nut Brown Mayd,' illustrated by T. Creswick, W. B. Scott, and S. Williams.  
'Kempion,' illustrated by W. B. Scott.  
'The Child of Elle,' illustrated by J. Franklin.  
'The Two Brothers,' illustrated by W. P. Frith.  
'The Blind Beggar,' illustrated by J. Gilbert.  
'Robin Goodfellow,' illustrated by R. Dadd.  
'Sir Patrick Spens,' illustrated by J. Franklin.  
'Gil Morice,' illustrated by K. Meadows.  
'Sir Aldingar,' illustrated by J. Gilbert.  
'Sir Launcelot du Lake,' illustrated by E. Corbould.  
'The Heir of Linne,' illustrated by E. M. Ward.  
'King Arthur's Death,' illustrated by J. Franklin.  
'Lord Soulis,' illustrated by R. M'lan.  
'Lord Thomas and Fair Annet,' illustrated by H. J. Townsend.  
'Pause Foodrage,' illustrated by T. M. Joy.  
'Genevieve,' illustrated by J. Franklin.  
'Fair Margaret and Sweet William,' illustrated by H. Warren.  
'The Birth of St. George,' illustrated by W. B. Scott.  
'The Mermaid,' illustrated by J. Franklin.  
'Lord Ullin's Daughter,' illustrated by E. Corbould.  
'Johnie of Breadislee,' illustrated by Sibson.  
'The Dowie Dens of Yarrow,' illustrated by J. Franklin.

**A PUPIL WANTED** by Messrs. SMITH and LINTON, Draftsmen and Engravers on Wood, 35, Hatton Garden.

REGISTERED 1843.

**TO ARTISTS AND AMATEURS.**—The **CARTOON PENCILS**, for the rapid production of Drawings and Designs in the style of the Old Masters.—The attention of the Profession, and all engaged in the delightful Art of Drawing, is particularly directed to the above Lead Pencils, which have been manufactured for the production of Designs, &c., in that bold and effective style so much desired by the present taste. For the execution of both large and minute work, they will be found to stand unrivalled. Their quality and peculiar form adapting them for the deepest and most delicate tints, while the absence of the numerous degrees (these pencils being only of four distinct shades) gives the essentials positively required, doing away with superfluity and confusion. Their peculiar feature is, they REQUIRE NO POINTING, but by cutting away the cedar, the means of producing Line and Shade of various breadths is immediately presented. The Lead of which these Pencils are manufactured is pure and genuine, and by extreme care and attention, every gritty particle is removed, which allows them to be used with that freedom and sweetness so essential for the production of fine drawings. In conclusion, they will be found a desideratum long required, and must, upon trial, obtain a decided preference and extensive patronage.

Manufactured and Sold by REEVES and SONS, at their Superfine Permanent Water Colour, and Black Lead Pencil Manufactory, 150, CHEAPSIDE, London. DEGREES:—No. 1, Hard; 2, Hard and Black; 3, Soft; 4, Soft and Black.

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE, 25, PALL MALL, LONDON.**

Capital £500,000.

#### DEPARTMENT OF MEDICAL STATISTICS.

WILLIAM FARR, Esq., General Register Office.

#### ACTUARY.

F. G. P. NELSON, Esq.

THIS OFFICE is provided with very accurately constructed Tables, by which it can Assure UNSOUND Lives on Equitable Terms.

The *Extra Premium* discontinued on restoration of the Assured to permanent Health.

A portion of the *Extra Premium* may remain as a Debt on the Policy.

*Survivorship Assurances* where the Life in expectation suffers from Disease, effected at *Cheaper Rates* than at any other Office.

Similar Tables enable the Society to grant *INCREASED ANNUITIES* on *Unsound Lives*—the amount varying with the particular Disease.

Members of *Consumptive Families* Assured at *Equitable Rates*.

**HEALTHY LIVES** are Assured on *Lower Terms* than at most other Offices.

**TO MINIATURE PAINTERS.**—J. RAWLINGS, Manufacturer of OR-MOLU FRAMES, CASES, MATS, and GLASSES, of the best make, at very reduced prices; also Imitation Or-molu Frames of very superior quality.

J. R. begs to say he executes all orders in the very best manner, and on the shortest notice. Cases wholesale for the Daguerreotype.—40, Albany-street, Regent's Park.

### VAN EYCK'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'Gueips, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

MILLER'S ARTISTS' COLOUR MANUFACTORY.  
56, LONG ACRE, LONDON.

**NOTICE.**—SPLENDID STOCK of GLASS and PICTURE FRAMES, the most modern and elegant patterns ever offered to the public, may be had at J. RYAN'S extensive Manufactory, 13 and 14, LONG-ACRE, at prices that will defy competition. Console Tables, Girandoles, Brackets, Cornices, and every article connected with the trade; Fancy Wood Frames of every description, of a superior quality, in great variety. Frames joined in the gold in the first style. A few fine Pictures for Sale.

**LOOKING GLASSES, &c.**—To ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which, for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4s. 6d. per foot; a variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, Moorgate-street, City.—A few Second-hand Chimney Glasses for sale.

### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**PICTURE-FRAMES, CHIMNEY GLASSES, CONSOLE TABLES,** and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regilt, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

**FRAMES FOR ART-UNION PRINTS, &c.**—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c. which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street, North Strand.

**ORNAMENTS for the DRAWING-ROOM, Library, and Dining-room,** in Italian Alabaster, Marble, Bronze, and Derbyshire Spar, consisting of Groups, Figures, Vases, Inkstands, Candlesticks, Tables, Obeisks, Watchstands, Paper-weights, &c., imported and manufactured by J. TENNANT (late Mawe), 149, STRAND.

Students in Geology, Mineralogy, or Conchology, can be supplied with an extensive assortment of Shells, Minerals, and Fossils, or with Elementary Collections, carefully arranged and described, at 2, 5, 10, 20, to 50 Guineas each; together with Geological Models, Maps, Hammer, Books, Blowpipes, &c., by J. TENNANT, Mineralogist to her Majesty, 149, Strand.

**TO MINIATURE PAINTERS, &c.**—W. WARRINER, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns, has removed to 16, CHARLOTTE-STREET, FITZROY SQUARE.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

### NOTICE.—PATENT RELIEVO LEATHER

HANGINGS and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

### SUPERIOR PREPARED BLACK LEAD PENCILS.

**S.** and J. FULLER beg to recommend to the Artists of the Kingdom, and to the Public, their very superior Black Lead Pencils, of different degrees of hardness and depth of shade, which have been tried and approved of by the first Artists, and from whom they have received the most flattering encomiums.

HHH. Used by Architects, and are extremely hard.	B. Shade, Black, for Shading.
HH. Engineering, very hard.	BB. Extra Shade, very Black, for ditto.
H. Architecture, not quite so hard.	HB. Prepared drawing, hard and black.
F. Fine Drawing, middling degree.	EHB. Extra Prepared Drawing, hard and black.

Prepared, made, and sold by S. and J. Fuller, at their Temple of Fancy, 34, RATHBONE-PLACE, London; where every kind of Work is published on the Art of Drawing, and every Material sold that is used for Drawing.

### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**TO ARTISTS.—SKELETONS, SKULLS, &c.**—ALEXANDRE, 37, GREAT RUSSELL-STREET, BLOOMSBURY, continues to supply the following Anatomical Preparations:—Skeletons Articulated, from £2 to £6 10s.; Arms and Legs, from 9s. to 12s.; Hands and Feet, 3s. to 5s. A fine collection of Anatomical Plates, plain and coloured, for the use of the Artists at the Academy in Paris, price 3s. 6d. plain, 7s. coloured. These Plates are of the whole length of the human body.—Skeletons lent on deposit.

### MILLER'S DRAWING-PAPER,

Made of pure linen only, without undergoing any chemical process.

### MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

MANUFACTORY, 56, LONG-ACRE, LONDON.

**WOLFF and SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK,** in various colours.

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and SON beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.

H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

Manufactory, 23, Church-street, Spitalfields.

MR. MOON,

Her Majesty's Publisher in Ordinary, has the honour to announce that he has now ready,

THE GREAT HISTORICAL ENGRAVING OF

GENERAL SIR DAVID BAIRD

DISCOVERING THE BODY OF SULTAUN TIPPOO SAIB,

AFTER STORMING SERINGAPATAM,

PAINTED BY SIR DAVID WILKIE, R.A.

ENGRAVED IN THE HIGHEST STYLE OF ART BY JOHN BURNET.

DEDICATED BY EXPRESS PERMISSION TO THE HONOURABLE THE EAST INDIA COMPANY.

PRIVATE PLATE, £10 10s.

THIS is the first grand historic picture which SIR DAVID WILKIE has dedicated to the achievements of the British in India; and no part of the world to which our arts and our arms have been carried presents more romantic actions, deeds of higher daring and hardihood, or associates our enterprise with a more splendid land or a more original and picturesque people. No empire so vast and so beautiful was ever acquired with so little violence or maintained with so much wisdom and liberality—or has so happily mingled mercantile enterprise and generosity with military vigour and discipline—or produced so many men gifted with that rare variety of talent which conciliates while it conquers, and consolidates while it extends. Within almost our own remembrance the Merchant Princes of London have extended their power and their influence from China to Persia, and have called into action such ruling spirits as Clive, Coote, Hastings, Wellesley, Cornwallis, Ochterlony, Malcolin, Baird, Munro, Elphinstone, and Auckland, and furnished the historian and the painter with such high achievements as the battles of Plassy and Assaye; the assaults of Seringapatam and Bhutpore; and the storming of Ghizné and Khelat; or such important and splendid scenes as Lord Auckland's diplomatic interviews with Runjeet Singh on the Sutlej, and among the temples of the Punjab. To an artist so variously gifted as Sir David Wilkie, India opens a wide field for pictorial adventure, and with a happy choice he has in the present picture selected an event in history remarkable for the overthrow and death of the last great Sultaun in Hindostan, and the full establishment of British power. It will be remembered that Tippoo, with the remains of an army with which he hoped the conquest of half of Asia, was forced back upon his capital, and perished not ingloriously in the assault commanded by that distinguished Indian officer whom he had injuriously held for years in captivity.

The scene of the picture is laid in the gateway of the inner Fort of Seringapatam; the time represented is the night succeeding the storming of the place; and the principal persons in this eastern drama are Tippoo Saib, the chiefs of his army, his son and his household, and his conqueror, Sir David Baird, with the soldiers whom he led to the assault. Much was there to excite on both sides—the animation of despair for the Sultaun and his followers, and the desire of retribution on the other part, for, every step the conquerors took over the dead and the dying, some dark and grated dungeon reminded them of the indignities to which many of them had been subjected, and the chains with which they had been loaded. The fiery tumult of the assault is over; the city is won; though some rough old soldiers of the days of Hyder Ally still hold out, and Sir David Baird, who has arrived at a place where resistance had been sternest, inquires the fate of the Sultaun. "Look for him among the dead, not the living," said one of his wounded officers; and among the dead he was accordingly found, for he was last seen at this spot animating his followers, and fighting fiercely himself. He had received a mortal wound from some unknown hand: a stern composure was stamped on his face: his splendid jacket, his embroidered and jewelled sword-belt, and richer turban were all gone. Sir David, it is said, did not behold without emotion the dead body of his great enemy, nor did he fail to observe at his feet, as he commanded it to be removed to the palace, the iron-grated door of that dungeon in which he had himself been so long immured.

This is the moment of time in which the great painter has conceived his picture; the fiery passion of the contest is abated, and the natural tenderness of man has begun to resume its influence. In the foreground Tippoo is lying, "his face to the foe," and pierced with many a wound, which the artist tastefully hides in the hesitation of his attendants to

remove his torn and bloody robe. The veteran commander or Killadar of the fortress, and several of the Sultaun's leading men, gaze on the body with eyes which attest their sorrow and anger: one of his sons, a boy, has made his way through the bloody press, and with an eastern lady—perhaps his mother—is regarding the body with deep emotion. It is a moment of silent agony, and well has the great painter expressed it; Sir David stands directing the removal of the body, and seems not to share in the anxiety of his soldiers, who eye the gloomy brows and flashing eyes of their enemies, and prepare their weapons to resist any sudden outbreak of sorrow and despair. Nothing can be finer than the look of the soldier on the right of General Baird, who, with his finger on the trigger of his musquet, calmly surveys the glittering scimitars of men who can scarcely be said to have ceased to resist; nor is the more eager look of the Highland soldier, a M'Leod of the old 71st, on the left of his countryman, the less to be admired, who, with his weapon in one hand and a torch in the other, affords both protection and light to his commander. Behind the General, the bright or dusky faces of the Company's soldiers crowd the archways, showing that it is not by European power alone that they succeed in their enterprises, while on the right of the picture the still resisting officers of the Sultaun prove that we prevail by valour as well as by wisdom.

The great actors in the drama are passed and gone; and even the scene itself—imperial Seringapatam—will soon be but a city in the historian's page and on the painter's canvas. The tide of its importance has begun to roll away; its towers are almost tenantless; the pageant of empire has moved across the Indus. "I write this," says a young officer belonging to Madras, 14th of January, 1840, "in one of Sultaun Tippoo's garden-houses, at the foot of the glacis of the Fort of Seringapatam. The walls are covered with pictures of warriors and elephants in crimson and gold, which some Malone-like European has tried to conceal under a coating of whitewash. Hyder Ally's mosque, or rather chapel, the roof of which some forty years back sounded to recitations of the Koran and the loud prayers of believers, now serves to shelter my horses during a two hours' halt. My guide through the city was an old Moosolman soldier, who entered, he said, the service of the Sultaun when twelve years old. While he told me this he pointed to his long grey beard, and gave a sort of melancholy smile. He served Tippoo till the siege, and was then appointed by 'Colonel Wellesley' to keep the keys of the palace. Forty years of neglect have destroyed all that is worth locking up; and probably in forty more there will be an end of the palace of Seringapatam. The spot where Tippoo fell is in a low, dingy-looking, archway connecting the outer with the inner Fort; and he lies buried with one of his sons in a grove of cypress trees, about a mile from the city." This picture from the pen renders more valuable and desirable the picture from the pencil and the graver.

There is a lesson, too, in this great picture, such as historical subjects seldom present, which belongs to the highest order of the moral drama. General Baird, as has been intimated, was for four years a prisoner in Mysore, and had been most cruelly treated by the Sultaun. Fourteen years afterwards the remembrance of his wrongs was strong within him, and, when the army invested Seringapatam, he claimed the right to lead the attack. During the assault the Sultaun and his former captive, now his conqueror, contended in the same street, and Tippoo fell at the door of the very dungeon where he had confined the victor.

This grand historical and national picture was painted for Lady Baird, as a visible and faithful record of one of the chief actions of her eminent husband;

ALLAN CUNNINGHAM.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 53.

LONDON: JUNE 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

THE ART-UNION may be had on the day of publication of Messrs. Hering and Remington, 153, Regent-street.

**BIRMINGHAM and MIDLAND COUNTIES ART-UNION.**—Engravers who may have a fine unpublished Plate suitable for this Art-Union, and from which impressions may be immediately taken, are invited to send specimens, proofs, and terms, addressed to the Secretary, Mr. Mason, Birmingham and Midland Counties Art-Union Office, Athenæum, Birmingham, on or before Wednesday, June the 7th.  
Athenæum, May 25, 1843.

**THE ROYAL IRISH ART-UNION.**—President—The Marquis of ORMONDE. The Lists close on the 30th of June: so no time should be lost in taking out any Tickets you may think necessary for yourself or friends, as after that date it will be impossible for the Committee to receive any further subscriptions.

Agents for London—Messrs. P. and D. Colnaghi, 14, Pall Mall, East; Mr. C. Robertson, 51, Long Acre; Messrs. Colnaghi and Puckle, Cockspur-street, Charing Cross; Messrs. Graves and Co., Pall Mall; Mr. R. Ackermann, 191, Regent-street.

Honorary Secretaries—John Evans, Esq., 17, Upper Stamford-street, Blackfriars; J. Blachford, Esq., 36, Moorgate-street; of whom Tickets, one guinea each, may be obtained at once, the Engraving last issued seen, and any information afforded; or the amount may be remitted by Post-office order, or letter of credit, direct to Stewart Blackler, Esq., Hon. Secretary, 20, Gardiner's-place, Dublin.

N.B. This Society repudiates, in the strongest manner, schemes got up by tradesmen under the name of Art-Unions, for their private advantage. Its officers (comprising the highest in rank, intelligence, and worth in the country,) giving their time and attention to it gratuitously. The whole of the Subscription is therefore laid out to the best advantage for the members and the public.

**CUYP and PAUL POTTER.**—A fine Specimen of each of the above Masters is now on view at T. N. BROWN'S, 40, FETTER-LANE; where may be obtained a printed Catalogue of a choice assortment of valuable ARTICLES OF VERTU.

**FINE ART DISTRIBUTION.**  
DRAWING FOR PRIZES ON OCTOBER 25th next.  
MR. BOYS has the pleasure to announce that he has been enabled to fix the DRAWING FOR THE PRIZES

in his FINE ART DISTRIBUTION to take place on WEDNESDAY, the 25th of OCTOBER next; they are now ON VIEW

At 11, GOLDEN-SQUARE, REGENT-STREET. Each Subscriber of One Guinea, or more, may select Engravings from a variety of the finest Works of Art to the amount of his subscription, which are delivered to him immediately, together with a receipt Ticket for each Guinea subscribed, giving him, as a BONUS, One Chance for any of the SIX HUNDRED PRIZES, value SIX THOUSAND FIVE HUNDRED and EIGHTY POUNDS, to be gratuitously distributed. The first Subscribers get the earliest Impressions of the Plates.—As the Drawing is to take place so soon, Subscribers' Names should be entered without delay.—Prospectuses of the plan may be had at 11, Golden-square, or will be sent on application.

**THE CHINESE COLLECTION,** Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 225 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d; Children under Twelve, 1s.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR.**—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lamqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**TO ART-UNIONS.**—An ENGRAVER has a PLATE, nearly completed, to dispose of. It is an interesting subject, and is engraved in the line manner on Steel. Size, 15 inches by 12 inches. Address to A. B., care of Mr. Millwood, 35, Dorset-street, Portman-square.

**ITALIAN PICTURES.**—The Property of a Gentleman—'The Reposo,' by TITIAN; 'St. John and the Lamb,' by CARLO DOLCI; 'The Madonna of the Time of Raphael'; 'The Virgin and Child,' by ANDREA DEL SARTO.—To be SOLD by PRIVATE CONTRACT, at the Picture Gallery, 107, Regent-street, established for the Sale of Pictures, &c., by commission. Open from Nine till Five o'clock.

**THE ROYAL GOBELIN TAPESTRY.**—Four most beautiful Specimens, brought to this country in the early part of the French Revolution, the subjects from the Life of Henry Quatre. The Compositions are truly elegant, and they are presumed to be unique, upright oval in shape, and appropriately framed. To be SOLD by PRIVATE CONTRACT, and may be seen from Nine till Five o'clock, at the Commission Picture Gallery, 107, Regent-street.

**WHOLE-LENGTH PORTRAIT OF QUEEN ELIZABETH.**—This very fine and extremely rare Portrait is painted by MARK GERARD, and is in the old genuine state. Her favourite Dog, mentioned in her Life, is on a table on which her hand rests. Also for Sale, a capital Picture by CANALETTTO, 'A View in Venice,' a charming composition, and a Picture of high quality.—To be viewed at the Commission Picture Gallery, 107, Regent-street, from Nine till Five o'clock.

**ART-UNION OF LONDON.**—E. F. WATSON, of 201, Piccadilly (Agent to the above Society), having designed a CHARACTERISTIC FRAME expressly for the Engravings given to its Members, respectfully begs leave to call their attention to it, and feels assured that all who may favour him with their esteemed commands will have every reason to be well satisfied with both price and workmanship; indeed the lively interest he takes in the above Society causes him to frame the Engravings at an unusually low price.

**THE LATE SIR DAVID WILKIE**  
A PAIR of his earliest and best Works—  
THE VILLAGE POLITICIANS.  
THE BLIND FIDDLER.  
Beautifully engraved in line by EDWARD SMITH.

 London: George Virtue, and all Booksellers.

**MILLER'S SKETCHING COLOURS.**  
 —These Colours are prepared for the purpose of enabling the Artist or Amateur to depict at once the transient effects of clouds, distances, &c., and will be found of indispensable utility in all instances where objects of an evanescent character are to be portrayed.  
**MILLER'S Artist Colour Manufactory,** 56, Long Acre, London.  
 Catalogues of all the Exhibitions may be had at this House free from charge.

**WING'S PREPARED PANELS,** for the use of Artists, warranted not to warp or crack, or to be affected by moisture.—With the view of handing down to a late posterity the works of British Artists, which canvas, from its perishable nature and liability to accident, is not calculated to do, the manufacturer is induced respectfully to offer to the notice of Artists a PANEL, made of well-seasoned wood, prepared in the best manner, the front being covered with fine canvas, and brought up to a smooth face with genuine oil colour.  
 The Manufacturer having a knowledge of painting, is perfectly aware of the qualities a Panel should possess; and he trusts his love of the Art will be accepted as a guarantee that his best endeavours will be used to produce an article in every respect worthy of the patronage of the members of the British School of Painting.

Application may be for the present made to Mr. Richard Wing, Fordingbridge; or specimens may be examined at the Office of the ART-UNION.

MAY 1843.

## SIR WALTER SCOTT'S WORKS AND LIFE.

I.

GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regit, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

**FRAMES for ART-UNION PRINTS,** &c.—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c. to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.  
 "The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.  
 "They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c. which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street, North Strand.

**THE ART-UNION of LONDON.**—The 'SAINT'S DAY.'—P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane, begs respectfully to inform Subscribers he has finished, and ready for inspection, a rich elegant FRAME (36½ inches by 21½ sight) for the above engraving, ornamented emblematically expressly for the subject, and gilt in a very superior manner in burnished gold, in imitation of Or-molu, with the best flatted glass, £3 15s.; the same Frame, in imitation of old carved oak, or in oil gold, and glass, £23; a handsome ornamented swept-gilt Frame and glass, £23; a fancy wood Frame, either rosewood, maple, satin-wood, Russian maple, &c., 3-inch moulding, with gilt inside, and glass, £1 8s.; a gilt bead moulding, Frame and glass, £1. The above prices include mounting of Engravings in an accurate manner. A list of the prices and drawings of different Frames for the Engravings of the 'Saint's Day,' and those being issued by the National Art-Union, sent, pre-paid, to any part of the kingdom. Every article connected with Carving and Gilding, Plate-glass, &c., supplied cheaper than by any other house in the trade.  
 All goods purchased at this Manufactory carefully packed, and the loan of cases free of extra charge.

## SOCIETY OF PAINTERS IN WATER COLOURS.\*

GALLERY, PALL-MALL EAST.

THE thirty-ninth Exhibition of the Society of Painters in Water Colours was opened on the 1st of May. It consists of 362 works—by far the larger proportion of which are landscapes; indeed, of subject-drawings there are too few; and their absence considerably deducts from the general popularity of the collection. The two or three new selections, to fill up vacancies caused by deaths—and in one instance of retirement—have been from among professors of this branch of Art; so that a change in the character of the Gallery is not likely to take place for some time to come. The members of this Society number 25, and the associates 17. Why this invidious distinction should be made, it is difficult to guess. There can be no wise reason for it.

On entering this Gallery—a very poor one, by the way, and utterly unworthy the noble purpose to which it is devoted—one is very soon struck by the singular uniformity of merit in the works exhibited. There is scarcely one that seems greatly superior to the surrounding mass; and very few that manifest an inferiority so decided as to be at once perceptible. The collection has indeed the sober and settled air of conscious value, as if assumption and pretence were equally unnecessary and unworthy. In this department of the Arts we may at least

\* Part 54—the “Supplementary Part”—of the ART-UNION, being exclusively devoted to the Exhibition of the Royal Academy, we print in this Part our comments on the Exhibitions of the two Societies of Painters in Water Colours.

claim to hold a station where we have no rivals. Our supremacy has indeed been long acknowledged; and to the efforts of this Society we are mainly indebted that it is fully established.

No. 1. ‘Men of War in ordinary at Hamoaze,’ W. C. SMITH. The principal object in the drawing is a huge hulk apparently “shelved” like an old sailor. It conveys in a high degree the idea of massive solidity, and has in it a strong quality of the picturesque.

No. 5. ‘Composition,’ the late J. VARLEY. The main value in a work like this is that it looks like a veritable locality; so faithfully was the character of our home scenery mirrored in the mind of the artist, that every thing of this kind which he did, although nominally imaginative, was, in reality, “after nature.” The ground, in the drawing under notice, is rich and substantial, but the clouds are harsh and husky, because they have been put in by the same kind of handling as the lower parts. This mannerism pervades the style of the painter.

No. 7. ‘Como, from the Milan Road,’ T. M. RICHARDSON, jun. This is a style of subject of which we have of late years seen perhaps too much. Views of the kind, to be interesting, must therefore possess some of the claims to admiration, with which the author has invested this work, every part of which is made out with the most perfect success. Mr. Richardson is a new member, and a very valuable accession to the Society. His election was honourable to him, but the choice confers honour also on the body, whose strength he will contribute largely to uphold.

No. 8. ‘Durham, from Newton Hall,’ G. A. FRIPP. An autumn evening effect, treated with a fine feeling for the poetic. We view the distant objects through a depth of atmosphere, and the eye passes most agreeably over the entire composition.

No. 10. ‘Still Life,’ W. HUNT. The miscellaneous objects of a back-kitchen, studied with the unflinching truth which characterizes the works of this artist. The place has been scoured and set in order for him to paint; no brick floor was ever more admirably laid down.

No. 12. ‘A Village in Westmoreland,’ P. DE WINT. All beautiful, as is this picture, we have seen others by the same hand yet more pleasing. Every thing is subservient to a group of trees, which is put in with an astonishing power and mastery of touch.

No. 16. ‘View over the Weald of Sussex, near Buxted, the South Downs in the distance,’ COPLEY FIELDING. This is a small drawing most sparingly tinted, but managed with inimitable sweetness.

No. 17. ‘The Scrutiny in Don Quixote’s Library, by the Curate and the Barber,’ J. M. WRIGHT. The figures here are extremely well posed, and very powerful in expression; yet, excellent as the substance of the work is, it would have been improved by being a little more Spanish. And again, the eye is not readily led from figure to figure.

No. 20. ‘Greenwich Hospital, from the Marshes,’ W. C. SMITH. The near part of the picture is a sedge pool in which a boy is wading. The water is beautifully transparent, and the distance sweetly painted, forming altogether a simple but exquisite drawing.

No. 21. ‘Brig and Fishing Boats off St. Valery, Coast of Normandy,’ C. BENTLEY. One of those marine pictures which suppose the spectator to be afloat. Various incidents are here forcibly painted; a passing cloud is the precursor of a rising squall, for which the boat is preparing by getting as speedily as possible “under snug canvas.” The water is painted with the usual excellence of this artist.

No. 22. ‘South View of Bolton Abbey, Yorkshire,’ COPLEY FIELDING. A favourite subject with this painter. It is a small pic-

ture, remarkable for the mellowness of its tones, and in the truthful contrasts shown by the nearer and remoter objects.

No. 35. ‘Durham,’ G. A. FRIPP. This work is the result of great care and labour; the object has been to produce a shadowless sunshine, or at least an effect with the shadows scarcely marked, and the consequence in this case is an approach to insipidity. Some of the lower parts of the drawing are exquisitely pencilled and coloured, but the tone of the castle and other buildings is offensively purple.

No. 36. ‘Morning of the 12th of August,’ FREDERICK TAYLOR. This is a sporting picture, the subject of which is “unkennelling for the moors.” The figures and animals are portraits, and they are arranged in a manner the most skilful to aid and relieve each other. It ranks among the best pictures of the kind we have seen.

No. 39. ‘View from the Ramparts of Dover Castle,’ W. C. SMITH. Apparently the descent into the town. The near ground of the picture is entirely thrown into rich shadow, and is made very skilfully to throw off a clear sky.

No. 49. ‘Snowdon, from near Capel Cŵg,’ COPLEY FIELDING. He is worthy of the highest honour who is thus loud in praise of old friends. It is Snowdon and such as Snowdon that have made a host of the best of our water-colour painters. Snowdon is the Falstaff of water-colour Art: few succeed with him, though all, according to the Persian proverb, “take a pull at his beard.” Nothing can exceed the loveliness of this scene; here is no faltering by the way; no abuse of colour or substitution of it for imbecility in effect; no hesitation of touch. Snowdon we may say is an oft-repeated lesson, but never comes it too often when said or sung in poetry like this.

No. 53. ‘An Interior,’ W. HUNT. A chamber with one of the highly-wrought chimney-screens of the sixteenth century. A maiden is reading by the fire. It is a beautiful and a valuable drawing.

No. 54. ‘Sands at Rhyl, North Wales,’ D. COX. A class of subjects in which this artist excels. The beauty of the work is, however, impaired by the confused nature of the sky. It is, we presume, an experiment, for something is wanting to the keeping.

No. 58. ‘A Lane Scene,’ P. DE WINT. The uncompromising treatment of this composition is remarkable; every object is put down to the tone and substance of reality, in a manner which none but a master could attempt. It is one of the pictures that seem to have been put together, and rendered almost tangibly visible in the mind of the artist, before transferred to the paper.

No. 61. ‘Ulswater, from Gowbarrow Park,’ T. M. RICHARDSON, jun. The lake occupies the middle distance, and beyond it are the remote hills, nearly excluding the sky. The work is highly finished, and the tones are blended with the utmost suavity.

No. 62. ‘Munich,’ S. PROUT. A scene truly after the hearts of the admirers of Prout. It is a market, crowded with figures disposed with all the decision of long ago. The drawing is of considerable size, and abundantly elaborate; the soft and varied colouring of the figures, and the admirable management of the not very picturesque buildings, render the work the more estimable in proportion to the stubbornness of the materials. The friends of Mr. Prout—they are very numerous—and the admirers of his genius—the list might include all who appreciate truth and excellence in Art—will rejoice to meet their favourite in his vigour, year after year, still the veritable master, mingling judicious instruction with exceeding delight.

No. 65. ‘Citadel at Plymouth, Mount Batten and Catwater in the distance,’ W. CALLOW. The shadows here are somewhat timid and

sharp; the water is too blue, but the land objects are coloured with much propriety.

No. 74. 'Fruit,' V. BARTHOLOMEW. These are selected from among the patricians of the vegetable category—a pine, grapes, and sunny peaches, so alluringly painted that the picture ought not to have been hung before the fruit was in season.

No. 75. 'The Gap of Dunloe,' W. EVANS. This drawing has the appearance of repeated pencilling, but, withal, the artist has maintained breadth—a rare success under such circumstances. The work is beautiful, and highly effective.

No. 76. 'Interior of the Drawing-room, Bramhall Hall, Cheshire,' JOSEPH NASH. This gentleman stands alone in the general success with which he has cultivated this department of Art; all his halls and drawing-rooms are of surpassing execution. A lady is here seated reading to an ancient cavalier, both habited in character with the taste of the apartment.

No. 86. 'View on the Severn,' P. DE WINT. A most literal translation from nature; the same skilful and daring manner of dealing with his objects which we have already admired. How rarely do we see such unqualified imitation of locality in effect and colour!

No. 91. 'Ehrenbreitstein,' H. GASTINEAU. The famous stronghold rises, of course, the principal object in the composition, which is brought forward with a most judicious mingling of cool and warm tints. The near objects are bold and substantial, and contribute mainly to keep in their places the other constituents of the picture.

No. 93. 'Verona, from the Old Bridge,' W. CALLOW. The view is happily selected, and composes altogether most gracefully, but the water is of a very distempered hue, and thus could not yield the blue shadow thrown over it. Some of the items of the higher part of the work are put in with so much strength as to be spots in the picture.

No. 98. 'Love Birds,' O. OAKLEY. Two maidens looking at a brace of love birds. The figures have the appearance of portraiture—they are very sweetly pictured.

No. 100. 'Ferry at Medenham, on the Thames,' G. A. FRIPP. This drawing displays great power, and perfect command of the materials of composition. It is throughout distinguished by a delightful freshness and repose.

No. 101. 'Granville, coast of Brittany,' C. BENTLEY. We see of Granville only some of those old and picturesque houses which abound in the northern departments of France. A storm clearing off the sea is most forcibly described by the contrast of the dark and heavy clouds with the tranquil sky which they are unveiling.

No. 105. 'A Poet,' W. HUNT. A boy versifying by the light of a stable lantern. He seems to "want a hero," or it may be he is only puzzled for a rhyme. It is equal to the best things of the kind by the artist, who, by the way, affords an extraordinary example of what may be done with one idea.

No. 109. 'The Folkestone Cliffs, looking towards Dover,' COPLEY FIELDING. The components of this drawing are of the simplest kind. We look from the cliffs upon the sea below, and thence again round the rocks which enclose the little bay; the charm of the picture is the glorious sun, and the effect one of the most difficult in nature to paint—the sunbeams partially obscured by the morning mist. This qualified light is spread over every object with a constancy of purpose which has produced a most superb work of Art.

No. 113. 'An Oat Field,' P. DE WINT. This drawing, although low in colour, is, as usual, masculine to a degree in touch and tone. The day is cloudy, and shadows are fitting over the ground.

No. 120. 'Hayward's Heath, Sussex,' FREDERICK NASH. A group of trees put in with a firm and crisp touch. The sky has the appearance of wind, but the lower parts of the work are in repose.

No. 122. 'View on the Derwent, Derbyshire,' P. DE WINT. Very faithful to the known style of the author. Cattle are fording the river—on the banks are trees, which throw down strong shadows. The foliage is a little woolly in parts.

No. 123. 'Scene from "Peveril of the Peak,"' G. CATERMOLE. The armoury in the Tower forms the subject of this sketch, although the main point is supposed to be an incident from the novel—the recognition by the King of "his old friend Major Coleby." This is indeed a drawing for the closet of the antiquary: the living figures look pigmies, surrounded as they are by those steel pots and robust iron jerkins, and overtopped by full tilting and battle suits of plate armour, mounted on barbed steeds. This drawing has never been surpassed in its style; it might, we think, have been aided by giving something more of character and expression to the countenance of the bad man and worse king—"who never said a foolish thing, and never did a wise one."

No. 129. 'St. Andrew's, Fifeshire,' H. GASTINEAU. This is a brilliant little drawing, and remarkably striking from the manner in which the author approaches the fugitive effects of an unsettled day. The ancient city is seen across a little bay, as it stretches into the sea.

No. 133. 'Bolsover Castle, Derbyshire,' D. COX. The sky is cloudy and lowering, an aspect with which the entire character of the scene is in perfect keeping. The castle is removed to a distance, and seen beyond a group of rugged trees. The whole is freely but firmly pencilled with one undeviating purpose, that of investing wild and romantic scenery with a character most fitted to render it impressive.

No. 134. 'Vale of Llanrwst, from Roe, North Wales,' C. BENTLEY. In the near part of the drawing is a corn-field, over which we look up a vale, closed by a distance which, for sweetness and serenity, cannot be surpassed. The foreground is clouded, and the shadows flit thence up the valley from crag to crag in a manner only to be shown by one who has the finest apprehension of such appearances.

No. 136. 'Arch of Constantine, Rome,' S. PROUT. A remarkable characteristic of this drawing is its weight and solidity; the lower part is in shadow, and the higher portion rises against a thinly-coloured sky.

No. 138. 'Hamilton, of Bothwellhaugh,' G. CATERMOLE. He stands in a corridor grasping a pistol, and looking down through a mulioned window; the figure is equipped in the plate-armour of the sixteenth century, and shows great caution and determination.

No. 142. 'Entrance to the Gap at Dunloe,' W. A. NESFIELD. This view is constituted of features that tell well in a picture, but here they are somewhat too much cut up to be shown to the best advantage.

No. 143. 'The Chapter House,' G. CATERMOLE. A hall, with some monks in council over matters of common import to the community; behind them rises a richly-carved screen, and at the fire sits one who may pass for the abbot. About the essentially-romantic drawings of this artist there is a dreamy quality, which is more intensely felt than easily described: we acknowledge everything he does as of, and appertaining to, humanity. His manner of circumstancing persons and depicting places is such as may have been observed by most individuals once or twice, but not more, during a lifetime. Such recollections are not to be effaced, and these it is that hallow to us the romance of such works.

No. 146. 'Portico di Ottavia, Rome,' S.

PROUT. A fragment of classic architecture; with more colour than is usual in the small pictures by the same hand.

No. 161. 'On the Thames, at Wargrave,' G. A. FRIPP. An expanse of water occupies the lower part of the picture, which, as rising to distance, is surrounded by trees: the colour throughout is extremely well distributed, and the prominent parts are substantially painted.

No. 162. 'View from Tilgate Forest, over the Weald of Sussex,' COPLEY FIELDING; and No. 163. 'Ben Venue—the Trossacks, and Ben An, over Loch Achray, West Highlands, by the same. These two works are so different in feeling that, on a slight examination, they do not appear to be by the same hand. In the former picture we look from a forest foreground over a wooded distance—the trees are strongly marked, the foreground is gloomy, and the entire aspect is sombre; the latter is distinguished by the harmonious play of the brightest colours: the mountains are blazing with the torrid light of the sun, the warmth of which is brought down, tempered by shadow and cooler colour, till the tints are again forced in the near parts. Such severity on the one hand, and brilliancy on the other, are very rarely witnessed.

No. 165. 'On the Thames,' W. EVANS. The near ground broken up by a lock, of which the artist has availed himself as a prominent and valuable feature of his picture. The trees are admirably painted, and seem to yield to the wind, and throughout the entire composition a most harmonious distribution of colour prevails.

No. 166. 'Stubble Field, with Gleaners,' D. COX. Nothing in truth but a stubble-field, broken only by the figures. The sky is of great beauty, charged with gathering clouds of varied tints. It is extremely difficult to give interest to such a subject.

No. 162. 'The Syren's Turret,' G. CATERMOLE. This is a small but very remarkable drawing. The turret is the conspicuous feature of the composition: at its base is a moat, on which is a gallant in a boat, who is about to be shot at by two figures lurking behind the bank.

No. 167. 'Too Late for Church—scene from the "Vicar of Wakefield,"' FREDERICK TAYLOR. This scene will be remembered as that in which the family of Primrose, being desirous of impressing their neighbours with a sense of their growing importance, resolve to go to church on horseback instead of walking as heretofore. The precise moment is that at which the horses refuse to proceed, and the vicar, returning from church, discovers his wife and daughters in the depth of their mortification. The passage has been admirably read; the artist touches with effect the vulnerable points of the ladies, and successfully follows out the dry wit of the author.

No. 168. 'Azaleas,' V. BARTHOLOMEW. They are in a little *bocale* of porcelaine, and present a variety of the most beautiful hues, laid in with the utmost mastery.

No. 173. 'The Confession,' J. WM. WRIGHT. Portraits of two ladies, the subject of whose discourse is clearly an affair of the affections. The figures are carefully drawn and naturally posed.

No. 177. 'Hospital of the Grimsel and Lake of the Kleinssee, Switzerland,' W. CALLOW. The hospital is a low building, in the middle distance; beyond it rises two cliffs, between which is seen a tract of snow-covered eminences, which, with their white glare, impair the general effect.

No. 182. 'Hay Barges, &c., Mouth of the Medway,' C. BENTLEY. A stiff breeze is stirring in this composition, the water is accordingly much agitated. A boat, containing several figures, is pulling from the spectator; and upon this feature of the picture the artist has lavished all his wealth of colour.

No. 190. 'An Interior,' W. HUNT. A cabinet, with an antique chair and other characteristic furniture; the whole made out with that patient finish which marks the interiors of this painter.

No. 191. 'Bala Lake, North Wales,' T. M. RICHARDSON, jun. This is a most beautiful production. It is rich and high in colour, but the hues are most skilfully balanced and harmonized; on the left is an effective group of trees, which clear up all around them, and thence the eye is led to the distant hills which break the sky.

No. 195. 'Lismore, from the Fishery,' W. EVANS. Lismore stands upon a wooded eminence overhanging the river, which, winding down the near parts of the picture, opens into the "Fishery," where is seen a figure with a rod, and near him a few heavy salmon; a rainy sky is thrown over the whole, which is marked by a peculiar decision of manner.

No. 196. 'Interior at Southam, Gloucestershire—seat of the Right Hon. Lord Ellenborough,' JOSEPH NASH. A spacious room, with an ornamented ceiling and a fire-place, carved with extraordinary *finesse*: a cavalier is sleeping by the fire.

No. 201. 'The Plains of Marathon,' the late J. VARLEY. We here look towards Uboa from the tumulus of the Greeks and Persians. This is undoubtedly one of the best of the latter works of this artist. There is a great denial of colour, which, in conjunction with the grave treatment of the subject, has invested it with an impressive and solemn interest not otherwise attainable.

No. 204. 'Distant View of Exeter,' W. CALLOW. Exeter is seen upon a distant eminence, below which is visible at intervals the river winding through the meadows of the middle distance; the foreground is broken and irregular, circumstances which the artist has made to contribute advantageously to the picture, which is in every part freely pencilled and most naturally coloured.

No. 212. 'Caterina Cornaro's Chamber, Palazzo Cornaro, Venice,' LUKE PRICE. One of many striking, beautiful, and interesting works—results of a long residence in the sea-city.

No. 220. 'Street in Bologna, looking towards the Piazza,' W. CALLOW. This is a work of great power. It is minutely finished without injury to the breadth. The objects, although commonplace, are brought out in a manner to render them imposing and even grand.

No. 221. 'A Carnival at Venice,' J. STEPHANOFF. The crowd of masques are for the most part assembled on the stairs of a landing-place on one of the canals. The time is evening, and the dusky buildings at the end of the street tell forcibly against the pure but darkening sky. The throng is finely diversified in colour and character.

No. 228. 'Interior of a Norman Church,' FREDERICK NASH. This may be very like the place, and the artist has made the most of it; it is still, however, rather an architectural than a picturesque drawing.

No. 229. 'On the Road between Keswick and Ambleside,' J. M. RICHARDSON, jun. The main effect of this drawing is striking and natural. It is a sunset, and the materials are rocks and crags laid in with a diversity of colour more rich than harmonious.

No. 234. 'On Stainmoor, Yorkshire,' J. M. RICHARDSON, jun. A small but very beautiful piece of moor scenery, seen under a clouded effect, and with a dark and rainy distance.

No. 256. 'Vessels at the Nore in Shoal Water,' W. C. SMITH. A rolling sea is here going in upon the coast with every plain indication of equally weather; the horizon is dark, with rain, though the sky overhead is breaking into light. The whole is finely told, and the water does justice to the reputation of the artist.

thNo. 259. 'On the Grand Canal, Venice, from e Dogana,' W. CALLOW. An infinity of labour has been bestowed on this picture; but it comes forward under most disadvantageous comparisons, since the subject has been treated by the most eminent artists of our time.

No. 269. 'Ce n'est que le premier pas qui coûte,' F. STONE. A charming picture of two figures, managed with all the grace and truth for which the painter is famed. A youth and a maiden are standing at a door, both evidently much embarrassed as to the manner of breaking the ice. The confusion on the one side and blushing difficulty on the other are admirably told.

No. 270. 'Lancaster Sands—Morning,' D. COX. The sky and plain of sand are bright and sunny, the latter dotted with figures. We have many similar scenes by this artist painted with perfect success.

No. 273. 'Damsons, &c.,' W. HUNT. Beautifully coloured, and rich with the bloom peculiar to the fruit.

No. 275. 'Byron's Room—Palazzo Mocenigo, Venice,' L. PRICE. This is no doubt like the place, but the colour does not appear natural, or gaudiness has been mistaken for richness; the value of red and gilding seems neutralized when spread over the paper thus in one glare of high light.

No. 277. 'Juliet and Nurse,' J. M. WRIGHT. This is the scene in which the nurse wakes Juliet. The colouring is characterized by perfect harmony, but the figures are too English for Verona.

No. 280. 'The Shadow on the Wall,' W. HUNT. A boy is here asleep, and a strong light falls upon his face, and, being intercepted by his head, throws a shadow on the wall. It is most forcibly and beautifully painted.

No. 302. 'Milton dictating to his Daughters,' JOSEPH NASH. Much care has been bestowed upon this picture, but it resembles too strongly others of the same subject that have gone before it. It is much to be regretted when an artist exposes himself to the question of originality of composition, although it sometimes occurs that similarities will fall out most unaccountably.

No. 310. 'Study of Gipsies,' O. OAKLEY. These figures look like portraits. They have the formality of this class of Art, and what conduces to this appearance is that they are rather busied with the spectator than with each other.

No. 314. \* \* \* FREDERICK TAYLER. A forester bearing a buck upon his shoulders. It is a half-length figure, and reminds us of Rubens's portrait of himself, with the buck on his shoulders.

No. 324. 'A Shrimper,' O. OAKLEY. A boy seated on a rock on the shore. The figure is most carefully studied from nature, and comes well out from a light background of sea and sky. The work is, indeed, worthy of all praise, as one of the truest and most agreeable contributions to the gallery.

No. 333. 'After the second Battle of Newbury,' G. CATTERMOLE. This is a night scene, representing Donnington Castle, "where the King lay, and all the army about him." The near parts of the picture are thronged with figures, accoutrements, guns, and ammunition waggons; beyond rises the castle, from the windows of which issues a strong light. It is an extraordinary picture, and would alone make a reputation.

No. 340. 'Vessel unloading,' FREDERICK NASH. A small and slight, but very forcible, drawing. The vessel is high and dry on the sands, and stands in strong relief against the lighter distance.

No. 341. 'Tuning,' J. WM. WRIGHT. A lady standing tuning a mandoline. It is evidently a portrait, but managed with peculiar grace and elegance. The figure is closed by curtains very effectively disposed.

No. 353. 'Killin, Scotland,' J. D. HARDING.

The substance of this composition is a river winding its course among rocks, and bordered by picturesque trees, which especially mark the power of the author. The drawing of the trunks and branches is unequalled in this part of landscape composition. The foliage is singularly fresh and luxuriant, and the other components are put in with that vigour of touch which only can be acquired by lengthened experience. It is the work of a great master—a work that may be classed at the head of "its order."

The Exhibition consists of 362 works; and although we have devoted greater space than usual, we are compelled to leave unnoticed many of high merit. Indeed, it is scarcely too much to say, the gallery does not contain a single work that is not creditable to British Art.

#### NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

GALLERY, 53, PAUL MALL.

THE ninth annual exhibition of this Society was opened on the 1st of May. It manifests considerable improvement, generally. Some younger members have added largely to its strength; the older keep their ground; and there is unquestionable evidence of a resolve to labour so as to secure a continuance of that public approval, under the influence of which it has so markedly progressed. The members now number FORTY-EIGHT; and as sound judgment has been manifested in all recent elections, and there appears to be a proper anxiety to be on the watch for fresh talent, we may anticipate an increase of merit and "high desert" from year to year. Those who were familiar with the Society, during its early existence, will feel peculiar gratification in bearing testimony to the *prudence* of its course. It has never advanced extraordinary claims to public patronage; the commencement of its career was unostentatious; it struggled through adverse circumstances, meekly and modestly; at no period did it assume a character of rivalry; there was neither pretence nor affectation in any of its proceedings; and it has won its "golden opinions" by sheer industry and actual merit. Few societies have been better conducted; few have laboured more harmoniously; and the credit due to its officers we willingly accord. It has now assumed a high position; success will not, we hope, tempt it out of the right path. In some departments of the art of painting in water-colours the excellence of its members will be universally admitted; they bear in mind their duty to form an exhibition that shall be interesting and attractive to the public as well as satisfactory to the critic; the result of their combined efforts has been to produce a collection extensively and deservedly popular.\*

No. 3. 'Chateau of William de la Marck on the Banks of the Ambleve,' R. K. PENSON. This work exhibits in its treatment the utmost liberality, approaching even to grandeur. The chateau stands precisely upon such a site as would commend itself to a man like "him of the boar's-head cowl." The huge pines which tower above the spectator diminish the value of objects in the distance. The work is faulty as to its coldness of tone, and the extreme looseness of manner which marks some parts of it; but, as a whole, it is a production of very considerable merit.

No. 6. 'Antiquities of Xanthus—a Composition,' J. W. ARCHER. This is too literally a

\* We presume to hint the wisdom of a junction between the "old" Society and the "new," and have reason to think the object not difficult of achievement. There are many reasons in its favour, and none, as far as we can see, against it. A proper gallery might then be erected, in the place of two poor and confined chambers; and the Art would at once be placed on a higher footing than it has yet occupied.

composition to induce any idea of its reality, for the rich confusion of these forsaken marbles suggests that they have been posed for painting—they have fallen too gracefully. The picture is a good one of its kind, but not of a class likely to be prized.

No. 7. 'Arabs of the Bishareen Desert,' HENRY WARREN. An Arab family are perishing in the arid waste for want of water; the mother has surmounted the heap of stones which serves to shelter them, and is announcing the approach of the thunder-cloud that will bring rain and consequent relief. It is a beautiful conception, arranged with very considerable skill, and full of touching pathos. Mr. Warren has manifested great ability by the production of pictures of eastern character; and very great industry also; for it is well known that, although peculiarly accurate and happy in the scenes and persons he depicts, he is familiar with them only through books, conversations, and studies.

No. 19. 'The Vicar of Wakefield taken to Gaol,' JOHN ABSOLON. The *de profundis* of the Primrose family has been seldom more effectively painted than in this composition—which is body and soul "steeped" in the simple pathos of Goldsmith's history. We recognise in the principal figure an accurate summing up of the character of the Vicar, in whom is portrayed all Christian humility. The great charm of this picture is an entire absence of dramatic alloy.

No. 29. 'Near Dorchester,' JAMES FAHEY. This subject is well translated from nature; it contains a striking effect of rain: such incidents brought forward thus successfully cannot be otherwise than pleasing.

No. 30. 'Cromwell and Ireton intercepting a Letter of Charles I.,' L. HAGHE. This is the story of the letter which was taken from the saddle at the Blue Boar, in Holborn. At this time Cromwell was about forty-eight years of age; he however, allowing for his being a trifle war-begone, looks older. He has read the letter, which he yet holds before him, and has, in a moment of deep and anxious thought, raised his eye from it, as inwardly resolving the King's fate. The artist has amply succeeded in investing this figure with an interest that would distinguish it among a thousand—he wears the buff-coat and gorget, and is equipped and girt up for another Naseby.

No. 36. 'Vase of Roses,' Mrs. HARRISON. These roses would call from us an apostrophic verse of Herrick. The flowers and other botanical studies of this lady are the productions of an enthusiasm but seldom thrown into this department of Art. The texture is rendered with extreme delicacy, the perfection of imitative art. Mrs. Harrison maintains a foremost rank in this beautiful and peculiarly feminine department of the profession. Her works are universally appreciated for their delicacy and entire excellence.

No. 37. 'An English Pastoral,' HENRY JUTSUM. A group of trees, before which lies a mirror of standing water framed in sedges. This is all; and what there is of it is given with becoming sweetness: the foliage is fresh, and is broken with the best judgment.

No. 44. 'Scene on the Avon, near Bath,' AARON PENLEY. The river is here nothing but a shallow brook—the resort of cows, which are even now luxuriating mid-stream up to the knees. The boast of the picture is two pollard willows, bearing everywhere marks of the utmost care in the dressing of the foliage, which is too flat in colour.

No. 46. 'The Council of Quacks,' C. H. WEIGALL. A small picture; the subject an assemblage of ducks, each member of which is characterised in a manner to do abundant credit to the ornithology of the author.

No. 63. 'Hollyhocks,' Mrs. HARRISON. This flower has no hold of our affections; it is not

suggestive of any absorbing reminiscences; it is never the *mignonne* of the bouquet or the button-hole; but here, without its gaunt stalk, it is yet beautiful.

No. 73. 'Scene in North Devon,' H. BRIGHT. The substance of the composition is a cottage, backed by trees, and the scene closed in by high land. This artist seems to be losing that breadth of manner which constituted a principal beauty in his works. The objects in this drawing are finely made out, but the whole is distinguished by that excessive coldness which chills the beauty of his minor productions. Certain passages of the work are most deliciously wrought out, but the original style is vitiated by finish.

No. 82. \* \* \*, JOHN ABSOLON. This is a scene from "Paul and Virginia"—that in which the two children intercede with the slave-owner for the pardon of the runaway negro. How emphatically soever such a narration may be managed, it is still an ill-selected subject. The innocent children and the trembling slave are strongly drawn; but the cool braggartism of the planter marks rather the American than the French slave-owner. Excellent as are some parts of the work, they are not sufficient to redeem the subject.

No. 90. \* \* \*, F. W. TOPHAM. A story from "The Deserted Village,"—descriptive of the distress of a family quitting "Sweet Auburn," their home, and hearth. The work is conceived and executed in a spirit closely akin to that in which Goldsmith wrote. The day is clouded, like the fortunes of the emigrants; and their village is no longer the place "Where health and plenty cheered the labouring swain." The picture is everywhere eloquent in allusion to the beauties of the poem. It may stand among the finest productions of its class. It will, indeed, place the comparatively "new" artist in the foremost rank of his profession, and secure for him its highest honours. He evidently thinks and feels; has studied nature attentively and accurately in reference not alone to its external effects, but to the higher emotions that sway and control the human heart.

No. 97. 'View of the Remains of Knaresborough Castle,' H. P. RIVIERE. The remnant of the fortress stands upon a brow of land, and, with its site, is well drawn and coloured; but the foliage of the opposite woods is exaggerated into deep blue, the abuse of which, as here shown, is more conspicuous than the mismanagement of any other. The trees are otherwise extremely well dealt with—they are luxuriant and full masses, perfectly natural.

No. 98. \* \* \*, G. HOWSE. This has no title, though it looks sufficiently like a genuine locality to have one. The scene smacks somewhat of the Rhenish; the items are those usually constituting river-side views—boats and floating logs of wood, with appropriate figures and buildings; the water is deep and flowing, and the whole is most harmoniously coloured.\*

No. 106. 'Grange Borrowdale, Cumberland,' H. P. RIVIERE. A rocky scene, threaded by a brawling rivulet—a valuable snatch of picturesque nature. There is perhaps too much gray in the picture, and the rocks in parts look rather woolly; but these defects are counterbalanced by many beauties.

No. 106. 'Christ's Sermon,' HENRY WARREN. This composition claims for its source a lofty aspiration of that kind which has stimulated to the most transcendent efforts in high Art. The Saviour is preaching, surrounded by his disciples, and "a great multitude of people out of all Judea and Jerusalem." The arrangement of the materials composing the work have cost

\* We take this opportunity of entering our protest against an increasing custom—a custom of giving no title to a picture, but marking it in the catalogue by a series of stars—\* \* \*. The evil occurs in no fewer than fourteen cases in this catalogue of the New Water-Colour Society. A minute's reflection will show the folly of the system.

the author as much labour as the actual execution, and it is worthy of a more lengthened consideration than we can here give it. With the artist it has been a chief object to make out a strong and reciprocal intelligence between Christ and his audience, and to give abundant variety of character. Both of these he has attained—with qualified success. The figure of the Saviour might with better effect have been more substantial—the *spiritualization* of the figure degenerates into thinness. A default in the arrangement is the equalised line of heads—those of the disciples on the left; and we ought now to know enough of truth to adhere no longer to the fallacy of Greek draperies in such pictures as this—which, nevertheless, does infinite honour to its author as being of an excellence rarely surpassed. If Mr. Warren does not completely reach our notions of what the subject might be, who is there in modern Art who *could* realize our conceptions of the scene and its sublime character? There is but one living artist who could do this effectually; and, perhaps, after him, there are none who could draw more closely to it than Mr. Warren has done.

No. 117. 'Water Mill on the Lyd, Devonshire,' W. OLIVER. This is a triumph of finish; but the unity of the composition is destroyed by elaboration. The artist has celebrated every leaf of his foliage. The picture is distinguished by much beauty, but the eye is fretted by the general treatment.

No. 119. 'Vallombrosa, near Florence,' J. F. D'EOVILLE. The foreground materials of this landscape are richly and substantially painted. The time is evening, which is closing in with unbroken repose. The substance of the composition resembles the country very much in character.

No. 126. 'Billingsgate—first Day of Oysters—early Morning,' E. DUNCAN. Billingsgate is here veiled in sail-cloth and cordage. It is only on close inspection that the famous *locale* becomes recognisable. The oysters seem abandoned to a furious onslaught; the countless boats are boarded by crowds of all hues. The business of such a morning, if it be so busy as this, is well described.

No. 133. 'Peace,' JOS. J. JENKINS. This epigrammatic title refers to a picture of depth and pathos scarcely surpassed in Art. 'Peace' has brought back to his home an old soldier, whose adust features tell of hard service in a hotter climate than ours. He has reached the dwelling of a comrade who has been killed in battle, and has laid before the young widow the watch and some other trifles intrusted to him, while announcing to her the sad news that she is a widow. The argument is aided by every component thrown into the work, and is strikingly characterized by the exceeding force and perspicuity of its narrative; in short, in its style, it has hardly been excelled. The story is communicated with a mingling of grandeur and simplicity; the interest of high tragedy is given to the common incident of a humble cottage. The features are full of character—the character of truth—in nothing exaggerated. In execution, the work possesses vast merit. It is laboured to a degree—yet not so that the labour bestowed upon it is too suddenly apparent. The picture is a *chef d'œuvre* of the English school of water-colours; and gives assurance that another great artist is among us.

No. 146. 'Cattle—Evening,' C. WEIGALL. It is evening, and the cattle are returning home, and about to enter the village. The artist is eminently successful in describing a scene of rustic quietude, and this without the tameness which so often attends this style of subject.

No. 149. 'On the Sands—Boulogne-sur-Mer,' JOS. J. JENKINS. A group of three female shrimpers form here a most graceful and interesting drawing. The figures are coloured with infinite sweetness, and are opposed with the best effect to a clear sky.

No. 163. 'Torrent of the Basan Valley,' W. OLIVER. Throughout this drawing the utmost propriety prevails, save in the colour of the distant objects, which is too cold. The threatening clouds have settled on the cliffs in accordance with the gloom thrown over the whole.

No. 164. 'The Faries' Favourite,' Jos. J. JENKINS. A maiden is sleeping by the fireside, while a busy company of fays, presided over by Titania, are bearing a share of the household cares. Some ply the bellows, obedient to which the fire is blazing on the hearth, while other similar offices are committed to others. The sleeping figure comes in strong relief from the wall, and the circumstances of the drawing remind us of the brownie and fairy legends of Scotland and Ireland. It is a work of great ability; bearing out our belief in the high fame of the painter.

No. 165. 'Sands at Hastings—Sunset,' Geo. B. CAMPION. Everything in this drawing is kept up to a high tone, light and air being the aim of the artist. The position of the sun would have justified even more colour and less light.

No. 170. 'Looking down the Valley of Dolwyddelan, North Wales,' THOS. LINDSAY. A remarkable view, closed on the left by a high back of rocks, which is skilfully drawn and coloured throughout its extent. The shadows are judiciously thrown in, although in parts too strong. The near objects and figures are substantial and appropriate.

No. 171. 'Mill-dam and Stream, near Llan-nion, Brittany,' WILLIAM OLIVER. This work is pure and brilliant to a degree; the sky, distant trees, and group of figures, are put in with a masterly hand, but the water, with its filmy surface, deserves especial praise.

No. 178. 'Fishing Boats in the Semoi,' R. K. PENSON. The fishing-boats form but an insignificant part of the picture, the force of which lies in the very strong opposition of a group of trees to a light sky. There is an attempt at grandeur of effect, partially successful; the great fault, however, of the production is the excessive deadness of the shadows: they are heavy, opaque, and black to the last degree.

No. 179. 'North Sunderland Fishermen rendering Assistance after a Squall,' THOS. S. ROBINS. A vessel seems to have grounded close in shore, and the sea, still under the lash of the furious wind, is breaching over her. The fishermen are approaching in a boat; the tail of the squall is passing over the land, followed by a train of driving clouds. This is all very beautifully described, and the water would be the perfection of art were it not too near the coast to be so clear.

No. 180. 'A Vase of Flowers,' Mrs. MARGRETT. Exquisitely beautiful—as perfect a transcript of nature as Art can produce: the group is arranged with the nicest skill, and the execution is very near perfection.

No. 182. 'Sunset—Wimbledon Common,' H. MAPLESTONE. This is one of the most impressive descriptions of a sunset we have ever seen. The materials are the simplest imaginable; in short, Wimbledon Common, crisp with the wild and luxuriant herbage of summer, in opposition to the bright and immortal hues of the declining sun. An "elegiac twilight" is already on the heath, rendering value for value to the pure sky.

No. 203. 'View of Edinburgh from the Calton Hill,' T. M. RICHARDSON. The very title suggests an idea of labour almost without end. We look down from the Calton on a tracery of streets, opening only here and there, amid numberless houses, towering over which, near the middle of the picture, is, of course, the Castle. All must laud the diligence with which this drawing has been brought to its successful termination. It is highly valuable as a faithful view of the capital of Scotland. Indeed, it may

almost be regarded as "a key" to it; for it comprises all the objects most interesting in association with the city. We cannot call to mind a more successful example of a vast congregation of houses rendered picturesque. The "likeness" is admirable and striking; every point to which the eye is directed will be recognised by those who are familiar with the original; both the skilful hand and the judicious mind have gone over the subject—and the result is a beautiful and most attractive picture. The work is, indeed, essentially a work of genius—of difficulties completely overcome. Mr. Richardson is, we believe, a provincial artist, and his son, also an accomplished painter, has been recently elected a member of the senior society. They do honour to their native town of Newcastle-on-Tyne—a town that has contributed many other great men to the Arts.

No. 211. 'Brook Scene, near Rokeby,' J. M. YOUNGMAN. A tree, with some ducks, a running brook, and appropriate accessories, drawn and coloured with perfect mastery. The objects have that appearance of reality which suggests the idea of having been studied on the spot; at least, the treatment of the whole is true to nature. The artist, who is, we believe, a new member, is a valuable accession to the Society.

No. 215. 'Fair Day—an English Scene,' C. H. WEIGALL. This scene is constituted of such objects as can be thrown into such a composition with the best effect, and the interest and character are well supported throughout every part of the work.

No. 216. 'Winterton Church and Light-house,' G. S. SHEPHERD. A clever and agreeable, and, we feel assured, accurate copy of a striking scene, by an artist whose adherence to truth has been always staunch.

No. 225. 'Water Mill at Ambleside,' T. M. RICHARDSON, sen. A singular contrast to the large and full work we have been describing; yet one of almost equal merit. Here we have fine and truthful nature, copied with purity and truth.

No. 234. 'St. Paul's from the Surrey side of the Thames,' G. DUNGEON. A work, of course, involving an immensity of mechanical labour. Everybody has seen nearly the same view under every aspect. This takes a high rank among similar productions.

No. 235. 'Blowing Cold,' E. H. WEHNERT. Lafontaine's fable of "Le Satyre et le Passant" affords the subject of this drawing. "Le passant," a heavily booted and spurred galliard, sits blowing his soup cold in the hut of his satyr host; who, incensed at his thus "blowing cold," bids him "reprendre son chemin!" Now this fable literally rendered is a perfect mistake; its richness and pith lie in its allusions and associations. Lafontaine never contemplated so simple a reading as this. The treatment is a fallacy throughout.

No. 239. 'A Shaded Brook,' H. JUTSUM. We are here on every side shut in by fresh and verdant trees, which lave their lowest foliage in the running brook. This little drawing is a perfect transcript from nature.

No. 252. 'Cinderella,' Miss F. CORBAUX. The vain and flaunting sisters are going to the ball, leaving poor Cinderella to the household drudgery. This is a large and imposing work, executed in a spirit so true as at once to proclaim the subject. The contrast between the humble Cinderella and her haughty sisters is well made out; the parties are admirably characterized.

No. 260. 'French Herring-boat running into the Harbour of Holy Island,' THOMAS S. ROBINS. The boat lies well in the water, through which she is running before a stiff breeze, to seek shelter from the coming squall. This is an admirable work; the water is perfect in its volume and motion.

No. 266. 'Berncastel, on the Moselle,' W. ROBERTSON. Much labour has been expended

on this work to little purpose; the near objects are badly drawn, the clouds and cliffs are mingled without intentional effect, and the distant parts are blue and heavy.

No. 286. \* \* \* \*, JAMES FAHMY. A scene from Waverley, if our memory do not betray us, for the picture is without a name, and a long quotation which accompanies that of the artist is unacknowledged. The work is one of decided ability.

287. 'Abbeville,' T. S. BOYS. A most accurate copy of a singular town of France—once a famous fortress of the frontier. Few artists equal Mr. Boys in transcribing such subjects with a happy mingling of stern truth and picturesque beauty.

No. 289. 'Garden, Powis Castle,' D. COX, jun. The artist has thrown into this picture a group of figures of a Watteau-like character; the scene is made out of a section of the castle and a portion of the garden, constituting altogether a composition extremely pleasing.

No. 297. 'Irish Tourists—parting Blessings,' G. B. CAMPION. Clever, but by no means pleasing; not exaggerated, however, in its disagreeable features.

No. 298. 'The Old Gate from the Boom Quay—Rotterdam,' G. HOWSE. Voltaire's land of the "canaux, canaille, canards," affords many rich subjects, but none more beautiful than this—a bit of the canal brimming with the most tempting water in the world, the old gate, a slice of the quay, with boats and boatmen for Holland to be proud of. The Town Council of Rotterdam—(as Hood calls the place) do not know of this, or they would buy it for the Council Chamber.

No. 306. 'Jesus at the House of Simon the Pharisee,' EDWARD CORBOULD. Much is here sacrificed to pomp and display. Christ is evidently rebuking Simon, but this would not have told less forcibly with more simple accessories. The artist has a precedent in the old masters for circumstancing scriptural figures amid Greek architecture, but grandeur is attainable without this, which is a treatment not upheld by truth. Mr. Corbould's genius is of a very high order; he established his reputation last year; this year he has not done more than uphold it. We are compelled to compare him with himself—and we miss that simple grandeur in his treatment of the 'Woman taken in Adultery,' which bore comparison with some of the best of the great old masters. We may not, however, depreciate this work; because, though not a step in advance, it is a production of great merit.

No. 314. 'Evening—Folding Sheep,' J. M. YOUNGMAN. The colours in this drawing are charmingly subdued and harmonized, and the incident of flying and partial showers emphatically pictured.

No. 326. 'The Town Hall of Courtray,' L. HAGHE. This valuable drawing perfectly exhibits the powerful and effective style of its author. The hall is thronged with martial and monastic figures, the latter begging of the former permission to seek the body of Robert of Artois, who has been slain at the Battle of the Spurs. The middle age interiors of this artist have never been surpassed, and the present work, although not perhaps so large as others we have seen, has never been excelled by the same hand; scarcely, indeed, equalled by any artist of the existing age.

No. 337. 'Fresh Breeze—Hay Barge off Erith,' E. DUNCAN. Everything here is identical with the river and its scenery, save the water, which is too much broken, and not of the genuine Thames tone. A fresh breeze would give more volume, even off Erith.

No. 343. 'Martin Luther Reading to his Friends the Manuscript of one of his Pamphlets against the Abuses of the Catholic Church,' E. H. WEHNERT. This is a fine subject, but it has been treated with too much deference to a

## THE ARTS IN CONTINENTAL STATES.

**ITALY.—ROME.—Necropolis of Veii.**—Much interest is continually kept alive in regard to Etruscan antiquities, from the number of excavations that have been recently made in the Necropolis of Veii and elsewhere. In one lately-opened tomb, besides representations of men and horses on the walls, there are animals painted in fantastic colours as in modern arabesques. In this tomb was found a helmet, pierced on both sides, as if by a lance, or some such weapon, probably having belonged to the warrior in whose honour it was constructed.

**Burying-place of the early Christians.**—A new opening has been made into the catacombs on the opposite side of Rome from St. Sebastian's, where our readers are aware the entrance to them has long been. Some figures in attitudes of prayer are found rudely painted on the walls above the tombs; many small circular openings occur at different places—supposed places of prayer; but none have altars. The usual Christian inscriptions of "PAX," &c., are found on many tombs.

**D'Alleves.**—The Pope has released from personal service in his Swiss Guards, a young soldier, named D'Alleves, who has shown a strong genius for painting.

**PARMA.—Frescoes of Correggio.**—By command of the Grand Duchess Maria Louisa, the Cavalier Toschi has been occupied in making drawings for engraving, from the famed Correggio frescoes in the dome of the cathedral, as well as from those in the "Camera di San Paolo." One of the plates of the frescoes of the Camera di St. Paolo will soon appear.

**VERONA.—Portrait of Dante, by Giotto.**—In the Basilica of St. Fermo Maggiore, in this place, a large picture in fresco, by Giotto, the subject a crucifixion, has been discovered. What renders the picture peculiarly interesting is, that it contains a portrait of Dante when young.

**MILAN.—Sculpture.**—Luigi Marchesi, brother of the celebrated Pompeo Marchesi, has excited much admiration by his recent works, namely his statues of Professor Albertoli, the Marchioness Ala Ponzoni, the Duke Visconti Modrone, &c.; his group of 'Charity,' for the Countess Ciceri; his statue of 'The Madonna,' for the church of Bicemo, at Varese; 'Three Children' (a group), for the Duke Uberto Visconti, &c.

**GERMANY.—VIENNA.—New Church at Leopoldstadt.**—Professor Von Rosner is occupied in preparing cartoons for painting in fresco the new church in Leopoldstadt. Two are completed, and are greatly admired: the subjects of all the frescoes are drawn from the passage to the cross, *via dolorosa*.

**BERLIN.—Archeology.**—A new monthly archeological publication was announced at the meeting of the Archeological Society, on the 9th of March, by Herr Gerhard, in which will appear regular bulletins of the antiquarian discoveries in the neighbourhood of Rome and Naples. From the first number of the work, Professor Gerhard read an article on the Monument of Sesostris, at Karabel, between Smyrna and Sardis; and a memoir regarding the Augustan "Marmor Ancyrenum."

**Cornelius.**—Cornelius has been making designs to be represented in *tableaux vivants*, to be exhibited at the court festivals. The subjects are drawn from Tasso's "Jerusalem Delivered."

**C. Hermann.**—Herr C. Hermann has been called from Munich to execute the frescoes in the Atrium of the Museum. The subject proposed is a pictorial development of German history under the old Northern Mythology, and then under the influence of Christianity.

**MUNICH.—Art-Union.**—The Art-Union here numbered, for the year 1842, 2870 members. The picture to be engraved for the subscribers is,—"The Entrance of Frederick Barbarossa into Milan," by Schnorr. The engraving is by Thater. **Swankhaier.**—Professor Swankhaier has completed the marble group of 'Ceres and Proserpine,' for Count Redern, of Berlin, and is now occupied with the models of the statues of Von Tilly and Von Wrede, to be cast in bronze, for the new hall near the Residence.

**LEIPSIK.—Exhibition.**—The exhibition here, though only consisting of drawings, engravings, and lithographs, is a very interesting one. The number of exhibitions has been fourteen, from

the first establishment of the Art-Union. The last contained drawings and etchings of the most celebrated living artists of the schools of Dresden, Düsseldorf, and Munich, including drawings and etchings by Schirmer, Lessing, and Bendemann.

**FRANKFORT.—Monument to Goethe.**—The spot for the monument to Goethe, to be erected here, has been fixed on—the *Theater Platz*, facing the "Stadtallee."

**GORLITZ.—General Winterfeldt.**—A monument is to be erected here to the memory of General Hans Carl von Winterfeldt, celebrated in the seven years' war, on the spot where he fell. It is to be a cube of red granite, supported on columns of the same—having on one side the inscription "Here fell Winterfeldt, the 7th of September, 1757."

**ERLANGEN.—The Margravine of Bareith.**—The King of Prussia has ordered that a monument be erected here to the memory of the Margravine of Bareith, sister to Frederick II.

**LIMBURG.—The Cathedral.**—The beautiful Cathedral here, of Byzantine architecture, is now in process of restoration; two new towers, according to the original plan, are to be added.

**SWITZERLAND.—GENEVA.—The Tomb of Calvin.**—The sculptor Dezereus has offered to the council of the town to erect a monument on the grave of Calvin; but the proposal was declined in conformity with the desire of Calvin, expressed in his last will, that no monument should be placed on his grave.

**DENMARK.—COPENHAGEN.—Thorwaldsen.**—The last bas-relief of Thorwaldsen is of very large size; the subject is 'The Rejoicing in Heaven at the birth of Christ.' Three angels float in the middle; one bears a harp, the other two a piece of music; around them are other angels with different musical instruments. The whole is very animated and beautiful. Thorwaldsen has lately finished for the King a statue of his grandson playing with large dog—the boy is in the costume of a hunter.

**SWEDEN.—STOCKHOLM.—The Cathedral.**—The ancient cathedral here, which was partly destroyed by lightning in 1835, has been restored. The new steeple is of iron.

**Archeology.**—To those whose taste leads them to retire for a while from the bustle and strife of present pursuits among the quiet fields of antiquity, we have to note several works of much interest. The first we shall name is the beautiful publication of the Cav. Giov. Pietro Campana, entitled, "Antiche Opere in Plastica della Collezione del Cav. Giov. Pietro Campana." Roma, 1842.

**Ancient Works in Plastic, from the Collection of the Cav. Giov. Pietro Campana.**—These works give examples admirably lithographed from a most rare collection of plastic works, the forming of which has been the labour of many years; they are collected from the ruins of Latium, the tombs of Etruria, and the inexhaustible treasury contained in the soil of Ancient Rome. They consist of statues of every size, bas-reliefs, friezes, and every variety of ornament used by the ancients in the decoration of their houses: in this last department the collection is singularly rich; and we were especially interested by the engravings of the details of the roof and ornaments of an ancient residence at Ostia, part of which, by some extraordinary chance, still remains; the roof is perfect, and is a beautiful example of the care and elegance which the ancients extended to the construction of buildings even of the humblest materials. This brick roof is worked and adorned like the marble one of a temple; the antifixes are the most beautiful bas-reliefs of marine deities, Nereids, masks of Neptune, &c. &c., suited to the situation of the house on the seashore, as are the cornices, friezes, and other ornaments; the bricks are stamped with the names of the consuls, Arrius Petinus and Ventidius Apronianus, which carries us back to a flourishing period of Roman Art—the age of Adrian. This slight indication may give some idea of the interest attached to the work: it is to extend to 120 parts; three only are published; the descriptive text is in French and Italian; the size large folio.

The second work which has excited our admiration is that of M. Roulez, Professor of Archeology in the University of Geneva, and is the fruit of travel and study, principally devoted to the examination of ancient vases, and the explanation and illustration of the subjects the designs on them

represent. One example only we shall give. In the collection of the Cav. Pizzati, at Florence, is a vase in which the 'Judgment of Paris' is represented. In this painting Paris gives the apple, not to Venus, but to Juno; there is no doubt on the subject, for Juno is clearly recognised by her diadem, her veil above the peplos, her long tunic, and pomgranate wreathed sceptre. Venus turning away from Paris and Juno, bears the myrtle-sprig in her hand. Minerva is in complete armour.

Now, M. Roulez explains this as a work of the Sophists: it was their pleasure to overthrow, or try to do so, received opinions; and as it is known that some of their number tried to exhibit Helen as a model of domestic merit, and that her phantom only appeared in Troy, sent by Jove to excite dissension, so some other Sophist has adopted Paris, and makes him here prefer Juno to Venus, the rest of his career being probably that of a hero; his countenance and dress have a severe simplicity in this design, which give increased probability to the opinion of M. Roulez, whom we regret we cannot follow in his further researches. The third work to which we shall call the attention of our readers, bears more nearly on modern times. It is published in Berlin, and is called "Die Altchristen Bauwerke von Ravenna vom fünften zum neunten Jahrhundert historisch geordnet und durch Abbildung erläutert von Al. Ferdinand von Quast." The ancient Christian edifices of Ravenna, from the fifth to the ninth century, historically arranged and explained by plans.

Ravenna became for a time, after the fall of Rome, the most important city of the west; and during this, its short and brilliant period, were erected specimens of Christian architecture, adaptations of architectural forms to a new worship. In these buildings is recognised the Byzantine style, brought from Constantinople, bearing in its pure and regular character traces of the Grecian tradition in contrast to the Roman Christian temples of that period, which were either somewhat rude buildings, or merely adaptations of Pagan places of worship to Christian rites.

Herr Quast gives not only examples of the general spirit of the edifices, but furnishes minute individual details, and, besides the plates, his clear descriptive pen, separating and characterizing with learned acumen, makes his work easy to be understood, as well as instructive. His opinions are based on firm foundations, supported by proofs drawn from monuments, inscriptions, and ancient writings, so that the edifices of Ravenna stand before us in their chronological order, with notices on the relation in style and character they bear to each other. The plates are only twenty in number, and it were to be desired that their number was increased to represent all the interesting early Christian architectural works at Ravenna. Those given in Herr Quast's work, are simply as illustrations of his text.

## MEMORIES OF PICTURES.

BY MRS. S. C. HALL.

## NO. IV.—THE MINIATURES OF PETER OLIVER.

THERE is a class of pictures that may be more peculiarly termed PICTURES OF THE AFFECTIONS—pictures which, although hardly honoured as much as they deserve, are beloved far more than all others: placed next the heart, they become, as it were, enshrined within it; passing years within the beating sanctuary of our bosoms, OUR OWN, OUR OWN ONLY, too sacred to be talked of or exposed to common eyes; cherished beyond all telling; pressed by the lips of childhood in its first lesson of love; and kissed, when the world is fading, on the bed of death. No matter how roughly the usages of the world deal with us, who is there so utterly alone—so without sympathy and tenderness, without what occasionally softens and ennobles even a life that sin has stained and sorrow worn—who is there that has not moistened a mother's, a husband's, a child's, a sister's, a friend's MINIATURE with tears, or covered it with purest kisses? How many of those companioning evidences of love have been found "soaked" in the lifeblood of the faithful soldier on the wild battle-field, or cast up by the waves of the mad sea—a thing smiling with mimic life and love amid wreck and desolation. There are few cottages so humble but that a miniature—roughly and coarsely executed, and so awfully out of drawing, as to provoke, perhaps, a smile of scorn

rather than of sympathy—hangs over the chimney, the centre of all the little ornamented dwelling contains. You find them everywhere—glittering in the most costly gems in our royal palaces, or recalling the days and companions of our youth, the beginning and end, the first and last of "the Art that can immortalize." There is something home-loving in the occupation of miniature-painting which renders it a branch of Art peculiarly suited to women: it requires but little of the room, the bustle, and preparation of its more stately, though not more lovely, sisters; a light firm hand, a clear eye—the more anatomical knowledge and patient study the better, certainly: women surely are patient by nature, and opportunities for acquiring knowledge are increasing every day; the most exquisite person cannot discover any disagreeable odour in the preparations necessary; and in any room where a good north light can be obtained, a miniature can be painted. I cannot deny that men have surpassed women in this, as well as in all other branches of the Art; but I think, as far as miniature-painting is concerned, it may, without vanity, be ascribed to their being so much called forth, Desdemona-like, to "household duties." Men labour at a profession, and do nothing else; women, on the contrary, if they attend to their first great duties, can only take up a profession during the hours which are stolen from repose and recreation. It has been one of my greatest sources of delight, year after year, to observe the improvement of those young ladies whom I remember almost holding their first pencils; and it was with sincere pleasure I noted, only a few days ago, the gaze of admiration and the voice of public applause uniting in warm approval of the beautiful things they have achieved. I wish any words of mine could stimulate them to press forward in noble competition with the productions of the great "masters" whose pencils seem endowed with life; and never to yield to discouraging feelings, but believe that the will to do, is sooner or later accompanied by the power to do. Water-colour drawings of a larger size frequently take the place which miniatures once exclusively occupied in household decoration; but as keepsakes, miniatures must always retain their value. Old-fashioned country-houses are generally great depositories of miniatures: you frequently discover them stowed away in antique cabinets, shut up in secret drawers; sometimes you see them set, as an old jeweller called it once, "in harmony,"—two very small miniatures forming a clasp; as lockets, in brooches, or broad bracelet clasps, frequently so faded that little more than the outlines remain; while others are full of colour and expression, preserved in morocco cases that once were red, lined with satin that once was white, and fastened with rich gold clasps; and though the cherished and the cherisher are only remembered as "ancestors"—names to be proud of because entablature on church walls, or associated with monumental marbles, still miniatures are seldom insulted or destroyed. They are of a meek and unobtrusive, of an almost holy character, sanctified by private feeling. The heart must, indeed, be hard that would insult an old miniature!

A venerable castle, where some of the happiest hours of my life have been spent, is the very paradise of miniatures: instead of being hid away in holes and corners, they are placed on the tables, in the cabinets, and on the projecting slab of a high chimney-piece. One of these miniatures was said to have been painted by Peter Oliver, the younger of the two who were so celebrated during the reigns of Elizabeth and the Stuarts, and whose works, still found in the collections of the curious, are deemed of rare value. This miniature, the portrait of a lady, excited in me so painful an interest that I have sat in the embrasure of an old window until the evening deepened into twilight, working myself into such a fit of nervousness that the miniature trembled on my hand. Now, it seems strange that a branch of Art which I so dearly love, should be associated with "a memory" of a mysterious and painful character. The lady was painted in a pale pink satin dress, high on the shoulders, and looped very low on the bosom by a bunch of flowers, every leaf of which would have borne a magnifying glass without their beauty being impaired; the throat was long, and the head small and vigorous; a high bold forehead, unshaded by any of those ringlets that stood out around the pale thoughtful features, imparted both dignity and power to the expression; and if it had not been for the firm straight line of

thin lips, the miniature might have been considered that of a beautiful, although determined, woman. I believe the mouth is the most difficult feature to paint; I know it is the feature of all others which those who are not painters least remember in the portraits they look upon; ordinary talent makes it small and red—"twin cherries parted;" mouths of intellect are generally more expressive than beautiful, indeed many are decidedly ugly; but this lady's could not be pronounced so; it was much, much worse—it was one of suppressed anguish and unspoken bitterness. I have seen many exquisite miniatures of our English school—things to be loved and cherished, miniatures of power and beauty, forming an almost neglected portion of our national exhibition, and yet being a glorious exhibition in themselves—but I never saw, and hope I may never see, such a mouth as that; no pen could paint it, no eloquence describe the effect it produced on me; perhaps the story attached to the picture had much influence in giving the impression: it was this:—

A brother and sister, of high rank and considerable mental endowments; so considerable, indeed, that when little more than children, it was believed they tampered with the occult sciences, and understood much that the truly wise and virtuous hold in abhorrence. They were strongly attached to each other: the lady preferred Latin to tapestry work, and read from the same books as her brother; he took no pleasure in the sports and pastimes that in general delight young men, and by his intense love of study wearied even his tutor—an Italian friar, who had been brought over, from his highly religious and scientific reputation, to educate the youth, the only son of an ancient and noble house. How the brother and sister imbibed their peculiar notions, can hardly be conjectured; for when the Friar found that these young creatures entertained, in addition to divers heresies, an entire disbelief in the blessings or punishments of a future state, he first, as in duty bound, endeavoured to reason them out of their fearful heresy; and finding that impossible, resigned his charge, with deep and earnest regrets that his labours had been so perverted: for he had at first taught them the art of cunning disputation, which in the end they turned against him. Left thus to themselves (for their father was a frank, free Baron, who loved the wine-cup and the chase; and their mother, a sweet gentle lady, whose mind was nearly as unexercised at fifty as it had been at fifteen), they plunged, like fallen angels, still more deeply into the dark and dangerous abyss of false knowledge, and became hardened in infidelity; the hard, bitter, corroding sin, that knows no happiness for time, no hope for eternity, fixed itself upon them, and doubtless stamped the closed and painful impression upon the lady's lips, which I have looked upon so frequently. At last it was decided that the youth should travel; his burly father thought this was necessary to complete his son's education, because he had so completed his; and his mother, who had never expressed a contradiction to her husband's will, prepared for her son's journey. The brother and sister felt this separation bitterly; they had been all in all to each other from earliest infancy: the girl to the full as eager for knowledge as the boy; their only pleasure, in imparting pleasure to each other. The night before the youth's departure, they walked for some time along the shore, shadowed by the towers of their ancestral hall. The sea rolled heavily along the beach, breaking with but little foam, but a low moaning noise; the sky was overcast, and starless, and the moon looked damp and heavy; large full rain-drops warned them to take shelter in one of the fissures of the rock from the coming storm; it hurried fiercely across the ocean, the lightning cresting the waves with fire, while a sudden discharge of the electric fluid reverberated through the caverns—peal after peal of heaven's own artillery. The boy and girl stood side by side, watching the strife of elements, with bold unflinching eyes; suddenly a flash, a glory of light, flew past the brother and circled his sister; she fell, and for a moment he believed her dead; it was but for a moment—the lightning had spared its victim. She was confused and speechless, but she pressed his hand, and in a very short time was able to express her sensations, mingled with a word of praise to God for her escape. The youth's infidelity remained unshaken: even then he jested at the spontaneous feeling which had produced the exclamation. His sister, still trembling, entreated

he would make her a promise; it was the last evening they should be together for at least two years; she would make the same vow to him she desired he should to her; and when he consented, she made him kneel by her side, and then—while the thunder still muttered its responses to the ocean's roar, and the lightning, no longer forked, flashed its broad blue flakes through the distant clouds—he promised her, that if he died before her, and found there was really an hereafter, he would come from the spirit world and tell her so, leaving a TOKEN by which she should know that the visitation was no idle dream. She, on her part, gave the same awful pledge. It was a strange unnatural compact between those two; but it was entered into. They returned to the hall, and next morning the brother departed. Two years elapsed, but the young man became so enamoured with the dissipation of foreign life that he forgot his home; two more, and even his sister, the beloved and cherished fellow-student of his youth, only heard of his talents, and beauty, and knowledge, from comparative strangers. Her father waxed so wrath, that he threatened to disinherit his son if he did not come back within a given time; yet he came not. One day her poor mother's death took her husband as much by surprise, as if he had not known that she was wasting into her grave during the last ten years of her trembling existence. Soon after this the sister married, and the old Baron kept up the old state alone.

I inquired curiously to ascertain if there existed any memory connected with the original of the miniature, to lead to the knowledge whether she was happy or unhappy as a wife; but nothing appears to be remembered except that, having left her father's house, she resided with her husband in another part of the country, rather avoided by the gentlemen as a *séparée*, and though young, already mentioned by the ladies as one "who had been" handsome. That she married and left her father's house, is certain; that many years elapsed, and she had not seen her brother; and that (so goes the tale) at least twelve months had passed since she even heard of him. I tell the story as I have heard it a score of times—from old and young, rich and poor, sometimes whispered in the twilight, or when the blaze of the Christmas fire threw the carved furniture of the castle (where the miniature now is) into strong relief; and once, many years ago, I heard it, in the old, crumbling, mildewed room the lady slept in when a child—I heard it from the woman whose grandmother had nursed the brother and sister—she was then nearly ninety years of age, a blind crone, yet so familiar with every passage of the hall, that no one ever led or looked after her; all day long, she would traverse the passages, and at night, if a door clapped, or the boards creaked, every one knew that the old woman was again about. She could not remember the names of her grandchildren, yet her eyes would roll and her wrinkles become more rigid when she related what I will repeat. The lady had not, as I have said, even heard of her brother for quite a year; and though doubtless she often thought of him, his name was never mentioned. The summer passed, the harvest moon was bright in the heavens, and cast its beams through the small-paned but lofty windows of the bed-room, where the lady and her husband slept. The lady suddenly awoke, and saw her brother standing by the bed-side, close to the curtains; she sprang up, and held her hand out to him; he drew back; she called him by name; his reply was—"There is an hereafter." Fully as the remembrance of their compact came upon her, she had sufficient presence of mind to address him. "Is it so indeed?" she whispered; "but when I think of this, if I speak of it, how shall I know that you have come to tell me this—leave me the TOKEN." The apparition looped the foot bed-curtains one within the other. "Not enough," she said; "any hand might do that." The form glided to the bedside, pressed the fingers upon her wrist, that was beating its mad pulses on the coverlet—and was gone. It was morning before her husband awoke; the lady could not move, and her eyes were fixed; but, when aroused, her mind was perfectly clear; she pointed to her wrist—it was marked by the impression of the dead man's hand, exactly where it had been pressed—there was no pain, no soreness, but it was blackened as if burned. In a few weeks letters arrived, stating that on the night of this extraordinary appearance her brother had died—how, was variously stated; some said in one way, some in another, but all agreed as to the date. The

lady always wore her own miniature clasping a broad black velvet ribbon over those mysterious marks, which accompanied her to her grave; and it was removed at her death by those who placed her in her coffin. She lived about fifteen years after this visitation, devoting herself to acts of piety and charity, though her demeanour was cold and repulsive to the last. The miniature is still in existence—I saw it last about a year ago; and to doubt the truth of the tale I have related, in the neighbourhood where the family resided, would be considered a fearful heresy.

If Peter Oliver really painted it, his task must have been painful, for the proud silent lady could not have excited his sympathy. She looks determined not to please. Whenever I think of miniatures, that is the first that occurs to me—with all its accompaniments—the wild theories of these unhappy children, the seaside cave, the ruined hall, the tattered hangings of the red velvet bed, whose foot curtains were never unlooped, the—but perhaps, now that I have written it, it will not haunt me as it has done, leaving place for what will give more pleasure—the memory of some of the beautiful productions of THE OLIVERS which I have been fortunate enough to see from time to time.\* The history of those exquisite artists—I mean the father and son—is, perhaps, the most unpropitious a biographer could stumble upon. Both seem to have lived industrious, tranquil, peaceable, prosperous lives, delighting in leisure, abounding in patience, and enjoying nearly as much fame before as after their gentle unro-

\* I append to my anecdote a few notes concerning the two painters—all I have been able to procure, and I believe nearly all that can be procured concerning them.

Isaac Oliver was born 1556, died 1617, at the age of 61. He studied under Hilliard, and afterwards under Zuccheri. He painted the most distinguished persons of his time: among them Elizabeth; Mary, Queen of Scots; Prince Henry, son of James I.; Ben Johnson, and others. Rubens and Vandyke used his miniature of James I. for their portraits of that Sovereign. His miniatures of the Digby family are considered his finest works: they were lately sold at Strawberry-hill, and were discovered, in Walpole's time, in an old house in Wales, belonging to a descendant of the family of Digby. The portrait of Lady Digby, as she was found dead in bed, was esteemed by Walpole as the finest work in existence of this master. The whole set had been enclosed in ivory and ebony cases, and then locked in a wainscot box, so that they had fully preserved their tints. Walpole gave 300 guineas for them.

His prices may be gathered from an entry in the office-book of Lord Harrington, April 4, 1617, when he was paid, for four portraits of Prince Henry, £40. He painted whole-lengths, the best being of Edward, Lord Herbert of Chesham, who is lying reclined on one arm beside a tree; and a very curious full-length of 'Sir Philip Sidney' sitting on a bank beneath a tree: a quaint and curious dress is worn by him; and in the background is a mansion, and its formal garden, with "thick pleached alleys" and walks. He drew frequently from the old masters: Raphael's 'Murder of the Innocents' he copied; 'Holy Families,' 'Magdalens' and 'Heads of Christ' of his are also to be seen. His largest work is an 'Entombment of Christ,' consisting of 26 figures. An anonymous writer of the time says, "It was a piece of the greatest beauty and perfection, so near as it was finished, that I think Europe or the world can produce." Charles I. employed him to copy, in miniature, some of the paintings by Titian in his own collection, which he is said to have "admirably performed." He bestowed great time on his works. "A 'Madonna,' of Mr. Isaac Oliver's limning, cost him 2 years, as himself told me." (Bodleian MSS. note.) He died in Blackfriars in 1607, aged 61 or 62. He was buried in St. Anne's Church, in that parish; but the great fire destroyed his tomb, erected by his son.

Many of Hilliard's highly-finished works have been long attributed to I. Oliver. Queen Elizabeth sat frequently to Hilliard, who painted in a pale style, with little strength of colouring; he was much admired in his day, the Queen declaring all shadows in portraiture unnatural. James I. gave him a patent, by which he alone had the privilege of giving portraits of the King and Court to the world, and had leave to "take a constable" and seize any portraits or plates not according to what he might consider the true likeness.

Peter Oliver was frequently employed upon his father's pictures, particularly after he had grown old. He frequently copied paintings by the great masters. He generally made two of each portrait, keeping one for himself. His father bequeathed him all his drawings of his own execution; and he was empowered to purchase any other pictures in the same collection at one quarter less than their value. He was buried with his father, and probably died in 1634; the story of his widow serving to show that he was not alive at the restoration. He appears to have succeeded his father in business, and have gone on with such regularity and industry through life that no event has been recorded by any biographer.

mantic deaths. The widow of the younger was unfortunate enough to dispose of some of her husband's miniatures to the weak-minded sensualist whose hand stained the British sceptre after Cromwell's death. His Majesty gave them away to the "ladies" whose beauty created an immortality for Sir Peter Lely. This roused the honest indignation of the painter's widow, who retained some of the Puritan purity of old times, and she said, imprudently but honestly, "that if she thought the King would have given the miniatures her husband painted to such creatures, he should not have had them;" a right brave saying, worthy of the widow of a man of genius. But what did the King? Why, he clutched the words as a pretext for unblushing dishonesty, and stopped the pension, which was paying by instalments for the pictures he had bought!

### SCHOOLS OF DESIGN.

SIR.—In the "Somerset House Drawing Book," No. 1, it is laid down—

1st. That ornamental art, as an imitative art, ranks midway between fine art and mechanical art, and partakes of the nature of both.

2nd. That the fine arts, in dealing with poetry, history, and moral expression, occupy a ground in which the ornamental has no right to enter.

And yet thirdly, that on beauty, the artist and ornamental occupy the same ground!

Again, the author says the power of imitating objects artistically, is not adequate to the ends the ornamental has in view; and yet at page 3, the author says, "It is not merely with lines the ornamental has to do, he has often to represent the colour and effect of metallic substances, the glitter of gems, in short to make a picture of the article manufactured, which shall show its general character and appearance, rather than the exact details of its form and ornament, and there is no other way of acquiring the power of doing this, than by the habit of copying, as an artist, the objects themselves or similar ones."

Again he says, the ornamental arrives at practice through science—the artist to science through practice.

And yet he says in the same page, "a saving of time would be effected, if the chief labour at commencement were bestowed (by the ornamentalist) on drawing by the hand."

In reply to these inconsistencies, I beg leave to state that—

1st. The ornamentalist and the artist both express their thoughts and inventions by the mechanical operation of imitating natural objects by form, colour, and light and shadow. Imitation of natural objects is, therefore, the basis of both ornamental art and high art, and the easiest plan of practising the eye to see, the brain to conclude, and the hand to obey, is the best plan at the beginning, both for ornamentalist and artist.

A student may puzzle his memory so long by scientific distinctions, if he begin by science, as to find when he has acquired science, his hand perfectly helpless; and, therefore, both in the case of the ornamentalist and artist, a certain degree of peribund practice of hand, eye, and brain, is absolutely necessary for the highest genius in each department, as well as the humblest, so that when their minds comprehend any principle of science, or any object of nature, their hands may at once be able to illustrate them by design.

No great artist of the Greek and Italian schools was considered a great artist without science, and no great ornamentalist was considered a great ornamentalist unless he was a great artist too. Raffaello was a great ornamentalist; Giovanni d'Udine, and Cellini, were artists as well as ornamentalists, and the foundation of both characters is, first, a power of imitating what you see.

There is no doubt the imitation of senseless angles and cones, the octagons and pentagons, may generate a dead sort of mechanical imitation; but the mind of the mechanic and artist sleeps, because there is nothing whatever to interest their sensibilities in the progress; give them beautiful eyes, their sympathies are excited, and the circle and ellipse being portions in the shape of eyes, they acquire the same power of imitation, and exercise their powers of thinking too—follow eyes by the nose, they learn the perpendicular—let them then practise the mouth, they are obliged to make it horizontal, or at right angles with the perpendicular of the nose; the shape of the head is an ellipse, the forehead and chin, portions of the circle.

A human head is thus got through—combined with a human look, and a human expression; the students feel as they proceed; what practice for geometrical designs is left out in the figure? Then come action, repose, intention, and thought, by circles, ellipses, angles, and perpendiculars, but combined as a whole to convey a meaning; when the artist and mechanic are got thus far, show them if you please, where is the geometry of the head and figure; practise them in angles and circles, that they may know their meaning; make them both men of science, if you like, and let the mechanic begin to branch off—but begin with making both skilful in hand, eye, and brain, by imitating the same object, for, according to our author at Somerset House, "a saving of time would then be engendered, if the chief labour at first were drawing by the hand."

If the power of imitation be the first power to be acquired, as I have proved—both from what I have said, and what our opponent says—why separate the education of artist and mechanic? But what will you say, of he say, who he acknowledges that in the most important of all qualities of design, viz., beauty, the artist and mechanic stand on the same ground, and yet he would separate their education? And though he admits, page 1, they stand on the same ground, yet, he again says, they proceed to exhibit beauty by a method totally the reverse to each other!

"Beauty," says he, "with the ornamentalist, is a quality separable from natural objects." I reply, it cannot be. Beauty, with the ornamentalist, from whatever form taken and applied, excites the emotion in the work of the ornamentalist, not because it is separated from the object to which it naturally belongs, but because, to whatever object applied, it has the power of again exciting the emotion, as it did when a component part of its natural object at first.

If a sculptor, says he, makes a lily, he models a lily. "Not so the ornamentalist—the lily appears in his hands with a new individuality." Of course, but it is still a lily—the ornamentalist makes it a cup, a vase, but I reply it is still a lily turned into a vase and cup—and if it be not like a lily, what would a sensible master say to a mechanic who showed him a cup made of a lily? "A lily! it is not a bit like a lily. Pray did you model a lily, or draw a lily?" "No, Sir, I did not, because we ornamentalists treat lilies with a new individuality." Very true, my pupil, but to be able to give a new individuality to a lily, you must first be able to form a lily in clay, or by drawing; to model or draw a lily, you must get a lily and study it; after studying it, you must imitate it by modelling or drawing. Imitation is the foundation of all arts or design, whether for the artist or ornamentalist; and though the ornamentalist turns a lily into a new office, if he cannot imitate a lily or a human figure, somebody else must be employed to do them for him, and this must prove to you, my pupil, the necessity of the ornamentalist and the artist beginning alike. Because what applies to the lily will apply to the figure, and the arguments are as good in one case as the other, and both prove the same truth.

The author proceeds to say "that the ornamentalist and the artist are imitators of nature, but in different senses—in the one, the resemblance is fictitious; in the other, a reality." I reply, the resemblance in both is fictitious, and in both a reality, though the application is different.

The basis of all this sophistry is simply this: the London leading artists had been so accustomed to be, by their rank, their payment, their honour, and their privilege, a distinct class, that they were shocked by any attempt to revive the old connexion between artist and artisan. It was a sculptor, though rising from humble but respectable parents, who first intimated the insult of giving the artisan an education, which would rank him more as an artist than, for 300 years, he had hitherto been in England, and, of course, without any imputation on the honourable motives of any one now; we all know there is a degree of sensibility as to duty, in defending the views of our superiors, if to them we owe our station and our existence in life: it is right it should be so; perhaps I do not know if one is not inclined to respect gratitude, if even it lead a man into the most egregious folly.

It is a question, if the education of the mechanic be not of more importance than the great artist's. See how he worms himself into all the ramifications of domestic decoration; and consider, if he had, like the German and the Frenchman, the power of conveying his thoughts by drawing the figure, how prettily, at a little cost, the drawing-room of the middle classes, or their parlour, or their bed-room, might be made vehicles of history, and poetry, and design. The more the power of design is diffused, the greater, and not the less, will be the employment of the great painters. The wealthy and the noble will always have the best of everything; and they who love the handsomest women, drink the best wines, ride the best horses, and claim the highest stations, will not be very apt to desert the best artists, when they want their efforts. I am decidedly of Burke's opinion, "Whatever turns attention to Art, even the purchase of old pictures," said he "reflects again on modern painters."

Never, I assure you, was British Art in greater danger than now. This London school, by separating the artist and the mechanic, and promulgating the doctrine, that sound art and decorative art are distinct, will, in all probability, do more mischief than a century will remedy: because the facility of admission is great, young artists go to it, and all the horrors of gaudiness, glare, hardness, and false taste, will spread like wildfire among the rising generation.

What reason can be given, that a flower should look in decoration like botanical preparations, pasted flat on lime? Distinctness is necessary, of course, but why cannot imitations of nature be distinct, without being inconsistent with the eternal principles of the great masters, established by the greatest geniuses the world ever saw?

Titian, Velasquez, Rubens, Rembrandt, and Reynolds, made their imitations of nature on the basis of the philosophy of human sensations.

Equalities of effect distract; variety is necessary, but if carried too far, pains. It is the same with every quality of imitation in the great works of the great masters, no individual requisite of imitating life is ever obtruded; whereas, by the separation of the education

of the artist and the mechanic, the imitations of the mechanic at present are all obtrusion and totally inconsistent with sound Art. If a race of this offensive description issue out, as designers for glass paintings for rooms, for halls, what will the art be like in a few years? The combination of sound Art can be seen to perfection in a glass window at Liverpool, where a fine picture has been copied, with all the principles of imitation; it is a fine work of Art in manufacture, and that is what should be the object in all Schools of Design.

Not long since, returning from Windsor, I went into the coffee-room of the Royal Hotel, at Slough, and found the paper on the walls full of pretty designs, from Fant (I believe). "Is this English," said I. "English," said the waiter, with an air quite insufferable, "French, Sir, of course!" Here is another case in point. Had the same principles of educating the mechanic been acted on at Lyons as in London, would this French artisan have been able so to please us in the middle class by such a display? and is not every visitor excited and improved by such a simple way of recalling the scenes of some beautiful poems?

I apologise for this long intrusion; my engagements preclude the possibility of continuing this important question; but I promise it shall not rest whilst I live, for I know its vast national importance, and that we have only to add mastery to design to our indisputable quality of material, to take the lead in the world.

In conclusion, I deny, *in toto*, that the mechanic has no right to mingle history, poetry, and moral expression in his manufacturing design; what right has any man, or any body of men, to fix a limit to the exercise of human ingenuity? The Almighty sometimes gifts a Byron, and sometimes a Burns, and reflects on the principles of our own noble aristocracy. Who, more tenacious of their rights, but who more useful as a check on the Crown and the people? and who is refused admission into their class, even from the *Assembly* amongst us, if genius, guided by conduct and decorum, prove any individual worthy to be a great lawyer, soldier, sailor, or statesman? If it were not for this wise decision, what would have become of the Aristocracy long ago? And with such an aristocracy in Government, are we to establish one in Art, where now no genius, no decorum, and no conduct will procure elevation and reward for the humble mechanic? Ridiculous—the bare thought and promulgation will make us the laughter of Europe, if this preface has not done so long since.

The artists must become more workmen, and the workmen more artists, before the great revolution, beginning will begin aright; but it will not be by putting forth theories which will separate them more and more than ever, but by being convinced, as the great Continental schools have long been, that as imitation is the basis of both Arts, the students in each should begin alike.

At the revival of art in Tuscany artists were artificers, and artificers were artists, in the strictest sense of the words. "It was not in the academy, but in the workshop, their genius was nurtured—the *arte degli orfelli*." "The goldsmith's craft was the chiefest school; hence came the best artists of all the three Arts of Architecture, Painting, Sculpture—Brunelleschi, Ghiberti, Orcagna, Luca della Robbia, Massolino, Ghirlandajo, Pollajuolo, Botticelli, Verrocchio, Francia, Finiguerra, Andrea del Sarto, Baccio Bandinelli, Cellini, Salvetti, Lioni, Vasari, and a host of inferior names, all were brought up to this good trade." Painters were chiefly employed as decorators of houses and furniture, &c. In all the associations of artists, trunkmakers, varnishers, saddlers, cutlers, and all workmen in wood or metal, whose crafts had any connexion with design, were admitted; and yet in England they are to be separated in education!

I think, therefore, that there is nothing "very erroneous in saying that the power of imitating natural objects artistically, ought to be the first requisite in the education of the ornamentist, or that the artistic imitation ought to begin by the human figure, since the mastery of this would render every other attainment comparatively easy."†

To conclude. The error of the First Council of the London School of Design was this:—viz., adopting the German instead of the French principle in educating the mechanic. The French begin by the figure and sound art—and the artisan thus educated carries sound art to ornament. The Germans begin my ornament, and make the figure and sound art the second step—and the Germans never recover the false taste of their education.

It is not yet too late to remedy this great mistake, by passing a law in the Council that every mechanic, as at Lyons, should be obliged to begin by the figure; and if this be not passed, I predict a corruption of taste in artisan and artist, which will throw the art into hideous confusion for years.

## LETTERS ON ART IN FRANCE.

THE LOUVRE, EXPOSITION, 1843.

Paris, May 4, 1843.

SIR,—The exhibition of modern paintings at the Louvre is now the leading topic in the intellectual circles of Paris, and it has occurred to me that a few remarks thereon might not be devoid of interest in England, especially at this period, when the works of your own artists are brought before the public. Unfortunately, the exhibition of this year, though nearly as numerous as usual, is uncommonly poor as to quality, which we may attribute, on the one hand, to the circumstance of almost all the heads of the school having kept aloof; and, on the other, to the exclusion of many works of undoubted talent, which have fallen under the ban of our academical tribunal, the injustice of which I can, in many cases, vouch for, having seen and admired several productions which have been refused admittance; for the Parisian academy, I can assure you, is no more exempt than any other from those many abuses to which all privileged associations are prone, when monopoly is within their grasp, and uncontrolled jurisdiction one among their many rights. Our academy is mostly composed (though not entirely) of men of the by-gone school, who, alike contented with the small share of talent they have long held unchanged, and the still unchanging recurrence of official demands for their works,—bad though they be,—naturally, and indeed necessarily, oppose with all their power, which is great, the efforts of rising genius, and spare no pains to cast into shade that talent which they know must, in the end, outshine them. It is true they are aware that they can only protract the evil day, but they still rally staunchly round their tattered standard, and will only yield when resistance has become impossible. When we look at some of the wretchedly decrepit works hung upon the walls of the Louvre, and then learn that they are from the pencils of those very men who have thrust so much rising talent from the arena, we feel oppressed by mingled feelings of pity and indignation, and it would be difficult to say which is uppermost. Another cause essentially tends to destroy the charm of our exhibition—and that is, the total want of all taste, method, or discernment in the hanging of the pictures. It would, indeed, seem that, far from endeavouring to place them in the best lights and relative positions (in, perhaps, the worst lighted gallery in Europe) or to secure the most advantageous places for the best works, the very reverse had been aimed at, so lamentably all taste and justice sacrificed to the influence of favouritism for the privileged few, and utter inattention to the rest, which are simply hung up according to the size of the frames and to the places they will fill up. It may, however, be generally observed, that in the case of a better picture than usual having been sent in by an *unknown* aspirant to fame, that the very *worst* place will have been selected for that work; the cause is obvious; the hanging of the pictures is under the sole and uncontrolled authority of the director of the Museum, to whose absolute will all are obliged to bow.\*

It is generally thought here, and I fully concur

\* The hanging of the pictures is "done" by M. de Cailleux ALONE (he is Director of the Musée), and no rule, but his WILL, is in existence in this respect; he is entirely uncontrolled, and no one excepting the King—in whose gallery the pictures are hung, and whose director he is—has a right to make an observation. The jury for admitting the pictures is composed of the section des *Beaux Arts* of the Institut Royal de France: the members are—

Painting—Garnier, Hersent, Bidault, Ingres, Horace Vernet, Heim, Granet, Blondel, Delaroche, Drolling, Abel de Pujol, Picot, Schnetz, Langlois.

Sculpture—Bosio, Cortot, David, Pradier, Ramey, Nanteuil, Petitot.

Architecture—Percier, Fontaine, Huyot, Vaudoyer, Debret, Lebas, Leclerc, Guenepin, Gravere, Desnoyers, Galle, Tardieu, Richomme.

The members of the Institute receive a small pension from Government, (under £100 a year,) as *members*; but, being once nominated, they have always as much to do as they can get through, and more too, allotted them by Government for the decoration of public monuments, &c. &c. Academicians are elected by their own body, who present two candidates to the King, and he chooses, generally, the elder candidate. Many of the members have apartments and studios *gratis* in public buildings.

in the opinion, that annual exhibitions are too frequent, at all events to suit the spirit of this country. Formerly these *solemnities*—and such they were—only took place every three years, and the difference in the result was most apparent. All the "élite" of Parisian, as well as foreign, talent appeared at once and together, and then alone could a fair appreciation be made of the state of Art in this country; and further, historical subjects being the principal *forte* of the French school, a year's labour is rarely sufficient to complete any important work in this line. I also think that the public interest excited by the "Salon" loses much of its intensity by frequent repetition, especially in a city like Paris, where the sources of interest and amusement are so very numerous.

Scheffer and Delaroche—two of our greatest men—have sent nothing this year, but have several unfinished works of the first order on the easel, Ingres, Delacroix, Decamps, Roqueplan, Gudin, Marilhat, Jules Dupré, and Alfred Dedreux, are among the absentees; and the jury have excluded all, or part, of the works of Leon Cogniet, Robert Fleury, Flandrin, Eugène Deveria, Louis Boulanger, Paul Huet, Cabat, Corot, Couture, Wyld, Viardot, Schwiter, and Madame Calamatta; and, to give some idea of the justice of this exclusion, I will add, that each of these artists has at different times received, at the hands of the King, public testimonials of approbation and honourable rewards of merit. Out of about 4000 to 5000 works sent to the Louvre by about 1200 to 1300 artists (or perhaps even more, for it is difficult to ascertain this to a nicety), 1597, the works of 897 artists have been accepted; and out of this number how few—how very few—are worthy of serious criticism, or even of remark. There are, however, some few works of the first order; and first on the list, is a masterly production by Gleyre. This picture is modestly entitled 'Le Soir,' and thus leaves ample scope to the imagination, and allows the spectator to interpret, according to his own conception, the artist's meaning. Upon a large and beautiful river—probably the Nile—whose deep and tranquil waters reflect the last dying rays of sun-light, and whose distant shore is studded with a few palm-trees, glides, wafted by the sinking breeze, a bark of antique form and elegance; it is filled by eleven beautiful female figures, some of which appear singing to the notes of the harp, while others, absorbed in intense reflection, seem lost to all except the witching delight of the hour. One beats time to the music, another is wrapped in study—all look happy. Sitting on the boat's side is an exquisite figure of Cupid, who, with an antique oar, is steering the joyous vessel, and strewing flowers on the stream as she glides quietly along it. Seated upon the bank, near the spectator, is a man, not yet old, but whose brow bears the stamp of deep thought, and even of care; he contemplates in apparent silence the group passing before him; a lyre, whose broken string seems to announce that its last notes have flown, has fallen from his hands, and lies abandoned by his side; his rich apparel and the golden circlet surrounding his brow seem to indicate that he also has drunk deep in his youth from the same cup of joy now quaffed by the happy beings before him; but they pass by without even being aware of his presence. Is it not philosophy, or stoicism, contemplating the transient illusions of life? The style, composition, and execution of this admirable painting are decidedly antique. We might almost call it an imitation of the old remnants of Grecian art; but it is an imitation so unshackled and so intelligent that it has all the merit of entire originality: the only things borrowed are similarity of costume, and the most exquisite purity of style; the simplicity and grandeur of design—the choice and execution of the accessories—reveal the most delicate taste, and the most consummate art in the author of this *chef-d'œuvre*; it is not, however, a picture which attracts such general and popular praise—it is of too high an order—as one by Leon Cogniet, representing 'Tintoretto painting the Portrait of his Daughter after her death.' This is altogether a good picture. The countenance of the old painter is very fine; great force and truth are given to the violent struggle between the energies of the old man's mind, the indomitable resolution to go through with his heart-rending task, and the bitter grief which you feel is almost overpowering his faculties. The rest of the painting

is not equal to this portion of it, and the general effect is a plagiarism. Another *chef-d'œuvre*—a very gem (as to size as well as perfection)—is the 'Interior of an Artist's Studio,' by Meissonnier, every portion of which may vie with many of the most celebrated Flemish artists of old, both as to colour and delicate correctness of execution. The painter is seated at his work, and seems endeavouring to direct all his attention to the canvass before him; but he is evidently thinking, and thinking painfully, of the two *grand seigneurs* who are seated behind looking at his picture with foppish superciliousness. He feels awkward, embarrassed, and would give the world to be left alone; yet, he knows it to be a hopeless case: their flippant approbation or unseasonable criticisms are not near over, and, unconscious of the torment they are inflicting, the two fine gentlemen have evidently taken up their position and intend to lounge away the morning where they are. This little gem of Art is not more than six or seven inches high by four or five in breadth; but it can boast a grandeur of style, a breadth of effect, and a correctness of design which might belong to a picture of the utmost importance. This clever artist has many imitators, the only one of whom worth mention is Beranger, whose efforts are confined to fruit and dead game, in which he is eminently successful. Adolphe Leleux has painted some 'Spaniards singing and drinking at the door of a *Poada*.' With the exception of rather too grayish a hue pervading this painting, little can be said in criticism, and much in praise. The scene is lively, animated, true to nature and to local character, and the execution agreeable in the extreme; the effect of daylight is perfect. I wish I could say any thing interesting of the historical branch of the Art—that in which our school generally excels; but decent mediocrity, and a certain classical tame correctness, so entirely pervade most of the large paintings of this class in the Salon—and there are many measuring 20 and 30 feet in length—that the less said of them this year the better (for our own sakes at least.) From this sweeping clause, however, must be excepted a large painting, by Papety—the largest indeed, in the whole Exhibition. The subject is a '*Rêve de Bonheur*,' and the artist has endeavoured to show us happiness in a general sense, as proceeding from the various causes from which, according to his ideas, it may be supposed to proceed; the painting is, therefore, strictly allegorical. On one side we see a happy father in the midst of his family; on the other, recumbent figures emptying the last drops from the wine-cup; in the centre is a female playing the harp:—here is study, there is enjoyment; some are awake, some are sleeping. In the left corner are two young lovers, who have sought shade and retirement (by-the-by, the only quiet portion of the picture). In the background we have a telegraph and two steam-boats, and some dancing figures; but these objects, which may help to carry out the painter's ideas, are not large enough to disturb the classical appearance of the composition—admitting that the figures being slightly clothed in flowing draperies, which can belong to no country or epoch, entitles a picture to this denomination. In spite of many imperfections—nay, even glaring faults—the natural result of inexperience (for M. Papety is a very young man), this is a remarkable and striking picture. Some of the figures are beautifully drawn, and some of the groups well composed; here and there is a fine piece of colour, but as a whole it is very defective,—all is glare and glitter; hot, *hard* sunshine, and almost without a calm, cool spot for the eye to rest on; the draperies are generally ill-arranged, and denote, as I said, great inexperience; but M. Papety has struck far out of the beaten track, and great hopes may be entertained of him for the future. Horace Vernet has sent a pretty little picture, in which he has applied, perhaps happily, the existing Syrian costumes to the sacred personages of Holy Writ; and thus boldly cast aside the traditional blue and red draperies that certainly had no other authority than that of the old masters' works, while there are many reasons for supposing that the costumes of the Holy Land are much the same now as they were 3000 years ago. Robert Fleury has some able pictures, among which 'A Woman coming out of the Bath,' and 'The Emperor Charles V. picking up a painting-brush which Titian has let fall,' are the most con-

spicuous: the latter picture has, I think, too great a resemblance to the paintings of the old masters, of whom it is an evident imitation, especially as to execution and colour; yet it is a fine picture on the whole, and most conscientiously painted. Among the portrait-painters, Henry Scheffer, Couture, Schwiter (whose works bear a strong and laudable resemblance to the English school of the time of Sir T. Reynolds), are among the best. I might mention many more, but it would be tedious merely to transcribe a number of names having no claim to celebrity, or to allude to works, the best of which do not soar above mediocrity; and, indeed, with the few exceptions I have pointed out, the whole exhibition is made of little else: but I must not omit mentioning a fine picture of flowers by St. Jean, which might bear a comparison with the finest masterpieces in this style.

We have, most incontestibly, several clever landscape-painters in Paris, and the works of Marilhat, Dupré, Cabat, Corot, &c., will afford ample proof of the fact; but they have either contributed nothing this year, or have been excluded by the jury; consequently the exhibition cannot be said to contain one good landscape: there are three or four which are tolerable, but I cannot pause to criticise them, and the rest are bad.\* Yet one thing, in the absence of real talent, is worthy of remark—I allude to the works of a certain class of pretenders to an *elevated style* of painting in landscape, but whose only claims to attention appear to me to be great eccentricity, an entire disregard of nature, a leaden or slaty tone of colouring, and a style of drawing most inconceivably distorted from truth, under the pretext of "*haut style*;" all which, in fact, means nothing, and is, I take it, only a lame excuse for the absence of real talent, which is always simple and true. This would-be *style* of landscape-painting, of which E. Bertin is the head, is an evident emanation from the Ingres school of draftsmen, who, not possessing the redeeming talents of their great master, effect to despise that beauty of colour which they cannot attain, and take eccentricity of form and hardness of contour for elevation and originality.—The drawings and engravings are mostly devoid of interest, or have been long before the public, with the exception of a beautiful print from Raffaele's 'Portrait of Leo X.,' by Jesi.—The sculpture, too, is miserably poor; I never recollect it worse. Here, too, the jury has most awfully thinned the ranks; and, amongst other things, excluded some clever animals by Barye, the first man of his day in this line. Pradier has exhibited a beautiful Odalisque, under the name of Cassandra, to whom she, however, bears no resemblance, but the figure is beautiful notwithstanding; and Simart, a fine statue of Philosophy, which is worthy, in parts, of the good epochs of the antique. There are numerous portraits, but they are of course devoid of interest to any but their originals.—Upon the whole, the exhibition of this year cannot be considered as being a fair sample of Parisian talent: the different reasons I have enumerated have contributed to make it little better than a failure; but, if we may believe in the rumours circulated, and if those performances, of which I have seen many, be next year brought before the public, we shall then make ample amends, and perhaps produce an exhibition never equalled in Paris.

I am, &c., A. Z.

#### THE COUNTRY HOUSE.†

"Good wine needs no bush," and there is certainly none hung out here to give intimation of the entertainment and instruction contained in this volume; for "with designs" is far from clearly indicating that architecture is the subject of it, much less that the subject is treated in a manner highly attractive and popular; and, at the same time, with more diligence and knowledge of it than usual. It gives us the actual correspondence between an architect and his employer, relative to a villa residence for the latter. "Actual," we say,

\* The best landscape-painter among the exhibitors is an Englishman—Mr. Wyld; his works possess very high merit, and would obtain honourable distinction even in our own Exhibition. They consist chiefly of scenes in Venice and the Low Countries, and are marked by exceeding breadth and brilliancy of style, combined with high finish.

† The Country House (with Designs). Edited by Lady Mary Fox. Quarto. London: Murray, 1843.

because, at all events, the architect is no fictitious personage, he being M. de Chateaufort, of Ham-burgh, who has more than once visited this country, and who is known to the profession here, both by his "*Architectura Domestica*" (published in London), and by having obtained one of the premiums in the competition for the Royal Exchange. The idea of such a correspondence is as happy as it is original, since it affords ample room on both sides for discussion and suggestion, objections and replies; whereas, in general, designs are left "to speak for themselves," although they invariably stand, more or less, in need of a literary interpreter, even supposing their peculiar language to be tolerably well understood. Were it generally adopted, the mode of explanation on the one part, and of scrutiny on the other, would be mutually advantageous to architects and their employers. While the former would be stimulated to greater diligence, and be induced to consider well beforehand every part of their design, so as to account satisfactorily for whatever is introduced in it; the others would, in all likelihood, be generally more tractable, and surrender their own whims to the judgment and better taste of those whose professional services they require, and in whose ability they have, or ought to have, some confidence, if they are worthy of being employed. Few, however, we fear, can expect to meet with such clients as the H. B., who, on this occasion consulted M. de Chateaufort; nor was the latter by any means insensible of the advantage of having an employer both able and willing to enter into full examination of his ideas and drawings; for, in regard to that matter, he expresses himself very positively. "Undoubtedly it is very pleasant to an architect to meet with an employer disposed to give him *carte blanche*, and permission to follow out his own ideas unrestrictedly; yet it is still more delightful to meet with one who, instead of merely passively acquiescing, assents from conviction after deliberate study of the ideas submitted to him, and from the lively interest he takes in them." This is most true: even approbation of a design, or other work of Art, may be so ready and facile as to be almost chilling, inasmuch as it may bespeak indifference, and might frequently be interpreted to mean, "I suppose it is very fine, and am content to take its merits upon trust, without being bored about the matter."

The earlier letters of this architectural correspondence, are occupied with discussing what style should be adopted, as the one most in accordance with modern habits and refinements, or at least capable of being accommodated to them, without forfeiting its character; and M. de Chateaufort recommends a mixed and modified one, in which, without regard to the authority of precedents and extant examples, the architect should be at liberty to avail himself of principles and elements, and to appropriate and adopt them as circumstances may require. By many this will at once be set down as downright heresy: a mixed style, it will be said, can be no other than a mongrel style, and consequently a barbarous one. At first such would appear to be the inevitable consequence; nevertheless, a little reflection may convince us that it may be possible to compose a style that shall be congruous and harmonious in itself, although derived from elements which are generally held to be inconsistent with each other. Yet, all depends upon the mode in which they are compounded; the result may be either a mere jumble and hotch-potch, or it may prove a fresh combination, quite satisfactory in itself, although not at all so were it to be offered as being in strict conformity with any one style already established. But, unfortunately, there is a vast deal of obstinate prejudice prevailing in such matters, and which condemns beforehand all attempt either at originality or further improvement as dangerous innovation or barbarous corruption. People suffer themselves to be imposed upon—to be awed, or scared by mere names: so that the style itself be but "genuine" and "legitimate," no matter though the work itself be a piece of genuine insipidity; while, on the other hand, whatever wants direct precedent, is condemned at once without further inquiry. In architecture there must, it seems, be no crossing of breeds: the consequence is, the "races" deteriorate, and are at length fairly worn out in utter imbecility. From such prejudices M. de Chateaufort, for one, is perfectly free, and claims for his Art that freedom to which, as one of the Fine Arts, it is entitled.

Although not so clearly developed as they might have been, many of his remarks on this point are highly suggestive, and deserving of consideration. We cannot, however, be expected to follow him step by step; let it suffice, therefore, to say, that he decides in favour of what he proposes to call "the *renaissance* style of the nineteenth century," which will better understood by our quoting what he afterwards says:—"From this long letter you will collect that, while on the one hand I do not mean to be confined to a servile imitation of a Pompeian house, so, on the other, I do not mean to be tied down to repeat your Elizabethan architecture, or the Gothic of Germany or England; neither do I propose to give you a *fac-simile* of any building of the *Renaissance* school. To the best of my power, I propose, as the best style, that which adopts the pure broad principles of beauty which were, I sincerely believe, best propounded by the Greeks, and which all experience has shown to be best suited to receive addition from the highest style of painting and sculpture, which are, in fact, parts of architecture."

Many will perhaps say that M. de Chateaufort has, after all, given us what is little more than a very obvious combination of Grecian and Italian, or what would generally be described as decidedly belonging to the latter style; and such, we must confess, is the case. In one part we behold large arched windows; in another, an open arcade, whose arches spring immediately from columns: here a sort of campanile belvedere, and for the entrance a lofty tower, crowned by a square dome; while there is little to remind us of Grecian, properly so called, except some low pediments filled with sculpture. We are, therefore, inclined to say that, so far from being too venturesome, the architect has rather shown himself to be too timid, and has in consequence produced what looks more like a mere mixture of different styles, than a compound one, in which conflicting elements are reconciled into harmony, each being made to lose something of its original character, in order to adapt it to the new combination—to the fresh combination it is made to enter into. Nevertheless, although M. de Chateaufort himself has not solved that most difficult problem very satisfactorily, we are still of opinion that it may be done, provided we do not obstinately set our faces against every experiment of the kind, and meet it by a decisive "*impossible!*"

What is said of the interior of the house, may be taken as a model of architectural description—accurate and distinct, yet the very reverse of either dry or tedious, it being replete with highly-interesting explanation and remarks, pointing out well-studied effects, or convincing us that M. de Chateaufort had thoroughly *finished up* the whole in his own mind, instead of leaving, as is generally done, a very great deal for after-consideration, and to be treated according to the notions and caprices of those who may be called in to complete what the architect himself either has not been allowed, or has not thought requisite to carry on beyond a certain state of advancement. H. B.'s observations in reply are also deserving of consideration, and in the course of them he suggests one or two corrections of the plan that would certainly render the arrangement more convenient.

Not the least interesting portion of the volume is a letter from Mr. Eastlake, in which that eminent artist and critic delivers his opinions on the subject of interior decoration, with reference to this design of M. de Chateaufort. In the course of them he holds out one very good caution, namely, that in wall-painting, the real wall itself should never be lost sight of, since "whatever merits ocular illusion may have in painting generally, it would be injudicious to attempt it here." Reality may be carried too far, because those deceptive effects which tell so powerfully in scene-painting can by no possibility be kept up on the sides of a room, inasmuch as the spectator is not confined to a limited distance, but frequently comes nearly in contact with one or other of the walls, owing to which the intended illusion is destroyed altogether, and exists no more for him than does that of the stage for the performers who act upon it. The painting—as has sometimes been done, all the sides of a room, so as to represent a continued prospect, is but a puerile conceit,—a sad waste of ingenuity and skill, a degree of imitation,—where the "naturalness" sought to be produced only

renders the trickery of the artifice the more glaring. A room of the kind is fit only to be looked at for a few minutes through an open doorway, without passing the threshold.

We are well content that Mr. Eastlake does not "recommend frescoes for the sitting-rooms of dwelling-houses." "The impossibility of change," he observes, "in such situations, is an unpleasant feeling. In a public building, on the contrary, it is satisfactory;" to which he might have added, that in public buildings frescoes are seen only occasionally, and there is a wide difference between contemplating such works of Art for a while, and being *assailed* by the continual presence of one, by our own fireside.

What is said in regard to the practice—now, indeed, rather gone out of fashion—of hanging up family portraits on staircases, is judicious. So arranged they seem to be put up only in order to keep them out of harm's way; since, as far as decoration is concerned, the effect is no better than that of a broker's shop. There are, likewise, some hints well worthy of attention, in regard to the ground or colour of walls, best suited to set off framed pictures to advantage. The arrangement of the pictures themselves is likewise a matter that requires some tact, and is sometimes attended with considerable difficulty, if a good general effect is to be secured. A drawing-room, or even picture-gallery in a private house, should never be crammed like a public exhibition, if merely because that, as is the case as in such places, not half the things so hung up will be noticed, or can, in fact, be seen as they deserve, if really worth looking at.\*

After what we have said this volume requires no further recommendation from us; it is one of more than ordinary interest, and from which very much is to be learnt; at the same time we are compelled to remark, that notwithstanding the tasteful manner in which it is got up, the beauty of the lithographic plates and the woodcut vignettes, it is sadly disfigured by typographical and other errors, for they are really so numerous, and some of them of so singular a kind, that to take no notice of them would look too much like an intentional imposition on our part.

#### RECENT AND LIVING FOREIGN ARTISTS.

##### No. III.—LEO VON KLENZE.

HAD he only that one single title to fame, the architect of the "Walhalla" (see page 13th of this volume), Klenze would have a most widely extended and what promises to be perdurable celebrity. In all Art—in architecture more especially—very much depends upon opportunities,—upon circumstances which even genius cannot create for itself, any more than mere opportunities can create genius: a truth which the history of Art often illustrates rather painfully; for often, where there have been all outward appliances and favourable circumstances, the mind capable of turning them to account has been wanting; or else, where the mind has been, the requisite opportunity has been denied; and, as even an eagle cannot soar if caged up in a hen-coop, so neither can talent of a higher kind display itself without occasions corresponding in some degree with its powers. Had not old St. Paul's been destroyed by fire, Wren would have lost not only the greatest, but by very far the brightest, portion of his reputation; had not the Houses of Parliament met with a similar fate, Charles Barry could hardly, by any possibility, have shown himself what he is now universally acknowledged to be; and but for the intense love of Art which characterizes Ludwig of Bavaria, Klenze would have been comparatively—might have been positively, an obscure name. At present, it is in a manner identified with those of Bavaria and its capital. Munich may, in fact, be considered as the theatre of Klenze's talents; the various edifices there erected by him are of themselves sufficient to stamp it with architectural character, and have

\* With regard to very small pictures or miniatures, the best way of arranging them is that of putting a number of them within a single frame of such dimensions as will accord with other pictures in the room; or else filling with them a frieze on the top of a low cabinet, or similar piece of furniture, where they would be on the level of the eye.

given it an importance it had previously no pretensions to.

Klenze was born at Hildesheim, in Lower Saxony, in 1784, and after studying for about two years at the Carolinum, at Brunswick, was sent to Berlin, in order that he might prepare himself for the same professional career as his father's, who held an appointment as justice or magistrate. These views for him did not, however, at all accord with Klenze's own inclinations; he felt a decided passion for Art, more especially for architecture; while his father was averse to his embracing a profession wherein success seemed to be very doubtful and rare, either in regard to fortune or to distinction; and most certainly there was at that time very little prospect that architecture would all at once meet with that encouragement in Germany which it since has done, much less could it be anticipated by the father that Leo would be pre-eminently favoured by opportunities far more splendid and more numerous than have fallen to the lot of even the most celebrated. Yet if reluctant to accede to what he considered, if not absolutely imprudent, far less eligible views than his own, the father was neither harsh nor obstinate, but allowed him to attend the "*Bau-academie*" at Berlin; and finding what unusual progress he there made, under Professor Gilly, consented about three years afterwards that he should travel for further improvement, and visit not only France, but Italy and Magna Grecia. It was in the last mentioned and in Sicily that he first felt what ancient architecture really was; and the impressions he there received were so strong as to be, perhaps, in some degree, prejudicial, filling him with a too exclusive admiration of the Grecian style and its principles, a degree of veneration for it which—as is the case with the Walhalla—has limited his ambition to the fame attending what is rather the reproduction of a classical monument, than an original work.

On his return from Italy, Klenze was appointed in 1808, Hof-architekt at Cassel to the then King of Westphalia, Jerome Napoleon; a post rather of honour than of advantage, therefore it was a far more favourable circumstance for him than the contrary, when the events of 1813 *unhinged* Jerome, and led the ex-Hof-architekt to visit Munich, where he found in the then Crown Prince and present King of Bavaria, not only a liberal and enthusiastic patron of Art generally, but one who, like himself, was more expressly devoted to Grecian Art. From this period the professional career of our artist commences, and the names of Leo and Ludwig became so associated, we may say consolidated together, that they will go down to future times conjointly. The Glyptothek at Munich, begun in 1816, though not completed till 1830, was only the first of those splendid architectural undertakings by which they have signalized themselves, while in itself it is one that would have ensured fame to them both; for, if of no great magnitude, it is an edifice of refined classical taste, breathing more of the true spirit of Grecian antiquity than all previous imitations of it.

During the progress of the Glyptothek, he erected various other important structures at Munich, some of them upon a more extensive scale. The principal ones among them are—the Reitbahn, or Riding-house, 1822; the Kriegs-Ministerium, or War Office, 1824; the Odeon, 1826; Allerheiligen Kapelle, 1826; Pinacothek, 1826; the Königsbau and Festbau, 1827; Prince Maximilian's Palace, 1828; and the Ionic *Monopteros*, or Polychromatic Temple in the "English Garden," 1833. These edifices are by no means confined to the same style; on the contrary, are of very dissimilar character in that respect, and some of such as would hardly be expected from one so strongly prepossessed in favour of Grecian architecture: not only Italian of various epochs, but even Byzantine and Lombardic, as in the Allerheiligen Kapelle. That portion of the Residenz or Royal Palace, which is called the Königsbau, is in the Florentine style, and is unfortunately too direct an imitation of the Pitti Palace; in some respects a far closer copy of it than was at all desirable, but in others attempting to refine upon it by the addition of Grecian pilasters, without other modification; the consequence is that, though there is little unity, there is considerable monotony of expression; and the style looks altogether too affectingly severe to be suitable for a modern palace. Whether all these varieties of style were adopted by the architect himself, and if so, as practical experiments,

may be doubted; the probability being that herein he was obliged to defer to the wishes of his royal patron, who, with all his love of Grecian Art, seems to have been desirous of adorning his capital with some adequate specimen of nearly every style of architecture.

In 1830 Klenze commenced the Walhalla, of which, by-the-by, there is a more fanciful than truthful graphic vision by Turner in the present exhibition at the Royal Academy; but of that *monument* we need say nothing in this, having so recently spoken of it in a separate article, except it be to remark that it is one of which no adequate idea can be formed by seeing it represented from any one single point of view, however well selected. In a more general and distant view, like the one just mentioned, the impression produced by vastness of construction and material, is lost.

In 1834 Klenze was sent by the Bavarian Government to Athens, in order to project various improvements and embellishments for King Otho's capital; and though he does not seem to have done more there than make suggestions, one result of his journey was his work entitled "Aphoristische Bemerkungen," published in 1838. Another work of his, and one which has rather detracted from, than at all added to, his professional reputation is his "Christliche Baukunst," a series of designs by him intended to recommend the Grecian style as the one that ought to be exclusively adopted for churches at the present day, by all religious sects. This publication was severely attacked by Wiegmann in his "Ritter Leo von Klenze," both for its tendency and its execution; and it must be admitted, not altogether without reason. It is, indeed, rather singular that he should have directed his attention so particularly to buildings of that class, because if he has ever executed any one of the kind besides the Allerheiligen Kapelle, which is in the Lombardic style, it is not of sufficient importance to have obtained mention among his other buildings. The collection of the designs for these last,—"Sammlung Architectonischer Entwürfe," has been in course of publication for about twelve years, but has been brought out so very slowly that only eight Lieferungen have as yet appeared, the two last of which consist entirely of illustrations of the Walhalla.

#### ART IN THE PROVINCES.

**APPROACHING EXHIBITIONS.**—Artists will bear in mind that the periods for receiving pictures at the three leading Exhibitions of the provinces, viz., Liverpool, Birmingham, and Manchester, are *fixed*. Pictures for Liverpool must be sent to Mr. Green on or before the 31st of July; for Birmingham (to Mr. Green also) also on or before the 31st of July; those intended for Manchester must have been already sent. It will be observed that an Exhibition is to be formed in Norwich, connected with the East of England Art-Union, information concerning which may be obtained of the Hon. Sec. Advertisements emanating from these several Institutions will be found either in this number of the ART-UNION, or in the number for May. We have reason to believe that Birmingham will again take the lead; the artists there are active and energetic; their success last year was considerable; and, as they have now much longer time to make their arrangements, we have no doubt of their succeeding fully, both in collecting admirable pictures and in procuring a largely-augmented list of subscribers to the Art-Union. The Committee of the Birmingham and Midland Counties Art-Union are at present actively engaged in arranging a plan for carrying out the object originally contemplated on the formation of the Society. (See advertisement in another column.) Attention is pointed to the fact, that the Triennial Musical Festival will be this year held in Birmingham.

**SHEFFIELD.**—The drawing of the Art-Union prizes has taken place in the Music-hall of Sheffield. The chair was taken by the Master Cutler, the Report was read by the Rev. B. T. Staunus, and a highly respectable assemblage was collected on the occasion. Mr. Gilbert's speculation has, it appears, been a failure; it has subjected him to "a considerable pecuniary loss," and the experiment is not therefore to be tried again; or at least, if it be, it will under very different circumstances. We must do him the justice, however, to state

that he has kept implicit faith with his subscribers. The number of subscribers amount to 911, and the sum to be allotted in prizes amounted to £455 10s., the remainder of the subscriptions having been expended in purchasing the engravings for the subscribers, and in defraying the necessary expenses. The Committee determined on dividing the amount into the following prizes:—One of £80, one of £50, one of £35, one of £30, one of £25, four of £20, two of £15, six of £10, two of £8, nine of £7, and one of £4 10s., making in the whole twenty-nine prizes. The £80 was a portrait of the 'Duke of Wellington,' by Mr. Salter. Among the other prizes were paintings by Müller, M'lan, Stephanoff, Tennant, Shayer, &c. We copy a paragraph from Mr. Gilbert's Report:—"He does not pretend for one moment that he had no idea of personal profit; but at the same time his plan offered advantages which were, in his opinion, superior to those held out by any other Art-Union of which he had any knowledge. One striking feature of that plan was, that parties subscribing had the choice of a number of engravings of great excellence—all of them having been published at from one to two guineas and a half each—and that the plates were delivered on the payment of subscriptions. In addition to this, the subscribers and their families had at all times free admission to the exhibition."

ROCHDALE has been disgraced by an act which the local papers justly characterize as "diabolical." The best account of the circumstance we find in a private letter.

"Butts (Rochdale), April 30, 1843.

"I think I named to you in a former note that Danby's picture of the 'Opening of the Sixth Seal' was exhibiting here; since which I have learnt that it belongs to Mr. Brett, of London, whom, I believe, you have some knowledge of. But grieved am I to tell you, that some miscreant last evening, between four and five o'clock, cut a piece, about twelve inches by eight, out of the centre of it, in the temporary absence from the room of the exhibitor. The slave, with uplifted hands, with the prostrate king and warrior in armour, is the part cut out and taken away, and no trace whatever is left of the parties who committed this execrable deed. We all feel the thing to be a disgrace to the town, a disgrace to the country, and a disgrace to the nation that there should have been such a miscreant in it. The poor fellow and his wife, who have the charge of it, are almost deranged; he was gone out to give orders for printing bills to announce his last week, and his wife let in two strangers, it is supposed not belonging to the town; and immediately after they had left the room, the man, on going in, observed that the light was excluded, and on opening the window the discovery was made. No blame can be attached to the man and his wife, who had the charge of the picture, as they are universally spoken well of here. The picture was valued at 1000 guineas, and was being disposed of in shares at £1 1s. each, the list of which was nearly completed."

**DUBLIN.**—The two Exhibitions are at present open. We are not as yet enabled to furnish our readers with statements as to their contents; we shall do so, however, in our next. Meanwhile we borrow a few paragraphs from the Dublin papers; first, concerning the "Royal Hibernian Academy," from *Saunders's News Letter*:—

"We have already given expression to the opinion, that the present exhibition is by far the best and most promising that has ever taken place at the Academy. The walls of the entire suit of rooms are covered from floor to ceiling. It is worthy of remark, that when the Royal Irish Art-Union was first started, the annual exhibition of the Academy was obliged to be discontinued, after struggling for years against the apathy of the public in respect to the Fine Arts. Now we have two exhibitions, vying each with the other, while but three short years since one could not be formed and upheld. To this most gratifying state of the Fine Arts in Ireland the Royal Irish Art-Union has powerfully contributed; it rests with the artists themselves now to advance their profession to the enviable height it has attained in other more favoured lands. While we thus rejoice at this revival, we are constrained to express not a little disappointment at the want of exertion in our native artists, as exhibited in the Royal Hibernian Academy. Out of 671 works of Art, 340 of them are English productions, and, on the average, very superior to those of their Irish competitors. The members of the Academy contribute only 77 pictures; the remainder are by artists not members. Some of the productions are quite unworthy of a place on the walls of any exhibition."

Next, concerning the "Society of Irish Artists," from the columns of the *Evening Packet*:—

"The exhibition consists of 121 pictures, 60 of which are contributed by the Messrs. Hayes and Brocas alone, from which circumstance many ill-natured per-

sons would pronounce it a snug family borough. The majority of the other names of exhibitors are yet, as far as we are aware,

'To fortune and to fame unknown'—

a riddle, if riddle it be, that after a glance at their works it would require no Oedipus to read. In good sooth, if the exhibition do not improve marvellously, and should any of our English friends take the first one as a sample of Irish Art, some of the taunts ascribed to them, whether truly or not we 'dinna ken,' in the address, cannot be said to be altogether undeserved."

[We direct attention to an advertisement of the "Royal Irish Art-Union," which appears in another column. It announces the day for closing the list.]

#### OBITUARY.

HENRY THOMPSON, ESQ., R.A., LATE KEEPER OF THE ROYAL ACADEMY.

THE death of this well-known artist took place at his residence, Union-street, Portsea, on the 6th of April, at the age of seventy years. The father of Mr. Thompson was a purser in the navy, and resident in St. George's-square, Portsea, where the late Keeper was born.

His native place was his favourite retirement from the activity of town life, and here, in 1828, he took up his permanent residence; but from his secluded habits very little was known of him, except that his charity was extensive considering his means.

Prolonged corporeal suffering compelled him almost entirely to abandon the exercise of his Art. The little he has done has been with a view of presentation to friends in return for offices of kindness and attention. He was especially fond of the recreation of boating, and his boat was among those objects which formed the subject of his last sketches, which were painted in oil upon rough paper, and so managed as to present a very agreeable effect. The boat was sketched for the office-keeper at the Gun-wharf, Portsmouth, to whom it was presented by Mr. Thompson. Such little exercises formed the amusement and solace of his declining years; being from infirmity unequal to greater efforts, they served yet to identify him with the profession in which he had risen to distinction. His style was historical and poetical—his 'Perdita' will be long remembered as one of the gems of its class. Since his residence at Portsea he has painted nothing of importance.

The late Mr. Spencer, Store-keeper of the Ordnance Department, was his particular friend for a period of forty years. With this gentleman he resided during his visits to Portsea, on which occasions his favourite relaxation was boating, being then in the enjoyment of robust health. His malady was of many years' duration, complaining principally of general debility. During the last three years he could not lie down in his bed; upon this state drooping supervened, and was the proximate cause of his decease. The neighbouring poor have lost in him a liberal benefactor, the extent of whose unaffected charitable disbursements was unknown.

In disposing of his property he bequeathed to the person who attended him during his last illness, and whom he had for some time previously known, £300, his house, carriage, and all his furniture, and to his female domestics £700 each. His funeral was private; his physician, Dr. Scott, his executors, and attendants, were all that followed his remains to their resting-place. He was interred in Portsmouth Churchyard, near the spot where his mother was buried. His works of Art have been distributed among his friends.

Paris.—M. Fauchery, the celebrated engraver of the beautiful print of 'Joconda,' is dead.

Munich.—On the 13th of March the historical painter Rockel died here.

On the 18th the painter Riedmaier was struck with apoplexy in the street, and died immediately.

Palermo.—The Abbate Niccolò Maggiore, fellow-labourer with the Duke of Serradifalca, in a work on the antiquities of Sicily, died here in the prime of life.

## VARIETIES.

**THE CARTOON COMPETITION.**—It must not be forgotten that **THE LAST DAY FOR RECEIVING CARTOONS** will be the **SEVENTH DAY OF JUNE**. They will be sent to Westminster Hall on or before that day, and of the arrangements for their subsequent exhibition the public will be informed in due course. We are not at present aware if they will be exhibited *free*, or if a small charge will be made upon visitors—say in the way of money paid for catalogues. The latter will, probably, be the plan adopted: a direct charge to the public cannot be well made, inasmuch as the public will pay for the prizes, and they will be exhibited in a Hall which is public property. At the eleventh hour, we understand, the list of competitors has been augmented, and some artists are mentioned as likely to compete whom we shall rejoice to see enter the lists. Still, our hopes remain with the younger, and as yet untried, talent of the country.

**THE HANGERS** at the Academy, this year, were Messrs. Phillips, Alfred Chalon, and George Jones. It is, we believe, known that the members take this most onerous, most troublesome, and most thankless duty in rotation. It will be about fourteen or fifteen years before these gentlemen are again called upon to discharge it.

**THE SCHOOL OF DESIGN.**—We regret to learn that the connexion of William Dyce, Esq., and the School of Design, has ceased; and that the Directorship has been confided to—Wilson, Esq., a gentleman not known as an artist, but who has been travelling on the Continent, employed by "the Royal Commission" to make inquiries relative to painting in Fresco in the several European states. He has, therefore, been subjected to a test that has obtained for him the confidence of those most interested in the prospects of the British School of Design. Still, without intimating any doubt as to the ability of his successor, we cannot but lament the loss of the services of a gentleman of high talent and large experience. His time and mind were, we believe, divided,—perhaps too much—upon several subjects; and possibly, therefore, he may not have been as useful to the Institution as he might have been had circumstances justified him in devoting himself exclusively to the one great object. For our own parts we have, in common with the public generally, often desired to procure evidence of "work advancing" at the School of Design, and have found it very difficult to obtain any. If the new Director bring less skill and experience to the test, he may bring to it more active energy, and we shall be the gainers.

**PLANS FOR ESTABLISHING A "BRITISH GALLERY."**—A project, which to us appears utterly untenable, has been recently suggested, for the elevation of British Art and the advantage of British artists. It is grounded exclusively on private patronage, which may certainly do much, which certainly has done much, but which will quite as certainly never do that which ought to be done. For instance, among other schemes it is proposed that the "Athenæum Club" shall subscribe largely to decorate their mansion with the works of British artists; but things of the kind are done every day—to the manifest advantage of the painters employed, but in no way, as far as we can see, to the advancement of the Art or the strengthening of public taste. If the Athenæum were painted from cellar to garret, it would be comparatively useless as a source of general enjoyment and improvement—unless the members were to open their gates to all comers. Whatever is done for the public should be done by the public, to be of real service; the nation is bound to teach itself, and it will surely make a great effort to do so ere long. Some three years ago, Sir Robert Peel intimated that a time was coming when a real National Gallery should be built in Hyde Park: it will be, we presume, not merely a depository of the works of old masters, but a

collection of the works of British artists, purchased or commissioned by the Nation by annual Parliamentary grant. For our own parts, we shall never cease to labour until this great and worthy—the only great and worthy—object is achieved. Whenever it is really in progress, there will be, we apprehend, little difficulty in commencing the collection, by inducing the Royal Academy to present to the Nation its store of Diploma pictures, now hidden in one of the holes in Trafalgar-square. Such a destiny would induce artists, when elected, to present really good pictures, instead of sending inferior works as matters of form. We are full sure that, after this nucleus, many private gifts would augment the collection; that many legacies would be bequeathed to it; and that, in short, before the expiration of ten years, England would contain a gallery that should be really a British Gallery.

**THE PRINCE ALBERT** having resolved to decorate, in fresco, a small summer-house in the garden attached to Buckingham Palace, has commissioned Messrs. Eastlake, Macleise, Lealle, Uwins, Etty, Stanfield, E. Landseer, and Sir William Ross to execute the work. The subject selected is the "Masque of Comus," from which the whole of the designs are to be made. The figures, we understand, will not be above two feet high. This experiment, on the part of his Royal Highness, is highly creditable to his taste and judgment; it will afford a valuable opportunity to some of our best artists to exhibit their power over a new style. The Prince has done that which the Nation could not do without injustice—commissioned the painters of established fame, who are most likely to be successful. An opportunity may thus be afforded for judging their capabilities, although they will not (with one exception) be among the candidates in the Cartoon competition. A hint may be thrown out to others who desire to obtain decorations in this way; and no doubt, after the exhibition has taken place in Westminster Hall, some younger aspirants will be selected with that view.

**THE ARTISTS' FUND.**—The dinner of this excellent Institution took place on Saturday, the 20th of May—Lord John Russell in the chair. It was, we lament to say, attended by comparatively few of the leading artists; the majority of the guests being, indeed, composed of those who fill minor parts in the profession. Of members of the Academy there were but two or three; and these not the most prominent. We fear that sufficient energy is not manifested by those to whom is consigned the executive of this Institution; so much indifference would not be manifested, unless there were some evil-working apathy at the fountain-head. The prosperity of such Institutions usually arises from the energy of some single directing mind: we fear the Artists' Fund has not this vast advantage.

**ETRURIA ILLUSTRATED.**—We have pleasure in announcing the speedy publication of a work, illustrative of the scenery of ancient Etruria. It is not a little strange, that among the numerous works illustrative of Italy which, of late years, have issued from the press, not one is to be found delineating the sites of Veii, Cære, Tarquinii, and other cities prominent in the early pages of Roman history: and that the untravelled public know almost as much of the scenic characteristics of Abyssinia or Japan as of the remarkable region in question—a region marked by features decidedly peculiar, but often eminently picturesque and beautiful. The growing interest in Etruscan antiquities makes a work of this description quite a desideratum. We have been favoured with a sight of the drawings, and cannot speak too highly of their fidelity to nature,—having been finished on the spot; of the taste evinced in the choice of subjects, and of the skill and spirit displayed in the execution. The portfolio from which they are selected is the fruit of three tours, and a thorough investigation of the land. The artist has, with great judgment, combined in his sketches the singular re-

mains of Etruscan architecture, hitherto unportrayed, with the picturesque features of the country; so that his work will be as valuable an addition to the library of the antiquarian as to that of the mere lover of natural scenery.

**COSMORAMA.**—The views exhibited this season are generally superior to any we have yet seen here. There is a view of the 'Interior of St. Peter's,' the central nave terminating with the high altar. This representation is as perfect as can be well imagined, and conveys as good an idea of St. Peter's, at least this part of the structure, as can be obtained short of being in the grand temple itself. There is also a view of 'Mount Vesuvius in Eruption.' This effect is extremely well managed. Vesuvius is seen by night, and at a distance; it seems to vomit forth fire in fitful gusts from its summit. The series contains also views of Athens, Bregentz, and the Lake of Constance; Mont Blanc, Isola Bella, Interlachen, and Mount St. Bernard.

**PREPARED PANELS.**—Some prepared panels have been sent to us, to which we direct the particular attention of artists. We have already submitted these specimens to several, and the "Report" coincides with our own opinion, justifying us in strongly urging on painters the duty of giving them a trial. The inventor is a Mr. Wing, of Fordingbridge; and, from the communications he has sent to us, we learn that ill health having compelled him to relinquish the practice of Art, he devoted thought and labour to the produce of this means to facilitate and advantage the work of others. The improvement consists principally in the assurance that they will neither warp nor crack; a desideratum which we think fully secured. The panels are, it appears, made of well-seasoned deal; the wood having been submitted to a high degree of heat; they are then saturated with drying oil, and the fronts covered with fine canvas, cemented on with a preparation of oil varnish and white lead, and then brought up to a face with the same composition. The frame round secures them from warping; the canvas on the front prevents cracking or splitting; and their being saturated with oil, makes them not easily affected by damp or moisture. This statement is borne out by a careful examination; and we do not imagine that a single artist will inspect the panel without desiring to use it. Mr. Wing states that circumstances enabled him to produce the panel at a cost very little beyond that of ordinary strained canvas. We cannot, however, enter sufficiently into details, and will therefore leave these panels at the ART-UNION Office, for the inspection of artists who are anxious to encourage improvements in those elements of the Art upon which their fame must at all times greatly depend.

**SKETCHING CLASS RENDEZVOUS.**—We direct attention to an advertisement from Mr. George Harrison, having reference to a "Sketching Class"—the business of which is to meet at some given place in the country, not far from London, and, selecting some particular objects, to sketch from nature. The plan is novel and may be useful. There are plenty of societies for studying from the living model; but few or none who may thus mingle social and healthful enjoyments with the immediate motive to labour. No doubt "the club," if club it may be called, will be liable to the jokes of professional brethren who make lengthened tours and distant voyages, once a year, and who will characterize these "stay-at-homes" as "cockney artists;" but they will have forgotten that some of the most beautiful scenery of England surrounds the metropolis—scenery associated with glorious memories, immortal minds, and great purposes honourably achieved. The painter will indeed find a vast store of wealth within an hour's walk of the city, and within an hour's railroad run, a greater abundance of rich materials than he could work up in half a century. Mr. Harri-

son's plan is a good one; and may be adopted most advantageously. It is calculated to give an additional motive to those which tempt to country excursions—to render profitable that which is agreeable, instructive, and healthful.

**ARTISTS' AMICABLE FUND.**—This very excellent and well-managed society progresses in strength and usefulness. A committee, appointed to consider "the best mode of creating a Widow and Orphan Fund," has recently made its "Report;" a copy of which may be obtained by application to the Secretary, C. E. Wagstaff, Esq., 30, Argyll-street, New-road. The subject is one that imperatively demands consideration. It is the solemn duty of every artist of every grade, to take thought in time for those whom death may leave in poverty as well as in misery. By a very small sacrifice while living, much wretchedness may be averted from survivors, and the dying bed rendered comparatively tranquil; for how awfully augmented are the terrors of death by the consciousness that those who remain to struggle along the highways and by-ways of the world, will find its paths hard, steep, and thorny all through life, because a small effort, a little reflection, and a very limited sacrifice, were withheld, until too late to render them available. We hope that applications will be made to the Secretary for copies of this "Report;" though founded upon actual experience, the plan proposed will seem new, as well as startling to the majority of its readers: they will perceive at once how much good may be done by minute efforts when combined, and they will surely feel that to draw back is to be heartless and criminal.

**"THE BOOK OF BRITISH BALLADS."**—An advertisement in our columns announces the continuation of this work, the seventh part of which will, it is said, be published on the 1st of next month. The first volume is also advertised at the price of one guinea, a price more in keeping with the usual cost of such publications than a guinea and a half, at which it was originally designed to be issued. The specimens we published last month must have made many persons acquainted with it who were previously ignorant of its existence, and we cannot doubt that a very large proportion of them will desire to possess it. Beyond all question, at the cost of a guinea, it is the cheapest work that has ever been published in this or any other country—containing, as it does, above 200 engravings similar to those of which a few were printed in our supplementary half-sheet last month.

**MAGAZINE FOR ARTISTS.**—An advertisement in the ART UNION directs attention to a periodical work, edited and chiefly written by Mr. E. V. Ripplingille, an artist of high ability, a traveller of large experience, and a critic whose opinions have been gathered in the best schools. To this character he is fully entitled; and, although it by no means necessarily follows that opinions, emanating from ability, experience, and sound education in Art, should be always discriminating and just, or generous and liberal—(many cases existing to prove the opposite, and to induce conviction that artists are not the best critics of artists),—we have much reliance on the spirit of integrity by which we believe Mr. Ripplingille to be actuated; and therefore augur well from his embarkation in the cause of authorship on behalf of the Arts. We hail his accession to the class critical as tending to good. We shall watch his progress with much hope and some anxiety, though with no small confidence, and report upon it hereafter, when time has developed all that we may desire to know.

**THE MEDIUM OF VAN EYCK.**—We some time ago referred to a statement made by a lady, that she was in possession of a MS. containing the secret of Van Eyck. We received several communications from her, and, after a personal interview, she has, we find, adopted our recommendation—to give to certain artists, in honourable confidence, such information as may enable them to make a "Report," upon which may be

grounded some mode of recompensing her, if it be found that the facts she can state are of real value. The matter is, therefore, likely to be set at rest very soon. We cannot at present do more than announce the inquiry as "in progress;" a meeting on the subject having recently taken place between the lady and certain artists at the British Coffee House.

**THE DIORAMA.**—This exhibition has opened with two pictures—"The Cathedral of Notre Dame, at Paris," painted by M. Renoux, and "The Basilica of St. Paul, near Rome," painted by the Chevalier Bouton. This is an exterior view of the Cathedral from the Quai du Mail, and, consequently, the principal façade is most distant from the spectator. The picture is presented under two effects—the first of which is sunset, and extremely well managed. The mass rises against the warm sky, here and there gilded by the faint rays of the declining sun. Twilight ensues, and night gradually, with its breadth of shade, blends the whole into an indistinct mass; the sky is clouded, but the moon becomes at length visible, and the edifice is again, with the best effect, thrown out in strong light and shadow. The Basilica of St. Paul is seen under two effects: the first is that of the interior light—the church being represented in its entire state before its destruction by fire. The roof is supported by beams of cedar, and the beautiful columns, the portraits of the Popes, the altar, &c. &c., all contribute to convey to the spectator a just conception of the former splendours of this once famous temple. The illusion of this picture is most perfect, and, rich as the colour is, it by no means exceeds that of marble mellowed in tone by long exposure. The second view shows the church in ruins, but, nevertheless, grand and imposing.

**THE PICTURE OF THE VILLAGE SCHOOL.**—bought at the Wilkie sale by Mr. Farrer, for £756, has, we understand, been purchased from him for the sum of £1000 by Mr. Moon, with a view to engraving; and we rejoice to learn that it is to be confided to the hands of Mr. Burnet; a matter of especial importance, inasmuch as the picture is unfinished in some minor details. Although the immense sums realized by the sale of the sketches at the Wilkie sale excited much astonishment, we have here at least one proof that those who purchased were not short-sighted. By the way, the picture of the 'Recruit,' for which Wilkie received 15 guineas, is now in the hands of Mr. Bryant, of St. James's-street, who requires for it no less than 1000 guineas, having been repeatedly offered for it 800 guineas. It is curious to estimate the present value of the first four pictures painted by Sir David Wilkie—i. e., 'Pittislie Fair,' 'The Recruit,' 'The Village Politicians,' and 'The Blind Fiddler.' For these four the artist was paid 140 guineas; they would now probably bring by public auction 5000 guineas. Wilkie is not the only painter whose works have increased in value a thousand per cent. within a couple of years after his decease. Very recently, a painting, by Constable, brought 500 guineas, for which Mr. Constable was paid £30; and we believe every picture sold at the sale of his works would now bring at least five times the sums they there realized. The same may be said of the works of Bonington; and nearly as much of the relics of O'Connor, who, while he lived, could scarcely sell his productions for the price of the canvas. Indeed, the statement applies with nearly equal force to the remains of all good English artists. Every sale exhibits evidence of the fact; while the case is very opposite in reference to the works professing to be by the ancient masters, to bring the estimated value of which it is necessary to produce a pedigree as authentic as that of the famous racer, Beeswing. The hint will not be lost on buyers of pictures.

**RAPID WORK.**—We learn from "the Kunstblatt" that Schnorr, the famous fresco-painter of Germany,—"by the aid of his assistants"—

completed in three months six fresco paintings, each twenty feet long; and it is added that Hess, another renowned professor of the art of covering walls, employs between thirty and forty assistants in the same Art. Upon this principle, let us only export both these gentlemen into England, and we may have our Houses of Parliament commenced and finished while a single moon is making her rounds. With eighty moustachioed "helps," the plaster may be coloured in "no time." Seriously, however, this announcement is worthy of serious reflection. Murmurs are frequently indulged in when an engraver produces a plate by what is termed "the manufacturing system;" that is to say, employing half a dozen hands beside his own, upon the one engraving,—a practice not to be encouraged. But what are we to think when we find high Art—the high Art—subject to the same process. To whatever extent our English artists may imitate their German compeers, we trust, at all events, they will stop short here, and pause before they undertake to cover twenty feet of wall in twelve days—a work of no inconsiderable labour, even to a paper-stainer, if he has to arrange his designs with more than ordinary taste and skill.

**INSTITUTE OF ARCHITECTS.**—At a late meeting a description was given by Mr. John Sylvestor, of a preparation to render stone, brick, and other absorbent materials impervious to water. The face of the wall is first saturated with a solution of soap, consisting of from four to sixteen ounces of soap to a gallon of water, according to the nature of the work, and then well wetted with a solution of alum by means of a syringe, or watering-pot. The saponaceous mixture must be applied hot, and on stucco should be used more than once. An advantage of this preparation is, that although it renders stone or brick impervious to water, it will yet permit evaporation to go on from within, so as not to shut in the natural damps of the material. If this process, which is exceedingly simple and inexpensive, prevents vegetation, and renders external painting unnecessary, its discovery must be considered important.

**VATICAN ARABESQUES.**—Mr. Nash's own house and gallery in Regent-street were by no means the least favourable specimens of his architectural taste,—the latter more especially, for there was a good deal of effect in the general arrangement, independently of the decorations; but it was afterwards entirely dismantled, and the fittings up have lately been brought to the hammer by Messrs. Christie and Manson. They consist of pilaster panels and lunettes, copied from the celebrated Loggie of Raffaele in the Vatican, and are painted upon canvass stretched on framings. Carefully executed, these paintings may be taken as trustworthy copies of the celebrated originals; but, as seen at the place of sale, where they were put up about the room, intermixed with a number of other pictures, very little idea could be obtained from them in regard to their collective effect, as component parts of a uniform architectural design. Besides, they were never intended to be viewed in combination with pictures, they were thus rendered only so many *disjecta membra*, or detached fragments, capable of being arranged in an infinite variety of ways; on which account it may be desirable to know in what manner Mr. Nash introduced them into the gallery he fitted up for himself. The apartment was 70ft. long by 17ft. in breadth, having on each side seven open and arched recesses (making the entire breadth 28 ft.), between which the pilasters were placed as piers, and there were also four others at each end of the room. So arranged, their effect must have been unusually striking and scenic, heightened, as it was, by the manner in which the apartment was lighted—viz. by a series of small circular openings, as skylights, along the centre of the arched ceiling, and by a similar one in the pendentive ceiling of each recess. There the whole was of a piece, and displayed a very suitable ap-

plication of *polychrome* embellishment, almost the first example of the kind in this country, and one which, it might have been thought, would have been followed occasionally, at least in some of the Club-houses. One circumstance, which must always operate against fresco-painting becoming at all general among us for the decoration of our rooms, is, that it does not admit of being removed, but must be left to succeeding tenants; whereas, the mode adopted by Mr. Nash enabled him to take down the *recherché* and costly decorations of his gallery in Regent-street, and transfer them to his residence at East Cowes, from which they have again been removed without sustaining injury, and apparently in as perfect condition as when first executed. Some of the pilasters appeared to us in much better taste than others—more happily composed in their general designs; and several of the medallion and tablet subjects introduced into them were exceedingly beautiful. We were least of all pleased with those consisting merely of upright arabesque foliage, which, painted *au naturel* on a white ground, had a crude effect, and partook too much of the appearance of a coarse paper-hanging pattern. In other instances the ground prevailed rather too much, so to occasion a rather cutting effect, and to give to some of the medallions, &c., the appearance of being pasted upon it. Effect of this kind must, however, greatly depend upon the colour and tone of surrounding objects—and whether it is intended that the pilasters should form a decided contrast with the walls of the apartment, or the contrary.

**PHOTOGRAPHIC PORTRAITS.**—We have had an opportunity of inspecting the latest improvements in photographic portraiture at Mr. Beard's establishment, at the Polytechnic Institution. We noticed some time since the experiments in progress, with a view to obtaining definite and fixed colour; and although these essays were attended with various success, they were yet sufficient to suggest that colour was obtainable to a very satisfactory extent, which has been confirmed by the result. In the portraits exhibited, the flesh-colour is a marked improvement upon the excessively cold tones prevalent in the uncoloured reflections. The control of the action of the light on the metallic surface has been a matter of much difficulty; but it is now managed in a manner to command, with precision, the best effect of light and shade. The plate is covered with an improved coating of metallic ingredients, so much more susceptible and tenacious of the reflection as to reduce the time of sitting. There is, however, generally a want of pictorial effect in these portraits, which might, we are persuaded, be remedied by graduating the light to various degrees of force upon the sitter; this we recommend particularly with respect to any portions of the dress which might be white, as such parts, from the very nature of the process, must be much more prominent than all the others. The merit of these improvements is due to Messrs. Johnson and Woolcott, who have given a new and very interesting character to these portraits.

**THE CRUCIFIXION, BY HILTON.**—Our readers are, we presume, aware that this masterpiece of our great English historical painter, stands upon the wall of the staircase in the town-hall of Liverpool—an unworthy station for so grand a work. We saw it a few days ago; the varnish is completely chilled; it is impossible to examine it in a good light; and in fact the worthy burghers of the city of commerce might as well decorate their wall with a few square yards of stained paper. It is, however, we believe, designed to *lend* it—a gift it cannot be—to the Royal Liverpool Institution, which already possesses a tolerable gallery of works of Art. Here it may gratify and instruct thousands; and we earnestly hope it will be ere long removed to a fitting place, where its mighty claims to admiration will be understood and appreciated.

**OLD MASTERS.**—We have had an opportunity of inspecting, at 209, Regent-street, a collection of works of various schools, which have been brought to this country from Germany by the proprietor, being part of a collection formed by him at Madrid before the year 1823. Of the Spanish school, there are specimens of Murillo, Pereda, Zurbaran, &c. &c.; of the Italian school, Titian, Tintoretto, Bassano, Schidone, &c. &c.; of the schools of the Low Countries there are some very beautiful portraits, especially one of the 'Dutch Admiral, de Witte,' by Frank Hals; also, by Mirevelt, a portrait of a Lady, painted on panel, highly finished and in good preservation. 'The Cobbler,' a head on panel, attributed to Rubens, is a fine sketch and rich in colour; but does not bear the breadth of touch which distinguishes that master in similar works.

**FRAME FOR THE 'SAINT'S DAY.'**—Another frame has been designed especially for the print of the "London Art-Union." It is furnished by Mr. E. F. Watson, of 201, Piccadilly, in whose window we have frequently seen objects displayed which augured well for the good taste and artistic knowledge to be found within. This frame is more simple than others upon which we have reported; but it is also more graceful and tasteful than fuller subjects, and may be better suited to the fancies of thousands, who seek rather for neatness than display in their English homes. The frame of Mr. Watson pleases us greatly.

**STATUE OF THE LATE M. T. SADLER.**—Mr. Patric Park's statue of the late estimable member for Leeds has been placed in the Philosophical Hall of his native town; "where" (we copy from the Leeds *Intelligencer*), "it forms a striking object of attraction, both as a highly successful effort of the sculptor's genius, and as a well-merited tribute of respect to a man whose talents and benevolence were an honour to our town. No situation could be better adapted for it than this neutral ground; for, as an active and distinguished member of the Society, and as a friend of literature and science, the memory of Mr. Sadler is deservedly respected, not only by those who agreed with, but by those who most widely differed from him on religious and political questions. The attitude is that of an orator addressing a public assembly. The modern costume, which was formerly considered too free for the stateliness of sculpture, has been managed by Mr. Park with admirable skill, so as to give the figure an air of dignity, without the loss of any of its freedom. The design for the pedestal was furnished by our townsman, Mr. Chantrell, and is classical and appropriate. The stone was presented by Mr. Husler, of Meanwood."

**THE ROYAL COMMISSION.**—Mr. Gally Knight, at the dinner of the Artists' Fund, made some interesting and very important remarks upon this subject, which we rejoice to copy from our esteemed contemporary, the *Literary Gazette*.

"He said that, though a very humble member of the commission, it was his duty to acknowledge the toast, and it gave him pleasure to do so, because it afforded him an opportunity of stating, thus publicly, what the commission had hitherto done, what were its views, and what its intentions. He could assure gentlemen present that the commission had not been idle; that its members had diligently employed themselves in considering what would be the most effectual means of encouraging British, and nothing but British Art; and had taken steps by which he hoped that end would be attained. As a preliminary measure they had offered a certain number of prizes for the best cartoons which should be produced by British artists. In this they had a double object: in the first place, to encourage that correctness of design which is the groundwork of all excellence in painting, and which has not been generally sufficiently attended to in this country; in the second place, to ascertain what power of representing historical subjects existed in England, whether amongst established artists, or amongst those who had not yet had an opportunity of making themselves known. The cartoons would be exhibited in Westminster Hall, in the course of June; and to that exhibition the public would be admitted. The commission had taken the greatest pains in constituting

the tribunal which was to pass sentence on the respective merits of the cartoons, and award the prizes. They had constituted such a tribunal as they hoped would be at once satisfactory to the public and to the artists themselves. It was to be a mixed tribunal of members of the commission and professional men; and he was persuaded that, when the names were known, the public and the artists would be satisfied with the judges, and every man, whether successful or not, would feel convinced that he had had fair play. He must repeat that the cartoons were only a preliminary measure. It was not yet decided whether paintings in oil or in fresco, or both, should be ultimately adopted in the decorations of the new Houses of Parliament; that would be an ulterior consideration. After the competition of cartoons, the sculptors of this country would be invited to exhibit samples of their Art, with a view to assist the commission in their selection of the sculptors to be employed. The same opportunity would be offered to artists of a humbler, but still very effective, class—painters on glass, and carvers of wood, whose works added so much to the embellishment of buildings in the pointed style. Such were the steps which had already been taken by the commission. But he should not be doing justice to the Prince who was at the head of it—the Prince who, in so short a time, had won the hearts of a whole nation—were he to omit to state how sedulously Prince Albert had performed the task which he had undertaken, and how deep an interest he took in the promotion of Art in this country. There was no member of the commission who had laboured more regularly or assiduously than Prince Albert; no member whose opinions had been of greater service. Prince Albert not only took an interest in the Arts, but he understood them; and he (Mr. Knight) was sure that the artists of this country would be glad to know that their interests were constantly watched over by such a protector. After all, it must be recollected that it would depend upon the House of Commons how far the wishes of the commission could be carried into effect; for it was evident that they could not be carried into effect without a large grant of public money; but he trusted that, when the encouragement of British Art was the object, a British House of Commons would evince no niggardly disposition, and as the artists who were present would perceive that, in their noble president and himself, they had friends on both sides of the House, they would see that good hopes might be entertained."

**SALES OF THE MONTH.**—At the sale of the collection of F. B. West, Esq., late member for Dublin—'Lot and his Daughters,' by Francesco Corradi, sold for 19 guineas; and by the same artist, 'Bathsheba and Attendants,' 32 guineas; 'Landscape,' by Ruysdael, 290 guineas; another, by the same, 200 guineas; 'Horsemen on the Road,' by Wouvermans, 223 guineas; 'A Portrait of Lady Catherine Clinton, as a Girl feeding Chickens,' by Reynolds, 28 guineas; 'St. John with the Lamb,' by Murillo, 100 guineas; 'Peasants, Cattle, and Itinerant Musician,' by Berghem, 170 guineas; 'Italian Lake,' by Wilson, from Colonel Fox's collection, 63 guineas; 'Sleeping Girl,' by Northcote, 25 guineas; 'View in Flanders,' after Rubens, 53 guineas; 'Tobit,' by Salvator Rosa, 62 guineas; 'Interior,' by De Hooghe, 73 guineas; 'Italian Landscape,' by Botte, 273 guineas; 'The Campo Vaccino,' 80 guineas; 'Madonna and Child,' by Correggio, 83 guineas; 'Woodland View,' by Hobbins, 400 guineas; 'River Scene,' by Cuyt, 440 guineas; 'Horsemen near a Ford,' 190 guineas.

At another sale, the proprietor of the pictures not being named, 'A Gipsy Scene,' by Morland, sold for 161 guineas; 'A Cottage-door with Peasants and a Wagon-house,' by the same, £52; 'A Mountainous Seashore,' by the same, 110 guineas; 'The Village Cart,' 30 guineas; 'A Pig Piece,' £15, and 'A Shipwreck,' 94 guineas, by the same; 'Cow Piece,' by S. S. Cooper, £120; 'Cicero at his Villa,' by Wilson, 155 guineas; 'Hubert and Prince Arthur,' by Harlow, 22 guineas; 'A Seashore,' by Stanfield, 50 guineas; 'The Avalanche,' by Louthborough, 100 guineas; 'Sea Piece,' by J. Wilson, 45 guineas; 'The Opening of Waterloo Bridge,' by Constable, 80 guineas; 'A Sketch,' from the same, 33 guineas; 'Interior,' by Leduc, 77 guineas; 'Landscape,' Wouvermans, 73 guineas.

Of the collection of the late Sir Bethel Codrington:—'Parce Somnum Rumpere,' by Sassoferrato, sold for 185 guineas; 'A Holy Family,' Andrea del Sarto, 135 guineas; 'Christ leaning on a Staff,' Rembrandt, 240 guineas; 'Landscape,' by Pynacker, 140 guineas. The gem of the collection was a 'Sea Piece' by Vandervelde, which realized the sum of 1475 guineas!

At the sale of the Pictures of the late Sir Richard Brough, 'A Canal Scene, in Venice,' by Canaletti, brought 63 guineas; and another, 'The Pendant,' by the same, 61 guineas.

## REVIEWS.

AN APOLOGY FOR THE REVIVAL OF CHRISTIAN ARCHITECTURE. By A. WELBY PUGIN, Professor of Ecclesiastical Antiquities at St. Marie's College, Oscott. Small 4to., 10 plates. London, 1843. WEALE.

Both as an architect and an architectural writer, Mr. Pugin stands prominent in his profession; nor is it in the latter character that he has least of all distinguished himself. His publications have much in them that can hardly fail to command popular attention; for when he takes up his pen, he shows himself to be in good earnest, and pursues his course straightforwardly and unflinchingly, quite indifferent as to whom he may offend, or whether he give offence unnecessarily, so that he can but defend his own views; yet, however meritorious his eagerness in what he of course considers a good cause, may be in itself, he frequently suffers it to blind him to what may be urged in opposition to his arguments, and seems to take too readily for granted that what he *feels* to be right, ought to be received as such upon his *ipse dixit*. He is apt, too, to make use of ridicule rather too freely, and to trust to that and to amusing caricature—both in his text and his etchings—where sober argument and critical explanation would be more in place and more instructive. This peculiarity of tone and manner, so very unlike those which prevail in books of the same class, has probably done some good, by rendering the subject more generally attractive. The reader is in no danger of falling asleep over this or any other volume of Mr. Pugin's, for they certainly contain much that is ingenious and striking; and, we must add, not a little that, while it strikes most persons, must wound many. So excessive is at times the freedom with which he scans the pretensions and the productions of his brother architects, as to border upon personality: still it is, at any rate, open and honest, inasmuch as there is no concealment; although the writer must have been perfectly well aware that the tone in which they are expressed must render doubly galling many remarks and opinions, which not all the honey of courtesy could have effectually sweetened.

Whatever name it be called by, or be it considered warrantable or not in itself, Mr. Pugin's blunt and downright manner of delivering his opinions on others, relieves us from the necessity of standing upon ceremony towards him. Hardly would he receive it as a compliment, were we to assure our readers that his book is written throughout in a kind and friendly spirit; is marked as much by candour and liberality of tone, as by zeal in behalf of Art; and is perfectly free from all dogmatism and prejudice. His own example encourages us to deal plainly with him, without any apprehension of wounding his feelings; since scarcely is it to be supposed that one who seems to pay so little regard to the feelings of others can be particularly sensitive and thin-skinned himself. He certainly has need to possess something of the rhinoceros in his nature, for, by setting himself up in *proprid personâ*, as a sort of public censor over the whole profession, he has rendered himself a mark to many who may endeavour to find out if he is made of vulnerable stuff. We do not dispute his right to take upon himself the office he seems to have done; and it is, or rather was—for he has now passed the Rubicon—for himself to consider the perils to which, by so doing, he exposes himself. Still less do we say that he has no pretensions to assume such seeming authority, since no one can deny his abilities and qualifications. His opinions both deserve and will obtain attention; on which very account it is desirable that they should be scrutinized a little, and not too implicitly adopted or acquiesced in.

To begin with the title of his book, we may remark that it expresses only half the object of it, for to the title as it now stands might very well be added—"Or, an Apology for the abandonment and extinction of all other styles of the Art," such being in fact, in no inconsiderable degree, the scope of the work. It might, too, be asked, why should Mr. Pugin think of putting forth an Apology for the revival, and in vindication, of the claims of a style of architecture, which, according to his own express showing, is at this very time more honoured and more triumphantly vindicated among us, than any other? Or did it not occur to him at the moment he was penning his warm eulogium on the

new Houses of Parliament, that that edifice—the only modern one, by-the-by, which he does not reprobate—would be a most convincing and all-sufficient apology in itself? Nevertheless, neither Mr. Barry's building, admirable as it is, nor Mr. Pugin's book, quite convinces us that it is desirable not only to revive the pointed style—which has been done already, but to *re-establish* it at the present day, to the exclusion of every other. Be it ever so desirable, is it practicable? We think not: centuries must elapse ere the pointed style could become again the predominating and universal one in England, for private as well as public structures of all kinds. London must be entirely rebuilt, and another St. Paul's must be erected, before the "Paganism" and "Heathenism" which Mr. Pugin so greatly deploras could be obliterated. Neither can we help being of opinion that he mixes up religion and architecture together far more than there is any occasion for doing, and in too suspicious a manner. Much of his religious zeal and feeling seems to arise from his admiration of "Christian architecture," as it existed among us in Catholic, i. e., Roman Catholic times; and he somewhat incautiously recommends that style as tending to revive and cherish Catholic feelings, not considering that if such be really the case, that very circumstance ought to induce us Protestants to reject it altogether. There is in some quarters, at the present day, too much of what looks like an endeavour to "get up" a sort of politico-religious enthusiasm in regard to ecclesiastical architecture and church decorations,—a sort, withal, that looks too much like enthusiasm at second-hand, and is, therefore, very likely merely to blaze for a while, and burn out again just as quickly as it was kindled.

In regard to the adoption or re-assumption of the pointed style for buildings of all kinds, both secular and ecclesiastical, public and private—in town as well as in country—for general street architecture as well as for residences of a superior class where more than ordinary attention is given to design, if it be really Mr. Pugin's opinion that such scheme is equally desirable and feasible, he has shown either excessive want of tact, or most unaccountable perverseness, in not having brought forward any instances to convince us that the architects of the present day are fully capable of treating that style with ability and consistency. Instead of doing so, he gives us plainly enough to understand that, Barry excepted, they have all failed alike in it, and that the generality of them have produced only downright abortions and "monstrosities." Singular encouragement, truly, for us to reject every other style, and take up exclusively with that in which, if he is to be believed, we have shown ourselves mere bunglers, and unacquainted with its "True Principles"! Either we have failed altogether—at least in Mr. Pugin's opinion, or he shows himself egregiously deficient both in generosity and sound policy, by drawing up all our failures in awful array before us, without pointing to anything that might serve as evidence of tolerable successfulness. In every other style, it seems, we fail completely; and when we attempt the pointed style—why there again it seems we fail also! Pleasant dilemma, certainly!—one from which the only means of extricating ourselves would be, to give up all styles alike in despair, and content ourselves henceforth with mere brick walls and sash-windows in them.

So far, Mr. Pugin's pen has served him an ugly trick, running away with him as John Gilpin's steed did with that renowned equestrian. Has his pencil served him better? Hardly, we think, when we look at his plate entitled 'The consistent Principles of Old Domestic Architecture, applied to modern Street Buildings;' for while the examples there given are very *so-soisâ* in themselves as designs, they seem to render very apparent to us the great difficulties that would attend the attempt to apply such style to that purpose, more especially as we are bound to suppose that Mr. Pugin has done his best to recommend it, or that, at all events, we should not be likely to get what would be much better from any one else. Notwithstanding, too, that he had here opened for himself quite a fresh subject—one that might have been made to afford a great deal of interesting and instructive remark, he enters into nothing of the kind, but merely touches upon it most superficially, dismissing it in a couple of pages which say nothing to the real purpose; therefore, it would have been more prudent to have reserved it for a separate volume.

With regard to his present one, we must confess that it has disappointed us, since it gives us very little more in substance than what he had said in his previous publications; while the manner of his saying it does not strike so much as it did at first. His censure, besides, is by far too indiscriminate to effect any reform: striking at every thing and every body without distinction, it comes to be looked upon by the profession as mere matter of course from him,—as what is no more than to be expected, and what cannot, by any possibility, be avoided; and we even question whether Barry himself would have obtained a syllable of praise from Welby Pugin, had it not been for the Houses of Parliament, notwithstanding that he has shown himself an equally accomplished master in other styles, and that he does not require extraordinary opportunities, in order to produce works of extraordinary beauty.

MODERN PAINTERS; THEIR SUPERIORITY IN THE ART OF LANDSCAPE PAINTING TO ALL THE ANCIENT MASTERS. By a GRADUATE OF OXFORD. Published by SMITH, ELDER, and Co.

In his preface the author of this work states that he sat down merely to write an article for some of the reviews; but his matter has grown under his hand insensibly to a thick volume of 420 pages. His object he professes in these lines:—"When public taste seems plunging deeper and deeper into degradation day by day, and when the press universally exerts such power as it possesses to direct the feeling of the nation more completely to all that is theatrical, affected, and false in Art; while it vents its ribald buffooneries on the most exalted truth, and the highest ideal of landscape that this or any other age ever witnessed; it becomes the imperative duty of all who have any perception or knowledge of what is really great in Art, and any desire for its advancement in England, to come fearlessly forward," &c. &c.

Now with this writer we cordially agree in depreciation of such notices as those to which he alludes: criticisms they are not, for in them is distinguishable no scintillation of a knowledge of Art, and they are as heartless as ignorant. But from this new teacher the public may hope nothing—the beginning, end, and middle of his career is Turner, in whose praise he is vehement and indiscriminate; when speaking of other artists not in the vein of his own taste, he hesitates not at indulgence in scurrilities, such as have not disgraced the columns of any newspaper. In allusion to Macclise's 'Hamlet' of last year, he speaks of the ruffian who appeared in *Hamlet*; and after adding that "a stout shillelagh" would have been a fitting accompaniment to the figure, continues, "and if his state of prostration had been rationally accounted for by distinct evidence of a recent compliment on the crown; or if the maudling expression of the young lady christened *Ophelia* had been properly explained by an empty gin bottle on her lap," &c. &c. Is this criticism? We humbly opine that a tone so coarse is not to be found in any of the newspaper notices, which we agree with him in condemning. If he speak thus of one picture which he does not like, we apprehend that, in going through an exhibition, his catalogue of vituperative epithet would not serve him. To what would the terms of his damatory vocabulary descend in speaking of a really bad picture? With respect to the position of *Hamlet*, he cannot have read the play, otherwise he would know that this is prescribed by *Hamlet* himself. Was there nothing in that picture to have dictated at least decent allusion? In examining it passage by passage, in collating its spirit and chronology with rigid truth, it has many errors; but thus to analyze Macclise, we must begin by condemning Shakespeare: if that picture had no beauty for him, he cannot hope to derive pleasure from the work of mortal hands; therefore all his extravagant admiration of Turner is unmeaning rant. He is an equal admirer of Turner in his youth, maturity, and old age. We yield to him not an iota in admiration of Turner; but he who assumes to any human career an equable course of unvarying greatness, is, to speak even mildly, at best but an irrationally drivelling enthusiast. We have before us, while we write, one of Turner's early drawings: it is a church interior, and every part is made out by very decided linear drawing; other water-colour works of his we are acquainted with, which are tinted with determined local hues: there are

scores such by Turner, and if these are of the utmost excellence—how are we to consider his latter works—or if these be the finite standard of all good, how are the others to be reconciled to this series? By none other save a principle of judgment peculiarly elastic in reference to Turner, but uncompromisingly stringent when others are considered.

The author has thought deeply, but he does not convey to us more than is known of every artist he mentions—we mean especially the old landscape-painters; the beauties of modern artists of that class upon whom he touches are so well understood, that nothing which he could say in their favour could raise them a degree higher in public estimation than the position they hold; nothing that he could urge against them would deprive them of any portion of the consideration they enjoy.

In justification of Turner's want of drawing it is said, "I do not mean to assert that there is any reason whatever for *bad* drawing (though in landscape it matters exceedingly little); but that there is both reason and necessity for that want of drawing which gives even the nearest figures round balls with four pink spots in them instead of faces, and four dashes of the brush instead of hands and feet."

No apology is necessary for that which is sufficiently understood to contribute to the effect of a picture. If the writer be impatient of ignorant remark on the subject of Art, he has come into the world before it was ready for him. The vulgar speak in the same strain of everything else of which they are unqualified by education to judge. Now it would appear that what is meant is the perspective of objects indirectly seen, and not that contempt of proportion so prevalent in those works which seem to be alluded to, and for which nothing can be said in justification.

The 'Napoleon' of last year, and the 'Slave Ship' of a year or two ago, are here held up as the perfection of that art which comes nearest to the truth of nature; of Turner's approaches to which it is said—"In every new insight which we obtain into the works of God, in every new idea which we receive from His creation, we shall find ourselves possessed of an interpretation and a guide to something in Turner's works which we had not before understood." We cannot pursue at greater length the reasoning in this work, which sinks the human understanding to a very low ratio, raising that of Turner to a standard which no other mortal intelligence can ever hope to arrive at. As we have already observed, we yield to none in admiration of the works of the better period of this once really great artist; but we cannot accord to him qualities in his last works which do not therein exist, and which he had not the most remote idea of giving to them—qualities which, in fact, it is in the power of no art to convey.

At the commencement of the work the author claims for himself indulgences—but these he denies to others; and we apprehend that a very inconsiderable section of the art and the public—seeing at all their way before them—are prepared to go the lengths he demands of them.

**FACTS OF VITAL IMPORTANCE RELATIVE TO THE EMBELLISHMENT OF THE HOUSES OF PARLIAMENT.** Detailed by an EYE-WITNESS. Edited by J. P. DAVIS. Publisher, SAMUEL CLARKE, Pall-mall.

An exceedingly pleasant *brochure*; a narrative "given in rhyme, with a view to brevity; verse admitting of more compression than prose." The writer has chosen the *ottava rima*, and has managed his subject with a happy blending of the serious and comic, we may add of the caustic and sarcastic, with the reflective and argumentative. A kind of key to the matter is supplied by the following verse, in which two fair ladies are described as paying a visit on the morning after "the fire" to another fair lady—the muse of Art, who exhibits no little astonishment at the arrival of such unusual guests—

"Dear muse of History!" the lady said,  
"Sweet muse of Poetry!" for such they were,  
'What can so soon have brought you out of bed—  
To see the fire, or take the morning air?"  
'Madam,' said History, 'no slight cause hath sped  
Our journey hither, reckless of the fare;  
Know then—but Poetry may speak the rest;  
I deal in facts—she illustrates them best.'"

The "narrative" rambles over a variety of topics;

touching lightly and pleasantly, and sometimes profitably, upon each; and the writer, while he exhibits considerable facility in dealing with verse, manifests also much critical acumen and sound sense. As a poetical composition, indeed, it is one of no ordinary power; abounding in brilliant passages; conveying buoyant good humour in forcible and eloquent language.

**OUTLINES OF CELEBRATED PICTURES.** By JAMES DICKSON. No. I. Published by the ARTIST.

We have here the first portion of a very interesting series—outlines, in lithography—of the most famous pictures of the world. They are judiciously selected and accurately copied, and convey sufficiently clear ideas of the originals. The size is considerable—about 12 inches by 8—and the mode of publication exceedingly neat and appropriate. The work, when completed, will be an acquisition of considerable value. We purpose examining it more minutely when the first part is completed. This first part will consist of three numbers—i. e., of 18 plates.

**THE BARONETAGE FOR 1843.** By SIR RICHARD BROUN, Esq., K.J.J. Publishers: CUNNINGHAM AND MORTIMER.

A very useful volume—not alone to the parties actually commemorated in its pages, but to those who may have occasion to feel interested in the subject. It contains some matters that are original: the Introduction is clear, succinct, and comprehensive; and the illustrated essay on "Exterior Illustrated Ornaments" is highly satisfactory; full of information for all classes, and abundant in useful hints to the artist. The list of Baronets is given with due regard to brevity; yet all the leading and prominent facts are carefully preserved and judiciously arranged.

**DICTIONARY OF ARTISTS: NEUES ALLGEMEINES KUNSTLER-LEXICON, &c.** Von Dr. G. K. NAGLER. Band I.—XII.

Never can any biographical dictionary be complete, for the lapse of every score of years supplies a mass of fresh materials to be incorporated in a work of the kind; consequently every succeeding one becomes more and more extensive in its plan, unless this last be modified, either by omitting comparatively obscure names, and such as are, after all, little more than mere names, without interest of any kind attaching to them; or else by starting *de novo* from that point, or thereabouts, which previous publications had come down to, so as to serve as a general supplement to any one or all of them. Had Dr. Nagler adopted this latter course, commencing perhaps with the eighteenth century, his "Künstler-Lexicon" would have been, if not so complete—that is, so comprehensive—far more satisfactory, and it might then have been more equal in execution; certainly might by this time have been "*completed*:" whereas it has now extended to double the number of volumes at first contemplated, yet is not advanced beyond the middle of the letter R; so that not above two-thirds of it is finished. To go over the whole ground again, merely to compile and abridge from his predecessors, and empty into his own volumes what he has got from standard, and therefore ordinary sources, says, in our opinion, far more for his pains-taking industry than for his judgment. While his work is, in consequence, now greatly increased in extent, the bulk of it is, in substance, mere repetition of what the majority of purchasers are likely to possess already in other shapes, and, in many instances, far more complete; on the other hand too, the fresh matter, which will not probably amount to more than two volumes out of all that will ultimately be published, might have had more diligence bestowed upon it, and have been more fully worked out: and that would certainly have been an ample task for any individual, and one from which more literary honour would have been derived, than from what now consists, for the most part, of mere book-making.

That the inconveniences we have pointed out belong to the plan itself, we do not dispute; but then, why was such plan adopted? At all events, there was no occasion to render it so very *complete* as to make it embrace the artists of antiquity, who are to us little better than so many *nominum umbrae*; for, except in one or two instances, their mere names alone have been handed down to us. Of modern artists, too, a vast por-

portion are little better than so many names—either persons so obscure that nothing is known of them, or relative to whom due research has not been made. The "Künstler-Lexicon" includes living as well as deceased artists of all countries; and some of the articles of that kind, those especially relating to Germany, are the most valuable and interesting in the work; but there are also a very great number that might have been passed over, and left for future biographers, should they hereafter be found worthy of notice. Such is certainly the case with regard to not a few English ones; for we here find catalogued, or *booked*, a good many whose names appear to have been merely picked up out of exhibition catalogues, and who are only mentioned as practising such or such branch of art. Many English artists, whose names are scarcely known at all to the English public, are duly registered by Dr. Nagler; which circumstance may be thought to be at least a pledge for his exactness, and for his extreme diligence in hunting after what would have escaped the notice of almost any one else. Yet unfortunately, notwithstanding all his apparent microscopical researches, he has omitted some names among us of pre-eminent note. To find no mention whatever made of such a man as Charles Barry, while so many others, who are comparatively quite nobodies in the same profession, are spoken of, is indeed startling. Nor is it very much less so that Welby Pugin, who has distinguished himself both by his ability in Gothic architecture and by more than one publication on the subject of it, should be similarly passed over. There is, indeed, an article on the elder Pugin, and a most strange one it is, it being hardly correct in a single particular; among other gross mistakes he is spoken of as being still living, and as having built a Roman Catholic Church at Manchester in 1839, about seven years after his death; which shows with what sort of care Nagler consulted, as he says he has done, English journals, &c., for materials relating to the artists of this country. Of equally gross error there may not be many other instances; but even the detection of one or two throws a suspicion on many articles here given for the first time, and which, notwithstanding that they may be correct, require to be verified before they can be depended upon as such. Neither are there, perhaps, other omissions so remarkable as those pointed out, but numerous omissions there certainly are, and some of them exceedingly provoking ones. If, too, we have generally found recent names which we have looked for, we have, in a number of cases, found little more than the names—scarcely anything to tell more than, and sometimes not so much as, we already knew. Prokophiev, the Russian sculptor (on whom there is an article in the "Penny Cyclopædia"), is not mentioned at all; and of other artists of the same country—Martos, Orlovski, the two Briulov's, &c., the notices are exceedingly meagre. For this there may be some excuse; but then what are we to say when we discover that we do not obtain much more satisfactory information in regard to many artists of note, tolerably full materials for whose biographies are to be met with; and to whom all the greater attention ought to have been paid, because owing to their recentness they have not been inserted in any previous dictionary of the kind? The celebrated Italian architect, Cagnola, for instance—whose name is metamorphosed into *Canjola*—is dismissed in a very summary manner, although the numerous "notices" and "memoirs," of one kind or other, that have appeared relative to him and his works, would have furnished matter for an article of considerable length.

One leading and very great defect of Nagler's work is, that there is no sort of keeping whatever in regard to the space allotted to the respective articles, and their intrinsic interest and value in a work of this kind. Of what is valuable in itself a very great deal has been so repeatedly given before, that it would have borne to be here greatly condensed; and for ampler information reference might have been made to other works. The "Künstler-Lexicon" is, besides, enormously swelled out by lists of the works of engravers, which sort of matter seems absolutely to clog it up; for it occupies, we should judge, nearly about half, and therefore doubles the cost, although such information is likely to be cared for by few except print-collectors, for whom it has already been provided in other shapes. Thus

the article "Raimondi, Marcantonio" occupies upwards of sixty pages, and Rembrandt even no fewer than 136, or one-fourth of an entire volume!—a prodigious disproportion in a work that sometimes gives a dozen articles or more in a single page, and frequently not above half a page is given to many that, to be at all adequately treated, would require very much greater space. Another circumstance which detracts not a little from the character and value of Dr. Nagler's "Lexicon," is the strange sort of gossiping and guessing that stamps many of the newer articles, which amount to no more than mere notes, apparently taken down in a hurry from mere casual hearsay. In very many cases—more especially in regard to those who have died within the last fifty years—we obtain no more than a rough guess at dates, without any positive one either of birth or death. The merest shadow of a name has been caught at where nothing more was to be had; so that sometimes, for pages together, the book has the look of being a mere catalogue or index, without a paragraph of readable matter. We are not therefore at all surprised at learning that, in Germany itself, this "Kunstler-Lexicon" is so far from bearing a high character as to be looked upon as little better than a piece of book-manufacture; on which account we are rather surprised at finding it perpetually referred to as an authority for articles of the class in the "Biographical Dictionary," now publishing by the Society for the Diffusion of Useful Knowledge.

**THE HISTORY OF THE DAVALOS FAMILY CONSIDERED WITH REFERENCE TO POETRY, PAINTING, AND DRAMATIC EFFECT. Publishers, HATCHARD AND SON.**

We welcome, with much pleasure, a volume like this, where an effort is made to give the true and beautiful of foreign and, to the general reader, almost inaccessible literature in a readable and attainable form. We are told that "the history was first written abroad, when an interest taken in some of the portraits of persons represented by Raffaele and Titian, led to an inquiry as to their story." There is ample evidence, throughout these careful and enlightened pages, of taste and feeling for the subject undertaken. If the author had been more profound, he (or she) would have been less pleasing; as it is, the volume is of sufficient value to deserve a place upon every artist's table, and wherever a love of Art and literature is cherished. Several members of this remarkable family were intimately and closely connected with the Arts; the period at which they flourished—from 1500 to 1556—comprehended the golden age of Art in Italy. Of the family comparatively little is told, because little is known; but the book supplies a striking, exciting, and very valuable picture of a glorious epoch of the world. It possesses all the interest of fiction, with all the utility of fact.

**SEVEN LECTURES ON METEOROLOGY. By LUKE HOWARD, Esq. HARVEY AND DARTON.**

These interesting and instructive lectures have gone through a first edition, and have been carefully revised and added to in a second. They need no recommendation beyond the statement of that fact. To the young they are profitable, and, at the same time, most agreeable:—leading to knowledge through pleasant paths.

**LA CONFIGURATION DE L'EUROPE. Par BAUERKELLER.**

This is a striking and beautiful map; conveying an admirable idea of the surface of Europe. The sea is coloured blue; the mountains raised—those that are covered with snow are tinted with white; those volcanic, with red; and the treatment is calculated to draw and rivet the attention of the young. We think that national maps of this description would be invaluable in private as well as public schools, and should like to see the plan carried into district maps—so convinced are we of its interest and importance. It must be seen to be appreciated as it deserves. This is, we believe, the production of an ingenious German; there have been several imitations of it, but, as usual, the original bears the palm.

**PARADISE LOST. In Fifty-four Designs, by J. J. FLATERS. Published by COLLOT, Bruton-street, Berkeley-square.**

A work wherein so much patient labour has been bestowed as on this, ought to be a source of com-

mensurate profit to its author: we trust it will— for seldom do we witness such laborious constancy, supported by hope of reward so remote as that which has upheld this artist in the execution of the work before us. It is a large and handsome folio volume; the plates are engraved in outline upon copper, and many of them are full of figures. From their beginning to their conclusion they have been in progress, we are told, eleven years, a most important part of that period of a man's life, which is animated by his best energies.

The first plate in the series is 'The Fall of the Angels,' by a single glance at which we are reminded of Michael Angelo, but not of his power. The drawings are strongly sculptural, which is, in this instance, prejudicial, since we consider the subject with respect to that department of Art in which it has been executed, and consequently would regard very differently the same subject in sculpture and in painting, or as a drawing. This is a drawing limited to the capacity of sculpture; it contains consequently too few figures, and cannot therefore describe the tumultuous fall of the legion that were precipitated from heaven with Satan; for as this is the impression conveyed to the mind by the verse, every effort at illustration which does not keep this in view is misdirected. Again, with respect to following Michael Angelo, or any other great master, it is at once fatal to reputation, for the imitation must suggest a comparison; indeed the comparison is involuntary, and it must always tend to the disadvantage of him who adopts such a course.

Succeeding plates are 'The Fallen Angels in the Fiery Gulf,' 'Satan and Beelzebub,' 'Satan haranguing the Fallen Angels,' wherein there is a degree of heaviness in the limbs of the figures which, considering them as ordinary figures, is unbecoming; but regarding them as "empyreal essences," is out of character, as telling rather of the flesh than the spirit. There is in 'Satan issuing from the Gulf' much that is beautiful; but he is raising himself by clinging to the rocks in a manner that yet reminds us of a mortal struggle, and one necessary to raise a heavy body; it does not therefore appear that he

"Springs upward like a pyramid of fire  
Into a wild expanse."

There are, however, throughout these plates many very beautiful groups and striking poses. 'Adam and Eve praying' is a composition of great beauty, as also are many others illustrative of the fortunes of our first parents. Notwithstanding the defects we have mentioned, the work is of great value and high utility; for from ingenuity of all kinds there is something to be learned, and the profit obtainable here is in a great proportion to the labour of an accomplished mind and hand working together for so many years.

**SCENERY ON THE DEVONSHIRE RIVERS. Drawn from Nature and engraved by F. C. LEWIS. Published by LONGMAN AND CO.**

This is a large volume containing twenty-six of the most picturesque views on the rivers Tavy, Dart, Okement, &c. They are copperplate impressions: some are mellow and beautiful etchings; others amount, in value of execution, to effective and finished engravings. All the views have been painted, and their publication in this form seems rather accidental than otherwise. The purpose, however, of the artist is one by which we would gladly see others stimulated: his labours have been undertaken in the spirit of giving the aspect of nature as a broad whole; and this after all is the legitimate theme; for by such generality alone is the mind powerfully moved. The style chosen by the author is of a character so free as to convey the feeling of an original sketch, so valuable from evidencing the impulses whereby the artist is influenced in his communion with nature. The views are accompanied by some pages of letter-press calculated to convey those impressions whence only real good results in landscape art, and wherein he expresses a hope that the publication may be productive of good in those channels wherein it may circulate. Of this we have no doubt.

'The New Prison on Dartmoor'—one of the first plates, is one of the most beautiful. Another, but of a different character, with high claims to admiration, is 'In the Grounds of his Grace the Duke of Bedford;' it is a wooded scene on the river Tamar. On the Okement there is 'a View of Okhampton Castle'—a picturesque ruin, which, with

the accompaniment of wood, water, &c., is effectively rendered. 'The Junction of the Tavy and the Tamar,' a vignette-like engraving, would be a gem in any series; it is an effect of the most charming kind. Other views of great beauty are 'Cotele Grounds,' 'Scene from Cumston,' 'Tar Steps,' 'On the River Tavy,' 'On the River Dart, from Whistman's Wood,' &c. &c. These etchings are altogether the most beautiful and instructive of their kind we have yet seen; they are severe in their deductions from nature, and are estimable accordingly.

**THE SONGS OF SHAKSPERE. Illustrated by the ETCHING CLUB.**

The illustration—as the term is—of the "Songs of Shakspeare" may, like anything else, be undertaken by whomsoever the desire may move; but the question of permanent fame, as distinct from mere ephemeral report, is another case. By those with whom it is a fashion to rave about the poetry of Shakspeare, its veritable soul is not felt—its positive charm touches no chord of their hearts, because nature left them unprovided with the finer strings. Thus also it is with those who paint from it: if the mind be not teeming with spontaneous imagery, spirits cannot be summoned at will from the vasty deep. Throughout the poetry of Shakspeare, his songs undoubtedly are the most difficult to paint from; his fairies, sprites, and voiced essences we continually embody in mental shape, though the poetry is but an incorporeal and melodious utterance.

Of the illustrations by the Etching Club, the first is by J. C. Horsley, and the subject from *Cymbeline*—"Hark! hark! the lark at Heaven's gate sings." This is arranged in two vignettes: in one of these the lady is extended upon a couch, beyond which is seen an open casement, wherein enters the voice to which she is listening. With the little that is devoted to the subject, it is most ingeniously arranged—the singing cavalier is below in strong relief against the rising sun, but we have, *en passant*, to observe (of which more anon) that this is an engraving, not an etching. The second is "Come unto these yellow sands," consisting of two vignettes: the upper one, by C. Stouhouse, is simply the seashore by moonlight, on which is breaking a heavy surge: this is chaste to a degree, but not sufficiently identified with the subject. The other is the company of "sweet sprites," who are "footing it feathily," having *Ariel* as their master of the ceremonies. Those lines convey to the mind the intelligence and communion of such existences as we deem profaned by ascribing to them anything like human habits and attributes. The dance here is sustained by a company of nymphs too classic to represent *Ariel's* sweet sprites. The song of *Autolycus* is illustrated by Webster and Creswick: the former contributes a group composed of *Autolycus* vending his "quoifs and stomachers," to *Mopsa* and *Dorcas*. This perhaps could not afford a better reading—the figures are well drawn and grouped, but the costume is decidedly a failure. "Jog on, jog on the footpath-way," is Mr. Creswick's subject, where he affords a charming little snatch of landscape with "the stile" and *Autolycus* in the foreground. "Where the Bee sucks" is rendered by Townsend and Bell. In the larger vignette *Ariel* is seen lying on creeping tendrils across the broad disk of the moon, but there is nothing in the figure to support the conception of living "under the blossom that hangs on the bough;" it is of the same material as ourselves, being evidently subject, like heavy bodies, to the laws of gravitation. *Ariel* is again seen on the bat's back, the version of Mr. Bell approaching very nearly the spirit of the line. The song in *Othello*, "And let the canakin clink, clink," is translated into a very spirited and beautiful composition by Knight: a company of soldiers, as *Falstaff* says, "taking their ease in their inn," in whom the wine is bawling forth, "Why, then, let a soldier drink." "Under the greenwood-tree" is one of Creswick's beautiful snatches of sylvan scenery, brought forward with that peculiar power which so easily throws a charm around the slenderest materials. The song of "Poor Barbara," from *Othello*, is illustrated by Redgrave, who renders it *literatim*—indeed there is no room for license in this simple ditty. The forlorn maiden sits—

— "Sighing by a sycamore tree,  
Her hand on her bosom, her head on her knee;"  
and in her woe-begone features are fully characterised the burthen of the song. The vignette of Mr.

Taylor is from the Forester's song in *As You Like It*. The scene is the depth of the forest, and the hunters are grouped round him "that killed the deer." The narrative is clear and pointed, and the figures are spirited and full of character. Messrs. F. Stone and C. W. Cope illustrate the song, "Crabbed Age and Youth." The latter presumes the introduction of a maiden to a rich but aged suitor, who is repulsed by her with an expression of scorn depicted with inimitable force and truth: thus at once summing up the whole into one simple sentiment—

"Youth, I do adore thee."

"Oh my love, my love is young,"

seems to have been the motto under which Mr. Stone has wrought, and assuredly never has a more graceful composition been at any time seen. A youth and maiden are slowly quitting a group of merry dancers; both figures are endowed with elegance and emotion; there is language in the air and gesture of the suitor, and an according response in the retiring manner of the maid: in short, no school, no time, has ever excelled this in sweetness and sentiment.

One word of the manner of these "etchings" generally. The greater number of them we cannot class under that branch of Art, as they are indisputably finished engravings, and must be regarded as such, if there be a definite meaning to the term etching. Be that as it may, in composition and general tone they do abundant honour to their authors.\*

**DICTIONARY OF GREEK AND ROMAN ANTIQUITIES.** Part 22. Published by TAYLOR and WALTON.

A concise description of the various methods of painting employed by the ancients is the principal article in this number of the above-mentioned work. The writer has commenced his treatise by such an enumeration of the writers, ancient and modern, who afford information on the subject of antique Art, as would form a useful list to all interested in the history of the genius of that remote time, upon the relics of which is based all that is elevated in modern Art. The story of the earliest practice of outline-drawing is briefly related. The daughter of a certain Dibutades, a potter of Sicyon, at Corinth, struck with the shadow of her lover, who was about to leave her, cast by her lamp upon the wall, drew its outline with such fidelity, that her father cut away the plaster within the outline, and took an impression from the wall in clay, which he baked with the rest of his pottery. Greek writers, however, differ in their attribution of the merit of having first practised skiagraphy (σκιαγραφία), or shadow-tracing, and on grounds which to them must have been sufficiently conclusive; for, in fact, discovery it was none, and could be new only in its novel application, for shadow tracing is an act which has been performed mechanically by the rudest races of mankind, and in the remotest ages of the world. The article describes the development of painting as executed by the ancients; alludes to the practice of painting their wooden images; names of the most celebrated artists, and in some instances the rates of their remuneration; and so continuing a clear and succinct review of the progress of the Art, terminates at the period when portrait-painting flourished in Rome.

**ELEMENTS OF ELECTRO-METALLURGY.** By ALFRED SMEE, F.R.S. Published by E. PALMER, Newgate-street.

We have already spoken of some portion of this work during its progressive publication; for it was originally published in parts, which are now before us in a collective form as a second edition.

Electro-metallurgy is one of the many discoveries which have been made during experiments instituted with a view to other results. Its history affords curious instances of the abstraction of the mind when bent upon one subject. It originated in the constant battery of Professor Daniell, who, "in removing a piece of the reduced copper from a platina electrode, the scratches on the latter were copied exactly on the copper," a circumstance which was noticed by him no further than as a

simple fact. M. De la Rue experimented afterwards on the powers of this battery, and he also states, in a paper printed in the "Philosophical Magazine" for 1836, that the copper-plate was covered with a deposit which was a perfect counterpart of the surface to which it had attached itself; yet the circumstance did not strike any person as of any utility. It was some time before the fact was applied in the manner suggested by itself; at length Professor Jacobi announced his application of it, as did Mr. Spencer, when it appeared that both had been simultaneously experimenting upon it.

It is impossible to estimate the various uses to which electro-metallurgy is adaptable: we find it already effecting wonders in commerce as well as in Art; though its sufficiency, with respect to engraved copper-plates, has yet to be confirmed. We are not aware that anything considerable has yet been done in this way. Small surfaces are represented with the utmost nicety; with the increased extent of the area, the liability to injury and imperfection is augmented at a compound ratio. Mr. Smee's work is a result of immense labour, and the most patient research; it is at once well fitted for the scientific experimentalist, the speculator, and the amateur; and is certainly the best book on the subject that has appeared. All the difficulties that obstruct the progress of the inexperienced operator are explained, and the matter is aided by cuts descriptive of the necessary apparatus. Although the author of this work may not have been the first to receive impressions from the announcement of Professor Daniell, or M. De la Rue, yet is his name strongly identified with its progress.

**THE HISTORY OF CHINA, PICTORIAL AND PICTURESQUE.** By Miss CORNER. DEANE and Co., Threadneedle-street.

We are likely to become well-informed on all subjects connected with the Celestial Empire. First of all came all manner and sorts of letters in the daily papers from civilians and jack-tars concerning "John Chinaman;" then the splendid emporium which crowds more information into an hour than could otherwise be gained in a year, was established at Hyde Park-corner; and then a fair Corner takes the field once a month with an illustrated history of China. Judging from the specimens now before us, the work will be one to interest and instruct; there are two lithographic plates to each number, and many spirited wood-engravings, illustrating the letter-press, so as to add considerably to its value. We doubt not it will be largely circulated.

**ENGLISH LANDSCAPE SCENERY.** By the late BENJAMIN BARKER. Published by W. EVERITT, Bath.

This is a series of studies after original works by the late Mr. Barker, engraved in aquatint, and printed in sepia. They are characterized by the earlier style of our water-colour art, and being drawn from nature, without affectation, will form an excellent set of examples for novitiate practice in handling, and the management of sepia. The features of the drawings are purely and markedly those of our own islands; and we can fancy them fresher, greener, and cooler than all else. The numbers extend to twelve, each containing four plates; and for the ability generally displayed in the selection and treatment of the subjects, the reputation of the late Mr. Barker is a sufficient guarantee.

#### TO CORRESPONDENTS.

**ACADEMY STUDENTS.**—We have had several applications respecting the mode of obtaining admission to study in the schools of the Royal Academy; and think it desirable to print, for the guidance of persons desiring information, the law which regulates this procedure, premising that "no drawings or models shall be received from persons applying to become probationers in the schools, except at the first councils held in the months of January and July."

"Any person desiring to become a student of the Royal Academy, shall present a drawing or model of his own performance to the keeper, which, if considered by him a proof of sufficient ability, shall be laid before the council, together with a testimony of his moral character from an academical or other known person of respectability. If these are approved by the council, the candidate shall be permitted to make a drawing or model from one of the antique figures in the Academy, and the space of three months from the time of

receiving such permission shall be allowed for that purpose; the time of his attendance to be from ten o'clock in the morning until three in the afternoon. This drawing or model, when finished, shall be laid before the council, accompanied with outline drawings of an anatomical figure and skeleton, not less than two feet high, with lists and references on each drawing, of the several muscles, tendons, and bones contained therein, together with the drawing or model originally presented for his admission as a probationer; if approved, the candidate shall be accepted as a student of the Royal Academy, and he shall receive in form the ticket of his admission from the hand of the keeper in the antique school. But if the specimen presented be rejected by the council, he shall not be allowed to continue drawing in the Academy." The rule for architectural students is of a like character.

**A STUDENT IN THE LITHOGRAPHIC ART.**—There is no work published on the recent improvements in Lithography. If our correspondent means simple lithography, the most important proceeding is the transfer of the design from the original stone to a second in an impression so faint as to be wrought into effect at pleasure. The lights are to be stopped with gum, which will bring them out with the utmost sharpness. If it be the lithotint to which he alludes, he will perceive that this is a mixture of lithography and brush work, similar to water-colour drawing; the material used is a kind of ink, which, drying on the stone, is repeated on the impression. In the absence of a treatise, the best source of information on this subject is the establishment of Messrs. Hullmandel, in Great Marlborough-street.

**U. V. W.**—Vellum may be prepared with size for water-colours. There is no settled prescription for its preparation, as all who use it prepare it after methods varying according to their own experience.

**J. S.**, "Kilgobbin," is entitled to a print published by the London Art-Union; and we have no doubt he will in a few days receive a circular to that effect.

Five shillings will be given for Nos. 1 and 2 of the ART-UNION, by the publisher; and Four Shillings will be given for No. 40.

#### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MARGYLE, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

**N.B.**—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

#### REGISTERED 1843.

**TO ARTISTS AND AMATEURS.**—The **CARTOON PENCILS**, for the rapid production of Drawings and Designs in the style of the Old Masters.—The attention of the Profession, and all engaged in the delightful Art of Drawing, is particularly directed to the above Lead Pencils, which have been manufactured for the production of Designs, &c., in that bold and effective style so much desired by the present taste. For the execution of both large and minute work, they will be found to stand unrivalled. Their quality and peculiar form adapting them for the deepest and most delicate tints, while the absence of the numerous degrees (these pencils being only of four distinct shades) gives the essentials positively required, doing away with superfluity and confusion. Their peculiar feature is, they REQUIRE NO POINTING, but by cutting away the cedar, the means of producing Line and Shade of various breadths is immediately presented. The Lead of which these Pencils are manufactured is pure and genuine, and by extreme care and attention, every gritty particle is removed, which allows them to be used with that freedom and sweetness so essential for the production of fine drawings. In conclusion, they will be found a desideratum long required, and must, upon trial, obtain a decided preference and extensive patronage.

Manufactured and Sold by REEVES and SONS, at their Superfine Permanent Water Colour, and Black Lead Pencil Manufactory, 150, CHEAPSIDE, London.

**DEGREES.**—No. 1, Hard; 2, Hard and Black; 3, Soft; 4, Soft and Black.

\* The reader will bear in mind that this work is to be obtained only by subscribing to the Polytechnic "Art-Union," and that the subscription-list will close in a few days. The work is amply worth the guinea demanded as a subscription.

**AN ARTIST** offers to furnish **DESIGNS** and **DRAWINGS** for **WOOD** and **COPPER-PLATE ENGRAVING**, as well as in **LITHOGRAPHY** and **ETCHING**, upon moderate terms.—Address, in the first instance, K. G., 282, Strand.

**TO ARTISTS.**—To be **LET**, a Suit of Three Noble **APARTMENTS**, situated on the **WEST SIDE** of **SOHO-SQUARE**, admirably adapted to the purposes of a respectable Artist. The front Drawing-room is 27 feet by 26, and commands an open aspect to the East. Kitchen conveniences if required.—Apply to Mr. Warne, Builder, 41, Lisle-street, Leicester-square.

**TO ARTISTS.**—**W. WARRINER**, Manufacturer of **MINIATURE FRAMES, MATS, MO-ROCCO CASES, and GLASSES** of every description, returns his most sincere thanks to those Artists who have so long patronised him; and begs to state, that, manufacturing the whole on the Premises, he is enabled to furnish them at lower prices than any other house in London, and with the greatest punctuality.  
No. 16, CHARLOTTE-STREET, FITZROY-SQUARE.

**TO PARENTS AND GUARDIANS, BUILDERS, UPHOLDERS, AND DECORATORS.**—An Architect and Surveyor, practically engaged in the Design and Erection of Interior Decorations of the very highest class for the Palaces, and several Residences of the Nobility, wishes for an intelligent Youth, who has a knowledge of Drawing, as **OUT-DOOR PUPIL**, who would have advantages not usual in such offices. The Son of those practically engaged in Building, Furnishing, or Decorating preferred. Premium according to usefulness.—Apply (by letter) to M. L., Benson's News Office, Parliament-street.

**LOOKING GLASSES, &c.**—To **ALL PARTIES FURNISHING.**—**W. E. GOULD** respectfully acquaints his friends and the public, that he has on sale a large assortment of **CHIMNEY GLASSES** of superior quality, in gilt frames, which, for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4s. 6d. per foot; a variety of Picture Frames; Cheval and Toilet Glasses; Regliding in all its branches. Every article manufactured upon the premises, 19, Moorgate-street, City.—A few Second-hand Chimney Glasses for sale.

**SPLENDID AND SUPERIOR GILT FRAMES.**  
**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with **PICTURE FRAMES**, of the very best manufacture, at prices never hitherto attempted.

A **LARGE SHEET OF DRAWINGS**, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

#### DEPARTMENT OF MEDICAL STATISTICS.

**WILLIAM FARR**, Esq., General Register Office.

#### ACTUARY.

**F. G. P. NEISON**, Esq.  
THIS OFFICE is provided with very accurately constructed Tables, by which it can Assure **UN SOUND LIVES** on Equitable Terms.

The *Extra Premium* discontinued on restoration of the Assured to permanent Health.

A portion of the *Extra Premium* may remain as a Debt on the Policy.

*Survivorship Assurances* where the Life in expectation suffers from Disease, effected at *Cheaper Rates* than at any other Office.

Similar Tables enable the Society to grant **INCREASED ANNUITIES on Unsound Lives**—the amount varying with the particular Disease.

Members of *Consumptive Families* Assured at Equitable Rates.

**HEALTHY LIVES** are Assured on *Lower Terms* than at most other Offices.

**POOLLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, **BLOFELD and Co.**, Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. **BLOFELD'S** London made Table Knives, at **BLOFELD and Co.'s**, 6, Middle-row, Holborn.

**HAMPTON COURT.—BOARD and LODGING** for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at **TWO GUINEAS** per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

**THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY.** Established at York, 1824, and Empowered by Act of Parliament.  
Capital, £500,000.

#### PATRONS.

Lord Hotham, M.P. M.P.  
Lord Howden, K.C.S.K. G. F. Barlow, Esq.  
Lord Wenlock Robert Cracroft, Esq.  
Lord Worsley, M.P. Robert Denison, Esq.  
Hon. E. R. Petre Henry Preston, Esq.  
Sir G. Strickland, Bt., M.P. F. Saltmarsh, Esq.  
Sir Francis Lawley, Bart. Marmaduke Wyvill, Esq.  
Actuary and Secretary—Mr. W. L. Newman, York.  
London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the Public is requested to the terms of this Company for **LIFE INSURANCES**, and especially for **FEMALE LIVES**.

Extract from the Table of Premiums for Insuring £100.

Age next birth-day.	Male.	Female.
10	£1 7 6	£1 5 4
30	2 5 0	1 19 9
50	4 1 9	3 13 3
70	10 0 4	9 7 6
80		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock insured *without the Average Clause*.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

**WOLFF and SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK**, in various colours.

**E. WOLFF and Son** beg to apprise Artists and Amateurs that they have, by effecting great improvements in their **CRETA LÆVIS**, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

For sketching from nature, the great advantages resulting from the adoption of the **CRETA LÆVIS** must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The **CRETA LÆVIS** will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers, where the **CRETA LÆVIS** may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

#### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the **CRETA LÆVIS**.

**WOLFF and SON** beg to recommend their newly-invented **SKETCHING PENCILS, or PERMANENT BLACK CHALKS**.

**B B** Very Black, for foreground.

**H B** Middle Tint.

**N** Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

Manufactory, 23, Church-street, Spitalfields.

Price One Shilling.  
**THE ARTIST AND AMATEUR'S MAGAZINE**, a work devoted to the interests of the Fine Arts, and the cultivation of Taste, is edited by E. V. RIPPINGILL, and published on the first of every month.

Longman and Co.

James Carpenter, Old Bond-street.

**MR. ALEXANDER HILL,**  
PUBLISHER TO THE ROYAL SCOTTISH ACADEMY, 67, PRINCES-STREET, EDINBURGH,  
Has the honour to announce the following splendid WORKS of ART in course of publication.

## PRINCE CHARLES EDWARD AND THE HIGHLANDERS ENTERING EDINBURGH AFTER THE BATTLE OF PRESTONPANS.

Painted by THOMAS DUNCAN, Esq., R.S.A. Now Engraving in the highest manner of Line Engraving by FREDERICK BACON, Esq., of London.

### DESCRIPTION OF THE PICTURE.

"The Highlanders, having defeated the Government forces under the command of General Sir John Cope, at Preston, a village nine miles from Edinburgh, on Saturday, 21st September, 1745, entered the metropolis the day immediately following the battle, carrying along with them the spoil of Cope's army, and a vast number of prisoners. The Prince entered the town in the afternoon, and was received with the hearty greetings of a great portion of the inhabitants; while the adherents of the reigning family witnessed with dismay the last triumph of the Stuarts.

"The Prince occupies the centre of the picture; accompanied, on his right, by the Duke of Perth, and Chief of Clanranald; and on the left by Lord George Murray; before whom, and armed with a Lochaber-axe and target, is the Miller of Invernahayle, who is said to have given Colonel Gardiner his death-blow. Near him, and in the act of saluting the Prince, stands Lochiel, the unfortunate Chief of the clan Cameron. Further to the left, and surrounded by a group of ladies, is the Marquis of Tullibardine, who is described as a cavalier of the old stamp, and partaking, in some respects, of the character of the Baron of Bradwardine. The two pipers, who are striving who shall blow the loudest tempest of the national music, terminate this group. On the right of the Prince is a figure bearing a target, and arrayed in the *trones*, a dress only worn by the Dhunniewassals, or gentlemen of the Highlands:

Size of the Engraving—30 inches broad by 19 inches high.

It has been remarked of this work, that, "during its exhibition in Edinburgh, London and the provinces, it became in almost every newspaper the theme of lengthened eulogium, written for the most part in a strain of heartfelt interest, such as few works of the age have had the fortune to elicit;" the opinions of the most eminent contemporary artists and connoisseurs, not less laudatory, have combined

he is meant to represent the young Clanranald, and leads a portion of his clan, which formed the Prince's body-guard; near Clanranald are his kinsmen, the two brothers of Kinloch-Moidart, and Hugh Stewart, an old Highlander of the Black Watch. In the foreground is one of Sir John Cope's captured field-pieces, over which leans Hamish M'Gregor, son of the celebrated outlaw, Rob Roy: he is keeping watch over part of the spoil of the action. Beside him is a Highland bard or sennachie, several drinking Jacobite lairds, and a crowd of citizens. The outside stair is occupied principally by a group adverse to the Stuarts. The figure with the Bible and buff belt is the gifted Gildilan, mentioned in 'Waverley'; and behind him are a few of his followers. Two or three steps lower are M'Laurin, the celebrated mathematician, and young Home, the poet, both energetic opponents of Prince Charles. The procession is represented as moving down the Canongate, towards the Palace of Holyrood. The building on the right, with the projecting clock house, is the Canongate Gaol; further up the street is the Netherbow Port, or eastern gateway of the City; beyond is the Tron Church steeple; and higher, in the extreme distance, a part of the Castle of Edinburgh."—*Vide CATALOGUE OF THE ROYAL ACADEMY EXHIBITION, 1840.*

with those pronounced by the press, in establishing its high claims as a Work of Art; and the public, by bestowing on the Engraving to be made from it a degree of patronage which few similar works even in England have received, have thus added the weightiest testimony, that its popularity is by no means confined to the judges of its artistic merits.

Present Price to Subscribers: Proofs before Letters, £15 15s.... India Proofs, £12 12s.... Proofs, £8 8s.... Prints, £4 4s.

To be advanced on the day of publication to—Proofs before Letters, £21.... India Proofs, £15 15s.... Proofs, £10 10s.... Prints, £6 6s.

It is respectfully intimated to those lovers of Art who have not yet ordered Copies of this Work, that while every possible means will be taken to prevent the issue of even one imperfect impression, yet, as the impressions must and will be delivered strictly in the order they are subscribed for, an early application cannot but prove decidedly advantageous to the Subscriber.

## PRINCE CHARLES EDWARD ASLEEP IN ONE OF HIS HIDING-PLACES, AFTER THE BATTLE OF CULLODEN;

PROTECTED BY FLORA MACDONALD AND OUTLAWED HIGHLANDERS, WHO ARE ALARMED IN THEIR WATCH.

Painted by THOMAS DUNCAN, Esq., R.S.A.

Now Exhibiting in the Exhibition of the Royal Academy (No. 263 of Catalogue).

To be Engraved in the mixed manner of Line, Stipple, Etching, and Mezzotinto, as a Companion in size to 'THE TRIUMPHAL ENTRY INTO EDINBURGH.'  
By H. T. RYALL, Engraver to the Queen.

The picture is intended by the gifted artist as a pendant and counterpart to his widely-celebrated work, 'The Triumphant Entry of Prince Charles Edward into Edinburgh, after the Battle of Preston.' Most striking, affecting, and beautiful, is the contrast in the two pictures. Here, we behold the same Prince Charles Edward whom we had before witnessed radiant with youthful beauty, and in the full flush of triumph—now a broken down and hopeless fugitive from the woful and bloody rout of Drummoissie Moor; his worn-out frame sunk in the sleep of utter exhaustion, through fatigue, and watching, and peril—stretched on a lowly bed of heather, spread for him on the damp floor of a desert cave, the secret retreat of Highland outlaws, a remnant of that mountain chivalry slain or scattered at Culloden. Keeping watch beside his sleeping Prince, sits a fair sentinel—the beautiful and noble-minded Flora Macdonald—she whose devoted affection and loyal faith have, for nearly a hundred years, been the theme of grateful eulogy and song, both with highland mountaineer and lowland maiden. An alarm of coming danger has evidently taken place, for her fine countenance is perturbed with an expression of intense anxiety—though unmingled with one atom of sordid or personal fear; the rugged clansmen also—the masters of this rude mansion—draw towards the mouth of the cave, which looks out on a bleak expanse of mountainous waste, and with silent energy grasp their weapons, and prepare themselves for a desperate defence.

Present Price to Subscribers: Artists' Proofs (of which only 100 will be printed), £10 10s.  
Proofs before Letters, £7 7s.... Proofs, £5 5s.... Prints, £3 3s.

A young and very handsome Highlander, who bears on his brow the marks of previous conflict, is communicating to Flora, by signal and whisper, the nature of the danger—it may be the immediate proximity of the *saidier roy*, or red soldiers, who, in scouring the passes and fastnesses in search of their devoted victim, were, as is well known, frequently within a few yards of his hiding-place. Nothing could be more masterly than the manner in which the painter has contrived to make the spectator of the picture participate in the breathless anxiety manifested by the inmates of the cave as to the nature of the coming danger: ever and anon we throw our eyes into the black profound, and endeavour to peer through the blanket of the dark, expecting that the advanced guard of the discovering-party will emerge from the obscure, and show himself on the platform before the cavern. Woe be to him if he should do so; for the old Highlander who stands foremost in the breach, has the eagle eye, the collected mind, and the firm joints of a veteran deerstalker; his rifle is in his hand, and he is not likely to miss his mark. A half-naked *gillie* is seen restraining the fury of a magnificent deer-hound, a noble specimen of the old Highland breed, who has roused himself from his lair to join in the defence. The figures are lighted up from a fire of turf and dried branches. The sky and savage wilderness, seen beyond the yawning throat of the cave, is dimly tinged by the first pallid streak of dawn.

## THE COVENANTERS' COMMUNION.

Painted by GEORGE HARVEY, Esq., R.S.A.; Engraving in Line by WILLIAM HOWISON, A.R.S.A.

Size of the Engraving—27 inches by 18 inches high.

"Martyrs who sustain'd,  
With will inflexible, those fearful pangs  
Triumphantly displayed in records left

Of Persecution and the Covenant. Times  
Whose echo rings through Scotland to this hour."  
Wordsworth.

"Harvey has painted, simply and sublimely, a 'Hill Sacrament.' There, all is solemn in the light of expiring day; the peace that passeth all understanding reposes on the heads of all the communicants; and in a spot sheltered from the persecutor by the solitude of sympathizing nature, the humble and the contrite, in a ritual hallowed by their pious forefathers, draw near at his bidding to their Redeemer."—*Prof. Wilson on the Genius and Character of Burns.*

Artists' Proofs (only 50 to be printed), £15 15s.... Proofs before Letters, £10 10s.... Proofs, £6 6s.... Prints, £3 3s.

## WINDSOR CASTLE, SUMMER EVENING.

Painted by D. C. HILL, Esq., R.S.A. Engraving in Line by WILLIAM RICHARDSON.

Artists' Proofs, £8 8s.... Before Letters, £6 6s.... Proofs, £4 4s.... Prints, £2 2s.

PORTRAIT OF THE RIGHT HON. DUNCAN MACNEILL,  
Lord Advocate for Scotland.

Painted by THOMAS DUNCAN, R.S.A.; Engraved by EDWARD BURTON.  
Autograph Proofs, £3 3s.... Proofs, £2 2s.... Prints, £1 1s.

PORTRAIT OF PATRICK ROBERTSON, ESQ.,  
Dean of the Faculty of Advocates.

Painted by THOMAS DUNCAN, R.S.A.; Engraved by EDWARD BURTON.  
Autograph Proofs, £3 3s.... Proofs, £2 2s.... Prints, £1 1s.

## "BRAN,"

A CELEBRATED DEER-HOUND, OF THE OLD HIGHLAND BREED,

The property of the Lord-Avocate for Scotland.

Painted by THOMAS DUNCAN, R.S.A.; Engraved by EDWARD BURTON.  
First Class Proofs on India, £1 5s.... Proofs, £1 1s.... Prints, 12s.

## THE ART-UNION.

SUPPLEMENTARY NUMBER.

LONDON, JUNE 1, 1843.

## THE ROYAL ACADEMY.

SEVENTY-FIFTH EXHIBITION, 1843.

THE seventy-fifth Exhibition of the Royal Academy was opened to the public on the 8th of May; the opening having been postponed from the 1st, in consequence of the death of the Duke of Sussex. The anniversary dinner took place on the Saturday preceding; the "private view" on the day previous; and on the eventful Monday, the usual rush was made at the doors, the customary crowd being admitted, to see each other—and the pictures, if they could. The day of private view affords a fertile theme—for THE AUTHOR; it is sadly productive of sighs, heart-burnings, and blighted hopes; a description which should keep a long way within the boundary that divides truth from fiction, would seem a huge exaggeration to those who have not endured the pain of witnessing the many sad countenances, indicative of sad hearts, congregated within the walls of the Academy on its "opening day." Our business is merely with plain facts, and to condense them as far as possible, leaving to others the task of describing—a task that might obtain a large reward, if properly executed, by inducing some change in a system out of which arises vast personal and public evil. We cannot, however, pass by this very proper opportunity of commenting upon some matters of very deep interest and importance to the Royal Academy, to British artists generally, and to British Art. We shall do so—swayed only by the knowledge that we are called upon to discharge an unpleasing, but an imperative, duty.

It is notorious that the Royal Academy are compelled to return a large number of pictures to their producers—and why? Because they have not room to hang them. It is not pretended that these proffered works are of inferior character; the majority of them are productions by artists—one or two of whose works are placed, and whose claim to reception, on the ground of ability, is thus admitted. If, however, there be a large number of pictures annually rejected, there are others so placed that rejection would have been a boon. And why is this? Because the Royal Academy have not room to hang them where they may be seen to advantage. Far above the ken of naked eye, and below the level of a child's knees, are pictures of great merit; and one room, so decidedly bad as to be distinguished as "the condemned hole," is filled with works, scarcely one of which is inferior, and many of which confer honour upon the British School.\* It is our duty to inquire if

\* No opinion is necessary to establish the fact that a position in this room is equivalent to a sentence of excommunication; it is a brand upon the brow that may not be removed until years have passed. Many visitors never enter it at all; we have, indeed, met with persons who have regularly visited and examined the exhibition, during the last three or four years, without being aware of the existence of this "Octagon Room." Others peep into it, give a hasty glance along the walls, and retreat under the impression that its contents are worthless. Even those whose business is to view and criticise "the hole," abandon it in despair; here, for example, is the mode in which the critic of the *Spectator* shuns the doomed chamber:—

"The pictures in that dark hole, the Octagon room,

this evil be without a remedy. So long as it exists, a taint will remain upon the reputation of the Royal Academy; serious injuries will be inflicted upon unprivileged exhibitors; the national character for integrity and "fair-play" will admit of doubt, and the Arts will be kept back in spite of all the government patronage that may be exerted for their advancement. These may seem large deductions from limited premises. But a little reflection will show that this is, in reality, the source of the mischief; that if sufficient space were supplied, by which the claims of every candidate for fame might be fairly tested, the onward march of improvement would be most sure, most safe, most rapid. We should occupy many columns, if we were to urge, fitly, the various arguments by which this assertion is to be supported. Briefly they are these:—Nearly all young artists work in fetters; paint for possible positions, high or low; dare not hazard subjects that require size; colour for exhibition-effects; in fact, labour under the conviction that their destiny depends upon chance, caprice, pre-estimate, personal feeling—upon any circumstance, indeed, save the genuine desert of the offering sent in. We are far from admitting the necessity for such courses, or the justice of such suspicions; but it is beyond question, that they are very generally entertained, solely because the Royal Academy, if they hang them at all, are compelled, from want of room, to hang injuriously three out of four "contributed pictures."

We think the evil by no means without a remedy. It should be sought for and obtained by the Royal Academy; or by the great body of Artists of Great Britain, if the Royal Academy decline to make the efforts necessary for its removal. Unhappily it is the characteristic of all chartered and privileged Institutions to be tardy in the admission of changes, even after such changes are shown to be beneficial; and it may be that the Royal Academy will require what is called pressure from without. Great bodies are proverbially "hard to move." But the latter half of the nineteenth century must not be permitted to pass, like the early half, without an adequate effort on the part of the profession to keep pace with the general advance of mind, and to meet a state of things marvellously altered since laws for the government of the Royal Academy were enacted.

It is undeniable, that certain changes in the constitution of this body have been rendered essential by Time. We earnestly hope that when made—and that they will be made, no reflecting person can entertain a doubt—the "makers" will be the members themselves. That they will not postpone a solemn and imperative duty until it is too late, and the task has been confided to the hands of enemies, who may so confuse the valuable with the objectionable as to destroy the one while removing the other.

The venerable and excellent Institution may be safely and advantageously improved by those who are interested in its preservation. Let it not be intrusted to those who may contemplate—not its renovation, but its destruction.\*

are invisible; it ought not to be used as a place of exhibition, for few persons enter it; and those who do, can see nothing but the gloss of paint on the pictures."

The omission of all notice of this room is not to be pardoned in one whose duty it was to offer some amends to certain artists for the neglect or injustice under which they were suffering—perhaps to their ruin; but it will surprise no one to learn that very few visitors, having no purpose but enjoyment, think it worth their while to do more than take three steps across it and three steps back again—quite satisfied that if there be anything to see they cannot see it. Yet, as we shall presently show, some of the best paintings of modern times have been squeezed into this cave of despair.

\* A feather thrown into the air will show how the wind blows; and we may, with reason, apprehend the danger of the Royal Academy refusing to entertain proposals for great changes, when suggestions for small improvements are rejected. Year after year we have

Our principal purpose in these introductory remarks is to implore the Royal Academy not

felt it our duty to protest against excluding, from the "private view" of the Exhibition, persons whose business it is to publish strictures upon it in the public newspapers. The system is equally unwise and unjust. The Academy is now, we believe, the only Institution in existence that not only offers no compliment to the press, but affects to scorn it. A few years ago the principle was precisely the same in the Houses of Lords and Commons; the presence of a reporter was, indeed, tolerated, but it was assumed that he was not "committing a breach of privilege" and taking notes; he was allowed no sort of advantage to facilitate his purpose, but thrust among the crowd, where he used his pencil as he best could. At length legislators, in both houses, reasoned that what was done might as well be done properly; arrived at the conclusion, that their speeches might be better reported by giving elbow-room to reporters; and two galleries were erected expressly for their accommodation. Similar enlightenment has not yet travelled so far as Trafalgar-square. Into the galleries of the Royal Academy, for the seventy-fifth time, the persons appointed to criticise the collection pushed their way, on Monday the 8th, after payment of one shilling each at the door. The rooms were, as usual, crammed with visitors; every picture of importance was barred from sight by a dense mass; it was, in fact, utterly impossible to see—and of course, therefore, to review—the collection; yet the parties who were to forestall public opinion, and, in a great degree, to determine the estimation in which the exhibitors were to be held, were forced to leave the gallery and prepare their "Report"—1st, upon insufficient information; 2ndly, under the influence of exceeding fatigue; 3rdly, with tempers annoyed and exasperated by what is considered uncourteous or insulting treatment. We may be accepted as authorities upon the subject—and we say, without hesitation, that so long as this absurd and most evil principle is adhered to, so long will the Royal Academy have an enemy—neither powerless nor idle—in every conductor of the public press. Can we, in any other manner, account for the following passages—grossly illiberal and unjust—appearing in a journal of high respectability and large circulation:—

"No exhibition of the Royal Academy within our memory has possessed less interest or produced a feebleness of impression than the present: it has but few salient points, and those not of the most striking character. . . . Superannuated Academicians are privileged to parade their incapacity in the most conspicuous manner, moving the many to mirth and the few to pity, and proclaiming the gross injustice of the Academy in the arrangement of the exhibition."

Believing it our duty to endeavour to arrest this evil—under the effects of which, not only the Academy, but the artists generally, and the Arts in Great Britain suffer—we addressed the Council, through the President, and applied for admission to the private view—making our application "chiefly, because as that which has never been asked, cannot be said to have been refused, it may remain doubtful if the Royal Academy willingly deny to the public press the advantage conceded to it by all other institutions, and which, in the case of the Royal Academy, is especially needed to secure cool and competent judgment." To this application, we received a prompt and courteous reply, declining to comply with our request—"as it had never been the practice of the Royal Academy to issue official invitations to any class, or to distinguish the gentlemen connected with the public press from other visitors." This is indeed a resolution greatly to be deplored—out of an obstinate adherence to which much evil has arisen, and much more evil is destined to arise. It is a copy from the dark ages—a solitary blot on the true liberality of the age. If the principle had been carried out in all things—the "sure it was always so" principle—the human mind would have been as stationary as an oyster. The Royal Academy will do well to remember, that if Gattin and Old Summ had been abandoned—and parliamentary representatives accorded to Manchester and Birmingham—there would have been no large besom to sweep a congregation of boroughs into schedule A. It was the objection to sacrifice a little to wisdom and justice that brought in the Reform Bill. The refusal to admit to the private view writers for the public press—the only "critics," be it remembered, who communicate between artists and the public—is sufficiently impolitic and unjust. We use the term "UNJUST," because the Royal Academy are not merely conservators of their own interests—to "do what they will with their own;" they are intrusted with the repu-

to consign to others the task of providing adequate means by which the contributions of artists to an Exhibition may be properly exhibited. There is no reason for the continuance of an evil which all deplore, or, at least affect to deplore, as a grievous injury to the Arts and the artists of this country. We say, without the fear of contradiction, that if the members of the Academy will stir in the matter, the object will be achieved without "AGITATION;" and that, if they decline to move, it will be effected without THEM—in that case, not immediately, nor without agitation, but, very certainly, after a time, when representations have been made in proper quarters.

The necessity for improvement has become more evident to us after a recent visit to the Louvre, and a comparison of its QUARTER OF A MILE of gallery with the four or five miserable chambers into which the productions of our artists have been thrust. The number of works contributed to both exhibitions are nearly the same; the Louvre containing 1697, including sculpture, miniatures, water-colour drawings, engravings, and lithographies; the apartments in Trafalgar-square 1630. These apartments are lined with frames containing canvases, literally from the floor to the ceiling; while, at the Louvre, there is no single picture removed from the eye so far as to prevent its receiving just and fair estimation.

There is an old saying, "What can't be cured must be endured;" it would be idle, or worse than idle, to dwell upon evils that admit of no remedy. But, we repeat, the remedy is easy; a practical remedy is suggested by one of, at least, a score of correspondents, who have addressed us on the subject. We print his letter in a note, although, upon some points, we dissent from it.\* We for the present contentions and the properties of some hundreds of artists, whose only mode of augmenting both is to appear in advantageous positions before the world. In this quarrel with the public press—for such it is—an evil spirit is evoked by no means injurious only to the Royal Academy. But more than this. The "practice of the Royal Academy" not having been to deviate an inch from old custom, or to allow the entrance of any modern improvement, other evils inevitably follow; for example: admission to the private view was refused to the honorary secretaries of the Art-Union of London—who, indirectly, had, in their hands, £3000 or £9000 to spend within its walls. This mattered little to the great artists of the body, who had no unsold works in the collection; but it was a serious grievance to some who, having eschewed Suffolk-street, looked to the Academy for some counterbalancing advantages. The holder of the £400 prize did indeed obtain admission, but it was by the private introduction of a member; the honorary secretaries procured it for him, and the result was an addition of £400 to the worldly wealth of Mr. Charles Landseer. This year there was a more than usually strong reason why the Academy should have facilitated the objects of the London Art-Union. Suddenly—and we humbly think absurdly—in consequence of the death of the Duke of Sussex, the opening of the Gallery in Trafalgar-square was postponed for a week. What was the consequence? Several prizeholders, who had visited London for no other purpose but to select their pictures, not considering it worth their while to prolong their stay for seven days, went to Suffolk-street, and laid out their money there, paying £200 for a sheet of canvas covered by Mr. Allen; and a huge imitation of unnatural light, by Mr. Jacobs, or Jacobi—a German or Frenchman, of no note; and this is upholding and encouraging British Art. This evil we distinctly charge to the account of the Royal Academy.

\* *Sir*,—As by the accounts in the public papers we find that nearly a thousand pictures were rejected from the exhibition of the Royal Academy from want of room, you will, doubtless, receive many communications, suggesting some plan for the prevention of this evil in future. Without further preface, I will lay before you a scheme which (as it appears to me) will, without injury to any one, completely remedy, not only the sad rejections of meritorious works, but the still more fatal system of hanging which prevails at all the exhibitions—*avowedly* from the crowd of pictures sent. I propose that the National Gallery (that is, the wing unoccupied by the Royal Academy) shall be employed for the modern artists in a precisely similar manner to

tent ourselves with observing that the proposal of a FREE Exhibition is made thoughtlessly, and without reflection as to the various interests it involves. Under existing circumstances it is quite out of the question.

We have no doubt whatever, that if the Royal Academy will set themselves to the work of obtaining a gallery suited to the purposes of exhibition, and in all other respects worthy of the country, they will soon procure one. Until this object has been achieved, at least we may ask for additional room in the—so called—"National Gallery," in order that the British public may have some idea of the progress made by British artists. Three years ago, we threw out this suggestion for boarding over the remaining half of the "National Gallery" for two months, as they do at the Louvre, where, by the way, however, they only cover a part of the collection of the old masters. Sure we are that the English public would by no means complain of such an arrangement, when made aware of the immense advantages likely to result to the artists and the Arts of Great Britain. But such a plan can be contemplated only as a temporary plan. Ultimately, and before long, a PROPER BUILDING MUST BE ERECTED, EITHER FOR THE NATIONAL COLLECTION OR FOR THE ROYAL ACADEMY. In all probability it will be for the former; leaving to the latter the structure—such as it is—in Trafalgar-square; unless circumstances should arise by which the two shall be amalgamated; and the Nation shall become the fountain of honours in the Arts, and the national wealth the means of their advancement.

Again, then, we presume to urge upon the Royal Academy the wisdom and justice and sound policy of not permitting another year to pass without removing a huge reproach from themselves and the country. True, there is space—or nearly space—enough to hang all the contributions of members and associates; \* and until the body is enlarged—that adopted in the Louvre at the present moment, namely, that the old pictures shall be boarded over and the new ones hung in front of them. It would be impertinent in me to point out to any one of common sense the advantages of this arrangement, and I know your good feeling towards the artists too well to doubt your most strenuous advocacy of any measure brought forward for their amelioration.

If, in answer to this proposition, any one should say, the public must not be deprived of the old masters to suit the necessities of the moderns, I reply—Let the exhibition take place during the holidays of the attendants of the National Gallery, when it is closed from the public altogether, and let this new Exhibition be a *free one*, so that the public are in every way the gainers.

A petition, which will, in due time, be laid before the proper authorities, is preparing, and we firmly rely on your powerful support and that of every well-wisher to the Arts. That every member of the Royal Academy will sign this "Artists' Petition" there cannot be the slightest doubt, as it is so good an opportunity for proving the sincerity of their yearly repeated avowal—"We deplore the necessity for returning your picture, but our want of room entails this upon you," and upon 700 or 800 others, whose wives and families are perhaps in want of bread, and their getting that bread or not depends, in many cases, on the exhibition of their works. Strong indeed must the reason be that could hold the hand of any artist—academician or other—from a memorial of this description, if his signature could advance it one step towards its avowed and evident object, the relief of a body of men struggling in a profession, the difficulties of which—at all times great enough—are now increased twenty-fold by the numbers of aspirants to its honours.

If you will give publicity to this in the next ART-UNION, so that the feeling of the profession may be obtained on this important point, you will greatly oblige, A SUFFERER BY THE EXHIBITION.

\* Ample space there certainly is not. The works of several members are this year very disadvantageously hung—far below the eye. It is thus with two of Mr. Wm's beautiful pictures, with two of Etty's also, and with two of David Roberts. Moreover, it is known that when the supply of works designed for exhibition was found so greatly to exceed the space at command, a proposal was made, and at once acceded to, that each member who had sent in his full number should withdraw one picture. This was done. The fact is creditable to the Academy, but the relief it afforded was very small indeed; probably about six pictures were hung that would have been otherwise rejected.

which it surely will be ere many years elapse—so as to present a size proportionate to the vastly augmented body without, the Royal Academy will not, *for their own interests*, be called upon to make an effort—mighty in its after influence upon the Arts; but for the sake of the great and numerous CLASS they represent, we earnestly hope the year 1843 will be the last year to witness an exhibition so humiliating and ruinous to the contributors, so prejudicial to the judgment or integrity of the Royal Academy, so injurious to the Arts, and so disgraceful to the country—merely because (after rejecting about 1000 works) there is WANT OF ROOM IN OUR NATIONAL GALLERY!!!\*

For the Royal Academy as a body, and for the members individually, we entertain sentiments of the highest respect. We repeat our conviction that no public Institution ever existed in any country more free from reproach, or less liable to the charge of wrongdoing. But there are periods in social life when (paradoxical as it may seem) to do no evil is to do much evil. Very recently a mighty move has been made that must produce immense effects upon the Arts. "The Government" on the one hand, and "the people" on the other, have been stirred from apathy into activity. The Royal Academy must not stand listlessly by, waiting for what may happen; it must direct the rising waters where to flow, so that fertility and not disaster may follow.

Fortunate are those who can foresee a coming storm!

Again, we say, all veritable patriots, and all true lovers of the Arts, will hope to see changes,—rendered necessary by Time—effected by the members of the Royal Academy, not forced upon them.

We have submitted these remarks, not only because this terrible evil—this "WANT OF ROOM"—is a poor excuse for the perpetration of immense mischief, but because it enables us to account for errors in "hanging," which undoubtedly startle and confound those who have confidence in the judgment and integrity of the Royal Academy. †

\* How humbled must an Englishman feel in walking over the Académie des Beaux Arts—a leading glory of modern Paris. It is a work of vast magnitude, in which splendour and taste have gone hand in hand; it is enriched by a collection of rare antiques. Here are collected the earliest and the later efforts of the pupils sent by the nation, as students, to Italy; here are schools, models, and lectures, open to every applicant; here is ample room for every purpose to which Art can be applied, or from which it can derive aid or illustration. Compared with our own miserable den in Trafalgar-square, it is—we shame to suggest a comparison. But the Arts in France have long been the fostered children of France. The wonder is, that the artists of Great Britain, notwithstanding their disadvantages, have not only kept pace with their neighbours, but have, with two or three brilliant exceptions, very far surpassed them. Let England do for Art, during the next ten years, what France has done for it during the last forty, and we may defy the "pick and choose" of all Europe.

† This is at all times a painful and embarrassing subject. Let us notice a collection of pictures when and where we will, it is sure to furnish a stumblingblock we cannot get over. Under the best and safest arrangements that could be made, many mistakes would occur, and much discontent inevitably arise. Nay, if an archangel were to hang an exhibition, some exhibitors would be dissatisfied. We doubt if universal contentment would ensue if it were possible to let every artist choose his own place, and hang his picture as best pleased him. A pleasant illustration is told of the Royal Hibernian Academy:—A certain member had once a year abused the hangers there; at last, they resolved, in professional phrase, to—*let him hang himself*; and he did; and when the exhibition opened, he was louder than ever in protesting he had never been hung so badly in all his life. Seriously, however, much allowance should be made for the honest differences of opinion that may exist as to the merits of a work. That which A B may consider execrable, C D may hold to be one of the finest pictures ever painted. This is no imagined notion; the thing occurs every day, or every hour of the

Having said so much—and so discharged a duty by no means altogether pleasing—let us direct our attention to more agreeable views of the important matter. The present Exhibition, on the whole, affords ground for congratulation, although it presents no single object of general attraction, and the absence of some of the best members of the Academy is a serious disadvantage. Neither Callcott nor Mulready have contributed anything; Edwin Landseer has done little.\* Yet, on the whole, the collection manifests a decided improvement, a marked advance, more especially on the part of those with whom the hopes of the country mainly rest—the junior candidates for high places.

The general aspect of the Exhibition gave to us especial, and far more than usual, pleasure this year, inasmuch as our visit took place almost immediately after a visit to the Louvre. Nor was that pleasure diminished when minute examination and matured reflection had enabled us to institute comparisons between the great public "shows" of England and France. Making all due allowance for the fact, that the great artists of France are not (and, by the way, rarely have been) among the contributors,† we are by no means disposed to concede the palm of excellence to our continental brethren. The very opposite.

Setting apart a score or two of good works, about half-a-dozen very good works, and, it may be, two or three of a high order—the collection certainly does not rise above mediocrity; and a vast proportion of them—of the 1597—would not possess sufficient merit to secure places even near the wall or on the ground of the Gallery in Trafalgar-square. The portraits are for the most part villainous; the landscapes, with few exceptions, execrable; the historical works, generally—big, and nothing more; and the pictures *de genre*, usually as unlike nature and fact as paintings can well be. There is, indeed, in this gallery much to stimulate and nothing to discourage the artists of Great Britain. Yet to the former "the nation" has been very liberal; for the latter "the nation" has, as yet, done literally nothing. Our time is to come.

We do not apologize for the length of this introduction; the topics it embraces are of vast magnitude and importance, and we are

day, in an exhibition-room. One is not obliged to consult merely public criticisms for opinions as opposite as light and darkness; he will have marvellous contradictions among every group that gathers round a work of note. It would be too bad to deny to "hangers," who discharge a most irksome, toilsome, and thankless duty, the freedom of thought each would claim for himself. It is admitted on all hands, that the hanging at the Royal Academy is by many degrees "fairer" than it is elsewhere. Yet, however willing to attribute to accident some embarrassing difficulty, or *peculiar* judgment, the positions occupied by—not a few—pictures in the Exhibition this year, we cannot but lament that genuine merit should be made liable to ruin by any cause whatever.

\* While considering this branch of our subject, it may be well to inquire why the Royal Academy has no law by which it may rid itself of useless members? Two of the "Academicians" and two of the "Associates" appear annually in the list; but never among the exhibitors.

† Among these "great artists" are men truly great; the world knows it; men who may contest for glory with the most famous of the old masters. On some future occasion we may be enabled to introduce them to our readers. Some of them are scarcely known in England, even by name. It is unnecessary to say that, although we were unable to make acquaintance with them at the Louvre—and the Luxembourg contains only their earlier and not best works—we did not quit Paris without endeavouring to form an accurate estimate of their value. This is only to be done by visiting *private* collections of pictures, and the *ateliers* of the artists. The former are very easy of access; and the latter may be reached with little difficulty. But these are topics that must be reserved for occasions when we may command greater space.

bound to discuss them freely and boldly, but also, as we hope we have done, with sufficient distrust of our own judgment, mingling reasonable hesitation in pushing forward our opinions with proper earnestness in our advocacy of those we consider right and just.

Let us now enter upon the main subject in hand.

The Catalogue, as we have intimated, \* enumerates 1530 works, 144 of which are in sculpture; and of which no fewer than 737 are classed among the miniature drawings and architectural models, medals, &c. Among these 737 there may be about 50 paintings—condemned works, hung just underneath the ceiling, above the lines of miniatures. In reality, therefore, the whole of the Exhibition does not contain more than 700 paintings—no very large number, after all, and certainly not sufficient to alarm those who have forced themselves into a fancy that every youth not born to fortune is destined to try for the achievement of one by his pencil.

No. 1. 'Welsh Mill on the Dolgarey,' W. MÜLLER. The native subjects of this artist are selected with a fine appreciation of the picturesque, inasmuch as to approach the dramatic romance of landscape composition. His mind is essentially poetical, yet capable of devotion to the merest and simplest facts. His drawing of natural objects manifests careful thought and study; and drawing, in trees, stones, and water-brooks is too generally neglected as of small importance—a grievous mistake. The bed of the stream whereon the mill is situated forms the rocky and broken foreground,—laid in with a marked predilection for a cold and opaque gray colour, which prevails throughout, and which may operate to its disadvantage with those who merely give a transient glance at the picture. It is, however, true to nature—to Nature, who has a thousand varied dresses, and who may change them a thousand times between sunrise and sunset. The genius of Mr. Müller is discursive: no living artist is capable of attaining so much excellence in so many departments of the Arts; but, as a landscape-painter, he may be assigned a very foremost rank—with certain peculiarities which the mass may not entirely comprehend, but which those who truly estimate genuine worth can thoroughly understand and appreciate.

No. 7. 'Portraits of Lady Mary Viner and Son,' J. LUCAS. The lady is seated in a high-backed chair holding her child. The work is extremely low in colour, but is to be valued as not being a dress portrait. The glimpse of sky striped alternately blue and yellow is a defect.

No. 8. 'Portrait of H. R. H. the Duke of Sussex,' SCHMIDT. The composition of the portrait is sufficiently orthodox, but the pose of the figure is highly objectionable; the Duke being seated in a chair with his hands so disposed as to convey the idea of his being afraid of falling. The features have by no means the fullness that belonged to those of the Duke.

No. 9. 'Virgil's Bulls,' J. WARD, R.A. This is an illustration of a passage in the third book in the Georgics, in which the bulls are described fighting—

"Illi alternantes multa vi prælia miscent  
Vulneribus crebris."

It is surprising that one justly celebrated as an animal painter should not have introduced Italian cattle into his picture in lieu of an Alderney and one of Lord Tankerville's breed. This brings us at once down from Virgil's campanian hexametrical associations to the halting

\* It is our duty to remark that the Catalogue has been revised in a very slovenly manner. It is full of errors—some of them of a very gross character—names misspelt, wrong addresses given, numbers confused, and, in some instances, names one never heard of substituted for those of the actual artists. This is quite unpardonable, seeing that a very large income is derived from this source.

prose of our own farm-yards. The animals are powerfully drawn, they fight with fierce determination, but the cow is by no means the "pulchra juvenca" of the poet's verse. The background wants breadth, and the sky natural colour.

No. 10. 'Windsor Castle and Park from St. Leonard's,' AMATEUR. It is to be lamented that such a picture should find a place on these walls to the exclusion of some other which could scarcely be rejected as being worse. It is painted in affectation of a taste acquired by copying works of the earlier schools of landscape art.

No. 11. 'Study for a Head of Christ,' M. MOORS. A head in profile painted in imitation of the early Italian manner, and toned down with warm colour until the whole is uniformly brown and adust. The expression is also inappropriate, for the artist, in casting about for intense humility, has fallen upon a vulgar and sinister character.

No. 12. 'The Bay of Naples,' W. LINTON. This picture has been painted with the utmost regard to identity; every object in the composition has been duly cared for and put in with great firmness of touch. It is, however, somewhat difficult to determine, from one or two incongruities, the kind of weather under which the view is presented to us.

No. 14. 'The Opening of the Wallhalla, 1842,' J. M. W. TURNER, R.A. On a remote hill, rising above the winding river, is seated the Wallhalla, approached from the opposite bank by a bridge of many arches, to which leads, from the foreground, a sinuous route, thronged by thousands of figures moving onward to celebrate the opening of the famous temple. The sun is not in the picture, but on the right is poured downwards a flood of light, painted apparently with chrome yellow. The landscape is by no means generally eligible, but this is of no moment, the object of the artist being to paint light and atmosphere; and how far he may be successful, will be better shown half a century hence than now. The admirers of Mr. Turner say, indeed, that Time will restore to him the high fame of which Time has deprived him. Yet those who see this picture, and here make a first acquaintance with the artist, will find it difficult to believe he once painted pictures of chaste, delicate, and surpassing beauty,—as true to Nature as Nature is to herself. Criticism would be wasted on what appears to be executed without end, aim, or principle. The picture is a whirlpool, or a whirlwind of colours, neither referring to fact, nor appealing to the imagination; yet there are others in the exhibition more objectionable still.

No. 15. 'Her Majesty the Queen,' F. GRANT, A.R.A. This portrait has been painted for the United Service Club. Her Majesty is seated, wears a diadem, and is habited in white satin; the likeness is good, and a pleasing expression has been given to the features. The work is characterized by elegant simplicity, and the utmost value has been accorded to those portions upon which the artist has most dwelt. Still the Queen has not yet been painted so as to do honour to the Art; and, even now, with this effort by Mr. Grant before us, we are reluctantly compelled to admit that all who have striven to picture her Majesty fall short of M. Winterhalter. We are by no means willing to allow that we are unable to surpass it, but assuredly it remains to be done.

No. 23. 'Portrait of Mrs. Gage,' T. M. JOY. There is much personal grace in this figure; it is plainly habited, but the drapery is too much cut up.

No. 25. 'Scenery on the River Teign, Devonshire,' F. R. LEE, R.A. On the left of the picture is a mill, overshadowed by the fresh verdure of a knot of sheltering trees, beyond which the view opens, showing rising ground, painted in with colours somewhat cold and

heavy. The stream flows over a bed interrupted by shelvings and blocks of stone, to each of the latter of which there is given an individuality so marked as to force them on the eye. The trees are imitatively painted; they are made out in a manner which gives them their full meed of richness and beauty.

No 27. 'Cottage Scene in Kent,' R. HILDER. Among the simplest materials of composition; a cottage and a tree; the latter constituting the picture, but finished with a huskiness of touch detrimental to that effect for which masses of foliage depend on each other.

No 28. 'Peasant Boy and Girl,' A. MONTAGUE. The figures are seated on some broken ground, and, although looking as if sitting as models, are yet placed at ease with themselves. They are skilfully relieved by a background thrown in with more freedom than good feeling.

No 30. 'The Graces—Psyche and Cupid, as the personification of Love burning the arrows of destruction, and trampling on the insignia of war,' W. ETTY, R.A. The title is followed in the catalogue by a long and embarrassing quotation from Lempriere, which the author of this picture reads very pleasantly. The Graces are presented, as usual—a brief chain of three beauteous links; near them is Psyche, plucking a rose; and on the other side Cupid, burning the arrows, &c. A glance at these figures enables the merest tyro at once to declare the particular excellence which the artist is most proud to have acknowledged. We find in them all the swelling and flowing tracery—all the play of line consonant with benignant inspiration; but this is only secondary to materiality, to which here everything yields. The roundness of the limbs—the warm *morbidness* of the flesh—which has settled in, with the texture of the veritable cuticle, bring back the mind to earthly substances, how disposed soever to allegorize.

No 31. 'A Peasant Girl,' E. M. EDDIS. The figure is standing looking out of the picture. The feet do not seem to have been painted from such a model as we might suppose to be required for such a design; they are too large, marked like those of an adult, and also remarkable for want of symmetry. There is, however, a fine feeling manifested by the work, which compensates for minor defects.

No 32. 'Portrait of the Rev. W. Pullen,' C. W. CLARKE. The head is forcibly put in, but it has so far the advantage of the figure that the latter looks too meagre, yet this may be the effect of the height at which it is seen.

No 36. 'Portrait of N. G. Campbell, Esq.,' H. P. BRIGGS, R.A. This is a sporting portrait—by the way, now a very fashionable taste, and assenting well with the pride of humility prevalent in modern costume. The figure stands holding in the right hand a fishing-rod, and is brought forward by a dark unbroken background. The portrait is pleasing, although almost entirely painted with low browns and grays.

No 37. 'Mazerbo and Lucello—Gulf of Venice,' C. STANFIELD, R.A. The effect of this picture is the broad and simple daylight so often observed in the works of this artist—the sky and water have the purity incidental to a tranquil scene, and the objects are real and substantial. On the right of the composition stands the remnant of a classical edifice, with steps descending to the water, which occupies the lower parts of the canvas; beyond this are seen some modern habitations, among which rise a cupola, and the square tower so common in domestic Italian architecture. The life of the picture consists of a few figures variously disposed: its great charm is its truth—solid and everlasting truth—pervading every passage of the work. The picture is one that will attract every visitor, and satisfy as well as delight all. It is, indeed, a noble work—a pride of the British School. Happy should we

be to transfer it for a month or two to the Louvre, that our neighbours might see what—at all events in this way—we can do.

No 38. 'Arabs Seeking Treasure,' W. MÜLLER. We are here shown, by torch-light, into one of the galleries of perhaps the pyramid of Cheops, where some of the dark men of the desert are unrolling a mummy in expectation of finding valuables which have been deposited with the body. At the end of a vista, formed by huge columns, is perceptible an opening, through which the moon is seen: the torch-light breaks most effectively on the near column, and is repeated, in different degrees of force, by the whole line. The work is excellent in design and execution, and singularly contrasts with the picture, by the same master-hand, to which we have already made reference.

No 41. 'Portrait of Benjamin Travers, Esq., F.R.S.,' C. R. LESLIE, R.A. This is a small portrait, forcible and brilliant to a degree. It is everywhere distinguished by the utmost care and high finish. In the hand is a book, the white portion of which requires toning down, as being obtrusive.

No 42. 'Recollection of a Scene by Sunset, near Piedmont,' R. R. REINAGLE, R.A. The eye is led up a rocky ravine to a distance too much cut up by hard contrasts. The dry and overheated mannerism of the picture wants the relief and qualification of cooler colour and fresher tone.

No 44. 'The Bather,' W. ETTY, R.A. In this kind of subject the artist is pre-eminent. A female figure has just stepped into a pool of water, and is looking anxiously about her in apprehension of discovery. The usual living roundness and substance are given to the figure; but the right arm is unquestionably ill-drawn. The trees rising in straight lines behind the figure have a prejudicial effect; but the colour and manner of the foliage, if it may be so called, are of the utmost value to it. It is the practice of this artist, we believe, to paint more from nature than from memory, and the principle is an excellent one: it may lead to the substitution of individual for general form, but it is an effectual safeguard against mannerism, and all sorts of pictorial vices. The only danger to which the painter is liable may be avoided, by taking care not to paint too much from one model; it is safer and wiser to resort occasionally even to an inferior.

No 45. 'Sailor—a Retriever, the property of Charles Brett, Esq.,' A. COOPER, R.A. The dog is black, carries a pheasant in his mouth, and is so well painted, that we look reluctantly beyond the animal to the sky, which is green and pink. We have before observed this singularity of hue in other works by this painter; but the mannerism becomes more and more conspicuous in later works.

No 47. 'Spanish Lady,' T. VON HOLST. The figure is in profile, but the head is a little turned—the picture merits a lower place; for, being so high, the carnation tones want clearness. The large dark flashing eye speaks of passion, and a heart open to impetus for good or evil. It is evidently a work of great merit; and not unworthy the reputation acquired by one of the most full painters of the age and country—a painter, whose surplus mind might be beneficially scattered among a score of more prosperous men.

No 51. 'A Fruit Girl,' J. T. HOULTEN, Esq. This is the work of an amateur; and although placed high, there are yet many artists whose works have been rejected who would have been content to have seen a picture of theirs in its place. The picture is, in parts, well painted, but is overdone in affectation; because, if it be a portrait, why should the figure be circumstanced as a fruit-girl? and if a fruit-girl, why be characterized in a manner so superior to the vocation?

No 52. 'Portrait of J. H. Hippealey, Esq.,'

H. P. BRIGGS, R.A. The figure is seated in a red chair, turning over the leaves of a folio. The composition exhibits lines in great diversity, managed most skilfully to contribute to the effect.

No 53. 'Ruins in the Island of Philoe—Nubia,' D. ROBERTS, R.A. The aspect of this scene is that of intense heat, and for the beauty of the picture, it may be said to be too hot; but the work strikes the spectator as being an unqualified translation from nature, in a garb in which we are not in these climates accustomed to contemplate her. The shadows in the near parts of the work are clear, and beautifully united with the lights. The ruins are seen at a little distance, and round them flows the sullen and apathetic Nile mantled in the deep blue of the upper sky. This is a picture of a venerable solitude: it is true there are figures, but they have nothing to do with the ruins; they and the yet reluctant piles of stones are at the two extremities of a long series of ages.

No 54. 'The Old Foot Road,' T. CRESWICK, A.R.A. A narrow path embowered by overhanging trees, and resembling the dry bed of a winter torrent. This picture is in that style whence the author has already reaped an abundant harvest of praise; but it may be observed that he now inclines to the "sere and yellow leaf," rather than the sunny freshness which charms all hearts, and comes home to all understandings. We do not mean to complain of this occasional change of style; on the contrary, we think it beneficial. It is a departure from the "jog-trot" that marks an active, thoughtful, and original mind.

No 55. 'Christ Crowned with Thorns,' W. E. FROST. This picture is well managed for effect, and is marked by strong character; but the arms of the Saviour are those of an Athlete or a well-practised Discobolus. How frequently does a love of anatomical display lead to extravagance and inaccuracy!

No 59. 'An Arcadian Landscape,' W. LINTON. The title of this composition would induce an expectation of a pure pastoral, which would scarcely be complete without some allusion to Pan, the presiding deity. We have, instead, buildings having about them much of the *procul negotiorum* air. The composition is otherwise well designed, and effectively painted.

No 60. 'The supposed Death of Imogen,' W. F. WITHERINGTON, R.A. This group consists of three figures hanging over the pallid and apparently dead Imogen. The subject is not the most interesting, but the artist has worked it out with peculiar force. It is not in style akin to the other works we have lately seen from the same source; there is, however, nothing lost by the change. The group is characterized by great firmness, and derives importance from the breadth of treatment prevalent in the background. It is painted with much clearness of colour, and firm execution. The figure of Imogen is very gracefully disposed, but with so little development of the female form, as to render the artifice of her disguise perfectly probable.

No 61. 'Portrait of the Countess Bective,' H. W. PICKERSGILL, R.A. A full-length portrait, in which the figure is standing before a column and some low-toned foliage. It is graceful in design and arrangement, very highly wrought, and possessing claims to be distinguished among the best productions of its class. The satin dress is a positive study. The whole work affords evidence of industry, thought, and judgment properly directed.

No 67. 'Dante, accompanied by Virgil in his Descent to the Inferno, recognises his three countrymen, Rusticucci, Aldobrandi, and Guido Guerra,' G. PATTEN, A. This is a magnificent subject for a picture—altogether a fitting exercise for the richest imagination. It is here brought forward as a large gallery picture. On the

left of the composition stand Virgil and Dante: the rest of the space is devoted to the other three figures, who are amid the smoke and glare of the very hot sphere to which they are condemned. It would assuredly have been better to have treated this passage according to the spirit prevalent in almost every line of the poet, than to have presented them made up, like ourselves, of substantial thew and muscle. Virgil is also too much of this earth. In reply to Dante, in the first canto, he says, "Non Uom; uomo già fui;" therefore Dante, in force and substance, should have stood distinct from the others. This is remembered and sufficiently shown by the poet himself, in a meeting between Virgil and Dante, and a multitude of spirits, who, on describing them, hasten towards them to learn the news from the earth, but are much alarmed on seeing the shadow of Dante, themselves being immaterial, and casting no shadow. Again, Dante, with respect to his age, describes himself as

"Nel mezzo del cammin di nostra vita;"

but he is here represented to us much older. Yet, the picture, the largest in the exhibition, is certainly by no means one of the least effective. Mr. Patten has made a great stride in his profession. The subject is perhaps not one of the best he might have chosen from the "Divina Commedia;" but it has been treated with great academic skill in what relates to form and character, and in colour and effect it is peculiarly striking and impressive. As a composition, we think it somewhat defective; the limbs cross each other at too many angles. But, when we compare this picture with Mr. Patten's 'Eve' of last year, we can only repeat that we think he has made a huge step in advance.

No. 68. 'Portrait of Mrs. Richard Lee Bevan,' T. PHILLIPS, R.A. The figure comes out before a garden background, and is strongly marked by substance and reality. The features are not strictly beautiful, but are characterized by much attractive sweetness. The arms are sharply cut by the frame, which has a very bad effect.

No. 69. 'War—a Sketch for a large Transparency, executed in 1815, on occasion of the Peace,' H. HOWARD, R.A. A fine conception, executed with a bold and decisive pencil, and in a depth of tone worthy of being transmitted through a much better medium than that of a transparency. This sketch is a work of genuine Art; we prefer it by very many degrees to the artist's 'Nativity' opposite to it.

No. 70. 'Horses of Sir E. Filmer,' Bart., E. B. SPALDING. The group consists of a chestnut horse, a bay, and a pony, all drawn and painted with the utmost care and attention to obtain roundness and elasticity of limb. The field is coloured with exquisite taste; indeed a little more would make it a landscape independent of the animals.

No. 71. 'View of Shank Castle, on the River Line, Cumberland,' T. M. RICHARDSON, sen. The castle is a ruin seated on high ground in the distance, the bulk of the work consisting of the river and its wooded banks. The work declares the author to have studied nature long and ardently. It is the production of an accomplished mind; and in every part affords evidence of the consummate skill of a master.

No. 72. 'Portrait of a Roman Lady,' M. MOORE. This is a profile, brown, hard and dry to a degree, with respect to its painting; there is, however, about the head a character reminding us strongly of the profiles on ancient Roman coins.

No. 74. 'The Queen Receiving the Sacrament (the concluding part of the Ceremony of her Majesty's Coronation), on the 28th June, 1838,' C. R. LESLIE, R.A. The merits of this picture place it among the highest of its class; the artist has succeeded in wrapping the scene in a holy interest, powerfully supported by the deep and anxious attention settled upon the

faces of all present. An appropriate effect is produced by a beam of light which descends towards the altar. The figures are remarkable for their ease and grace, and the likenesses are strikingly identical. It must be remembered that in the treatment of such subjects there are many difficulties to be surmounted. The whole arrangement is arbitrary; the business of the artist is to paint the actual fact, unheightened by imagination or pictorial artifice. Parts of this picture, assuredly, required no embellishment: the figures of the young Queen and her maids of honour are as graceful, ideal, and beautiful as the most poetic fancy could desire; we cannot say so much for some of the great dignities and strait-laced officials who figure in the ceremony, but they are equally essential to the occasion, and they are well discriminated.\*

No. 75. 'Portrait of a Lady,' J. P. KNIGHT, A.R.A. This portrait is unexceptionable in style and colour; the head has been especially dwelt upon, although every part bears evidence of the utmost care.

No. 76. 'Peace,' H. HOWARD, R.A. This is a sketch, also for a large transparency executed in 1815 on occasion of the peace—it comprehends many figures, the principal of which is Peace. The allegory is well supported, and the composition would, upon a large scale, have an imposing effect.

No. 77. 'Carriage Horses, the property of the late Sir Francis Chantrey,' A. CORBOULD. The animals are faithfully drawn and unaffectedly painted, but too much has been attempted as respects the gloss of their coats, which resembles rather the bloom on fruit.

No. 78. 'Entrance to the Crypt, Rosslyn Chapel,' D. ROBERTS, R.A. One of the class of pictures called interiors, abounding with stone carving of a rich and florid character. The work is remarkable for the softness and transparency of its shadows, and the power displayed in painting the cross lights. The subject is bisected by a heavy column, a little beyond which are two figures who do not support the feelings generated by such a work.

No. 79. 'The Entombment of Christ,' W. ETTY, R.A. The group consists of the persons usually present; and, had the work no merit beyond, it is really valuable from its entire want of affectation, being the result of a solidity of purpose which many of our painters would substantially profit by imitating.

No. 80. 'Mrs. Smith Barry,' B. R. FAULKNER. One of those graceful portraits which always recur with pleasure to the memory. The lady is in a garden, two trees of which rise before her, much to the disadvantage of the general effect. The drapery is most beautifully modelled in, and the colour judiciously arranged.

No. 86. 'Portrait of the Rev. Sir H. Dukenfield, Bart., Vicar of St. Martin's,' Sir M. A. SHEE, P.R.A. The figure is in a black robe relieved by a red curtain; the head is most forcibly painted, and the pose is one of perfect ease.

No. 87. 'Lex Talionis: the Raid on the Reivers, or the Laird getting his ain again,' A. COOPER, R.A. This picture is allusive to the marauding habits of the borderers before the inhabitants of the debatable land had, like some of their own morasses, been taken into cultivation. The cattle of a landed proprietor have been driven off, and, as usual, secured in the peel-house or fastness of the reivers, upon which an attack has been made for their recovery—and attended with success, for they are now rapidly driven down the path leading to the peel-house. This is an excellent subject for an animal

\* An engraving from this beautiful and interesting picture is now in course of publication by Mr. Moon. It is from the burin of Mr. Cousins, and is unquestionably—considered as the joint production of two great artists—fully worthy of the occasion that called it forth, and honourable to the Nation as a work of Art. It will be our duty to review the print next month.

painter, and more might here have been made of it. The bullocks and horses in the foreground are painted with great skill, but the latter show too much breeding to have been the property of a border landlord of the seventeenth century. This work redeems the artist's reputation a little from the picture of race-horses in the adjoining room; it contains some attempt at composition and arrangement of colour, but the execution, as in most of Mr. Cooper's pictures, is lamentably poor and weak.

No. 88. 'The Lake of Nemi,' W. LINTON. The lake is the principal feature of the picture; it lies enclosed by banks of highly picturesque character. The whole is firmly and unaffectedly painted; the greens are very positive.

No. 89. 'View on the Thames near Woolwich,' R. CROSIER. A small picture, presenting a view of the river, which is under the influence of a stiff breeze. The time is that of high water, and vessels are seen taking advantage of the flood.

No. 93. 'A Scene at Zurich, taken from the Bridge,' S. J. STUMP. We know not what could have induced the selection of this subject, which is marked by no one tolerable feature. On each side of the picture are buildings monotonously brown, and abounding in straight lines. The distance is leaden, and the sky equally dead.

No. 94. 'The World or the Cloister,' W. COLLINS, R.A. We should have called it "To be, or not to be;" and most certainly, "not to be" was the issue. In the cloister of a nunnery are seated three figures: two of the sisterhood, and one who seems to have partaken of the pleasures of the world even to satiety. Nothing can be more perfectly characteristic than the air of the two *religieuses*, who are earnest and urgent in exhorting the other to the veil. The flaunting attire of the latter contrasting with the sombre weeds of the sisters supports the story most effectively. The lady in blue has been disappointed in the fidelity of her lover, or been eclipsed at a ball; but, however annoyed for a moment, "she won't be a Nun." The younger "of the sisters" is a most exquisite portrait; and the exterior of the Convent, with the landscape, is elaborately and beautifully painted.

No. 95. 'The Lady and Son of W. L. Chute, Esq., M.P.,' F. R. SAY. This picture is most agreeably composed; the lady is seated on a flowery bank, and a playful child leans upon her shoulder. A happy subject and happily treated.

No. 96. 'The Countess of Malmesbury,' J. G. MIDDLETON. The flesh-colour here looks yellow throughout; but this defect is counterbalanced by many beauties, the chief whereof lie in its simple and unassuming style.

No. 100. 'Portrait of the Hon. Ashley Ponsonby,' E. LANDSEER, R.A. The figure, that of a young gentleman, is habited in crimson velvet, mounted on a bay pony, and attended by two dogs, one of the terrier and the other of the beagle race, the willing companions of his boy's sport, rabbit-hunting—which, by the way, has been ample for him, being two brace slung over the pony *en croupe*. Of these dogs we shall say nothing, they can bark in their own praise; nor of the pony will we speak further than to observe that he looks one of the best that ever went before a tail; yet of the entire composition, a few words: it is at once a picture and a portrait, a work of that class in which no other school save our own succeeds.

No. 104. 'The Hop Garland,' W. F. WITHERINGTON, R.A. Some children have been gathering hops, and are now engaged in fitting "the hop garland" to the head of one of their party. The figures are round, free, and, above all, sufficiently childish and natural. The colour and texture are appropriate and masterly; in short, it is a work of high merit.

No. 105. 'Portrait of Stewart Marjoribanks, Esq., M.P.,' J. LINNELL. This is a small

half-length, with the head beautifully high in colour; but yet, seductive though it be, this richly Hesperidian hue is by no means natural, as suffusing the entire face.

No. 107. 'Prince Arthur's Dream,' H. LE JEUNE. The subject is from the "Faerie Queene," and about the execution and composition there is strong independence of manner, declaring a genius intent upon taking a path of its own. Two figures, one of which is Prince Arthur, in a suit of ringed mail, are so disposed in extended positions that the two heads in shadow are presented in strong opposition to a light sky; the higher of the two as if

"Watching at the head of him that sleeps."

This is a very remarkable picture, and betokens clearly a degree of progress in its author. We are looking to him anxiously for great things.

No. 108. 'Hagar and Ishmael,' C. L. EASTLAKE, R.A. The back of Ishmael is turned to the spectator, and Hagar is in the act of giving him water from an earthen cruise which she holds for him to drink from. The scene is the desert, and near Ishmael lie a bow and quiver, and upon the left of the quiver a fallen and withered palm. Conscious of his power, the author of this work has laid aside all meretricious auxiliary: the figures are appointed with that severe simplicity which best becomes a pure and lofty style. The drawing and painting of the back of the boy is beyond all praise: in breadth, texture, and colour, this piece of painting has never been excelled. An imitation of this we recommend to those who insist upon an offensive display of anatomy, and to those who would paint Ishmael meagre and bony. It may be objected that the skin of the boy is too clear. This, assuredly, is not consistent with truth, but it is a transcendent licence, charming us into the spirit which has suggested it: such mastery could not have been shown with deeper tones. We never saw what may be termed "breathless anxiety" so fully depicted as in the face of Hagar—she is beautiful; but the beauty of the woman is lost in the feeling of the mother. The features and attitude express the intense passion of her agony lest the draught should have come too late. Few mothers can look upon this picture without tears. It is a source of deep and general concern that so few of this artist's works are publicly seen. Mr. Eastlake's feeling evidently inclines to the earlier rather than the later schools of Art. He amalgamates his figures but little with his backgrounds, but he obtains perspicuity by an inflexible breadth of style. His works have a religious severity, we had almost said sanctity of effect, which reminds us strongly of the earlier schools of Italy, and which no other artist of this age has achieved. The moment you look upon his pictures, you feel, as it were, in the presence of power and genius, and entertain a distaste to whatever may immediately follow. The subjects which Mr. Eastlake suggests are worthy of a high ambition. His own mind is not frittered away in efforts to produce mere amusement; he is indeed a great teacher, whose pencil is richly eloquent, and whose eloquence is most effective in the cause of virtue and truth. For simple purity and veritable worth, without seeming effort, he stands at the head of modern Art.

No. 109. 'A Composition,' J. J. CHALON, R.A. Consisting of ruins, the banks of a river, and distant prospect of the sea; but the ruins are so numerous that they lose value in a mere irrelative composition.

No. 110. 'Meeting the Sun,' J. WARD, R.A. This is a brilliant morning effect; the life of the picture lies in two figures who, behind the plough, are "meeting the sun" in going over a ridge.

No. 112. 'Acis and Galatea,' R. JEFFRAY. Two figures, which have been profitably studied and exceedingly well painted, but the heads

want character: they have been transferred without treatment from very commonplace models.

No. 113. 'Study from Nature, near Hayes, Kent,' W. T. WITHERINGTON, R.A. The truth of the title is everywhere borne out. It is a study of trees, and those not of the most picturesque character; hence the greater difficulty in attaching interest to them; yet they possess it in a high degree, being fresh, verdant, and with branches that would yield not only to the passing breeze, but even to the weight of the smallest bird.

No. 114. 'The Confession,' T. UWINS, R.A. This is a frequent subject among foreign artists, but we have never seen it more effectively dealt with than in the present production. An Italian woman is kneeling at the confessional, within which sits a monk; the latter is in deep shadow, which is thrown in with admirable depth and management.

No. 125. \* \* \* \* A. SOLOMON. An incident from Crabbe's poems—a source abundant in subject-matter to painters of English character. The courtship of Ditchem, the friend of Dawkins, is here described. The suitor is an elderly man, in a new red coat, telling the story of his love in a manner somewhat too broad and dramatic.

No. 126. 'Beatrice,' M. MOORE. There is nothing to tell us which of the heroines of the name this is intended for, or if it be brought forward at all as a heroine. It is a profile, apparently a portrait of a Roman woman, toned down to one uniform and unmitigated swarthy hue, and drawn in with all the sharpness and severity of the earlier period of Italian Art. It may be somewhat original in character; but at best it seems a mere *capriccio*.

No. 128. 'Sickness and Health,' T. WEBSTER, A.R.A. Before a cottage door two children are dancing to the music of a hand-organ, played by an Italian itinerant: this is the illustration of health; that of sickness is a girl seated by the door, and supported by pillows,—on her sad features plays a gleam of temporary pleasure at the performance of her sisters. The invalid child is touchingly painted; it is apparent that the general object is her amusement, and also that there is some anxiety to prevent her feeling this; a temporary glow suffuses her cheek, but her feeble and languid condition seems to pronounce her mortally stricken. The children are most successfully pictured, and the organ-boy is a perfect specimen of his class. Altogether, it is one of the most effective and interesting pictures in the collection, fully sustaining, if indeed it do not increase, the high reputation of this excellent artist.

No. 129. 'The Sun of Venice going to Sea,' J. M. W. TURNER, R.A. The title is accompanied by some lines, which do not aid us to any understanding of the treatment of the subject, as we are therein told that "soft the zephyrs blow a gale:"\* the softness which marks the lines is scarcely carried into the picture. The 'Sun of Venice' is a fishing felucca, putting to sea amid the blaze of a sunny morning: she is a holiday-looking craft, and but ill fitted for a gale in any shape,—and less for one such as the oldest eyes of the United Service Club never saw. The water is a brilliant and highly transparent mixture of yellow and green, through which this boat is making her way to the open sea, and the towers of Venice rise in the background. The most celebrated painters have been said to be "before their time;" but

\* Mr. Turner must permit us to urge objections against his poetry with less hesitation than we do against his painting. For some years the source of his information in this way seems to have been some abominable perpetration in the manner of "blank verse," called "Fallacies of Hope"—a mass of thorough nonsense, utterly unintelligible and ungrammatical. Possibly the wretched verses may have had some deleterious influence on the painter's mind—may have cast a spell over a great genius. Oh! that he would go back to nature!

the world has always, at some time or other, come up with them. The author of the 'Sun of Venice' is far out of sight; he leaves the world to turn round without him: at least in those of his works, of the light of which we have no glimmering, he cannot hope to be even overtaken by distant posterity; such extravagances all sensible people must condemn; nor

"is the winter of our discontent

Made glorious summer by this 'Sun of Venice.'"

No. 130. 'Portrait of R. Benyon de Beauvois, Esq.,' H. P. BRIGGS. This portrait is painted for the Royal Berks Hospital. The figure is relieved by a red curtain; the attitude is that of marked attention, and the most prominent points of the work display the sterling and substantial manner of the artist.

No. 131. 'Portrait of E. H. Bailey, Esq., R.A.,' T. MOGFORD. An excellent and very agreeable likeness of the distinguished sculptor. The work is painted with much force and freedom, manifesting a firm and masterly hand. Altogether, it may be classed among the better portraits this year exhibited.

No. 136. 'Portrait of the Queen, in the Robes worn by her Majesty when delivering the Royal Speech, on the opening of the Session of Parliament,' Sir M. A. SHEE, P.R.A. The author of this work has availed himself of the supposed occasion in order to give a novel treatment as regards expression, and has succeeded. The figure is of course full length; the Queen holds the speech in her left hand, and a tone of thought and anxiety has settled upon her brow as being about to pronounce it in the House of Lords. As a high work of Art, it is impossible to class it; neither can we be justified in describing it as a remarkably accurate likeness.

No. 137. 'The Actor's Reception of the Author,' D. MACLISE, R.A. This is a gorgeous and pungent rehearsal of one of those scenes which occurred after Gil Blas had fallen among the players. It represents the author offering to Gil's mistress the acceptance of a part, with these words:—"Be so good, madam, as to accept of this part, which I take the liberty to offer." The composition consists of many figures, some sitting, others standing; for the reception takes place while the company are at table. For finish, laborious but successful study, intelligent and unwearied research, nice selection, and fit association of objects, and, above all, for expression, character, and imaginative power, this picture is unequalled in its class. In short, we know of no painter of any school who could produce a work to rival it in so many of the highest qualities of Art. The author has been lavish of the wealth of a very rich imagination, and lavish of his powers of realizing even the least significant points of his conceptions. The author enters, and bows very low, while the "magnificent" lady whom he addresses keeps her seat in contemptuous silence; the attention of all present is fixed upon the author in a manner at once to point the tale and confirm the unity of the composition. If there be a fault in this part of the picture, it is the evidence of power too much indulged; the expression is somewhat exaggerated: that is, the contempt of the players is too broad. Mr. Macclise's works are, as it were, other words for luxuriant inventions, especially when, as in the present instance, they lead to the exhibition of ladies, cavaliers, pages, and gay people of all sorts, laughing, quaffing, coquetting, and enjoying themselves. The poor author seems the only unhappy person in the group. The colouring of this picture is wholly deficient in depth and tone; but, as those are qualities which the painter does not appear to have aimed at, we may not condemn him for the absence of that which he had no intention to give. The sort of effect aimed at in colour by Mr. Macclise is that of hilarious cheerfulness; a quality, however, which, with adequate management, we think by no means inconsistent with a certain sobriety of tone. But let us avail ourselves

of this opportunity—a more fitting one could not occur—to enter our solemn protest against the application of so much genius to such comparatively unworthy purposes. MacIse has been too much wasted upon “Gil Blas;” and a very large number of our artists are rushing to that book, and others like it, as to fountains at which large draughts should be taken. “Gil Blas” and the “Diable Boiteux” have indeed, of late years, been a kind of stock-books for British artists. But the high power of MacIse, at least, should be addressed to loftier subjects—subjects the treatment of which might confer honour upon himself and add to national honour. Up to the present time he has scarcely grappled with a single real difficulty—a difficulty that demanded a mighty struggle, in which failure would have been terrible, but in which success would have been great glory. It is full time that he does so; that he opens the book of British history.

No. 140. ‘Happy Moments,’ G. HEALEY. A maiden sitting asleep near a window, into which a young man is looking. It is surprising that artists, with a certain amount of knowledge and power, should not exercise those acquisitions on subject-matter more tangible, since every abuse of sentiment cannot be merely ineffective but must be more or less ridiculous. In an ordinary way, a descriptive passage may be approached with some degree of success; while imaginative sentiment is intolerable save when comparatively perfect in treatment.

No. 141. ‘Landscape, Herefordshire,’ P. W. ELEN. A small picture composed of a trout stream and trees, put together with good feeling. The colour is natural and unaffected.

No. 143. ‘The Holy Man,’ T. UWINS, R.A. There is, according to a quotation appended to the title, in every religious house in Italy, one of the brethren more religious than the rest, who is an object of particular reverence among the neighbouring peasantry, on account of his devoted sanctity. Such a person is the principal figure of this group. He is blessing those who are kissing his garments. The expression and manner of the Holy Man are deeply devotional, and altogether the passage is charmingly illustrated. It is, indeed, a delicious picture—full of touching pathos and sweet instruction.

No. 144. ‘Dogana and Madonna della Salute, Venice,’ J. M. W. TURNER, R.A. This is the most intelligible of the pictures painted by this artist; yet here there are extravagances which reduce the work infinitely below the average of similar subjects exhibited in past years.

No. 145. ‘Portrait of the Right Rev. the Bishop of Ely,’ T. PHILLIPS, R.A. The head of this prelate is precisely such a one as would tempt a lover of his Art to an extraordinary effort, and it may be said that in the present instance the subject has received justice. The figure is seated, and attired in episcopal robes.

No. 150. ‘Portrait of a Lady,’ J. P. КНИЖТ, A. A full-length portrait; the lady is habited in black satin, and seated. It is a work exhibiting a vast amount of power; the artist has neglected all those aids which are rather supplementary than contributive of real value. He has painted here a figure in a manner we would gladly see more extended.

No. 152. ‘Summary Conviction under Martin’s Act—Village School Exercises in “Ass in presenti,”’ T. WOODWARD. This is, perhaps, a very facetious title, but we do not think it helps the picture. “Ass,” of course, is translatable enough; “in presenti” must mean “in the background.” The picture is illustrative of the schoolboy sport of tormenting a donkey, which is interrupted by the *παδων γος*, whose name is Martin, and who, in just wrath, is about to seize the ringleader by the ear. Parts of the picture are admirably painted, but we cannot patiently contemplate such an abuse of power.

No. 153. ‘The Terrace,’ F. CRESWICK, A.R.A. We may presume we are again at Haddon, such is the quality of the old and good materials here presented—literally a terrace we would gladly ascend. It is one of a class of pictures to which the accomplished painter is indebted for his reputation. Although the subject be perhaps a little formal, yet the work is in the highest degree beautiful.

No. 154. ‘Beauty and Sprite—the property of Miss Latham,’ J. WARD, R.A. A white horse partially dappled, and a rough terrier, the former playfully following the latter: the background is a field. The horse is finely drawn, and his anatomy skillfully marked, there is also roundness in his limbs and elasticity in their play; but in the colour there is a somewhat of disagreeable rawness in the red touches about the head.

No. 155. ‘Dante’s Dream,’ F. R. PICKERS-GILL. A female figure dressing her hair, with a fountain for a mirror, and coming out before a dark woody background. There is nothing in the treatment of the subject to suggest its being painted from Dante’s Dream in the seventh canto of the “Purgatory.” The figure that appeared to him was Leah, daughter of Laban, and first wife of Jacob, and was intended by Dante to allegorize active life. There is nothing in the work appropriate to the source whence it is said to be taken; this commonplace and matter-of-fact treatment of such subjects is much to be deprecated. We regret this the more, because the artist promises well, and possesses much ability.

No. 164. ‘Scene from the “Vicar of Wakefield,”’ C. R. LESLIE, R.A. The family are intently listening to the discourse of the two ladies from town, who are voluble, if not eloquent, in praise of virtue: “Virtue, my dear Lady Blarney, virtue is worth any price, but where is that to be found?”—to which the sterling friend of the family, who sits by the fire, with his back turned to the company, appends his significant ejaculation, “Fudge!” much to the discomfort of the Vicar, who eyes him askance with evident disapprobation. The artist has, in this picture, adhered closely to the letter and the spirit of the story, for there is no more here than Goldsmith himself intended; and, like his author, the artist centres his force in character. The scene is most effectively maintained: the ladies from town are the lions of the party, of whom all, but the malecontent by the fire, sit in awe. This is assuredly the real feeling wherewith to paint from this very popular work; but where shall we find other powers equivalent to genuine illustration like this? No artist, living or dead, has ever so completely and thoroughly entered into the spirit, feeling, and meaning of an author, from whose written characters portraits are taken. Fancy excellent old Noll, with his young heart and genuine nature, rising out of the grave to look upon this copy from his creation; sure we are he would have nothing to suggest, nothing to add, nothing to take away. It is so in all cases where a book furnishes Leslie with a subject. Pity it is that he cannot, or rather will not, colour as he conceives—study the natural when his palette rests on his fingers, as well as when he is studying the expression most fitting and most true.

No. 165. ‘Italian Peasants,’ E. V. RIPPINGILLE. At the bottom of some steps two female peasants are seated, busied in some light occupation, while a third is near carrying a child. There is in this small picture that severity of truth which rejects all qualification: the figures are put in in rigid imitation of nature and substance, and are consequently perfect portraits of Italian rustics. It is distinguished by a most careful finish, and great brilliancy of colour.

No. 168. ‘A Festa Day,’ T. UWINS, R.A. A family of some half-dozen Neapolitan peasants are keeping the *festa* under the grateful

shade of a vine arbour, which is open to the seabreeze. The principal actors are a mother and her child, the former teaching the latter to dance the universal tarantella, while the father, grandmother, and others applaud the talent of the infant votress of Terpsichore. This picture is throughout painted with the utmost purity; it is beautiful in conception, and admirable in execution.

No. 169. ‘In the Greenwood Shade,’ W. ETTY, R.A. A female figure lying on a flowery bank, and with her a winged child, whom we must presume to be Cupid; the figures lie in shade, canopied over, as it were, with the boughs of trees. We can suppose this nothing more than an accidental study, wrought into a picture, and, like all such works—the *capita mortua* of the studio, devoid of that kind of meaning—the voice with which a picture speaks to the understanding.

No. 170. ‘Una,’ C. TAYLOR. A picture unfortunately placed, but apparently possessing very great excellence. It is the “familiar face” of the fair Una—seen often, but welcome ever. We shall look for other works of this artist, who, if we mistake not, is destined for distinction.

No. 171. ‘Shakspeare’s Walk,’ F. STACKPOOLE. A good and natural landscape, if we can judge fairly of the work.

No. 177. ‘Portrait of Mrs. Charles Whitlaw, with her infant Son,’ G. PATTEN, A. The lady is habited in black velvet, and disposed in an easy and conversational attitude: an excellence valuable in proportion as it is rare of attainment.

No. 178. ‘Gil Blas in attendance on the Robbers in their subterranean abode,’ J. J. CHALON, R.A. This is one of the most extraordinary experiments upon human forbearance that has ever come under our notice; there is not one redeeming point of any value whereon to fix, in order to say anything in its favour. The subject has been seized, and this production wrung out of it in the intoxication of fancied power; but it does not ascend to even mannerism; the brush has scotched roughly on, reckless of everything that should constitute a picture, and not the least important of all—of reputation. The captain, Rolando, and his gallant band are supping beneath the rays shot from their iron lamp, and poor Gil (too bad for even a man who had fallen among thieves), their *minister poculorum*, is doing the *rapti Ganymedis honores*. The drawing is everywhere questionable; the effect is *nil*; and, in short, we find outraged the whole series of those decencies which render a picture at all presentable. It is difficult to divine under what views such a work can have been exhibited; there is nothing in it to add to a reputation, but everything to detract from one: it is an experiment that no even established reputation could afford to risk.

No. 179. ‘Portrait of Henry Angelo, Esq.,’ C. R. LESLIE. A small three-quarter portrait, every part of which is kept, save the head, which is very brilliantly coloured, though with a too great prevalence of cold tints.

No. 182. ‘The upper part of the river Teign, near Dartmoor,’ F. R. LEE, R.A. The river flows between banks rising abruptly from the stream; upon the right bank is a road, by the side of which is seen a gipsy encampment. The landscape is painted under a clouded sky, an effect to which this artist is so much attached that we rarely find his works present any other. The foreground is laid in with a full and luxuriant touch, and abounds with rich and appropriate colour; but the background is in parts cold and heavy.

No. 183. ‘Sir Roger de Coverley and the Spectator go hunting,’ R. B. DAVIS. The scenery is here sketched apparently from nature; the costume of the time is accurately preserved, and the buoyant eagerness of the hounds, who are rushing out, is expressed in a

manner which must, we think, gladden the heart of a sportsman.

No. 190. 'Portrait of Admiral Sir Philip H. Calderwood Durham, G.C.B.,' J. WOOD. The figure is in full uniform, standing, and relieved by an appropriate background; the head is not very happy in colour or expression, but the other portions of the picture have been accurately studied.

No. 191. 'Portrait of a Lady,' J. WATSON GORDON, A.R.A. This is one of the most graceful female portraits we have of late seen. The figure displays all the elegance and gentleness which characterize a gentlewoman. She is attired in white, and relieved by the utmost simplicity of management.

No. 192. 'The Castle of Ischia, Kingdom of Naples,' C. STANFIELD, R.A. The castle is seated upon a rock, which rises from the water like another St. Michel. The scene is tranquil; the light under which it is presented is that of sober day, and the colour of the near objects is unequivocally local. The pure hues of the air and water in this work are equal to the best efforts of the artist; the latter is beautifully cleared up by a piece of rock rising above the surface near the shore, an incident of such frequent occurrence in the rocks of this gentleman, that we cannot think it always so happily cast in nature. The most beautiful passage in this picture is the succession of small waves breaking on the sand; the little crest of white rises from a slight swell invisible in deeper water, and is thrown perfectly limpid on the yellow sand, which is seen through the waves until concealed by depth.

No. 193. 'The Cotter's Saturday Night,' C. W. COPP. This is a popular subject, and one of amplitude sufficient for a work of high merit. The entire family of the cotter are, of course, present, and they are judiciously grouped, but the colour is entirely subdued by over-toning; there is also a want of expression in the features, defects which reduce this work below the average of what we have been accustomed to see from the same hand.

No. 194. 'Scene in Wales,' R. McKENNY. A small production composed of a lake with rocky shores and hills, so substantially and effectively painted as to look very like a faithful copy. It is unassuming and strikingly natural.

No. 197. The 'Nativity,' H. HOWARD, R.A. This picture is painted from Milton's hymn "On the Morning of Christ's Nativity," and supposes the Virgin holding the infant Jesus—

"Whilst all about the courtly stable  
Bright harnessed angels sit,  
In order serviceable."

The angels occupy the upper part of the picture, and are so represented that, at a certain focus, they seem to throw the Virgin and child in the background. There are precedents for pictures like this, but there is no originality in painting by precedent. The work is at best a poor affair, creditable neither to the Exhibition nor the Academy.

No. 199. 'Crossing the Brook,' T. MOGFORD. A work in which much fancy and close observation of nature are combined with skilful execution.

No. 200. 'Portrait of Madame Eliza Forgeot,' T. M. JOY. A portrait of the highest class;—we apply the term to its character, and not to its position.

No. 203. 'Portrait of the Right Hon. Viscountess Glentworth,' T. PHILLIPS, R.A. A portrait of the highest class. The head is exquisitely painted, and the utmost nicety prevails throughout the rest of the work; the figure is relieved by foliage.

No. 204. 'A Windy Day, Sussex,' W. COLLINS, R.A. The composition is very similar to that of one of the series of etchings lately published by this artist. It is a coast scene, with figures: a fisherman selling fish to a damsel, who has some difficulty to maintain her

position, in consequence of the violence of the wind. There is great purity of colour in the picture, in every part of which the main purpose is supported. It assimilates with the olden style of this excellent artist—a style which we confess we prefer to that which his journey into Italy tempted him to adopt. Mr. Collins is essentially an English painter; and in England he is, in a double sense, most at home.

No. 207. 'A Squall off Boulogne,' J. WILSON. Powerfully as this picture is painted, we cannot concur in the description it professes of a squall, which is here said to lie upon the water like a blasting cloud, while some small craft are preparing to meet its effects by taking in sail at the instant they are about to be enveloped in its dark volume; in short, a boat like that, with the sails set, must be swamped in such a state of preparation for a squall. It would have been better to have shown the effect at greater distance than to have admitted such discrepancies.

No. 209. 'On the Conway, North Wales,' T. CRESWICK, A.R.A. A valuable subject, but not exactly of that kind with which this name is identified. The water flows to the foreground between banks covered with verdure, beyond which is distant rising ground.

No. 210. 'Gate of the Mosque of the Met-wales, Grand Cairo,' D. ROBERTS, R.A. This is a street scene in the city of tombs. On the immediate right of the picture are houses with projecting latticed windows, such as are everywhere seen in the East; and beyond these are the gates of the mosque, over which rise two lofty minars, with open galleries at intervals from the gates upwards. The pencil of this celebrated artist descends to the nicest minutiae, where necessary, an example of which is here offered. The street is crowded with figures, camels, &c., in perfect keeping with the mauresque architecture.

No. 211. 'The Lord Wharncliffe, Lord President of the Council,' F. GRANT, A.R.A. The character of this work is studied simplicity—a method of treatment which assuredly confers on works of the kind a more lasting value than any other. The likeness is very striking; a tone of thought is thrown into the features—a very apposite allusion to the position occupied by the noble lord.

No. 217. 'A Sultry Day—Naples,' W. COLLINS, R.A. A seashore view, comprehending in the near parts of the composition boats and the multifarious paraphernalia of fishermen. In shadow beneath a boat is a fair example of the delicious *far niente*, a man sleeping very much as if it was his "custom of an afternoon." A sultry day is an infinitely more difficult subject than a windy day, and we do not think the artist has so well succeeded with the former as the latter.

No. 218. 'Doctor Johnson perusing the Manuscript of the "Vicar of Wakefield,"' as the last resource for rescuing Goldsmith from the hands of the bailiffs, E. M. WARD. This is a well-selected anecdote, admitting of much picturesque variety in grouping and character, of which the painter has availed himself very happily. The Doctor's expression is admirable, full of interest, anxiety, and critical acumen. Poor Goldy exhibits his natural *insouciance*, albeit a little disturbed by immediate circumstances. The landlady, we think, might have been made a little more old and ugly; her expression, however, is sufficiently that of a virago; and the bailiffs perform their duty with a quiet satisfaction naturally resulting from their benevolent employment. As a whole, very few artists have shown more judgment in selecting a subject, or better skill and knowledge in the treatment of it. The picture is, indeed, one of very great excellence, highly interesting in character, and executed with masterly ability.

No. 219. 'Gateway of the Great Temple at

Baalbec,' D. ROBERTS, R.A. The gateway is constructed of marble, and is beautifully sculptured; through it is seen a *façade* of rich architecture, and on the threshold appear those letters S.P.Q.R., a legend of freedom in Rome, but rivets of bondage abroad. Other inscriptions there are also: on the massive side pillars are written Irby, Mangles, Scheik Ibrim, Puckler Muskau, &c. &c. These we presume to be the ruins of the famous temple of the Sun, at least the gate, for the rest do not seem to be of the same character.

No. 220. 'The Father's Grave,' J. C. HORSLEY. A widow sitting with her son near the recent grave of her late husband—a passage from the book of life easily read by the humblest intelligence. A very charming picture, full of pathetic sentiment, and exceedingly well arranged. The face of the young widow is touchingly beautiful. This is a subject frequently brought forward with more or less success; here it is treated with much ability, though not one whereupon a rich imagination would fix.

No. 222. 'Portrait of a Gentleman in the Highlands,' H. W. PHILLIPS. This is a small sporting portrait. The figure is seated on a stone, habited in shooting gear, and anxiously watching game. It comes off in strong relief against the sky, and forms altogether an agreeable picture.

No. 223. 'Portrait of the Bishop of London,' S. LANE. This is a small portrait, composed and painted with great taste. The identity is striking, although the bishop looks somewhat older than this portrait.

No. 232. 'Dinner-time in the Refectory of the Franciscan Convent of the Ogni Santi, at Florence,' S. A. HART, R.A. This mode of painting—in which an exact transcript is made of some particular scene, without the slightest attempt to generalize the effect by the principles of Art—may have, for the vulgar eye, a certain look of reality; but the style is a poor one, and we think any artist of talent does but waste his time on such subjects. The only value of the work consists in its faithful representation of a place which has no claim to pictorial interest. We hope we may hereafter see a more satisfactory issue of Mr. Hart's visit to Italy.

No. 233. 'Dead Fallow Deer,' W. BARBAUD. The animal lies in the foreground, having been shot by a sportsman who is again following the herd. Although this picture is well coloured there is about it an unpleasant smoothness, which gives it a quality of dryness.

No. 234. 'Portraits of three Greyhounds, the property of H.R.H. Prince Albert,' G. MORLEY. Two are black and one gray; they are on the outside of a paling, which is overtopped by trees, whence descends a deep shadow on the ground; the effect is not objectionable, but a more agreeable picture would have resulted from a lighter aspect.

No. 236. 'Enjoying the Breeze,' J. WARD, R.A. Cattle of various breeds are here grouped together, some of which may be supposed to be "enjoying the breeze." They are naturally disposed.

No. 237. 'The Cynosure of Neighbouring Eyes,' C. LANDSEER. A lady is here seated and reading a letter, while a cavalier leans at the open door with his eyes fixed upon her. There are many points to praise in the figures, and the circumstances of the composition, but the subject is by no means clear; hence is lost much of the real value of the picture.

#### MIDDLE ROOM.

No. 242. 'The Claims of St. Francis,' H. and W. BARBAUD. A picture of considerable size, comprehending many figures, horses, slain deer, &c.; those in the more immediate parts of the work are monks apparently requesting of a mounted gentleman, habited as of the

period of about our Henry VIII., a share of his abundant day's sport, for on the ground lies many a fat carcase of antlered deer. The animals are generally well painted, but the components are too much scattered, and the grouping too much subdivided for good effect. There is also great poverty about the buildings which enclose the court-yard, and if the arm of the foreground monk were straightened, the hand would fall nearly to the knee.

No. 248. 'Portraits of Mrs. Burn Callander and Children,' R. S. LAUDER. This, as a portrait, is a work of the highest merit. The lady is drawn at full length; she stands with a child in her arms, while a beautiful boy is seated near her; the countenance is pale, and a cast of sadness is settled on the features, the impression of which the spectator cannot shake off even by dwelling upon the most prominent and more graceful beauties of the work. Although the sky is blue, it is so low in tone that the blue dress of the child in arms is somewhat staring, as being altogether unaccompanied; and the seated child is so posed that there is not a sufficient indication of the right leg.

No. 249. 'A Welsh Glen,' T. CRESWICK, A.R.A. This is an apparent misnomer, whatever may be the fact, the substance of the picture being a stream flowing between almost perpendicular rocky precipices, crowned with trees wearing the richest livery of summer. This is the style of picture wherein the power of this artist is most conspicuous: his monument, indeed, is of rocks and trees, and on both is his name deeply graven. The water here is subdued, and catches the shadows of objects with undiminished limpidity. It is a bright day beyond this close solitude, which but one speck of sunshine has reached, and that has fallen on the hard rocks. The truth and beauty of the work is not to be surpassed.

No. 250. 'Salvator Rosa sketching amongst the Brigands in the Mountains of Calabria,' R. C. J. LEWIS. This picture comprehends many figures, but they are thrown together without attention to a concentration of interest. Salvator is seated upon the left of the picture, the centre point of a group remarkable for rich and effective colouring; and entirely disjointed from this another group occupies the left of the composition. It may be that Salvator is sketching from this, but the composition would have been improved by a closer correlation. As for the figure of the "Savage Salvator" himself, he was not so favoured by nature as we have him here. There are in the work traits of great beauty in colour and grouping, but the character of those near and around the great painter is too much of what we see at home to carry us in imagination to Calabria. The drawing is also defective, and the author of the work would have done better to have followed the style of composition adopted so closely after nature by Salvator himself.

No. 252. 'A Scene from Bombastes Furioso,' J. FRANKLIN. A work of much merit, full of point and character. The female figure is especially good and effective; the colouring is remarkably brilliant.

No. 253. 'In Windsor Great Park,' J. STARK. A group of oaks elaborately studied from nature. This is all the picture consists of, but so accurately drawn and fittingly painted are they that the eye is nowhere offended by the slightest impropriety. The picture, although small, surpasses any we have of late seen by the same hand; and that is saying much; for his contributions to the Royal Academy and the British Gallery have been universally liked, and have found greedy purchasers.

No. 254. 'Horses—the property of Sir George Farrant,' W. BARRAUD. The animals are two, a grey and a bay. The body and limbs of the former are well drawn and painted, but the head is too short and obtuse:

this may be a characteristic of the horse, yet it is here too prominent. The turned neck of the other, also, is foreshortened in a manner productive of bad effect.

No. 255. 'Portraits of all the Horses and Jockeys engaged in the Derby Stakes, won by Little Wonder, the property of David Robertson, Esq.,' A. COOPER, R.A. This picture, for many cogent reasons, had better not have been exhibited: it can be interesting only to the jockeys who figure in it. Love of Art never prompts the execution of works like this, and when things of the kind are painted by commission, it should be remembered that such studies do not promote legitimate Art, and they ought, consequently, to give place to those that do. Several really valuable pictures might have been hung in the space occupied by this jockey picture. Assuredly, if Mr. Cooper had not been a member of the Royal Academy, he would not have had the face to ask that such a perpetration should be hung. It is a huge blot upon the exhibition. What will a foreigner say, who is not aware of circumstances, at seeing this disfigurement so honourably placed, and then entering the Octagon Room, where a work by another COOPER is doomed? He will not for a moment imagine that both are by the same hand; but he will be terribly puzzled to make out by what "accident" the two works dropt into their present places.

No. 257. 'The Little Roamer,' R. RORWELL. A child who has been gathering flowers, and is now resting against a bank. The assumed ease of her position has an appearance of awkwardness. The head is most forcibly painted, and the background is rich to a degree.

No. 262. 'Spring,' A. GEDDES, A.R.A. A large picture, presenting Spring in an allegorical impersonation—the subject taken from the first lines of Thomson's poem. A fair-haired and blue-eyed nymph is stepping from a descended cloud to the earth, already studded with the first flowers of the year. Save for especial purposes, allegory of this kind is less acceptable to public taste than any other department of Art. If Rubens were unequal to it, men of less pretension may be content to fail with him. In the present work it is not attempted to complete the description which the poet continues,—

"While music wakes around, veiled in a shower  
Of shadowing roses, on our plains descend."

We admit the difficulty of following the lines, but cannot help observing that so great is the charm of painting the figure, that the infatuation will keep us pinionless down to the substantive associations of our own earth. This work will do no service to the reputation of Mr. Geddes—a very unequal painter, sometimes remarkably good, at other times exceedingly bad.

No. 263. 'Prince Charles Edward asleep in one of his Hiding Places, after the Battle of Culloden, protected by Flora Macdonald and Highland Outlaws, who are alarmed on their Watch,' T. DUNCAN. In Art as in letters history has a subtle rival in its own romance; indeed, those passages of the annals of a nation called not improperly the romance of history, generally hold place in the memory to the exclusion of facts only chronicled to supply what would be otherwise a blank in the catalogue. The adventures of the Pretender have been a fertile theme of song and story in Scotland ever since "the '45"—they have also supplied painters with subject-matter of various complexions; but no incident in the perils to which he was exposed has been so powerfully painted as that which forms the subject of this picture. It is a large and imposing work; the scene is a cave, and extended on the ground lies Charles Edward; near his head Flora Macdonald, expressing anxiety lest he should be awakened; near the mouth of the cavern, and looking out

of it, are the dark and wild figures of the Highland outlaws. The circumstance is rendered here precisely as it might have happened without impertinent exaggeration; and no mean labour has been exerted in the acquisition of every effective propriety. The cavern is lighted by the dying embers of a recent fire, the light of which is broken in variously graduated force upon all the objects. This work is one of the most meritorious of its interesting class. It will fully establish the reputation of the artist. Mr. Duncan's name is comparatively new, but his picture is one of—we will not say the highest promise, but of actual performance. It combines in an unusual degree and in nearly equal excellence the qualities of composition, colouring, and chiar oscuro. The effect of fire-light is given with surprising truth and brilliancy, but in such a manner as in no shape to interfere with the general effect of gloom, terror, and mystery which pervade the picture. It is frequently the case, when the attention of the artist has been greatly directed to picturesque arrangement, to see sentiment sacrificed to that object; but the two qualities have been united in this work with complete success. It is, we understand, about to be engraved by Mr. Ryall, for Mr. Hill, of Edinburgh, an indefatigable and enterprising publisher, to whom Scotland is already very largely indebted.\*

No. 266. 'Fishborne Creek, Isle of Wight,' A. VICKERS. A small picture of ordinary materials, rendered pleasing by judicious treatment; the water occupies the lowest part of the canvas, and diminishes to distance, closed in by a low and flat country. The work is, in parts, somewhat cold, but has otherwise great merit.

No. 270. 'Making the Most of their Pen'orth,' J. A. AGASSE. A very vulgar title to a weak and puerile subject—some children riding upon hired donkeys. To speak mildly, the production of this picture was an error inexplicable, and the hanging it an error unpardonable.

No. 271. 'The Gillie's Departure for the Moors,' A. COOPER, R.A. At the door of a cottage, amid bleak Highland scenery, stands a gray pony and a Gillie, who is receiving the stirrup-cup from a woman at the door of the cottage. This is a small picture, executed with even less care than is usual with this artist.

No. 272. 'A Neapolitan Boy playing a tune on the Mandoline to his Inamorata,' T. UWINS, R.A. This is a small picture, light, and sketchy, and pleasing, though somewhat artificial in its composition; they are seated in a nook, shaded by the vine, he being at the feet of his mistress. In the remote distance we have a glimpse of the blue sea.

No. 279. 'Highland Cearnach defending a Pass,' R. R. M'LAN. This picture is worthy of a much lower place; indeed, at such a height, it is impossible to do it the justice it evidently merits. A group of Highlanders

\* Concerning the treatment of this subject we have received the following letter, which we cannot for a moment hesitate to print—without, however, agreeing with the fair writer, and leaving the matter open to Mr. Duncan, who will, no doubt, be prepared with his "Authorities."

MR. EDITOR.—I claim, as one of your oldest subscribers, that you will print this letter. In the present Exhibition is a picture, No. 263, of 'Prince Charles,' painted by Mr. Duncan. I am a lineal descendant of Flora Macdonald, and as such, cannot help expressing my surprise and sorrow to find that any man who bears so distinguished a Scottish name as *Duncan*, would dare to attempt to falsify Scottish history, or traduce the spotless memory of Flora Macdonald, as he has done. When that lady assisted his Royal Highness to escape, she was attended only by her servant, *Neil Macdonald* (ancestor to the late *Marshall Macdonald*), and escape was effected by those two alone, and the Prince wore at the time a woman's dress. If Duncan's picture be right, the Hanoverians of that day would had good reason for suspecting the virtue of Miss Macdonald; but the fair fame of that lady was as untarnished as the bravery of the house from whence she sprung. I am, Sir, your humble servant,  
4, Edgware-road. MARY MACDONALD.

are busied, on the very crest of their native rocks, in arresting the progress of an enemy's advance below. They are remarkable for the determination with which they fight, having put in requisition missiles of every description, in as far as we can make out the composition, which powerfully illustrates one of those incidents peculiar to the history of the inhabitants of the northern hills and glens, appropriated and described by this artist with intense nationality of feeling.

No. 280. 'Naomi and her Daughters-in-Law,' E. U. EDDIS. This work derives its chief value from the chastity of its treatment. Naomi and her two daughters-in-law are presented without any accompaniment; but we have in them once more to complain of what our artists seem to be utterly heedless of—that is, national characteristic: we have here three Englishwomen figuring as Asiatics. However, the reluctant consent of Naomi, and the affectionate solicitation of Ruth, are impressively alluded to.

No. 281. 'The Ducal Palace and Columns of St. Mark, Venice,' C. STANFIELD. A view even more familiar than the most remarkable within or around our own metropolis; but it does not possess the interest which attaches to the sea-scenes of this gentleman, although of the highest order of its class. The Palace is upon the left, and the view traverses the façade and extends to the distance. The foreground is thronged with figures in every variety of costume.

No. 282. 'Morning at Lymington—the Isle of Wight in the Distance,' A. VICKERS. It is the highest merit in pictures like this, that their homely materials are so attired as to exercise the mind in immediate comparison between them and nature: this is a proof of their suggestive power. This work is very like the place it professes to picture; it is atmospheric, and faithful in perspective.

No. 284. 'Landscape and Cattle,' J. WILSON, jun. Three cows, a cowhouse, and other probabilities, thrown into a nook of pasturage. In the upper part of the picture a cloudy effect is well handled; but the ground wants breadth, being frittered and cut up in a manner unjust to the principal objects. Although a fine work, and supplying evidence of great ability, it scarcely upholds the reputation of the young painter.

No. 287. 'Waterloo, 18th June, 1815, half-past seven o'clock p.m.,' Sir W. ALLAN, R.A., P.S.A. This picture has an interest far beyond ordinary battle-compositions; it affords, as nearly as can be afforded, a distinct view of the position and distribution of both armies on the occasion of the last grand effort of the French to force the British position, upon which occasion the advancing columns of the French reserve were cut down by the British batteries in front, and the deadly flanking fire of the brigades of Generals Adams and Maitland; the columns move onward, but only to augment the frightful carnage in front. This is the terrible moment here represented, that in which the utter fortunes of both sides were cast into the balance, and the result of which, announced with the words "*La garde recule*," threw a panic even to the rear of the French army. There are many things in the picture which it is difficult to reconcile. The ground has been carefully modelled in: Napoleon, with some staff officers, occupies the right foreground of the picture; immediately in front of him are some of the French batteries, and the Imperial Guard is still marching past his position in column; in the extreme left of the foreground the cuirassiers are engaged with a regiment of British light cavalry, the 23rd; immediately in rear or on the right of whom are volumes of smoke issuing as if caused by a battery upon the spot. This we cannot account for, and if it can be reasonably accounted for, which we doubt, it

leads, seen as it is, at least to erroneous suppositions. The person of the Duke of Wellington is clearly recognisable by the spectator, who is supposed to be standing near the Emperor. He is conspicuous in everything: the recognition must afford the utmost pride and pleasure to every spectator; but presenting so fair a mark to the batteries in the foreground, his Grace would not assuredly have been overlooked by them. With respect to the frightful slaughter in progress at the head of the advanced columns, that of course is not to be accounted for by the batteries in front and the lines on the left; but there are no doubt other batteries aiding, which are not in the picture; yet, with the discrepancies we have noted, and others of minor import, it is perhaps the most valuable battle picture that has ever been painted, in consequence of the incontrovertible truth of its main features, to lay no stress upon its great merits in execution.\*

No. 288. 'The Hindoo Gentleman—Dwarkanauth Tagore,' F. R. SAY. An admirable subject for a pictorial portrait. This celebrated person is painted in the full costume of the Hindoo of condition: he is turbaned and shawled; and so successfully has the artist met the spirit of his subject, that he has not only left his work a meritorious portrait, but a valuable picture. The colouring is wonderfully brilliant. In this respect, indeed, it is beyond all question the most remarkable work in the Exhibition.†

No. 290. 'Scene in Kirkdale, Yorkshire,' J. RADFORD. This is apparently a landscape of much merit; but it is so high as to preclude an examination of the manner of its detail.

No. 291. 'Griselda,' H. LE JEUNE. This subject is supplied by Chaucer, and its treatment is such as at once to declare the motive of the scene. The Marquis is mounted, and addresses Griselda, who is at the door holding an earthen cruise. There is some skilful drawing in the picture, and the artist is not afraid of bringing forward his outline: his figures, moreover, are distinguished by a substantial roundness and fulness, which clears them entirely from the back scene of the picture; shadow is so far valuable, but in a simple daylight scene there is some affectation in throwing unreasonably the principal head into shadow.

No. 292. 'Reading the Scriptures,' C. W. COPE. This is a large picture, with large half-length figures. Such a method of treatment is inappropriate to the subject, which is of that class generally treated on smaller canvasses. The work is over-toned,—thus producing an ungrateful muddiness throughout. The abilities of Mr. Cope are unquestionable; but he evidently wants the tact to know how best to apply them.

No. 293. 'View on the Giudecca, Venice,' C. STANFIELD, R.A. A large upright picture with a circular top. The near objects on the right of the foreground are buildings and part of a church, whence the eye is led along the quay to objects in the distance. "Everybody" has painted the most remarkable views in Venice: this excellent work is composed of fragments; yet in even this way the famous city cuts up well in the hands of an operator so skilful.

No. 297. 'Nuts to Crack,' W. CARPENTER, jun. A black boy feeding a mackaw with nuts; both are profitable studies of colour, and the

\* It is very pleasant to state that this work has been purchased by the Duke of Wellington, for the sum, we understand, of 600 guineas. The Duke knows a good picture; and must, we imagine, be a pretty good authority as to the truth of the treatment this subject has received. The purchase is indeed a high compliment to the abilities and industry of the artist.

† It is only just to state that this picture is painted with the medium prepared by Mr. Miller; and for which he has more than once challenged a trial in the advertising columns of the ART-UNION. Few who look upon this work will hesitate to believe that its peculiar brilliancy is derived from some unusual means; what those means really are, it is the duty of every artist to inquire and ascertain.

character of the boy has been admirably dealt with. The picture is indeed one of small pretensions; but there are few better in the whole gallery. This young artist is on the safe and sure road to fame.

No. 298. 'The Pet Lamb—a Sketch in the Abruzzi,' T. UWINS, R.A. A girl is seated with the lamb near her; a simple subject made out with a corresponding feeling. The manner is free and sketchy.

No. 300. 'Jessica,' W. DYCE. A head and bust—certainly as such most chastely dressed, but as certainly in no degree pointing to Jessica. The expression is not that of the daughter of Shylock. The head has much the character of Raffaele, whose style seems to have been closely followed. The shoulders are enveloped in satin, which has been imitated with the most felicitous accuracy. It is a good work; perhaps more than a good work; yet insufficient to sustain the reputation of Mr. Dyce, and making no claim whatever to original thought.

No. 301. 'A Woman playing on a Sistrum,' Miss E. COLR. This idea is very far-fetched, the sistrum being an instrument used in the rites of the ancient Egyptians. The sistrum therefore, associated with this lady in comparatively modern attire, is a practical anachronism. The figure is firmly painted and well drawn, and the work altogether manifests considerable ability.

No. 305. 'Portrait of Lady Oranmore,' S. WEST. A full-length portrait. The lady is seated, and attired in dark blue velvet, coloured with a deep and rich effect. The work is one of great excellence, and sustains the character of a very excellent portrait-painter.

No. 306. 'John Knox endeavouring to restrain the Violence of the People, who, excited by his Eloquence against the Church, destroyed the Altar, Missals, Images of Saints, &c., at Perth, 1559,' J. P. KNIGHT, A.R.A. Mr. Knight is one of the best colourists and most dexterous *executors* in the English school. There is a richness in his effects, a harmony in his colouring, and a fluency in his pencil, which, at a first glance, make his works exceedingly captivating; but he should confine himself, we think, to pictures of a quiet and unobtrusive character; for where energy and power are wanting, there is a deficiency in mental conception which becomes strongly evident in such a subject as the present. None of the figures seem in earnest. John Knox deports himself with a coolness as if he were covertly enjoying the mischief going on; and it would be impossible to understand the action or *motive* of several of the other persons, except as we are informed by the Catalogue. There are sad disproportions too throughout the figures, in many of which the head, arms, and legs do not appear to belong to the same individuals. Art, however, has vast capabilities, and works, in which parts are portentously bad, are frequently redeemed by passages of equally conspicuous beauty; and whatever may be the faults of Mr. Knight's picture, there is so much that is excellent in it, that he must be a very sour critic indeed who does not look at it with more gratification than dislike.

No. 307. 'The Sisters—Children of the Hon. Col. and Mrs. Dawson Damer,' F. GRANT, A. One of these heads is a profile, the other is a front face. The heads exhibit surpassing power; they are childish, winning, and admirable in texture; but there is about the whole picture a degree of laxity to which we have not been accustomed in the works of this artist.

No. 309. 'The Virgin and Child,' W. COLLINS, R.A. The subject is here treated with a novelty not less attractive for its own sake than charming on account of the many beauties by

which it is distinguished. The title is accompanied by some lines from Milton's *Nativity Hymn*, but instead of the stable the artist has assumed the license of seating the Virgin within a rocky cavern, open to the sky, wherein we see Heaven's "youngest teemed star." The infant lies upon the knee of the Virgin, and is strongly lighted by a ray which descends upon him. The head of the Virgin is enveloped in a thin white veil, which we would gladly see painted out, as a nicety only tending to vitiate the effect. This picture is in the whole distinguished by a profound feeling which accords to this gentleman a high place among the painters of the poetry of scripture.

No. 311. 'A Weir on the Thames,' A. GILBERT. The scene is closed in by trees, which are crisply painted, but somewhat raw in colour. The water is not sufficiently broken, and is deficient of relief in colour.

No. 314. 'Horses—the property of William Wigram, Esq.,' E. LANDSEER, R.A. The animals are in a field, and brought up to the foreground to drink from a large iron pot. There is between them a strong generic difference, which has been respected in every line and touch. In examining the admirable texture of their coats, it is astonishing to see with how little effort this accomplished artist produces the necessary effects. The less of the two is placed nearest the spectator, and, though it is a plain creature to look at, it is round, warm, and heaving with life. This is not all the picture: there are also two magpies—one by the side of the horse, coquetting with a marrow-bone; and it is evident that the horse considers the bird one of evil omen, for while drinking his eye is turned towards it, and his ears are thrown back. Of the magpie, one more word: we beg to differ from the artist with respect to his size; for he is not a bird of nearly three times the magnitude of a horse's hoof.

No. 315. 'Sir Joshua Reynolds and his Friends,' M. CLAXTON. This is a large picture; the subject is a *conversazione*, at which some of the most celebrated persons of the time of Reynolds are invited to assist. The force of the picture lies in a group on the right, of which Mrs. Siddons is the centre: the figures here compose well, but the heads might have been painted with more brilliancy. On the extreme right of the picture are Dr. Johnson, Goldsmith, and others, forming a group of themselves, without connexion with the others in the room, being indeed divided from them by a positive *hiatus*, formed by the excessively white and obtrusive fire-place. Many of the portraits are striking; but it was ill-advised to put them in the positions in which they are familiar to us in Sir Joshua's pictures. The work would be improved in value by certain modifications. The subject is a valuable one; we are sorry it has not been better dealt with.

No. 318. 'Expectation,' M. J. CROWLEY. Evidently portraits, and very skilfully managed; painted with much care; arranged with skill and judgment; and eloquent of an interesting "story."

No. 322. 'Portraits of the late Mrs. Thompson, &c.,' J. P. DAVIS. A striking and interesting family group, composed with judgment, but defective in colour.

No. 325. 'Portrait of the Most Honourable the Marquis of Clanricarde, K.P.,' J. SIMPSON. The features are remarkable—they command attention to something serious already prefaced by the eye, and which is about to pass the threshold of the lips. Nothing, however, can in bad taste go beyond the very "clean" white waistcoat put upon the figure; this ought to be taken off for many reasons.

No. 326. 'Portrait of Miss Ward,' G. PATTER. Parts of this work, especially the arms, are exquisitely painted. The pose is somewhat uneasy, but we are aware of the difficulty

of avoiding monotony, and being always successful in change.

No. 328. \* \* \* F. DANBY. There is no title to this picture; it is accompanied by a quotation from Wordsworth, although the substance of the story were evident enough without it. Two shipwrecked sailors have saved themselves by gaining the summit of a barren rock, the boundless sea is around them, and there is no hope of succour. The story is emphatically told, but there is a too prevalent redness in the picture. It is, however, a work of high promise.

No. 329. 'Dovedale, Derbyshire,' H. DAWSON. This is a large landscape, composed chiefly of the rocks rising on each side of the dale, at the bottom of which flows a rapid current. It resembles in feeling some of the pictures of Ruysdael, but on the whole is heavy, and little relieved by the patch of rich herbage in the foreground.

No. 330. 'A Grecian Sunset,' W. LINTON. A brilliant and Claude-like composition, apparently at a distance, for it is placed too high to admit of examination into detail.

No. 333. 'Portrait of a Gentleman, and favourite Bloodhound,' W. SIMSON. A three-quarter length, the figure standing and wearing a great-coat as if prepared to go out—marked by much of the power which distinguishes this gentleman's portraits generally.

No. 334. 'Lord Charles Scott, youngest Son of the Duke and Duchess of Buccleuch,' F. GRANT, A. A child holding a dog by a ribbon: he is standing in a landscape very freely painted. The head of this little figure is brought forward with inconceivable force. The work is perhaps one of the most perfect in the exhibition; but the "finery" given to the child is a little too prominent.

No. 335. 'Portrait of Sir W. Lubbock, Bart.' T. PHILLIPS, R.A. The expression of the countenance is agreeable and animated; but this is a portrait which would scarcely arrest the attention of any save those to whom the subject is known.

No. 336. 'A British Man-of-War hard and fast on the Rocks,' J. C. SCHETKY. The vessel is on the Rocks, but not in such weather nor in such a sea as will justify her officers under trial by court martial. There is in the water a hardness destructive of motion and transparency, and the sky accompanying the scene should have worn a very different aspect.

No. 338. 'The Falcon,' C. DUKES. A gentleman and lady, in ancient costume, are here looking at a falcon on the hand of the former. The figures are defective in drawing and ungraceful in treatment. They have very much the appearance of having been supplied by a recent publication, illustrative of earlier costume. It is necessary that such works be consulted, but they are not intended to afford figures.

No. 339. 'Christ and the Woman of Samaria,' J. R. HERBERT, A. "And Jesus saith unto her 'I that speak unto thee am he.'" These words and their living utterance the author of this work has pictured in the features of the Saviour; and their effect upon the woman is described as well with all the emotion that human nature can supply to Art, as with expression that surpasses language. Jesus is seated on the stones of the well, the woman stands opposite, and beyond the well are some palms to assist the effect. The former is attired in red and blue subdued, and the latter in simple and appropriate drapery. The exalted style of this work is comparable to that of any which in modern Art are held up as the nearest approaches to highest excellence. The Saviour is here painted with red hair,—we know not from what authority, other than inveterate habit, and for the sake of apparently harmonious colour. The woman is clad in the simple manner of some of the Arab tribes of the

present time; a sufficiently good authority—for the costume of some of these people is now much the same as it was two thousand years ago. This production will acquire for its author a very high consideration in his profession. It is less finished than it ought to be, and is marked by hastiness in its less prominent parts; indeed, in the draperies of the principal figure we notice an absence of due labour, but the feeling that pervades the whole is exquisite, simple, pure, and true.

No. 340. 'River Scene—Morning,' J. TENNANT. This is a very favourite effect with this artist, and one which he paints with the utmost sweetness. Some cows are standing on a tongue of herbage relieved by the sheen of the passing water; some trees occupy the left of the picture, whence we look into a distance melting into light and air. All this is beautiful; but of the trees we have to observe they want softness, and that quality whereby they are made to yield to the wind. The grass and weeds are too hard and edgy; they look as if they would not bend to the foot.

No. 341. 'A Lane in Holm Chase, South Devon,' S. R. PERCY. A green lane, shaded by towering trees, painted with a rich and full brush. Although there is much careful pencilling, there is yet a want of union in the masses, and a judicious toning, leaving much crudity in the colour. There is, withal, much in the manner that may be modified into excellence.

No. 342. 'The last Moment of Sunset,' F. DANBY, A. This is a continuation of the landscape Poussin, who could not have painted better the departing glories of the setting sun. A group of trees occupies the left of the picture. They are sunk in liquid shadow, and worked out with the finest feeling. The utmost tranquillity prevails, broken only by a cow crossing the water, which reflects the colour of the distant sky. This picture is the work of a mind imbued with the purest classical taste, and may be classed among the *chef-d'œuvre* of the British school.

No. 343. 'Bruce about to receive the Sacrament on the Morning previous to the Battle of Bannockburn,' J. P. PHILLIP. A large work, comprehending many figures in military and clerical costume. Bruce is a powerful and martial figure; kneels bareheaded, having given his helmet to a page near him, and is about to receive the cup from the officiating priest. Among the crowd by whom he is surrounded there are some women, and it may be asked, what they do in a field of battle? But it may be remembered it was a number of women, marched over a distant height, who assisted in the defeat of Edward's army by causing a panic. Many of the figures are extremely fine, and the scene, on the whole, is highly impressive. Bruce, by the way, wears plate armour: this is an anachronism. We regard the work as a work of right good promise. It affords evidence of thought and industry added to genius; and is altogether honourable to its producer.

No. 349. 'Portrait of a Gentleman,' C. SMITH. This is a full-length portrait, the figure being seated. This is a work that does not tell well in an exhibition, from the singular lowness of the forehead, the deficiency of which gives to the countenance a forbidding expression, and even lowers the value of every item of the composition.

No. 358. 'The Wreck,' W. F. TOLDERVY. A vessel, having been cast ashore, is left by the tide: it is now night—the moon has risen; and it is in its effect that the force of the picture lies. The moon, however, is too bright—it deteriorates the transparency of the night-air lying on the principal object.

No. 361. 'Jephtha's Daughter—the last Day of Mourning,' H. O'NEIL. The daughter of Jephtha and her companions are here represented bewailing in the wilderness;

it is, however, "the last day of mourning;" in the distance, therefore, is seen an escort, prepared to convey them back, in order to the fulfilment of the vow. In composition, this work is somewhat artificial; the heads of the maidens rise in amphitheatrical array—the lower ones relieved by the upper, and the upper by the sky: it is also difficult to account for the manner in which they are supported; there is also too great a nicety of dress for women who have been two months bewailing in the mountains. Moreover, there is not a single one of the figures whom the mind will associate with ideas of Jewish maidens. Yet the beauties of the work are numerous and striking: every part has constituted a theme of deep thought to the artist. The heads are generally very beautiful, and the grief of the principal figure is expressed in a manner the most touching. The work will greatly augment the already high reputation of Mr. O'Neil; who has long promised to occupy a prominent station in his profession.

No. 362. 'Passing the Cross—Brittany,' F. GOODALL. Some peasants are going to market, and in passing a *Calvaire* are seen acknowledging it: the men raising their hats, and the women crossing themselves; one woman is kneeling in devotion at the foot of the cross. We have already remarked on the fidelity with which this artist paints the people of Normandy and Brittany, even to the prevalent national cast of countenance. The present work is in that respect equal to others that have preceded it; but the colours are much more toned down than in those which have made a reputation so early. It is to be hoped this will not so increase as to sully the lustre and more than sweetness of his original style. The figures are mounted on the small rough nags so cheap and abundant in the country; and the heads are put in with careful but broad finish; and the faces wear an expression admirably adapted to the feeling of the subject.

No. 363. 'Shade and Darkness—the Evening of the Deluge,' J. M. W. TURNER, R.A. We presume to read this the *Eve* of the Deluge—yet it aids us but little to the meaning of the picture. In the Catalogue we find a quotation from "The Fallacies of Hope," which suggests an interpretation of some of the misty imagery with which the picture abounds. We are to suppose the last awful menace in the heavens—the ark floating in the distance—the scared birds wheeling and screaming in the air, and the beasts wading to the ark. There is nothing for an intelligent and reasonable mind to seize upon. The work is an extravaganza in Art, exemplifying the anti-climax from the sublime to the contemptible.\*

No. 371. 'Portrait of a Lady and Child,' J. PARTRIDGE. The lady is drawn at full length and in black velvet: the head is much too small for the other personal proportions, and the child she holds is inanimate and doll-like.

No. 373. 'The Love Reverie,' D. MACNEZ. A maiden seated on a bank, having a plaid over her shoulders, and habited otherwise in accordance. She is supposed to be visiting a spot she has frequented with her lover who is absent. The figure is thrown out by the deep shadow of the bank; the head is partially in shade, and the eyes are cast down, accompanied with an expression of sadness which says all recorded in the four lines of the quotation that follow the title. The figure has in every part been studied with success and truth.

No. 374. 'Landscape,' F. W. WATTS. Trees on the bank of a river, the water of which is

cold and opaque; a like degree of heaviness prevails in other parts of the work, the best of which is the largest tree, though in the green so much white has been used, as to render it flat and ineffective.

No. 375. 'Chateau Gaillard, on the Seine,' C. R. STANLEY. This famous seat, we believe of the Bishops of Rouen, is seen in this view rising with its many towers on the right bank of the river. The place is represented with fidelity, but the colour of the picture seems faulty. The artist is always pleasing, agreeable, and true to nature; and his pictures are distinguished for accuracy.

No. 376. \* \* \* C. LANDSEER, A.

"The monks of Melrose made good kail  
On Fridays when they fasted;  
They neither wanted beef nor ale  
As long as their neighbours' lasted."

We are here invited to what is termed, on the banks of the Tweed, "a kettle of fish"—that is to say, a "red fish," transported from the eddying current of that famous and romantic river into the seething whirl of a cauldron boiled with sticks upon the greensward. We are in sight of "bonny Melrose," and have fallen into excellent company—that of the Abbot, one or two of the brethren, and some sportsmen, whom we should, in the phrase of Burns, designate as of the "ram stam squad." The sportsmen had established themselves on the verdant grass, with a venison pasty and plenty of wine—Bordeaux, of course, that was the favourite beverage in those parts—when a descent of the brethren takes place, and they unceremoniously help themselves to the viands they like best. There is much ability manifested in this picture; so, indeed, there is in all the productions of the artist, although it rarely approaches genius. But we can scarcely consider this work as an advance; it is not, indeed, to our thinking, equal to his pictures produced some three or four years ago. We cannot but consider, therefore, that he is more indebted to his "luck" than to his merit for the out-of-proportion sum he received for the picture from the Art-Union subscriber, who was also more fortunate than deservng.

No. 377. 'The Sepulchre,' M. CLAXTON. A naked figure is here lying with the head supported on "the sepulchre;" but we cannot agree with the artist in his method of treating the subject. Such a display of the anatomy of the human form, with every appearance of attenuation from disease, is certainly revolting. Apart from this objection, there is much excellent work in this picture.

No. 379. 'Portrait of a Gentleman,' R. ROTHEWELL. The head is painted with that brilliancy which distinguishes the artist. The other parts are made out in a manner to support the principal light. It is perhaps one of the best male portraits in the collection.

No. 382. 'The Rival Pets—a portrait,' J. SANT. A lady, full length, habited in light satin. She is playing with a cockatoo, which sits upon her right arm. The figure is egregiously tall, being some eight or nine heads in height, and the character of the portrait is extravagant in its theatrical taste. The head is well painted, but the person is overdone in dress, and the whole work is marked by affectation.

No. 384. 'The Meeting of Hetty Hutter and Wah-ta-wah on the Banks of the Glimmer Glass,' A. D. COOPER. The subject is from the "Deer-Slayer," and the picture presents Hetty and the Indian woman seated among the rocks at the brink of the river, and near them a canoe drawn up clear of the current. Hetty is a damsel so coarse that she sinks in comparison with her Indian companion. There is not a sufficient intelligence between the figures; and the other parts of the picture want harmony.

No. 385. 'Light and Colour (Goethe's

theory)—the Morning after the Deluge, Moses writing the Book of Genesis,' J. M. W. TURNER. Each successive year brings forth some production by this once eminent artist more absurd than the preceding; to what his insane stars will ultimately lead him it is impossible to say. Amid a reduction of "Goethe's theory," bright with all the unalloyed wealth of the palette, sits a figure in the clouds, from which a serpent is falling. Mr. Turner may fancy himself in a position to make any experiment he pleases upon the good nature of his friends—and we know full well that there are persons who would laud anything he did—but he is fast losing the suffrages of the sensible part of the community, who never themselves do anything without a reason, and expect others to be able to plead a sufficient cause for what they do. No vindication of such pictures as this can be brought forward, nor can the ardent admirers of such works say in what consists their real value. To the artist himself we would offer the advice given by *Falstaff* to *Pistol*, and entreat him to discourse to us like a man of this world.

No. 386. 'The Visit of the Village Pastor to a Reduced Family,' T. F. MARSHALL. There is much here that is well intended, but the whole is feeble in character and coarse in execution.

No. 388. 'Hayes Common, Kent—Study from Nature,' W. F. WITHERINGTON, R.A. Valuable for the success with which the perspective of the Common is given, but by no means comparable with the figure pictures of this artist.

No. 389. 'Flemish Courtship,' W. ETTY, R.A. This is a subject of a complexion very different from those generally treated by this gentleman. A *Flamande* is leaning on a copper water pitcher, and so receiving the proposal of her *Flamand*, a youth wearing a *bonnet rouge* on a head very picturesque. But the charm of this picture centres in the head of the woman, which is coquettishly set off by a high lace cap with long ears; her head is marked by an originality rarely met with.

No. 396. 'Portrait of Mrs. W. Jackson, Birkenhead,' T. H. LLLIDGE. A lady, drawn full length, in black velvet. There are few portraits in the Exhibition more *soundly* painted. The figure is gracefully, and without effort at attitude or affectation, introduced into a brilliant landscape, standing on the steps of a magnificent mansion, the lordly entrance to a baronial hall. The flesh-tones are remarkably true, and the dresses and draperies are admirably wrought. We have, indeed, seldom seen velvet more accurately copied. The work is calculated to do the painter much service, at a time when competition in a most profitable branch of the Arts is as eager and zealous as it is honourable.

No. 397. 'The Fortune-Hunter,' R. REDGRAVE, A.

"Neglects a love on pure affection built  
For vain indifference, if but double-guilt."

The scene is in the hands of three persons, who enact to admiration the parts committed to them, as to the immediate business, though the detail of the narrative appears to us somewhat ambiguous. It would appear that the fortune-hunter pays a visit to a lady really attached to him, and at the same time addresses earnestly, and *sub rosa*, another possessed of more property. All this takes place in a room wherein the neglected one sits within a screen, on the other side of which she hears her faithless lover kissing the hand of her rival. Without the hint from the title, the scene must fall to the level of a simple love-affair, overheard from within the screen, for there is nothing to tell of the fortune-hunter. The figures are admirably drawn and dressed, and the painful agitation and uneasiness of the lady within the screen is inimitably set forth.

\* Everybody will remember the story of the painter who was commissioned to paint the passage of the Israelites through the Red Sea, and who produced a sheet of red-coloured canvas; demanding the imagination to picture the Israelites as having passed over, and the Egyptians as all drowned.

No. 398. 'Watering Cattle,' E. WILLIAMS. A wooded landscape, with water, cows, and a broken foreground. The trees are painted with great firmness of touch; but they are assuredly among the most difficult objects in nature to paint well, since imperfections in their structure are so obvious and offensive. There is a deficiency here of intermediate gradations, and the colour is crude.

No. 407. 'Portrait of Mrs. Gurwood,' A. MORRIS. The lady is seated, and painted at half length. The execution of the head is of the highest order of this class of Art, but the bust and person are *gigantesque*; and so conspicuous is the disproportion as to be a real defect.

No. 409. 'View in the Medway,' C. STANFIELD, R.A. Be it as it may, this view in our own land comes to the heart more warmly than even the sunniest prospects in classic Italy. The picture consists of nothing—nothing at all, except a few hulks, a boat, a brig, and the ever-fretting waters of the estuary; but with what surpassing beauty of effect are these simple elements combined! We are placed, as it were, upon the water; look into it and feel its motion. This is *ne plus ultra* of marine painting.

No. 410. 'A Scene from the Heart of Mid Lothian,' A. FRASER. The impersonations are those of Butler, old Deans, and his daughter, and the scene of the colloquy, the house of Douce Davie. It illustrates one of the passages of deep pathos so abundant in this novel; but the artist has recourse rather to action than to the countenance, for the expression of emotion. The composition of the picture is unobjectionable, and the light passing in at the window and falling on the figures contributes to their value; but there is in the whole an affectation of looseness of manner, and a contempt of colour, which detract considerably from the merit of the performance.

No. 412. 'Evening,' T. CRESWICK, A. In this work the artist has been less careful of finish than in other works on these walls; he here relaxes the stringent observances peculiar to his works, and we think detrimentally to the picture; but in effect it is equal to the best things he has ever done; the near parts of the landscape are filled by a river and its banks, from the more distant of which rises a group of trees brought forward by the fading light of the western sky, for the sun has recently sunk below the horizon. It is in the foliage that we cannot well spare the touch, which, although individualizing the leaves has at the same time reconciled them in swaying masses of light and shadow; albeit, however different in execution, we acknowledge the sentiment of the work, which comes home in full force to all who have any perception of the beautiful in the varying phases of nature.

No. 413. 'Interior of an Irish Cottage,' N. CONDY. A very clever and accurate copy of one of the "bettermost" Irish cottages. The furniture and *et-ceteras* have been carefully considered and skilfully introduced.

No. 414. 'Low Water on the Coast near Scarborough,' A. CLINT. A beach view, with the cliffs occupying the right of the picture; this feature of the composition, with its irregularities, is carried into the distance with a fine perspective effect. The shore is shingly, and relieved by water left by the receding tide. There is breadth in the picture as a whole, but too much pains has been bestowed on strawing the foreground with pebbles and bowlders, which displease the eye as much as they would fret the foot. It is necessary to express this, but it should be done in a manner much less positive.

No. 415. 'Market Figures crossing a Ford,' F. R. LEE, R.A. An unqualified daylight scene wherein everything is represented with local colour. The life of the picture lies in a party fording a brook in their cart as returning from

market. The water is crossed by a rude bridge, beyond which rise some lofty trees with leaves yet young in colour. Upon these trees the brush has fallen with a full and free touch, perfectly describing the manifold richness of leaf over leaf. In this valuable picture the best traits of the accomplished artist are discoverable; but in the water there is an apparent rapidity of current which would have justified its being a little more broken on the surface.

No. 416. 'Scene from Molière,' C. R. LESLIE, R.A. The scenes painted by this artist from the French drama possess the extraordinary merit of being real life pictures, rather than enacted colloquies. He translates the drama into actual life, while so many of our painters carry sober realities to the *outrance* of stage effect. This is the famous scene wherein M. Purgon leaves his patient to the merciless course of a list of evils, sufficient to destroy a frame of cast-iron. The figures are four, the principal of whom are the *malade* and his physician, who is quitting the room with the words, "J'ai à vous dire que je vous abandonne à votre mauvaise constitution, à l'intempérie de vos entrailles, à la féculence de vos humeurs." M. Purgon is an incomparable epigram in the characteristics of the peculiarities of his class at the period supposed. He is exquisitely dressed, and the bitter denunciation of his look says more than is expressed in the text. He speaks, through Leslie, in a strain of irate emotion, more deep than through Molière. The eye, and the lip, and the bursting fury of the manner say more than the written words. The patient seems already overwhelmed by the catalogue of diseases to which he is resigned; his look is powerfully deprecatory of the doctor's wrath. Toinette stands behind his chair, and her phrase, "C'est fort bien fait," is outdone by her countenance; indeed, the picture is one entirely of character, and in the spirit in which it is painted has been very rarely equalled, and never surpassed.

No. 417. 'The Children of Lord Clinton,' Mrs. J. ROBERTSON. We do not remember to have before observed a picture so large by this lady. It comprehends portraits of a numerous family of children, who are disposed with the best effect in a richly-furnished room. This is a work whereon very great labour has been bestowed, with the happiest results; indeed, a work of such power as to challenge comparison with the best of its class. The various ages of the children are accompanied by most appropriate character—generally a remarkable deficiency in infantine portraiture.

#### WEST ROOM.

No. 423. 'Solomon Eagle exhorting the People to Repentance, during the Plague of the Year 1665,' P. F. POOLE. All who have been acquainted with the style of the author of this extraordinary work cannot help expressing astonishment at a vast and sudden display of power, for which they had not been prepared by any previous announcement. It is a large picture, in which is summed up, in epitome, all the horrors of the direst virulence of the pestilence. It refers immediately to Defoe: Solomon Eagle is, of course, the principal figure; he stands naked in the middle of the picture, preaching, with a pan of burning charcoal on his head. The expression of his countenance is carried beyond the maniacal, it is almost demoniacal, but it is tempered by relief from other parts of the figure, declaring the spirit to be vehemence of language and not violence of action. There is one circumstance, however, in the management of this figure injurious to the composition—he is preaching, not so much to those around him, as to the spectator; and is thus independent of the rest of the composition. The artist has read Defoe to good purpose, and somewhat too painfully followed him; his

picture is, accordingly, brimful of the horrors of the time he has chosen to illustrate. The *locale* seems the door of a public-house, where are seated some of the reckless roysters, who betook themselves to the most desperate excesses even while their friends were dropping around them; one of these falls dead with the cards in his hand. On the right of the picture a corpse is let down from a window; and, on the left, a woman, raving mad, is rushing into the street, in almost a state of nudity; look where you may on the canvas, it is rife with allusion to the pestilence; in its beginning, its progress, its crisis, and results, nowhere is there any help save to a loathsome grave, and nowhere any consolation; for Eagle himself speaks rather of despair than hope. Of all who see this picture not one will call it beautiful, but all must acknowledge it a wonderful work of Art; it is one of those which sink deep into the memory—an unerring evidence in favour of works of Art. It is peculiar, we may say original, in style, but, on examination, we can detect, in the handling, the known manner of the artist. We cannot, at a moment, remember any other work similar in feeling and execution to compare with it, save the 'Wreck of the Medusa'; we can offer the artist no higher praise. The exhibition of this work forms, indeed, an epoch in the Arts. It is not too much to say that no work, produced in our time, has so suddenly arrested our admiration—so suddenly elevated its producer from a comparatively humble station to the very foremost rank in his profession. The picture is one for which we challenge competition, among all the schools of Europe. Mr. Poole must be hereafter classed among the great artists of the age and country.

No. 421. 'The Death,' R. ANSDALL. A noble stag has here been overtaken by the dogs just as he was about to take to the water; he is in a shallow, surrounded by the dogs, which are fastening on him. The picture is very large, cold in tone, and appears too much cut up for agreeable effect. Yet it is evidently *true*; the actual transcript of a veritable scene.

No. 422. 'Portraits of Mrs. H. J. Johnston and Child,' J. WOOD. The lady is dressed in maroon velvet, seated, and holds the child; both are substantial, round, and lifelike. It is a brilliant and unaffected work, the object of the artist having been substance and animation, and in this he has amply succeeded.

No. 425. 'Miss Herbert,' Mrs. J. ROBERTSON. This is a miniature in oil; one of those charming little works which have acquired for the lady a reputation so extensive. The figure is full length, and has just descended some stairs. The movement is graceful to the highest degree; the face and neck are broad in manner, but yet equal in finish to an ivory miniature. The dress is white satin, painted in most perfect imitation of the material.—No. 426. 'The Baroness Lionel de Rothschild and Children' is by the same lady, and in the same style. There are many figures in this inimitable composition—the principal, that of a lady dressed in blue velvet, surrounded by children, and an infant in a cradle near her. The beauty of these valuable miniatures is much heightened by the manner of circumstancing the figures—these, for instance, being in a room, the rich and elegant furniture of which is disposed and detailed with infinite address.

No. 427. 'Portrait of Ambrose Hussay, Esq., High Sheriff of the County of Wilts, 1841,' Mrs. W. CARPENTER. A full-length portrait of a gentleman in a court-dress, but treated with so much graceful simplicity as to counteract all ceremony and stiffness. The importance of the figure is somewhat diminished by the large folds of the curtain behind; the style, however, of the work is such as many professors of the other sex might imitate with advantage.

No. 432. 'Shrimpers and Mentors on the

Sands of St. Michael, Normandy,' E. W. COOKE. An extensive plain of sand is opened before us, here and there diversified with stagnant pools left by the tide. We see in the distance the famous Mont St. Michel breaking the line of the horizon. The figures in the lower part of the canvas are some shrimpers, and a man upon horseback: a grey horse, to which this artist seems as much attached as Wouvermans. This composition, as far as it goes, is the best we have ever seen by this artist, who has here remedied many of the defects we have observed in preceding works; it is indeed a view of a high degree of merit.

No. 447. 'Cleopatra,' Mrs. W. CARPENTER. She is recumbent on a couch, and supported by cushions; a Nubian slave stands by her, holding a nautilus shell mounted as a drinking-cup. The drawing of the figure is skilful, and in character it is markedly coincident with historical truth.

No. 449. 'Portrait of Mrs. Coningham,' J. LINNELL. The simplicity of this gentleman's portraits approaches, perhaps, a little too near the homely. This, however, "simple though it be," is a beautiful work, and one of the best in colour we have ever seen from his pencil.

No. 452. 'The Finishing Touch,' R. FARRIER. A lady of a certain age attired in the manner of the latter part of the last century, is applying "the finishing touch" of carmine before a looking-glass, previously to joining some friends who are waiting for her in an adjoining room. This is a very pointed satire, extremely well rounded off in composition, and most carefully followed out in the painting.

No. 453. 'The Church of Stamford-on-Avon, Warwickshire,' D. ROBERTS, R.A. The simple interior of an English country church, coloured with all the sweetness which constitutes a main beauty in the works of this celebrated painter, under whose hand the most commonplace elements become highly picturesque. There are ancient monuments in the church, and abundance of stained glass, which has its full value in contrast with the plainness of the architecture.

No. 456. 'The Gamekeeper's Lodge,' J. STARK. The lodge is an unimportant feature of the picture, the principal objects of which are some fine oaks and birch trees, surrounded by scenery much like that of Windsor Park. Every care has been exercised to give distinctive character to the trees, and with the best result, but a defect in the work is its want of fresh and cool colour.

No. 467. 'A Girl of Sorrento Spinning,' W. COLLINS, R.A. She stands on a terrace holding some flax, which, with the aid of her knee, she is twisting into thread; the same method practised by the earliest generations of mankind. She looks sufficiently Italian, and the landscape is Italian, pointing at once to a nationality without any broad and vulgar suggestion — so often deemed necessary to instruct the spectator. The landscape, after the manner of the artist, is put in with unqualified local colour.

No. 459. 'Jaques and the Wounded Deer,' C. STONHOUSE. This is too tame for the primeval aspect of the scenery befitting the subject. The trees here seem to have been planted, and the water to be artificial. The dark metallic green hue of the foliage is such as is never seen in the generous colour of forest trees. Brughel and others afford examples of this, but such eccentricities are not to be followed. "Nous avons changé tout cela, nous autres — et tant mieux."

No. 462. 'The Smuggler's Retreat,' J. HARWOOD. There is not enough here to constitute a retreat, the smuggler himself filling the canvas; the picture is high; the detail is, therefore, not visible, but the colour appears brilliant.

No. 463. . . . . A. ELMORE. The

narrative here relates to the future, and points to the past. A young monk, recently professed, is seated at the door of his convent, while his former companions are seen at a short distance in full enjoyment of their favourite relaxations; there is a deep sentiment in the history, but, from the position of the picture, it is difficult to speak of the manner of its execution. That it is good, however, we have no doubt; for the artist manifested considerable ability prior to his visit to Italy, where he has passed two or three years; and, from some examples recently exhibited at the British Institution, we are justified in considering that his time has not been ill spent. He sends but one picture to the Royal Academy, and that picture should certainly have been better hung. It is sadly disheartening to a young artist, after years of anxious toil and anxious hope, to find that, as far as the constituted judges are concerned, his hopes blighted and his toil of none avail. Mr. Elmore will, nevertheless, get over this barrier in his way, grievous and injurious though it be.

No. 464. 'Italian Bowlers—scene in the Court-yard of an Osteria,' R. M'INNES. This is a large picture, comprehending many figures, which, together with the scene of action, are characteristic of the country and the class of men among whom bowling is a favourite amusement; the whole is, undoubtedly, very near to the life, but the work is cut up by unmeaning shadows, so harsh and positive as to be spots in the picture.

No. 465. 'Portrait of the late Sir John Jacob Buxton, Bart.,' H. P. BRIGGS, R.A. Marked by the breadth and firmness of this gentleman's usual manner, but we observe generally, in those portraits, that the studied roundness of the head is never carried into the figure: this is an error of practice so inveterate, that sometimes likeness in the other parts of the person is entirely overlooked.

No. 467. 'Pal Al, or Scotch Hop,' J. E. LAUDER. Some children are assembled before the door of a cottage, amusing themselves with this game, which is too well known to require description here; other figures stand near, adult and aged, variously disposed; all drawn with extreme force and perfect accuracy, and painted with a corresponding power. Colour is sparingly used; the effect, however, of the work would not be injured by this, but that it is too flat in general colour, and much weakened by the manner of painting the distant trees.

No. 468. 'Going to Service,' R. REDGRAVE, A.R.A. Great ingenuity has been exerted to render the story perfect; every part of the canvas contains some allusion to the main incident, thrown in so judiciously as to appear in the proper place. A girl is about to leave her home in the country to proceed to town, to a place procured for her at Lady Fashion's, somewhere at the west-end; and her mother, an invalid, gives her excellent advice touching the temptations to which she is about to be exposed, while her younger sister takes leave with tears. Effective narrative and delineative truth have been the artist's principal view here, and his purpose is perfectly answered. Each of the figures sustains perfectly the part allotted to it, without the slightest impertinence to interrupt the smooth currency of the history.

No. 470. 'Tintern Abbey—Evening,' H. JUTSUM. The materials of this composition are such as we find in the simplest water-colour drawings. The river is a principal object in the picture: on the right bank of it is seen the ruins of Tintern among trees, and thrown into shadow. Upon the right of the picture are some trees put in with a firm and full pencil; and on the left a portion of the foreground lighted into rich and warm colour. This artist gives an excellent account of the

locality. The work is executed with a sweetness rarely surpassed.

No. 471. 'Sorrento, Bay of Naples,' W. LINTON. We view the sea from a terrace; it lies below in deep shadow, which extends too positively to the houses on the right of the picture. Vesuvius appears in the distance, which is rendered with a soft and aerial effect.

No. 472. 'Waterfall at St. Nighton's Keive, near Tintagel, Cornwall,' D. MACLISE, R.A. Notwithstanding the title, the substance of the picture is a female figure—a maiden crossing a rocky and rapid current, carrying on her head a brown pitcher of water. On the right of the composition is the cascade, falling from precipices which seem to enclose the water-bearer. Nothing can exceed the beauty of drawing, painting, and expression, shown by the figure; but, unless it be a portrait thus romantically circumstanced, the dress is by no means in character with the vocation and the condition of life to which the damsel should belong. The dress, arranged in every fold to a nicety, and the style of presence, are those of a maiden of condition rustivating for amusement. The gushing current, the stones, and impending banks, are inimitably drawn, as is also the whining and dripping-wet dog, the faithful *poursuivant* of her infirm footsteps.

No. 473. 'Portrait of Robert Bald, Esq., F.R.S.E., &c.,' J. W. GORDON, A.R.A. In this excellent work the universal dark or red-curtain background is rejected for a plain light background, by which the figure is skilfully relieved. He is seated in a plain chair, and holds a letter. The head is among the very best that have of late years been produced: it is round, full; and the features, full of the glow of life, express a consciousness of your presence.

No. 474. 'An old Pollard,' A. PRIEST. The venerable and failing tree is apparently a willow, decaying by the side of a river, overshadowed by foliage, against which it is made to tell too conspicuously; but the work is too high for closer inspection.

No. 478. 'Digby Cayley, Esq.,' B. R. FAULKNER. A three-quarter length portrait, standing with, what seems to be, a plaid thrown over the arm. The figure is endowed with an easy movement, extremely difficult of expression in portraiture, wherein there is so much that is conventional, that, after the acquisition of a certain degree of practical facility, artists, solely occupied in the production of portraits, paint little more than the heads of their sitters, and, for the rest, depend on experience.

No. 481. 'Portrait of Mrs. W. W. Ogbourne,' J. LUCAS. The lady is leaning upon a stone balustrade, in a position perfectly natural. The arms and hands are finely drawn, and the whole is easy and unaffected.

No. 483. 'Interior of the Cathedral at Pisa, with the Lamp, the oscillations of which are said to have suggested to Galileo the idea of the measurement of time by the Pendulum; he is supposed to be contemplating its movement,' S. A. HART, R.A. An interior, extremely insipid, from being nearly all white. The very large bronze lamp hangs in the middle, and Galileo stands below. But little, at best, could be made of the subject, and even here there is nothing suggestive of the supposed incident.

No. 485. 'The Sailor, engaged to Marry after his next Voyage, returns with a Sickness that carries him to his Grave,' T. UWINS, R.A. "Still long she nursed him: tender thoughts meantime Were interchanged, and hopes and views sublime,— To her he came to die."

The subject is derived from Crabbe's "Borough," and the feeling of the lines has been faithfully transferred to the canvas. The scene is a cottage interior, presented in the subdued effect of half light. The dying sailor is seated on a chair, and beside him kneels his betrothed, grasping his hand in an agony of despair on beholding his eye becoming fixed in death. The

artist has felt the full force of the description. We read Crabbe's story in the picture, which has, within it, the point that renders all description beyond unnecessary. It is a most beautiful, although a most painful, picture.

No. 499. 'Portrait of Mrs. Romeo Coates, lady of R. Coates, Esq.,' H. LILLEY. This is a full-length, and is a fine style of female portrait, though the artist has communicated to his figure a movement too epic to set the spectator at ease with her. The work has been designed and executed in the best manner, save the background, which looks artificial, but yet is well adapted to throw out the figure.

No. 501. 'The Castle and Village of Ehrenburg, near the Moselle,' C. DEANE. The lower part of the canvas is filled by some houses of the village, picturesque in some degree, as is the greater part of the domestic architecture in the district where the scene lies; beyond these, at a little distance, rises the castle, but it is thrown in, in a manner fatally cold and opaque. Much more assuredly might have been made of the view; the near houses are hard and inharmonious in colour, and the eye ought to have been conducted to and from the buildings on both sides by some connecting objects.

No. 502. 'An Incident in the Life of Napoleon,' G. HARVEY. The canvas here speaks out and at once; the story is definite and intelligible. The anecdote is given in the catalogue, but it is superfluous. The scene is one on which a battle has been fought; it is a moonlight night, and Napoleon, accompanied only by one or two of his staff, passing near a body, alarmed the faithful dog watching by his dead master, which is represented as growling in defiance at Napoleon. The subject is powerfully handled, but the picture is badly coloured, although the effect is good; and this was equally attainable with colour of greater truth and purity.

No. 504. 'A Moorish Girl,' A. GEDDES, A.R.A. A life-sized head and bust, but distinguishable as Moorish in nothing except colour. The features are such as we see daily, and might be afforded by an ordinary model.

No. 505. 'The Infant Moses and his Mother,' W. ERBY, R.A. There is little of sentiment or remote allusion in this picture; it describes a simple act, the exposure of the child by his mother, who is yet stooping over him, as lying before her. The work is in fact a study of a woman stooping, painted in the average manner of the author.

No. 506. 'The Gipsy Camp,' H. J. BODDINGTON. They are encamped in a lane, and have chosen the shade of some overhanging oaks, whereof the picture is mainly constituted. This work evinces great improvement in the style of the artist; it is throughout harmoniously coloured, and the trees are successful in imitation of nature.

No. 507. 'Portrait of William Sharman Crawford, Esq., M.P.,' J. P. KNIGHT, A. This portrait is powerful and effective; every part is firmly painted.

No. 508. 'The Supper at Emmaus,' J. LINNELL. In this frequently-painted subject, the moment chosen is that of breaking the bread: here also it is the point of time selected. The Saviour is seated between the two to whom he offers the bread, at which instant their eyes are opened; he is seated with his back to the remaining light in the sky, the day being far spent; but these circumstances scarcely justify the very positive shadow thrown over the features, the purpose of which is not sufficiently evident: if it have only reference to the opposing light, it is too heavy; if it be otherwise intended, the distinction between the Saviour and the other figures is, with respect to substance, not sufficiently made out. The work is the result of deep feeling, and the recognition by Cleopas and the other is pointedly told.

No. 512. 'Portrait of Miss Revel,' J. G. MIDDLETON. This is a portrait that would acquire distinction, even among many of much higher pretensions; the head is a charming study, and the entire figure is richly endowed with feminine grace.

No. 513. 'Gipsies Reposing,' J. HAYES. This is more like a party rusticated, *à la Bohémienne*, than veritable gipsies. However well a picture may be executed, such a departure from truth is at once destructive of its principal interest. The subject is by no means adapted for a picture so large. The artist would succeed better on a smaller scale.

No. 516. 'Angelica descending to the Earth from the Flying Horse, after she had been rescued by Ruggiero from being devoured by the Sea Monster,' J. SEVERN. In painting poetry, it is not a mere literal reduction from the text that we look for; the artist must essay to catch the inspiration of the poet, otherwise his picture is a mere inanimate production. The subject of this work is from Ariosto, but it is too literally read from the poem. There is in the composition everything that ought to be there, but the whole comes forward with a propriety tediously prosaic. Ruggiero is setting down Angelica, a naked figure, very like the Venus. This, *in se*, may be no fault; but all similar reminiscences should be studiously avoided. The classic grace, severe truth, and exceeding purity of Mr. Severn are universally admitted; they are unfortunately qualities far too rare in modern Art, and it may be that we do unwisely in seeming to censure a system we would fain see more general; but a little more study of nature may be most serviceably added to a thorough knowledge of Art.

No. 518. 'Watering Cattle—Evening,' T. S. COOPER. This picture is painted with all the sweetness of the earlier works of the artist, and combines some of the best qualities of the English and Dutch schools; many of the defects of which we have had to complain are here remedied: the sky is pure, airy, and bright; and the foreground colours are relieved of a certain heaviness observable in preceding pictures. It consists of a few cows, some water, and a willow-tree, all charmingly described. In the last there prevails, however, too much sharpness of touch.

No. 519. 'The Lady Margaret Lyttleton,' F. GRANT, A. A small full-length, the lady being seated on a bank beneath a tree. She is habited in white, and in a manner extremely simple. We cannot speak too highly of this little portrait: it is purely national in style; strongly so; and, in its approach to the sweetness of Reynolds, will stand a comparison with the best works of its class.

No. 520. 'Tintagel Castle, the Birthplace of Arthur,' W. COLLINGWOOD. A rocky nook in an iron-bound coast, with the castle in the distance. A storm is here attempted, with a sea breaking furiously against the cliffs; but in effect and in manner it would be difficult to point out a more signal failure. It is matter of extreme surprise that such pictures should at all be received, and, having been admitted, should be exposed in places so favourable as this occupies.

No. 523. 'Portrait of John Wilson, Esq., Professor of Moral Philosophy, Edinburgh,' R. S. LAUDER. Years ago, Christopher North (*splendide mendax*) told us of his growing infirmities, but he seems suddenly grown green again—"neque viget quicquam simile aut secundum." That long hair becomes him, but by no means that austerity of countenance, which is a misconstruction on the part of the artist, who otherwise has done his sitter ample justice, and carried the portrait even to a picture. He looks too much in the mood to criticise—pray heaven he had no book of ours before him when to the eye of the painter he looked thus!

Yet it will not be difficult to perceive how completely that stern brow might unbend, and the young, generous, and kindly heart of the great critic shine upon it.

Not 530. 'Mrs. Scrutt and Child,' F. GRANT, A. A small portrait, with the figure at full length, seated on a bank and under a tree, the child standing by the lady. In feeling and execution this is so much like the other small portrait already spoken of, as apparently to form a pendant to it. It is even more beautiful than the other: the background is free, but incomparably coloured and wrought.

No. 531. 'On Derwent Water, looking towards Borrowdale,' W. J. BLACKLOCK. Lake scenery, with portions of it tolerably painted; but there are in the foreground two trees dotted into the picture in a manner extremely offensive to the eye; they are comparable to nothing in nature: the object is *nicety* and a clean touch; but if nature and breadth be not substituted, works brought forward in such a style can bear no value.

No. 533. 'On the River Lynn, North Devon,' P. W. ELEN. A close wooded subject. The distant hills are shown with creditable feeling, and the trees of the middle of the picture are effective; but the rocks in the foreground are painted up to be spots in the picture. It is most strange that in compositions formed of similar materials the like error is so often observable.

No. 534. 'The Last Appeal,' F. STONE. One of those gentle subjects so full of the graceful sentiment, in picturing which, the artist is so distinguished. The chaste propriety which marks every part of this work is beyond all praise. The story of the picture is told with a truth and judgment that we have seldom seen surpassed: the youth has been rejected more than once; the rejection has eaten into his heart; the passion has entwined itself with his existence, grown with his growth, strengthened with his strength; his worn and anxious face contrasts with the full, soft, and (but for a time) melancholy features of the girl, who has not jilted or coquetted, but cannot love him: she has told him so frequently, but he has hoped and despaired so often, that he ventured to hope once more. His dress bespeaks him a student; a poet certainly, for love and poetry are one; there is intense feeling and power in his agitated features; and she is sorry, very sorry, but she cannot give him her heart, and is too simple and too pure to give her hand without it. We congratulate Mr. Stone upon another triumph; the conception and execution of this picture are most admirable—touching, and full of the best expression; reading a page of life and character, and most emphatically telling a story.

No. 535. 'Portrait of Mrs. Cuppage,' R. ROTHWELL. The female portraits of this gentleman are distinguished by the intensity with which the laughing eyes look out of the shadow to which he usually consigns them. A smile plays upon this face, but it is piquant and graceful, not insipid and vulgar. The artist attaches himself but little to conventionalities; we would gladly say the same of others.

No. 536. \* \* \* W. BOWNESS—

"The course of true love never did run smooth."

A picture which may mean anything within the catalogue of human misery. A girl is sitting in a very desponding situation; the figure is round and comes well forward, but there is much bad drawing, which is especially conspicuous in the arms.

No. 539. 'Pont d'Ai, Val d'Aoste,' J. D. HARDING. That this is a beautiful picture is sufficiently evident, notwithstanding the height at which it is placed: this cannot be accidental, and is therefore the more to be lamented. The composition is rich, with the most picturesque mountain scenery. Down the valley a stream toils onward, overhung by cliffs

and impeded by rocks, offering many points of beauty, on which the artist has dwelt with the best effect. The detail of the work it is impossible to discern, but its high merits ought to have gained it a lower place: we feel no hesitation in again most decidedly complaining of this injustice exercised towards one of the most accomplished landscape-painters of the country, and one of the most exquisite pictures in the collection. If the indignity were designed as a hint to Mr. Harding that his attempt to compete with artists in oils is to be disputed by other means than contrast, the attempt will fail. He has mettle not to be crushed by a blow or two from weapons in hands to which circumstances give only a temporary power.

No. 540. 'Portrait of Mrs. John Charretie,' J. P. KNIGHT, A. The face is so treated as to convey to the spectator the idea that the lady labours under a slight degree of alarm.

No. 541. 'Christ stilleth the Tempest,' J. MARTIN. A great proportion of the canvas is occupied by a raging sea, bounded by a shore of rugged cliffs, beyond which is seen the city. Around the boat, containing Jesus and his Disciples, the sea has risen so high as to extinguish all probability of a vessel living in it five minutes: this may be done the better to show the miracle, but it could have been equally well done consistently with natural truth. The colour of the water is opaque, unnatural, and laid on in sweeping lines. It is impossible to imagine water rolling in such huge billows in a space so confined; it is also difficult to suppose such a difference between the boat and the vastness of these whelming waves.

No. 543. 'The Old Romance,' T. CRANE. Two ladies seated on a garden terrace, the one reading to the other the romance. It is a work of high merit; great skill is displayed, especially in the lower figure seated on the broad stone pavement. The costume is of the latter part of the last century; the colour of the dress of the lady who is listening is heavy to a degree; the picture otherwise is of a most pleasing character.

No. 546. 'Scenery near Crediton, Devonshire,' F. R. LEE, R.A. Assuredly the productions of this very accomplished painter do him infinite honour. The beauty of this picture is not to be surpassed: it is legitimately national in everything; it is constituted of native scenery, painted in the sweetest style born of our own school. The canvas is rather large, and very full of objects. From the nearest part of the picture a road winds downward till lost among the trees below, beyond which we have an extensive view over a various tract of country ranging to extreme distance, where objects are superseded by atmospheric depth. The utmost strength of colour is lavished upon every part of the picture, but so skilfully is it diversified, that the sweetest accord is everywhere prevalent.

No. 547. 'Prayers in the Desert,' W. MULDER. The largest figure picture we have yet seen, as resulting from this gentleman's wanderings in the East. The story of the devotion of these Mussulmans is most impressively told: it is early morning—the desert is around them, and they have spread their mat and set themselves toward the East, bowed in prayer; the sky is dark behind them, for the gloom of night still lingers in the West. The Osmanli never buy pictures: it is contrary to the dictates of the Koran; but should this state of things ever change, this would be one of the first a Mussulman would seek to possess. Some of the figures stand, others kneel, and some are cast upon the earth; but in all the earnestness of devotion is exquisitely painted. The picture is very beautiful, touching, and effective. It will add to the fame by which the zeal, industry, and genius of the painter have been already rewarded.

No. 548. 'The Return of the Prodigal Son,' W. SIMSON. The prodigal son is received by his father at the threshold of his home, which, contrary to truth, seems to be built like a Greek temple. It was customary in earlier times to give domestic architecture in scriptural subjects a classic character, an error which has found its way into works of the present day, by artists who will not think for themselves. Two simple figures are not enough to describe the reception of the prodigal son; the rehearsal is imperfect without allusion to the festivity by which the event was celebrated.

No. 549. 'Portrait of a Young Lady,' R. R. REYNOLDS, R.A. An unaffected portrait, carefully painted in the draperies. With respect to the eyes, the likeness may have required the light touches which make them so prominent, and communicate to them an appearance of alarm. The left hand is raised, the wrist of which has in some degree the semblance of being broken.

No. 550. 'An Italian Boy with Guinea-pigs,' H. PICKERSGILL. This is called a village scene. The boy carries before him the accustomed box, containing his exhibition, which has attracted the curiosity of some of the village children: near him stands a group of girls, one of whom carries a basket of linen on her head. These figures are effectively disposed, and stand in perfect relation with each other. Of the Italian boy, it may be observed that he is too English: he is not sufficiently distinguished from those around him.

No. 553. 'The Poor Teacher,' R. REDGRAVE, A. The profound sensibility thrown into this figure must render it a theme of applause with all who see it. "The poor teacher" seems to be an orphan of parents who have moved in a superior circle of society. She is seated in the school-room, the theatre of her drudgery, and near her stands a cup of tea and a spare slice of bread and butter. There is in her downcast countenance a burthen of melancholy, resulting from a sinking of the heart; and her pale countenance and attenuated hands proclaim a frame already the prey of disease. This is one of the "aside" passages in the melodrama of every-day life, but it is not the less deep and moving. Like the genius of the Eastern tale, who dived even to the centre of the earth for its most precious gems, this artist searches the human heart for its most touching moods. Rarely do we find a picture, at all tolerable, so simple and so unaided by accessories; this, however, is one which has been so richly inwrought with the purest alloy, that its peculiar value must remain undiminished, to what comparisons soever it may be subjected.

No. 554. 'St. Benedetto looking towards Fusina,' J. M. W. TURNER, R.A. When it is said that this is one of the Italian views of this artist, its composition may at once be understood: a canal occupying nearly the breadth of the canvas, a few gondolas, distant buildings, and the sun at an elevation of forty-five degrees. This painter was precocious, and the fruits of his early autumn have been gathered, and he seems accordingly to be in the dotage of his art before his *physique* shows its weight of years. Now, this picture, in its mere effect, is very beautiful: but it exhibits, *passim passimque*, that lofty contempt of moderate finish which destroys all good intelligence between the artist and the spectator. It was in this class of subject that Mr. Turner, some years since, produced inimitable pictures, near which his latest productions are not worthy of being seen.

No. 556. 'Portrait of the Right Honourable Lord Plunket (late Chancellor of Ireland),' R. ROTHEWELL. The head, itself a striking subject, is among the most beautiful we have ever seen in colour and execution; indeed the artist seems to have walked long with

Anthony Vandyke, and not in vain has he sat under his mantle. Time will mellow this study into charming harmony of tones.

No. 557. 'Florimel in the Cottage of the Witch,' F. R. PICKERSGILL. Florimel is seated on the floor, as are also the Witch and her son, who asks his mother respecting Florimel. The subject is from the "Faerie Queen," and the artist has laboriously confined himself to a statement of this simple fact, which he does broadly enough. There is too little of the poetry of Spenser in the work—too much of daily association. The substantial manner in which the figures are put in, and the force with which their observations are directed to Florimel, together with all absence of poetical feeling, show the artist better qualified for strong prose than poetry.

No. 559. 'Portrait of Copley Fielding, Esq.,' W. BOXALL. A small portrait, but exquisite in management and execution. The figure is thin, and the hair gray; he is seated with a sketch before him.

No. 561. 'Festival of Bacchus,' E. V. RYPPINGILL. In this highly classical composition the simplicity of mythological worship and the innocence of ancient pastoral life are amply illustrated. The canvas is covered with figures, but unfortunately the picture is too high to admit of an examination of the jealous nicety with which every object seems to be made out. The mere gathering of the materials for such a work is an immense tax upon the most fertile imagination, and, having procured them, their adaptation is an exercise for the most patient ingenuity. In the centre of the picture is an icon of the bifronted Bacchus, around which are assembled those immediately engaged in the orgies. The most conspicuously beautiful group is formed by three virgins, kneeling while offering the primal wine, in what seem to be *patera* of opal; the grace, beauty, and originality of these figures are beyond all praise. On their right are some *festulatores*, blowing amain in honour of the deity; and on the left some philosophers discussing the humanities, while observing the gambols of some sportive children. The picture abounds with passages of the utmost beauty, and every part of it supplies evidence of intense study, and declares its author gifted with a mind fraught with the richest imagery.

No. 562. 'Italy,' W. D. KENNEDY. This is a very large work, consisting of a principal compartment with two wings. Italy here is modern every-day Italy, done up into a *festa* held in the open air by some peasantry. The artist has very injudiciously accompanied his title by the lines from Byron

"Italy's a pleasant place to me,  
Who love to see the sun shine every day;  
And vines, not nailed to walls, from tree to tree  
Festooned, much like the back scene of a play," &c.

This, we say, is injudicious, because the spirit of the picture is not the spirit of the verse. Some of the figures are well drawn, but the colour and shadows are highly objectionable. Take, for instance, the woman dancing. There is no shadow on that portion of her legs seen below the dress; again, the carnation of the man with whom she dances is anything but like nature: in short, the style resembles that of some of those flat and ill-coloured frescoes that abound in every part of Italy. The subject is not adapted for so large a canvas; had it been drawn on a small scale, and well coloured and finished, it would have made, with some modifications, an agreeable production. The picture, then, we consider a failure; not so much from want of talent in the artist as from his having taken up a set of false principles. The figures seem cut out of pasteboard, without light and shade, colour or rotundity. This may be called simplicity, largeness, or style, for aught we know; but it is a false Art, and this work furnishes an unquestionable proof of it.

No. 566. 'The Spectator's Club,' A. MORRIS. The subject is found in the first and second number of the "Spectator," and furnishes here an agreeable and select conversation. The figures are all seated, and although every charm of expression and execution be thrown into the work, there is yet a want of relief to the monotony of the line of heads, and the exclusively sedentary position of all the members. Even, however, with the fault we mention, it is a beautiful production.

No. 568. 'An English Green Lane, near Kenilworth, Warwickshire,' H. JUTSUM. The objects here compose in a manner extremely effective. The foreground is much broken, affording an opportunity for variety of tint, of which the artist has advantageously availed himself. It is shaded by some lofty trees, pencilled with richness, breadth, and freedom, and drawn with a close observation of nature.

No. 569. 'The Leicestershire Lass,' G. CLINT. The "parlour," we presume, of a country inn in the neighbourhood of Melton is here intended; the figures, one or two red-coated Nimrods and the waitress of the house: the former toasting the latter. It is a vulgar and ungraceful subject, such as under any circumstances could not be really pleasing.

No. 576. 'Portrait of the late Sir Philip Bowes Vere Broke, Bart., R.N.,' S. LANE. A portrait, we believe, of the gallant officer who distinguished himself by the capture of the American frigate Chesapeake. It is a full-length quarter-deck composition: the figure is in full-dress uniform, holding a sword in the right hand, and is painted and relieved in a very skilful manner.

No. 577. 'The Thames,' E. W. COOKE. The view seems to have been taken somewhere below Gravesend. It is high water, and a brig is coming up, besides which we see many other vessels pursuing various courses. There is a breeze on the river, but the smoke from a steamer at a little distance, and the sailing of the vessels, do not seem to coincide in showing it as from the same point. The work is not so pleasing as many others we have seen by the same hand.

No. 579. 'The Heroine of Saragossa,' B. R. HAYDON. The rampart is of course the scene here, and the tumult of battle is perfectly and powerfully set forth. The picture is large, and the heroine is about to fire the gun, near which she stands. It is a subject capable of much stirring effect, and the artist has thrown into it great spirit and diversity of character. But the promise is mightier than the performance; and the painter is greater in theory than he is in practice.

No. 580. 'The Reduced House,' N. J. CROWLEY. It is intended to show the departure of a young man, as, says an accompanying motto, "to seek his fortune;" but there is a want of distinct point about the work, which leaves the spectator under the impression that the youth is only leaving home on a journey. Nevertheless, it exhibits some fine feeling and striking character, and is painted with much ability.

No. 582. 'Canute the Great rebuking his Courtiers,' J. MARTIN. A gorgeously-coloured assemblage are here represented on the seashore, seated within reach of the turbulent waves. The colours are forced to their utmost power, and in a manner never seen in natural reflections. The entire force of the sea seems to be directed against the King. In looking along the coast it is evident that the breakers come in heavily, but they do not seem to be in perspective force according with the volume of water in the foreground. The colour also and motion of the water are given without sufficient reference to nature. The dull and opaque clouds weigh heavily on the composition, and the red-and-yellow streaks of light are productive of evil effect.

## OCTAGON ROOM.

Let our readers call to mind the famous sentence of Dante—

"All hope abandon ye who enter here,"

and the gate over which it was written. The Royal Academy should copy it, and print it above the door-way that leads into a small chamber, turning out of a "bit" of passage, between the Great Room and the Middle Room. Reader, you will miss it if you do not "look sharp." Alas! for the unhappy artists who are condemned to this purgatory. We transcribe their names with regret, because in so doing we extend the knowledge of the indignity to which they have been subjected. Here, however, and we say it without hesitation, are some of the best productions of the British school—of men who will be famous when their unenlightened or unjust judges are forgotten. Why have they been crammed in here? It would be difficult to find an answer that we should not feel grieved to give.

No. 591. 'The Fortune-teller,' C. STORHOUSE. A clever and characteristic work; the best by this artist, who is certainly not in favour with the Academy. The incident is from the "Vicar of Wakefield," where "his girls" consult the gipsy at the door. The two figures are graceful, but too tall in proportion to their little brother who stands beside them. The picture would have been more valuable if the foliage and background objects had not been so sharp and positive.

No. 592. 'Clelia,' Mrs. CRIDDLE. A pretty, pleasing, and graceful composition, by an accomplished lady.

No. 596. 'Coast Scene, near Watchet, Somersetshire,' W. H. BACH. A picture of rocks: on the right of the composition, they are substantial and firm, and tell well in opposition to the other parts of the picture.

No. 597. 'The Countess of Derby defending Lathom House, when besieged by Fairfax,' F. R. STEPHANOFF. The Countess is commanding a sally to be made; there is too much ease and unconcern in her countenance, for even the bravest man in such a situation must have had a shade of anxiety on his brow. The cavaliers beside Captain Farmer are drawing their swords: this is unnecessary here, even to express deep devotion. The chaplain and children are ready to join in prayer with the Countess for the success of the attack on the besiegers. The effect of the picture is good, and every stress is laid upon the principal circumstance. Mr. Stephanoff's compositions always contain much to admire; the only fault of his oil-paintings is, that they look too much like water-colour drawings. Surely the qualities of tone and texture are worth an effort; his works would be greatly improved by a tincture of those qualities.

No. 598. 'In the Via Mala—Pass of the Splügen, Switzerland,' G. A. FRIPP. A large picture of wild Swiss scenery—the course of a mountain torrent forcing its passage amid rocks and precipices. The background objects are well painted, but their shadows have equal strength with those of the foreground, which is too much cut up.

No. 601. 'A Scene from the Merry Wives of Windsor,' W. P. FRITH. This excellent and valuable work is completely and utterly destroyed by its position—a circumstance for which it is impossible to account, for its merits must have been obvious, at even a partial glance, to the most heedless or indifferent observer. The mystery is enhanced by the fact that, last year, a picture by the same masterly hand was hung on the line, where it was universally admired, and purchased on the first day of the opening. Indeed, to our own knowledge, it would have found half a score of purchasers. Mr. Frith's reputation was therefore considered secure; at least, it appeared certain that no one but himself could lessen or impair it. Yet how vain

are all human calculations; a single thoughtless, careless, or prejudiced decision has destroyed the fruits of a whole year, as effectually as a sudden blight will perish the prospect of a field rich with the promise of harvest. It will not be so, however, if the expectation created by the production of last year should lead a judicious judge to make inquiry for the results of this year, and, when found, shall really look closely and narrowly into the picture. He will find that Mr. Frith has made a great advance; that wise patronage induced an effort to wrestle with a more difficult subject; and that success has followed a most honourable attempt. To paint from Shakspeare at all requires no ordinary courage; but to paint *Falstaff* is a very bold thing. Comparative failure under such circumstances would not have been discreditable: we should at least have honoured the motive; but to triumph is indeed an achievement. Mr. Frith will encounter fairer or wiser "hangers" next year, and his lost position will be restored to him. In all respects this is a good picture: the fat knight is most happily transcribed from Shakspeare; the merry dames are capitably pictured; and "sweet Anne Page" is as exquisitely perfect a creature as any English artist has ever painted. The minor characters are all admirable—*Bardolph*, *Pistol*, the boy, *Sir Hugh*—all, in short, are copies out of the immortal poet—copies accurate and true. Our readers must take our word for all this (and long before they come to it they will have been enabled to ascertain how far it may be depended on), for it is utterly impossible they can so examine it as to be enabled to judge for themselves. As if to put an unequivocal ban upon Mr. Frith's picture, it is hung beside a work somewhat similar in general character, but so miserable as to excite marvel how it came to be hung at all. It is numbered 612, and called 'The Tarantella of Naples'—a perpetration of the very worst kind.

No. 602. 'Cattle at Pasture,' T. S. COOPER. The principal object of this picture is a bull; but all the minor accessories are made essential to the composition. It is the best work of Mr. T. S. Cooper; the best work, of its class, of the English school; and a work that vies with those great pictures of centuries of descent for which small fortunes are given in exchange. It is really too bad to see such a noble work thus dishonoured—a work that any member of the Academy might have been proud to acknowledge as his production.

No. 606. 'The Village Coquette,' G. LANCE. The observations applied to Cooper's picture apply equally to this. It is a *chef-d'œuvre* of its class; and the most meritorious production of the excellent artist.

No. 613. 'The Lords of the Congregation taking the Oath of the Covenant,' A. CHRISTOLM. Not sufficiently finished, but manifesting considerable labour, thought, and ability in composition, and full of striking and interesting facts.

No. 614. 'The Highland Home,' A. JOHNSTON. A Highlander amusing himself with his child at the door of his home, which seems to be embosomed among the hills. The head of the man is admirably drawn, but, generally, the picture is less effective than usual with this artist. Still it is infinitely too good for the position it is made to occupy.

No. 617. 'Bern Castle, on the Moselle,' H. GRITTEN. A landscape of very considerable merit, manifesting decided improvement.

No. 626. 'A Soldier relating a Tale of War to Joan of Arc and her Parents,' H. J. TOWNSEND. A very forcible and interesting design, exhibiting judicious thought and care in composition, and arranged with no inconsiderable skill; but by no means sufficiently finished. It supplies evidences of power ample enough to deal with a noble subject, and gives satis-

factory assurance of ability to carry out a lofty purpose; but as a completed work this cannot be considered.

No. 629. 'Harbour Scenery,' W. A. KNELL. Composed of a boat and a few hulks, apparently in the Medway. This picture is executed with great force and descriptive power. The water is full of motion of that kind which declares the prevalence of wind.

No. 634. 'The Empty Cradle,' FANNY M'LAN. A young mother is here represented sitting by the "empty cradle," an incident not the less touching that it is common—an occurrence of every day. This gifted and accomplished lady has thrown into the figure the most perfect expression of grief subdued. It is very sad to see so chaste and expressive a composition condemned to such a hole; the more especially as gallantry towards a lady might have led to a scrutiny of her solitary offering to the Gallery. If it had been looked at, it would have had a better place; it will touch the hearts of all who do look upon it by its exquisite pathos. But then they must peer into it closely, or mounted on stilts, for a most pathetic episode will otherwise be lost. The story is told by the tiny infant's shoe, which the bereaved mother holds in her hand. This single thought speaks a volume; yet, where it is hung, Mrs. M'lan might as well have made the sad mourner clutch a snuff-box in her fist.

No. 636. 'Lucy Ashton and Ravenswood visiting Blind Alice,' C. BROCKY. This work wants relief in every way; the figures are heavy, and the entire aspect is singularly sombre.

No. 638. \* \* \* J. DUJARDIN, JUN.

"Oh! dear, what can the matter be,  
Johnny's so long at the fair?"

A female figure standing by a window much in the spirit of the lines. The picture is judiciously made out.

No. 640. 'The Introduction of Sir Piercie Shafton to Halbert Glendinning,' A. EGG. Every part of this excellent production declares the finest feeling for the most attractive beauties of Art, and a power of hand equal to their accomplishment. The Halbert Glendinning is accurately read from the text; but the bearing and presence of Sir Piercie is scarcely brought up to the intention of Scott. The drawing and painting in every part are those of one gifted with the rarest abilities; one who is as sure to make his way to the highest place in Art, as years are to pass over his head. He has been doomed to do penance in this hole—for the crime of painting an admirable picture; but his work has found a purchaser nevertheless. He will soon have more commissions than he can execute, or we shall eschew prophecy.

No. 645. "Scene from the Merry Wives of Windsor," T. BRIDGFORD. A work of much merit, full of point and character; well drawn and coloured, and excellent as a composition.

#### ARCHITECTURE.

The present Exhibition is far from being rich in architectural subjects. There are this season fewer than usual that are attractive either for their merit as designs, or for the importance of the projects which they communicate to us. Nor is it very astonishing that such should be the case, when we find so few names of mark (architectural) in the catalogue. It were idle, if not dangerous, to speculate why such should be the case more particularly this season; else we might attribute it, in some degree, to the dissatisfaction which has been expressed, and not without cause, at the indifference manifested by the Academy to this department of its exhibitions, not only as regards the very inadequate accommodation afforded for architectural drawings, but also the carelessness or want of judgment with which they are hung up. After all the best places on the 'line'—which are, in

fact, the only good ones for works of this class—have been disposed of, the other frames seem to be hung up indiscriminately, upon the impartial principle of "first come (to hand) first served." Attempt at classification—such, for instance, as grouping together the principal subjects according to their respective styles—there is none. Yet some sort of arrangement might be observed, in regard to subjects and classes of buildings as well as styles: interiors might be, in some degree, collected together, and so on with the rest; whereas, at present, it is almost impossible to compare any two subjects immediately together;—designs for palaces, poor-houses, prisons—for Grecian temples and Gothic churches—presenting an architectural chaos. Variety, no doubt, is charming, and no doubt a medley is variety; still the sort of it which we find in the architectural room at the Royal Academy is somewhat bewildering. The impression one always feels on taking a survey of it is, that the majority of the subjects are only nominally accepted, just because there is room to hang them up somewhere. There certainly are not a few things admitted every year which, however creditable they may be to their authors—supposing the latter to be merely beginners—reflect no credit either upon the Academy, or upon our taste in architecture. It is not for us to attempt to point out how this might be corrected—in some degree at least, if not entirely. It would, no doubt, be a work of difficulty; but what we complain of is, that there seems to be no disposition on the part of the Academy to endeavour to improve the architectural portion of its exhibitions. If nothing can be done in the way of providing better accommodation for it, it might, at all events, be kept more select; whereas, now there is such a mass of commonplace mediocrity, that, although it may serve as a foil to talent, it is the former rather than the latter which stamps the collection as a whole. Thus, although there are this season some productions of superior merit, the average quality is very low.

As already hinted, many of those who have generally been among the leading architectural exhibitors, have sent nothing; and such is the case with the Professor of Architecture, who, at all events, ought to have been at his post, let whoever else might stay away. This circumstance is neither very auspicious, nor very encouraging, and is, withal, likely to excite comments and comparisons, not particularly flattering to Mr. Cockerell. The architectural academicians are so few, that not the Professor alone, but each of them, ought to make a point of sending at least one drawing every year; unless we are to suppose that their "R.A." privileges them to be inactive. Hardwick is the only one of them who exhibits, for Barry has sent nothing; and, to the best of our recollection, Sir Robert Smirke has never sent anything at all; therefore, at all events, he is not missed. We do, however, miss his brother; because, to say the truth, we rather calculated upon seeing the design for the new Conservative Club-house, on which it is understood that he and Basevi are to be conjointly employed. Nor is this the only disappointment of the kind we have experienced, for there are many buildings lately executed, in progress, or projected, in various parts of the country, relative to which we should have been glad to be furnished with some information by drawings of them. But it is time for us to begin to speak of what is to be seen; and instead of adhering to the straggling and accidental arrangement of the numbers in the catalogue, we will notice those productions which we notice at all, according to the alphabetical order of their authors' names; therefore commence with

Alexander, G. No. 1260. 'Interior of the new Church of St. Mary the Virgin, Herne

Hill, Dulwich.' Considering the difficulties which attend modern church architecture, and more especially its internal arrangements—owing partly to inadequacy of funds, and partly to arbitrary restrictions—this design possesses considerable merit, and, if it does not come up to the standard of its models, rises far above the average of the in-door Gothic of churches and chapels of late erection.

Allom, T. No. 1186. 'Design for the Restorations of the Interior of the Church of the Holy Trinity, at Hull.' One of the most attractive, though not most elaborate, drawings in the room; and no less attractive for its interest as an architectural subject, than for its merit as an architectural picture. With a very unusual degree of decoration in parts—such as the rich open-work screen set within the lofty pointed arch that divides the chancel from the body of the church—there is also a pleasing soberness and breadth in the composition generally, and these opposite qualities seem rather mutually to aid than to interfere with each other. The effect as to light and shade is perhaps rather more brilliant than it will prove in the building itself; but if so, it is a licence in the drawing that few would wish to correct.

Ditto. No. 1234. 'Design for a Music Hall at Carlton, the seat of Lord Beaumont—a sketch,' and as a sketch charming; lively and fanciful also as a design, yet, as it appears to us, without anything at all characteristic of a music-room in particular. The style is Elizabethan *reformato*, though not reformed quite to the extent we could wish to see it, but rather corrected of some of its vices than improved upon and worked up in its better qualities.

Batson, A. No. 1259. 'Design for Street Architecture'—may also be called a sketch, an artist's conception, wherein are put forth some original and vigorous, and perhaps rather exaggerated, ideas. It would seem as if Mr. B. aimed at giving us a decidedly new style of street architecture, most impressive, dignified, and solemn, infinitely too much so, we apprehend, not to be rejected at once as impracticable. We can compare it only with one of Piranesi's architectural dreams, it being eccentric almost to wildness. However, we do not on that account relish it the less, for one great besetting sin of our modern architecture—no matter what style be employed—has hitherto been *tamelessness*; whereas, mere mechanical correctness, without energy, can no more produce a work of Art in architecture, than it can in painting or sculpture; while, as to the *purity* so obtained, it oftener than not proves no better than *puerility*.

Carpenter, R. C. No. 1247. 'Interior of the Church about to be erected at Whitstable, Kent.' If we may be excused for an almost irresistible pun, we should say that, though Gothic, this design is by no means in what is called 'Carpenter's Gothic' style; it being, on the contrary, more than usually good in quality; simple and unpretending, without either meanness of expression or poverty of style.

Cottingham, L. N. No. 1286. 'Interior View of the great Central Tower and North Transept, Hereford Cathedral, now in progress of restoration.' A very large but coldly and formally executed drawing, and not of that interest as to its subject which its size seems to claim for it.

Elmes, J. L. No. 1290. 'Interior of St. George's Hall, Liverpool.' Should the idea here shown be fully carried out in execution, this hall will be one of the finest pieces of interior architecture in the Grecian style in the kingdom. Mr. Elmes has been most singularly favoured by good fortune, in having so very superior an opportunity afforded him at the very outset of his professional career; but he has shown himself worthy of it, and worthy of the opportunity itself.

Essex, R. H. No. 1193. 'Interior of the Temple Church, London.' Interiors seem to

abound this season; nor is this the least interesting of them all in point of subject, and as showing the so much talked of decoration of the edifice it represents. Scrupulously exact, as showing the pattern of the edifice—which in itself is meritorious enough—it is far, however, from conveying a characteristic idea of it; the drawing being in a formal style, more suitable for a mere section than a perspective view.

Hardwick, P., R.A. No. 1252. 'South-east View of the Hall and Library, Lincoln's Inn.' Of the design itself some notice has already been given by us at page 89, col. 3; and we may now remark that it is one of the very few subjects in the present exhibition which make us acquainted with a public building of any importance that is actually in progress, with the exception of churches. We should like to have been favoured with an interior view also; but, no doubt, we shall be so next season, and perhaps with more than one.

Knowles, J. T., exhibits two drawings of a splendid mansion lately erected by him at Silvertown Park, Devonshire, for the Earl of Egremont, viz., No. 1162, 'A South-west View,' &c.; and No. 1322, 'Perspective View of the Central Hall.' The style is Grecian, and the building is one of the largest and costliest houses which have been erected in that style of late years; but of what it really is as a residence, we can judge but imperfectly, because only from what we are here shown, and which we should have been able to understand better, had not the exterior view been placed so high, that its lesser features, and all that constitutes finishing, are lost. Much less can we form any idea in regard to interior arrangement and accommodation; but, if we may judge from the 'Central Hall,' this mansion is, or will be, fitted up in a very sumptuous style.

Lamb, E. B., has four subjects, of which No. 1168, 'Forest Cottage, the shooting residence of the Marquis of Breadalbane, on the north bank of Loch Tallor, N.B.,' is a charming and very happy specimen of the cottage domestic style; homely indeed in character, but marked by an elegant homeliness, without the slightest sort of affectation and make-believe. We have seen things of the kind that, although "very pretty," have looked as if they had been imported from the Opera-house: whereas there is an air of heartiness and genuineness about this, and its picturesqueness is such, that a painter might transfer it at once to his canvas. No. 1265, 'Almshouses,' is also a pleasing composition of somewhat similar character, and showing itself to be what its title implies; but it might have been shown to more advantage by being thrown into perspective, so as to destroy the formality arising from the regularity of the elevation. No. 1317, 'Interior of the Cemetery Chapel erecting at Cambridge,' proves how much may be made of a limited opportunity by judicious and *con amore* treatment of it. The building itself is on a very small scale, nor is there much that amounts to decoration; still there is more than a little that gives it quality and character, and that is so far even more valuable, perhaps, than mere decoration—certainly is not so common a merit as it might be. No. 1284, 'Model of Wadhurst Castle, Sussex, showing the alterations now nearly completed,' shows also how happily a piece of castellated architecture of the true Cockney genus has been transformed into a very picturesque group of Tudor building. From the attached sketch of the original house, we perceive that it was a mere upright box, and as disagreeable, and what we should call uncomfortable-looking, in its general form, as positively ugly in detail—for the omission of it on the one hand, and the absurdity of it, where it was aimed at. Owing to a conservatory and other parts having been added to what is now the body of the house, the latter seems now well balanced, and the whole

has been rendered a picturesquely varied mass; and though it has not been very greatly enlarged, the house is of more than twice the importance in respect of apparent size it was before.

Mocatta, D. No. 1197. 'Design for an alteration of the National Gallery,' proposes to give greater importance to the *façade*, and both greater mass and elevation to the centre of it, by making the portico loftier, and also partly extending it by columns so placed that the ascent up to it on each side would be under shelter behind them. That this last circumstance would be a very material improvement, there can be no doubt, because it would do away with all occasion for the trumpery make-shift of an awning erected over the steps, and which is an annual satire on the architect of the building, reproaching him with his want of contrivance, or his disregard of convenience. To give somewhat greater height to the portico, its columns are here raised above the level of the rest of the order, being placed on a podium or parapet added to the present stylobate. By that means, and by also increasing the pitch of the pediment, increased loftiness and nobleness of effect would be obtained; and looking at this part of the composition, we think that Mr. M. has suggested some good ideas, but we also think that they might be worked up to something still very much better. In the other parts of the *façade* he has not been by any means so happy.

Roberts, H. No. 1210. 'Norton Court, Somerset, lately erected for C. N. Welman, Esq.,' is a very pleasing and unaffected specimen of the Tudor domestic style.

Smith, A. No. 1222. 'Stone Church in the palmy days of the fourteenth century,' gives us a richly-decorated Gothic interior, fitted out with all the trappings of Catholic pomp, and of the ecclesiastical magnificence of those times.

Wigg and Pownall. No. 1262. 'Chambers now erecting in the South Court of Staple's Inn, claims notice, as showing an architectural improvement, though one of no very great extent, which is now in progress. The style is Elizabethan, divested of some of its more *outré* fancies, yet a degree too tame withal; for had more vigour been given to the details, the design would have been considerably better; whereas at present there is a certain flatness about it, occasioned in some degree by want of relief in regard to colour, the white brick neither harmonizing nor contrasting with the stone dressings. However, we hope that the improvement thus begun will not stop here, but that the Holborn Court, which is at present in a most shabby and dismal state, will now be rebuilt in a corresponding style, unless it is intended to be made a specimen of the genuine picturesque, by falling to ruins.

Wilkinson, G. No. 1212. 'New Poor-house, at Carlrow,' though a small drawing, so placed as to be likely to be overlooked, has, considering the subject, much novelty of design, the style being Italian, and there being no windows on the ground-floor in front.

Having now reported on what appeared to us the subjects most worthy of notice, at least among those which can be seen\* so as to be judged of, we take our leave of the present Exhibition, hoping to see, next year, a stronger muster of architectural talent, and the productions of many whom this year we have missed.

\* Not only the height at which they are placed, but the manner in which the light falls upon the frame-glasses renders it impossible to make out more than the mere subject of many of the drawings. We would suggest, therefore, whether both inconveniences might not be in a great measure obviated, by inclining forwards those frames which are much above the level of the eye. Everywhere, however, the hanging is equally unfortunate. There is, indeed, but one remedy—the provision of a better Gallery for the exhibition of all classes of works of Art. Until this is procured, the evil will be just "An Annual."

## DRAWINGS AND MINIATURES.

We have left ourselves small space to notice the drawings and miniatures; we so much regret this, that, possibly, we may to recur to the subject. A few of them we may not pass by.

No. 655. 'Portrait of Robert, son of R. Buchanan Dunlop,' A. E. CHALON, R.A. One of the free sketches of this artist—a child in a red dress, having suspended from its neck one of the plate-armour gorgets of the seventeenth century. The shoulders are carelessly drawn, as is the foreshortened left hand; there are, however, other works wherein this gentleman sustains his reputation, as in No. 1013, 'Undine,' 'Portrait of Lady Clementina Villiers,' &c.

No. 661. 'Mademoiselle Rachel, in the Tragedy of *Les Horaces*,' E. D. SMITH. This is extremely like the celebrated *artiste*. The character of the countenance is an admirable summing up of the part of the sister of the Horatii. By the same hand is also a charming group—'The Sisters'—gracefully composed and effectively treated.

No. 694. 'The Right Honourable Lord Morpeth,' T. CARRICK. A three-quarter length miniature, powerfully drawn and broadly painted. Many exquisite works are exhibited by this artist, as No. 712, 'John Cowper, Esq., of Carlton Hall,' &c. &c., all executed in a forcible manner, uniting breadth and finish.

No. 723. 'Lady Le de Spencer,' Sir W. C. ROSS, R.A. elect. The flesh in this portrait is characterized by the luminous purity which gives such value to the works of this gentleman. No. 754, by the same, a portrait of 'Sir Henry Hardinge,' is one of the most astonishing instances of finish ever carried into the detail of this branch of Art; and No. 827, 'The Marchioness of Abercorn, and the Ladies Harriet and Catherine Hamilton,' form a group which for sweetness and brilliancy can never be excelled.

No. 746. 'Portraits of Mrs. Colonel Fitch and her three Sons,' Sir W. J. NEWTON. Grouped with infinite skill, and most harmoniously coloured.

No. 762. 'Portraits of Mrs. Gladstone and Child,' R. THORBURN. This gentleman is deepening yet further into the chastest colours and most striking effects of the old schools. Like this work, his portraits generally are pictures; for instance, No. 802, 'Portrait of the Honourable Mrs. Percy,' &c. &c.

No. 894. 'Portraits of Julian, Laura, and Charley, Children of the Artist,' J. HAYTER. A playful group of three children—one carried by the other two. This is a chalk drawing, slight but extremely effective.

No. 1055. 'Portrait of his Imperial Majesty Nicholas I., Emperor of All the Russias, and the Empress Alexandra Feodorovna,' Mrs. J. ROBERTSON. This is a miniature in oil, representing the Emperor and Empress in a cabinet of the latter, and executed with all the beauty and delicacy of this lady's style.

No. 1100. 'Portrait of the Cockburn Family,' H. P. BONE, after Sir Joshua Reynolds, is a beautiful example of this department of Art. There are other very highly-wrought enamels by the same artist.

We must be satisfied to give a mere word of praise to some exquisite gems by S. LOVER; to several fine drawings by Miss COLE and Miss A. COLE; and to those of Miss M. GILLIES. Nor may we leave the room without a passing compliment to some highly-wrought and excellent drawings—both in landscape and portraiture—by Mr. G. H. HARRISON.

The line under the roof of this room will amply repay a careful examination. Here are some fine and very valuable paintings by LE JEUNE, G. E. HERING (a most beautiful landscape of Italy that would make a reputation if it could be seen), and a score of others who have given, elsewhere, ample proof that they are on the high-road to fame.

## SCULPTURE.

The sculpture-room is not rich this year; we miss the men who have given glory to this branch of British Art: Gibson is away; so is Wyatt; so is an artist who is likely to rival either of them—M'Dowell, who was, we understand, unable to finish in time a most noble and beautiful group upon which he has been some time occupied.

This apartment—it would be absurd to call it a gallery—we must also pass rapidly through; for our space is exhausted; and, like the Royal Academy, we are compelled to reject many excellent works "for want of room."

No. 1386. 'Marble Bust of H.R.H. the Duchess of Kent,' E. DAVIS. The features have a strong resemblance to her Royal Highness, but the manner of dressing the hair gives undue heaviness, which is not relieved by the ornament worn in front.

No. 1387. 'Statue of the late Very Rev. Dr. Wood, Master of St. John's College, Cambridge,' E. H. BAILY, R.A. This large statue is intended for the Chapel of St. John's College. The figure is sedentary, fully draped, with a head of striking cast, to which the sculptor has succeeded in communicating an expression of profound reflection.

No. 1388. 'Statue in Marble of Psyche,' E. H. BAILY, R.A. There is nothing new in this work; it is however free from the defects of affected novelty. It is marked by much classic chastity.

No. 1389. 'Figure in Marble of an Italian Shepherd Boy,' W. SCULLAR. Very chaste, natural, and beautiful.

No. 1391. 'Paul and Virginia,' W. C. MARSHALL. A work of great merit, worthy of one of our most promising sculptors.

No. 1392. 'Cabinet Statue—the Apotheosis of Malibran,' No. 1393. 'Marble Group of Genevieve and Brabant and Child,' W. GREEN. Works of very high merit; productions which evidence considerable genius.

No. 1394. 'Marble Statue of Ophelia,' J. G. LOUGH. We should prefer this statue without the heavy bouquets on the head; the history of her madness would have been better read in the features, aided by one or two light and drooping flowers. There is great poverty of arrangement in the lower part of the statue.

No. 1398. 'David with the Head of Goliath,' W. C. MARSHALL. The figure is standing, and grasps the sword of the giant Philistine, whose head lies at his feet; and but for which and the sword we should presume the figure to be a version of Apollo, so much does it partake of the personal attributes universally allowed that deity. There is in the look a "love in idleness"—which should give place to a sterner mould.

No. 1399. 'Group in Marble of a Bacchanalian Revel,' J. G. LOUGH. Three figures, one borne aloft by the two others. The work evidences a high purpose; which, however, it does not realize. Some portions seem vastly out of drawing; and the group fails to convey an idea of perfection.

No. 1400. 'Marble Statue of his Grace the Duke of Sutherland,' J. FRANCIS. The late Duke, more famous as the Marquis of Stafford. A fine and expressive statue of the venerable nobleman—very like.

No. 1405. 'A Sleeping Falconer,' J. CAREW. An excellent work—emphatically true.

No. 1407. 'Posthumous Statue of a Sleeping Infant,' J. BELL. Of genuine truth and fidelity to nature; there is no work in the exhibition that surpasses this. It gives evidence of high genius and power; and may be accepted as security for great things hereafter.

No. 1408. 'Cupid with the Attributes of Mars,' E. G. PARWORTH. A capital conceit; full of pleasant fancy.

No. 1409. 'Hercules and Lychas.' A group of very great merit, which obtained for the

artist the appointment of travelling student to the Royal Academy.

No. 1413. 'A Group in Marble, of Maternal Love,' E. B. STREPHENS. A name that seems new to us; but which is destined to become "great hereafter." This work is deliciously beautiful—a gem of the purest water; it is of small size—fit ornament for some tasteful drawing-room; but the subject has been as carefully studied as if it were to have been treated in life-proportion. That the sculptor can deal with matter of large size, is sufficiently evidenced by another group—'Hagar and Ishmael,' No. 1414—a work also of very great merit.

No. 1416. 'Hope,' a marble statue, F. THURUPP. Very graceful and beautiful.

1410. 'Statue in Marble of Helen unveiling herself to Paris,' E. H. BAILY, R.A. This gentleman depends for success on his simple adherence to the simple beauties of nature. This is a beautiful little statue; the movement is easy and graceful, but the effect of the lower part of the figure is injured by the right leg inclining too much inwards.

No. 1417. 'Nymphs bringing Lilies to Alexis,' a basso relievo, F. THURUPP. The figure of Alexis is too heavy to accord with the spirit of the poet, and the scale of proportion observed here is such as to give to the nymphs an undue degree of coarseness.

No. 1419. 'The Warder,' C. R. SMITH. A work of striking character and considerable merit.

No. 1420. 'A Colossal Statue in Plaster of Hector reflective,' P. PARK. This statue suggests to the memory the 'Farnese Hercules.' Reflection implies a position of the most perfect ease, which is altogether inconsistent with the contortion of this figure; and the voluminous muscle everywhere so conspicuous is unbecoming the subject. The face is certainly too small.

Nos. 1421 and 1423. 'Guardian Angels,' 'Infancy and Age,' W. C. THOMAS. Fanciful allegories; executed with much taste, judgment, and skill.

No. 1422. 'The Pleasures of Hope,' P. HOLLINS. A very striking, interesting, and effective production; a young mother is watching the sleep of her firstborn. The young mother is our young Queen; but state is forgotten at the call of great Nature.

No. 1425. 'Bas-Relief from Homer,' J. G. LOUGH. A large and very complicated work, abounding with figures, the various offices of which it is difficult to understand, full though the mind may be of the imagery of Homeric verse, the deities and personages whereof are hallowed to us by long communion in spirit, inasmuch that, jealous of probable outrage upon them and Homer, we are distrustful of them thus assumedly rendered into stone.

No. 1438. 'Marble Bust of Wynne Ellis, Esq., M.P.,' D. W. SIEVIER. An eligible subject for a bust, to which the sculptor has given value by the manner in which he has treated it.

No. 1443. 'Bust in Marble of the late Walter de Winton, Esq., M.P.,' J. E. THOMAS. There is an intense earnestness in the features, which they are well formed to support; but the management of the drapery interferes with the head.

No. 1453. 'Posthumous Bust in Marble of the late Sir Francis Doyle, Bart.,' E. DAVIS. Another good subject, and such a one as a sculptor could scarcely err in. The features are qualified with a tone of dignity highly becoming them.

No. 1464. 'Marble Bust of his Grace the Duke of Leinster,' C. MOORE. It is sufficiently evident that the artist has confined himself to a simple translation of his materials; the drapery, however, is too prominent, diminishing the importance of the head.

No. 1466. 'Marble Bust of Mrs. Robertson, of Dulwich Wood-house,' P. PARK. Of this drapery it may also be remarked that it is not

calculated to assist the head, to which the artist seems to have done ample justice.

No. 1469. 'Napoleon—designed for a Public Monument,' COURT D'ORSAY. "Saul among the Prophets!" This is a work of considerable value. Calm, expressive, and characteristic; drawn with exceeding accuracy, and altogether the production of an accomplished mind.

No. 1470. 'The Death of William Rufus,' J. H. NICHOLSON. A small work in brown plaster. Rufus has fallen from the horse; his limbs are already lifeless; their nerveless effect is powerfully descriptive of death. The horse stands by him restless and alarmed; and here it is, wherein the power of the artist is manifested. The animal is modelled in perfect consonance with truth.

No. 1516. 'Bust in Marble of the late Sir David Wilkie, R.A.,' S. JOSEPH. Very like—yet most pleasantly like—the great artist.

No. 1516. 'Bust of the Earl of Tyrconnel,' E. DAVIS. In the features of this work great openness and accessibility are described, in a manner which seems to have been a chief object with the artist, who also otherwise has made the most of his subject.

No. 1518. 'Bust of Mrs. James Jay,' T. BUTLER. This work is distinguished by the graceful simplicity of its treatment; the deep sentiment thrown into the features raises it beyond portraiture—even to poetry.

No. 1519. 'Count D'Orsay,' in plaster, W. BENNETT. The resemblance here is particularly striking, and the manner in which the hair is treated characteristic and beautiful. We cannot help remarking the extraordinary breadth of the chest; it has the effect in some degree of diminishing the importance of the head, but it is perhaps not exaggerated.

No. 1530. 'Bust of the Right Hon. Lord John Russell,' R. WESTMACOTT, A. The subject with which the artist has had to deal was extremely difficult of treatment. Yet the difficulty has been completely overcome.

We have thus gone through the "Exhibition of the Royal Academy" and the *Contributors thereto*; for we cannot lose sight of the fact, that, although nominally the "Exhibition of the Royal Academy," it is in reality that of the Artists of Great Britain; and this year, more especially than ever, the contributions of non-members form very prominent and important parts of a great whole.

We have gone into the subject at great length, devoting to it, as our readers will perceive, an entire number. We have considered it our duty to do this, because other journals, upon which so many demands are made by so many other interests, can afford, or, at all events, do afford, very small space to a matter deeply interesting to thousands. We have studied to introduce into our columns some remarks upon every picture that, in our opinion, deserved notice; and yet, no doubt, we have omitted several, the claims of which we should readily acknowledge if we were yet once again to enter the Gallery.

Fatigued as we are, after a very extensive, a very heavy, and a very anxious labour, our epilogue cannot be long. We have endeavoured to discharge our duty—and, in a word, we have, at least, the consciousness that we have discharged it, not only FULLY, but fairly. If we have been this year somewhat more critical than heretofore, we have not, we trust, been less generous and considerate. The Arts are making huge strides onwards; it becomes, therefore, most essential to give a right bias to a right purpose, and induce high motives to accomplish high results.

We repeat, the Exhibition is, on the whole, most satisfactory; it affords unquestionable evidence of a general improvement; and is very encouraging to those who desire rather the universal than the partial advancement of the Artists of Great Britain.

## PAINTING, SCULPTURE, AND ARCHITECTURE.

## THE ATHENÆUM,

Price FOURPENCE,

(STAMPED TO GO BY POST, FIVEPENCE.)

## CONTAINS

FULL and ACCURATE REPORTS of the LECTURES delivered this Year at the Royal Academy,

BY

Prof. COCKERELL—Six Lectures on Architecture;  
Prof. Sir R. WESTMACOTT—Six Lectures on Sculpture;  
Prof. HOWARD—Six Lectures on Painting;

WITH

Critical Notices of the Exhibitions at the Royal Academy—the British Institution—the Society of Painters in Water Colours—the New Society—the Suffolk-street Gallery—of New Works added to the National Gallery—Picture Sales—New Prints—New and important Publications relating to Art—and much interesting information, showing the progress of Art both at home and abroad.

[The January Numbers have been reprinted, and the Series for the Year may, therefore, be had complete.]

## THE ATHENÆUM,

JOURNAL of LITERATURE, ART, and SCIENCE,

Price FOURPENCE

(Stamped to go by Post, Fivepence).

The ATHENÆUM is printed in large Quarto. During the present year, on TWENTY-FOUR PAGES of three columns each, and twice (to find room for the above important Lectures without trenching on other subjects of interest) on THIRTY-SIX PAGES, but without additional charge). It contains—

## REVIEWS,

With copious Extracts, of every important New ENGLISH WORK, and of the more important FOREIGN WORKS.

## REPORTS

Of all that is interesting in the Proceedings of the LEARNED and SCIENTIFIC SOCIETIES; with Abstracts of the more important Papers.

## AUTHENTIC ACCOUNTS

Of all Scientific Voyages and Expeditions—Criticalisms on Art—Critical Notices of New Prints, New Music, the Opera, Concerts, Theatres, &amp;c.

BIOGRAPHICAL NOTICES OF  
DISTINGUISHED MEN.

## ORIGINAL PAPERS AND POEMS.

With Miscellaneous, including all that is likely to interest the informed and intelligent.

\*.\* The ATHENÆUM is published on Saturdays, but is re-issued each Month, stitched in a wrapper.

Also, this day, with Title-page and Index, bound in cloth, price 1/1.

THE VOLUME FOR 1842 OF  
THE ATHENÆUM.

IT CONTAINS

A COMPLETE HISTORY OF THE LITERATURE OF THE PERIOD,

OF THE PROGRESS OF ART,

and of the

PROCEEDINGS OF THE LEARNED AND SCIENTIFIC SOCIETIES;

And is an invaluable Present to Friends residing in the Colonies, or in Foreign Countries.

The ATHENÆUM may be ordered of all Booksellers and News-vendors, either in Weekly Numbers or Monthly Parts.

BOOKS PUBLISHED BY Wm. S. ORR and CO., London; and W. CURRY, Jun., and CO., Dublin.

In 8vo., with 28 Illustrations by PHIZ, 15s. cloth, **THE COMMISSIONER; or, DE LUNATICO INQUIRENDO.** "It is, in short, in all respects, a work of first-rate merit."—*Scotsman*.In 8vo., price 12s. in cloth, **CONFESSIONS of HARRY LORREQUER.** By CHARLES LEVER, Esq. With 22 Illustrations by PHIZ."An exceedingly droll set of confessions, most assuredly, full of high spirits, keen observation, rich invention, and a talent for placing everything of ordinary or extraordinary occurrence in the most ludicrous light possible."—*Morning Post*.In 2 vols. 8vo., price 24s. in cloth, **CHARLES O'MALLEY, THE IRISH DRAGOON.** By CHARLES LEVER, Esq. With 44 Illustrations by PHIZ."Beyond comparison the pleasantest book of our times."—*Standard*.In one vol. 8vo., price 14s. cloth, **JACK HINTON, THE GUARDSMAN.** By CHARLES LEVER, Esq. With numerous Illustrations by PHIZ, on Steel and Wood, and a fine Portrait of the Author, after a Miniature by Lover."Mr. Lever's style seems to improve with every fresh attempt at authorship. There is a breadth and finish about this work which none of his earlier productions possessed, while the same spirit of drollery and fun which first commended him to the public exists as fresh and unflagging as ever."—*Derry Sentinel*.

In Monthly Numbers, with Illustrations by PHIZ, price One Shilling each,

**TOM BURKE OF OUR'S.** By CHAS. LEVER, Esq. Nos. 1. to IV. already published."A pleasant, interesting, and spirited story."—*Salopian Journal*.

Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

MILLER'S SILICA POWDER.

MILLER'S GLASS MEDIUM

FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

MILLER'S VENETIAN OIL.

MILLER'S VENETIAN VARNISH.

MILLER'S VENETIAN GROUND CANVASS.

MILLER'S COLOURS FOR PAINTING ON GLASS.

MILLER'S GLASS MEDIUM

FOR WATER-COLOUR PAINTING.

No. 1. For first colouring or laying on masses of colour.

No. 2. For second colouring, glazing, and finishing.

MILLER'S SKETCHING COLOURS.

MILLER'S ANTHYDOR,

FOR SKETCHING AND PAINTING.

MILLER'S MINIATURE TABLETS.

MILLER'S DRAWING-PAPER,

Made of pure linen only, without undergoing any chemical process.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

MILLER'S GLASS MEDIUM,

FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'Guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

Any of the above Media may be thinned, according to the taste of the Painter, with Venetian Oil.

MILLER'S SILICA POWDER.

If this powder be mixed stiff upon the palette with a small portion of Venetian Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

MILLER'S VENETIAN OIL.

Pictures painted entirely with this oil, upon being submitted to the action of the blowpipe, will vitrify, showing they possess the properties described as belonging to Venetian Pictures when put to the same test.

If a picture should become dull from the action of the atmosphere, or be covered with a bloom, through the use of indifferent varnish, by washing it with cold water, and then applying a little of the above oil with an old silk handkerchief, it will entirely remove the bloom, and bring out the colours in all their original lustre.

MILLER'S GLASS MEDIUM,

FOR WATER-COLOUR PAINTING.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

T. M. begs to call the attention of Artists to his new Drawing-Paper, made of pure linen only, without undergoing any chemical process.

MANUFACTORY, 54, LONG ACRE, LONDON.

# SPLENDID ENGRAVINGS

RECENTLY PUBLISHED BY

GRAVES AND WARMSLEY,

PRINTSELLERS AND PUBLISHERS IN ORDINARY TO HER MAJESTY, 6, Pall Mall.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 55.

LONDON: JULY 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, 26th May, 1843.

Her Majesty's Commissioners hereby give notice:—  
1. That whereas various statues in bronze and in marble, of British Sovereigns and illustrious personages, will be required for the decoration of the New Palace at Westminster, artists are invited to send models to be exhibited for the purpose of assisting the Commissioners in the selection of sculptors to be employed.

2. The models are to be sent in the course of the first week in June 1844, to a place of exhibition hereafter to be appointed.

3. The specimen, or specimens not exceeding two in number, to be sent by each artist, may be either prepared for the occasion, or selected from works already executed by him within five years prior to the date of this notice.

4. The works may be ideal or portrait statues, or groups, but not reliefs. The subjects are left to the choice of the artists. The materials are to be such as are commonly used for models and casts. The dimensions are to be on the scale of an erect human figure not less than three nor more than six feet.

5. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

6. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 15th of March, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, 16th June, 1843.

Her Majesty's Commissioners hereby give Notice:—  
1. That whereas carve-work in wood will be required for various parts of the New Palace at Westminster, and in the first instance for the doors of the House of Lords, artists are invited to send specimens in this department of Art, to be exhibited for the purpose assisting the Commissioners in the selection of persons to be employed.

2. The specimens are to be sent in the course of the first week in March 1844, to a place of exhibition hereafter to be appointed.

3. The specimens are required to be designed in general accordance with the style of decoration adopted in the New Palace. Outlines in lithography, showing the dimensions of the principal door of the House of Lords, may be obtained at the Architect's offices in New Palace Yard.

4. Each exhibitor is required to send one and not more than two designs for an entire door, drawn to the scale adopted in the outline, viz., two inches to a foot; and one carved panel, or part of a panel and frame-work, not exceeding four feet in the longest dimension, representing a part of such design in the full proportion. The objects forming the details of decoration, in conformity with the conditions above expressed, are left to the choice of each artist. The material of the carved specimen is to be oak.

5. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

6. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, June 16, 1843.

Her Majesty's Commissioners hereby give notice:—  
1. That whereas various windows in the New Palace at Westminster will be decorated with stained glass, artists are invited to send specimens in this department of Art, to be exhibited for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The specimens are to be sent in the course of the first week in March 1844, to a place of exhibition hereafter to be appointed.

3. The specimens are required to be designed in general accordance with the style of architecture and decoration adopted in the New Palace. Outlines in lithography, showing the dimensions of the windows, may be obtained at the Architect's offices in New Palace Yard.

4. Each exhibitor is required to send one and not more than two coloured designs for an entire window, drawn to the scale adopted in the outline, viz., two inches to a foot; and one specimen of stained glass, not exceeding six feet in the longest dimension, representing a part of such design in the full proportion. Such specimen of stained glass to be glazed up in lead, and framed in wood.

5. The objects forming the details of decoration may be either figures or heraldic devices relating to the Royal Families of England, or a union of the two, and may be accompanied by borders, diapered grounds, legends, and similar enrichments.

6. The invitation to send specimens for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

7. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## THE CARTOONS.

### ROYAL COMMISSION OF FINE ARTS.

—Her Majesty's Commissioners hereby give notice, that the EXHIBITION of the CARTOONS sent in pursuant to the notices published in April and July 1842, and March 1843, will open in WESTMINSTER HALL on MONDAY NEXT, the 3rd of JULY.

During the first fortnight the Exhibition will be open (from nine o'clock in the morning till seven in the evening) to visitors paying One Shilling; afterwards, for a period hereafter to be fixed, the Public will be admitted gratis, excepted on Saturdays, on which days the Exhibition will be closed till two o'clock, and then open to visitors paying one shilling.

The price of the Catalogue will be Sixpence. The money received will be applied, as may hereafter be determined, to the promotion of the Fine Arts.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL ACADEMY OF ARTS,

TRAFALGAR-SQUARE.—The EXHIBITION of the ROYAL ACADEMY is now OPEN: Admission (from Eight o'clock till Seven), One Shilling; Catalogue, One Shilling. HENRY HOWARD, R.A., Sec.

## BRITISH INSTITUTION, PALL MALL.

The GALLERY is OPEN DAILY from Ten in the Morning until Six in the Evening, with one room containing the Works of Sir Joshua Reynolds, the next with those of Ancient Masters, and the third with those of deceased British Artists. Admission, One Shilling; Catalogue, One Shilling.

WILLIAM BARNARD, Keeper.

THE THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER-COLOURS, at their GALLERY, PALL-MALL EAST, WILL CLOSE on SATURDAY, the 15th inst. Open each day from Nine till dusk: Admission, One Shilling; Catalogue, Sixpence. R. HILLS, Sec.

EXHIBITION of SIR GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing Portraits of all the Members of Parliament, also a portrait of her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk. At the Egyptian-hall, Piccadilly. Admission 1s.

## TO ARTISTS.—ART-UNION OF LONDON.

—SIXTY POUNDS will be given for the best consecutive Series of not less than TEN DESIGNS in OUTLINE (size 12 inches by 8). The subject is left at the option of the Artist, but must be illustrative of some epoch in Sacred or British History, or be taken from the work of an English author. Simplicity of composition and expression, severe beauty of form, and pure, correct drawing, are the qualities which the Committee are anxious to realize in this series. If it should be deemed expedient to engrave the compositions selected, the Artist will receive a further remuneration to superintend the publication. The Drawings, accompanied by a sealed letter, containing the name and address of the Artist, must be forwarded to the Honorary Secretaries on or before Lady Day, 1844.

GEORGE GODWIN, } Honorary  
LEWIS POOOCK, } Secretaries.  
4, Trafalgar-square, June 20th, 1843.

## EAST OF ENGLAND ART-UNION.—TO

ARTISTS.—The Committee having deemed it advisable to POSTPONE the opening of the Exhibition from the 20th of July to SATURDAY the 5th of AUGUST, those Gentlemen to whom their Circular has been addressed are requested to forward their works to Mr. Green, 14, Charles-street, Middlesex Hospital, on or about the 31st day of July.

GEORGE SKIPPER, Hon. Sec.  
Norwich, June 21, 1843.

## TO ARTISTS.—The notice of those Painters

and Amateurs who have not yet had an opportunity of inspecting a picture painted exclusively with Silica Colours and Glass Medium is respectfully directed to No. 288 in the present Exhibition of the Royal Academy. The subjoined are extracts from the ART-UNION of June 1843, relative to this picture:—"No. 288 'The Hindoo Gentleman, Dwarkanauth Tagore,' F. R. SAY. Painted by subscription for the Town Hall, Calcutta. An admirable subject for a pictorial portrait. This celebrated person is painted in the full costume of the Hindoo of condition: he is turbaned and shawled; and so successfully has the artist met the spirit of his subject, that he has not only left his work a meritorious portrait, but a valuable picture. The colouring is wonderfully brilliant. In this respect, indeed, it is beyond all question the most remarkable work in the exhibition."

"It is only just to state that this picture is painted with the medium and colours prepared by Mr. MILLER, of 54, Long Acre, London, and for which he has more than once challenged a trial in the advertising columns of the ART-UNION. Few who look upon this work will hesitate to believe that its peculiar brilliancy is derived from some unusual means; what those means really are, it is the duty of every artist to inquire and ascertain."

NEW AND ORIGINAL PICTORIAL WORKS, TO AID DOMESTIC AND  
PUBLIC INSTRUCTION,

PUBLISHED BY

THOMAS VARTY, 31, STRAND, LONDON.

T. VARTY respectfully solicits an inspection of the Works contained in his select Educational Catalogue, as peculiarly suited to advance practical knowledge, and, under a most pleasing form, facilitate the progress of the Pupil and lighten the labour of the Teacher. The Catalogue will be forwarded, prepaid, on application.

## CHRONOLOGICAL PICTURES OF ENGLISH HISTORY.

DESIGNED AND LITHOGRAPHED BY JOHN GILBERT.

The Literary portion of the Work by ELIZA CARTWRIGHT, with Fac Simile Autographs of the Sovereigns and distinguished Characters, accompanied with Descriptive Sheets of Letter-press.

"Artistic talent of no ordinary kind is engaged."—

*Athenaeum.*

"One of the best helps to the study of English history we have seen."—*Churchman.*

"Most capitally executed drawings. The striking impression which this graphic painting produces upon all minds need not be indicated."—*Church of England Quar. Review.*

Size—Imperial folio, Price each Part, in a Wrapper, 7s. 6d., beautifully tinted—Every Part contains Five Plates, and each Plate illustrates a Reign.

TO BE COMPLETED IN SEVEN PARTS.—PART VI. NEARLY READY.

## VARTY'S GRAPHIC ILLUSTRATIONS OF ANIMALS;

SHOWING THEIR UTILITY TO MAN,

IN THEIR SERVICES DURING LIFE AND USES AFTER DEATH.

One Folio Volume, exhibiting nearly 60 Animals in upwards of 300 Illustrations, beautifully coloured, bound in cloth and lettered, £2 2s.; Single Prints, 2s.

"It is an Encyclopaedia in itself."—*Literary Advertiser.*

LONDON: THOMAS VARTY, YORK HOUSE, 31, STRAND.

**ART-UNION OF LONDON.**—E. F. WATSON, of 201, Piccadilly (Agent to the above Society), having designed a CHARACTERISTIC FRAME expressly for the Engravings given to its Members, respectfully begs leave to call their attention to it, and feels assured that all who may favour him with their esteemed commands will have every reason to be well satisfied with both price and workmanship; indeed the lively interest he takes in the above Society causes him to frame the Engravings at an unusually low price.

**SCHOOL OF ART, No. 6, CHARLOTTE-STREET, BLOOMSBURY.**—This School, established and carried on many years by Mr. SASS for the EDUCATION OF ARTISTS, and the Instruction of Amateurs in Figure and Landscape Drawing and Painting in Oil and Water-colours, Modelling, Etching, &c., possessing every requisite as a Probationary School for the Royal Academy, is now conducted on the same principles as heretofore by Mr. F. S. CARY, with the aid of Mr. REDGRAVE, A.R.A., who is engaged as Visitor.

The Studios contain an extensive collection of Casts from the Antique, Drawings, Works of Art, and Folios of Prints from the Old Masters.

\* There is a separate Establishment for Ladies.

Mr. F. S. CARY may be spoken with from nine till eleven, at the School, where printed particulars of the terms are to be had.

**LOOKING GLASSES, &c.**—To ALL PARTIES FURNISHING. — W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which, for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4s. 6d. per foot; a variety of Picture Frames; Cheval and Toilet Glasses; Regliding in all its branches. Every article manufactured upon the premises, 19, Moorgate-street, City.—A few Second-hand Chimney Glasses for sale.

**TO ARTISTS and other Professional Gentlemen.**—To be LET, a very excellent and spacious PAINTING-ROOM, lighted by sky-light, with sun-blind, fitted up complete; with other accommodations if required. Apply at No. 30, Howland-street, Fitzroy-square.

"No work that has hitherto appeared to aid the study of British history can at all compare with it."—*Lit. Ad.*

"An elegant mode of insinuating a knowledge of English history."—*Asiatic Journal.*

"The Tabular Sheet embraces much valuable information."—*Polytech. Jour.*

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

Most Valuable Collection of Paintings, including some Works of the very highest class, and of singular interest.

**MR. C. WARTON** begs to announce that he has been favoured with directions from the respected Proprietor, to submit to PUBLIC AUCTION at the Hall of the ATHENÆUM, PLYMOUTH, on Tuesday, August 29th, at Twelve o'clock, the WHOLE of the VALUABLE COLLECTION of PICTURES forming the well-known and justly-admired DEVONPORT GALLERY. Amongst numerous other specimens it may be sufficient at present briefly to notice Hilton's celebrated chef-d'œuvre, 'The Angel delivering St. Peter from Prison;' his grand design of 'Risah.' T. S. Cooper's splendid work, 'A Summer Noon;' and its companion, 'The Intercepted Raid;' also his noble work entitled, 'Amongst the Mountains of Cumberland;' and two others by this great painter. Three of the finest works of the lamented G. Chambers; beautiful specimens of J. B. Pyné, P. Naysmith, J. P. Davis, Reynolds, Gainsborough, Ibbotson, Breemberg, Procaccini, Cayp, Guercino, J. Steen, S. Rosa, Velasquez, Zuccarelli, Le Seur, &c. &c.

Descriptive Catalogues are preparing, and will be ready in good time at Plymouth, Manchester, Liverpool, and at the principal Inns in the Western Counties, and (of Mr. C. WARTON, No. 38, Threadneedle-street, near the Bank of England.

**THE LATE SIR DAVID WILKIE'S WORKS.**—The admirers of the Works of the late Sir D. WILKIE will be gratified to learn that a beautiful copy of the celebrated Picture of 'THE VILLAGE FESTIVAL,' by that great master, is now in the hands of Mr. EDWARD SMITH, to be engraved in the line manner, on a large scale, so as to range with the other Engravings already published from the same Painter. Further particulars will be given in a future advertisement.

June 26th, 1843.

### TO SUBSCRIBERS of ART-UNIONS.

Subscribers of Art-Unions are respectfully informed they can be supplied with every description of Ornamented, Gilt, and Fancy Wood Picture Frames of the first quality, at prices lower than by any other manufacturer in the kingdom, by P. GARBANATI, Working Carver and Gilder, 19, St. Martin's-court, St. Martin's-lane. An extensive assortment of Picture-frames of the newest and richest designs kept ready. A list of the prices of Frames for the Engravings of the Art-Union of London and National Art-Union sent pre-paid to any part of the kingdom.

**DOBBS AND CO'S RELIEVO MAP OF ENGLAND AND WALES.**—The object of this novel application of Embossing is to give additional interest to a scientific study of GEOGRAPHY and GEOLOGY. The various hills are exhibited in relative proportion, and no expense has been spared to render the map accurate and deserving of British patronage. The copies coloured geologically comprise the latest arrangement of strata approved by the President of the Geological Society.

Coloured and Varnished (stout card board) 10s. 6d.  
Coloured Geologically ..... 13 6  
FRAMED and VARNISHED for Libraries, Offices, &c., 4s. 6d. or 7s. 6d. extra.

London: Dobbs and Co., 134, Fleet-street, and 13, Soho-square.

### PICTURE-FRAMES, CHIMNEY GLASSES,

CONSOLE TABLES, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regilt, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—be, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and CO., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

## NOTES ON BRITISH COSTUME.

## PART THE FIFTH.

BY FREDERICK W. FAIRHOLT.

## THE TUDORS.

Civil war, with all its attendant horrors, being happily terminated, and a union of the rival houses of York and Lancaster effected in the persons of Henry VII. and his Queen Elizabeth; the King devoted his attention chiefly to the filling of his coffers, and the effectual subjugation of the nobles to the crown. Mean, crafty, and rapacious, no opportunity was lost for the full employment of any means by which these ends might be brought about; and his chosen satellites, Empson and Dudley, carried out his wishes or commands so thoroughly, that their decapitation on Tower-hill, in the second year of the reign of his son, was welcomed as an act of necessary justice by men of all classes. Thus intent on the acquisition of wealth and power, and being naturally of a reserved and crafty disposition, Henry's court was at no period either a gay or a brilliant one; nor do we find this monarch displaying anything gorgeous in personal decoration in the portraits still remaining of him. The effigy on his tomb at Westminster is habited in a simple furred gown and cap, very similar, and in no degree more kingly, than those rendered familiar to the eye in portraits of the great Erasmus. A sobriety of costume was almost consequent to these regal tastes; and we find, accordingly, little to note in the way of absurd extravagancies, which, at this period, do not appear to have been indulged in by the great majority; exquisite there were, and will be in all ages and times, and we find some in these

days expensive enough in their costume to excite the ire of the sober-minded, though the general complaint was, that a feminine taste reigned among the lords of the creation, and certainly, when we find them wearing "stomachers" and "petticoates," we may indeed begin to doubt the sex of the wearer.\*

The first of the figures here engraved is an excellent sample of a dandy of this period, and occurs among the illuminations in the copy of the "Roman de la Rose," among the Harleian MS. in the British Museum, forming No. 4425 of that collection, of which this volume is a distinguished gem.† His short doublet, with its preposterously-long sleeves; his close-fitting vest, low in the neck and displaying the shirt above; his tight hose and broad-pointed toes, are all characteristic of a gay youth of this period. His hair is long, and flows over his shoulders in a profusion of curls, which were encouraged by the beaux, who as carefully eradicated moustachios and beard. A small cap or coif covers the upper part of the head, over which is worn a hat which might rival that worn by Chaucer's Wife of Bath, which he declares to have been as broad as a buckler or target. An enormous plume of variegated feathers adorns this obtrusive article of costume, the stem of each feather being ornamented with rows of pearls or jewels. These plumed hats are frequently depicted slung behind the back of the wearer, and the head covered only by the small coif. The square cap (an article of headdress peculiar to this period, when it first came into fashion) is worn by the companion figure of our cut, copied from Harleian MS. 19, C. 8, which was executed in 1496, as appears from the date given at its close. It is a fair specimen of the general form of dress adopted by the gentlemen of the age, and the most fastidious could find little to complain of in its sober gravity. A long gown with wide

\* The "stomachers" were coverings of cloth, velvet, or silk, over which the doublet was laced. The "petticoates" (according to the genuine signification of the word) were short or little coats, distinguished as such from the longer outward garments.

† The illuminations in this volume may be justly considered as triumphs in this particular branch of Art. Nothing can exceed their brilliancy and beauty; while, as works of Art, they may take a high place. Many of the allegorical figures are conceived with a power, and yet executed with a delicacy and finish, that is quite extraordinary. Shaw, in his "Dresses and Decorations," has copied two of the most interesting of these figures; yet, notwithstanding the carelessness with which they have been engraved and coloured, they give but little idea of the exquisite beauty of the originals, which, in tenderness and finish, rival the miniatures of Oliver. The public and artists in general, who only know ancient illuminations by the copies they see in our various books, can have no idea of their great merit as works of Art, or of the vigour and elegance, and beauty of colouring displayed by these ancient artists, whose names are unrecorded. Their works have afforded much genuine and valuable information during the progress of these notes; and in quoting, probably for the last time, this MS. as an authority for costume, it is but just to give this parting tribute to their merits.

sleeves, fastened by a girdle or narrow scarf at the waist, lined with a darker cloth, and open from the waist to the neck, falling over the shoulders and displaying the inner vest, gives a staid and dignified appearance to the figure not unbecoming the most philosophical. If any ornament was adopted, it appears to have been confined to the under-garments, which are sometimes embroidered; the shirt at the collar and wrists, where it now caught the eye, was also frequently decorated with needlework.

The ladies appear to have devoted their attention principally to their headdresses, no remarkable change or novelty occurring in any other part of the dress, which consisted of a full gown, not inconveniently long or trailing, with full sleeves confined at the wrist, or hanging loose and wide, according to the taste of the wearer. They wore their gowns close round the neck, or open from the waist, displaying the stomacher, across which they were laced; the waist being confined by a girdle, with a long chain and pendent ornament hanging from its central clasp in front, after the old and approved fashion so long in vogue, and of which many instances have already been given. Unmarried ladies generally wore their hair hanging down the back—a fashion universally adopted at nuptials, if not in use at other times. Close cauls of gold network occasionally confine the hair, similar to those worn during the time of Henry IV. and V.; or close-fitting conical caps, perfectly Greek in form, and very probably adopted from some "maid of Athens" in the olden time. From the East also the turbans may have been imported, which are also seen, and were worn sometimes plain, and sometimes crossed by bands of pearls and jewels meeting on their summits. There is, however, in all these changes nothing to offend good taste, or disgust the eye; the horned headdresses that so stirred the wrath of the censors, have for ever disappeared, and the steeple-cap has followed; the mere lappets remaining, and, growing a little more ample, encircling the neck of the fair wearer in its close warm folds: a quality that recommended it so much to the elderly members of the fair sex, that we do not find it discarded for many a long year, and at last only giving place to the still closer and warmer hood that became so general in the reign of Elizabeth.

The most striking novelty in headdress, and which gave a peculiar feature to the latter part of the reign, was the adoption of the diamond-shaped headdress, of which two examples are given above. The foremost figure, holding the book, is Margaret Countess of Richmond, and mother of Henry VII.; and it is copied from a portrait of this lady, formerly belonging to Dr. Andrew Giffard, and now in the British Museum. The stiff rigidity of the entire dress, and its thoroughly conventual appearance, is a characteristic feature of the costume worn by the aged ladies of the day, who not unfrequently ended life in a nunnery, either as lady abbess, or even as mere sisters, to the no small emolument of the church. The gorget or wimple worn by the Countess covers the neck, and reaches

half-way to the elbow; it has a deep plait round its bottom. The angular headdress is perfectly white, bending its harsh corners over the head, the sides stiffly reposing on the shoulders; a long white veil hanging from it behind. The other example is obtained from Holbein's portrait of Henry's Queen, Elizabeth of York, and is of a more ornamental kind, though still sufficiently harsh and ugly in its features. It is lined with ermine, and decorated with jewels and embroidery; and although apparently inconvenient in shape, retained an ascendancy in the world of fashion for more than half a century. The original picture is in the collection at Hampton Court.

"Bluff King Hal" is so well known from Holbein's portraits, that it would be perfectly unnecessary to detail his costume or descent on his general appearance. The same remark may apply to the other monarchs of his line, each of whom are "old familiar faces" in the memory of all, and are readily accessible to the artist by laying out a few shillings at any print-shop. The space hitherto devoted to the description of the monarch, and his or her costume, will henceforward be devoted to the less known dresses worn by the nobility, the middle classes, and the commonalty. As general pictorial encyclopedias of costume for this reign, I may refer to the celebrated pictures now exhibited at Hampton Court, and representing the embarkation of Henry at Dover, May 31, 1540, to meet Francis I. in "the Field of the Cloth of Gold" between Guisnes and Ardres, in the June of that year. Both these sovereigns were at that time young and gay, loving display, and all the pomp they and their retainers could muster was lavishly exhibited on this occasion. The old chronicler Hall, who was present at this famous meeting, has left us a dazzling detail of the gorgeous scene, in which cloth of gold and cloth of silver, velvets and jewellery, become almost contemptible by their very profusion. "Henry," he says, "was apparelled in a garment of cloth-of-silver of damask, ribbed with a cloth-of-gold, as thick as might be; the garment was large and plaited very thick, of such shape and making as was marvellous to behold;" the horse he rode having, according to the same authority, "a marvellous vesture, the trapper being of fine gold in bullion, curiously wrought." Such was the insane desire to outshine each other felt by the English and French nobility present on this memorable occasion, that they mortgaged and sold estates to gratify their vanity, and changed their extravagantly-splendid dresses twice each day during the meeting.

"—To-day the French,  
All clinquant, all in gold, like heathen gods,  
Shone down the English; and, to-morrow, they  
Made Britain, India: every man that stood  
Show'd like a mine. Their dwarfish pages were  
As cherubims, all gilt; the madams, too,  
Not us'd to toil, did almost sweat to bear  
The pride upon them."

An exceedingly interesting series of bas-reliefs, five in number, exist at Rouen, also delineating this celebrated event. They are chiselled beneath the windows of a side-gallery in the courtyard of that magnificent erection the Hotel du Bourgtheroulde, at Rouen.\* They have been copied by M. Monfaucon and our countryman Ducarel, in both instances equally wretchedly. They are worthily lithographed by Nodder, in that portion of his magnificent work, the "Voyage Pittoresque dans l'ancienne France," devoted to Normandy; but this is a rare and very expensive book. As Rouen is—thanks to steam—at so short a distance from us that we can reach it in a day and a half, and is now so frequently

\* This structure was commenced at the latter part of the 16th century, by "Guillaume Leroux, Seigneur du Bourgtheroulde," and finished by his son. A more richly-decorated residence can scarcely be conceived; it is covered from base to roof with bas-reliefs and carvings of a most interesting kind, the busts of Henry and Francis decorating the gate. "Tout cette composition est dans le style qui était en usage sous Louis XII. et Francis I., mélange du gothique et de l'antique renouvelé."—M. Langlois.

visited, it is earnestly to be wished that some public-spirited individual would obtain casts of these interesting historic monuments, which are also valuable as works of Art, and present them to some public institution, where they might be seen by all who wished to consult them. Such casts are preserved in the museum of that ancient city, where they are, in fact, less wanted; but indeed, as Sterne truly observes, "they manage these things better in France," with a committee appointed to preserve and protect their national antiquities, and a Government with an ever-open hand to receive and reward anything conducive to the improvement of the Art and the country.

The Rouen bas-reliefs display the nobles in the feathered hat, already described in the previous reign; their dresses being little else than a series of puffs and slashes, which, coming into fashion at this time, was carried to an absurd extent by the nobility and gentry. A marked difference in costume occurred at the commencement of the sixteenth century, one of the innovations being hose fitting close to the leg, having the upper portion from the knee, or the middle of the thighs, slashed, puffed, and embroidered distinct from the lower. The upper portion being termed *hose*, and the lower *stocking*; in modern phraseology we have retained the latter word, but have erroneously applied the term *hose* to the same articles of apparel, but which, in fact, became ultimately *breeches*; "a pair of hose" being the word used in describing the capacious puffed garments that officiated in the place of these more modern articles at this time. The large wide sleeves, also now worn, were attached to the shoulders of the vest of both sexes, and were separate and distinct articles of apparel, being sometimes of another colour; in the wardrobe accounts of the period, mention is frequently made of "pairs of sleeves."

Holbein's portrait of the Earl of Surrey, at Hampton Court, has been engraved above, as affording a fine example of the usual costume of the nobility and gentry during Henry's reign. The Earl is entirely arrayed in scarlet, of different depths of tint, and wears a short doublet or vest, fastened round his waist by a girdle, to which his dagger (in a richly gilt case) is appended. The vest is open in front, displaying his shirt, which is white, ornamented with black embroidery, as also are the ruffles. His jacket, or jerkin, is made broad at the shoulders, and very wide in the sleeves, which are gathered and puffed and slashed in the first fashion; the dress altogether having a strange contradictory look of heaviness and lightness, occasioned by the

superabundant breadth and exceeding shortness of these articles, contrasting curiously with the tight stocking and small flat cap, which eventually displaced the broad hat and its enormous circle of feathers worn at the early part of the reign. The shoes are also scarlet, and probably of velvet, crossed by bands of a darker tint, and enriched with jewels. He wears the *bragetto*, an article of dress that, singularly enough, was adopted throughout Europe at this period, both in civil and military costume (and to which I can but barely allude), and continued in use for more than a century.

Noble ladies and gentlewomen dressed much as usual, the chief novelty being in the head-tire. The two specimens engraved above will show in what the changes principally consisted. The elder figure to the left is copied from Holbein's portrait of Catherine of Arragon, as engraved by Houbraken, in 1743, when the original was in the possession of Horace Walpole. It is exceedingly plain, and exhibits the ordinary costume of the elderly ladies of that period, being merely a close unornamented hood. Wide sleeves, and a gown with a train, would complete the dress of this figure. Her successful rival, Anne Bullen, has afforded us the other example; her head-dress shows us the way in which the diamond-shaped one of the previous reign had been modified, and rendered more elegant and portable. Kerchiefs appear to have been folded about the head at this time, one end hanging over the shoulders, and presenting sometimes a mere mass of confusion, not so easily understandable as this of Anne. If we imagine the lower part of Anne's dress and the sleeves similar to those worn by Queen Catherine Parr, the subject of our next cut, we shall obtain an idea of her entire costume.

This very interesting portrait of the seventh and last wife of "the rose without a thorn,"\* is

\* This flattering title was applied to Henry when he first ascended the throne, by a people sickened with the avaricious rule of his parent, and overjoyed to welcome a young and gallant sovereign in his place. It was stamped upon his coin as a compliment; he converted it into a bitter satire.

at Glendon Hall, in Northamptonshire. The Queen wears a simple, but elegant, headdress of richly ornamented goldsmith's work; her waist is long and slender, and is encircled by a chain of cameos hanging nearly to her feet, and having a tassel at its end; such chains continued very fashionable until the beginning of the next century. Her sleeves are of the remarkable form now usually adopted; exceedingly tight at the shoulder, and having a wide border of fur, displaying an under-sleeve richly decorated, slashed and puffed, and disproportionately wide to the wrist, where it is bounded by a ruffle. These singular sleeves are at once indicative of this period of English female costume; and the portraits of Mary and Elizabeth, when princesses, by Holbein, now in Hampton Court, exhibit them wearing such. The open gown, and the richly-wrought petticoat, are embroidered in cloth-of-gold, the entire dress being of regal splendour.

As a specimen of the ordinary costume of the people during Henry's reign, two figures are here selected from the painting representing the siege of Boulogne, formerly at Cowdray, Sussex, and published by the Society of Antiquaries.\* The male figure is dressed in a plain doublet, full hose to the knees, tight-fitting stockings, a small close cap, and narrow ruff round the neck. The female wears a close hood, and her face is partially covered by a muffler, an inconvenient and unnecessary article, that became fashionable now, and which lingered among the elders of the female community until the reign of Charles I.† The sleeves and front of the dress is slashed and puffed, and the long girdle is held up by the hand. If we imagine these ornamental parts of the dress away, and the pendant strip of cloth removed from the shoulders of the male figure, we shall have the costume of the commonality in its simplest and commonest form. The ordinary dress of a plain countryman at this period is well described in Armin's "Nest of Ninnies," who narrates an anecdote of a simple Shropshire man, the uncle of Will Somers, King Henry VIII.'s kind-hearted and favourite jester, who paid his nephew a visit at Court: he was "a plain old man of threescore years, with a buttoned cap;‡ a lockram falling band,§ coarse but clean; a russet coat; a white belt of a horse-hide; right horse-collar, white leather; a close round breech of russet sheeps' wool, with a long stock of white kersey, and a high shoe with yellow buckles."

In the thirty-third year of his reign, Henry passed a sumptuary law regulating the apparel of each member of the community, and which would

\* This interesting old mansion, filled with antique furniture, curious historical paintings, and ancient manuscripts, was reduced to ruin in 1793 by fire. Fortunately the most interesting of the paintings had been engraved and published by the Society named above.

† It will be remembered as a very essential part of Falstaff's disguise as the "fat woman of Brentford;" and a disquisition on this article of dress, accompanied with several engravings, will be found in Douce's "Illustrations of Shakspeare."

‡ The flaps, that fell over the ears, turned up and secured by a button.

§ A narrow collar of coarse linen, turned down round the neck.

appear to have exerted some influence over their usual mode of dressing, as it involved some consequences to the wearer; such as obliging him to keep always ready a horse and armour for the wars, provided his apparel displayed any costly article forbidden to all but those persons of a liberal income, sufficient to maintain the necessary equipment for battle; and this was enforced by a heavy fine, which in those days of constant pillage was no doubt carefully sought after by the jackals of a sovereign who probably got through more wealth than any other English king. The ladies were also effectually reached by the same law, through their husbands; for it was enacted, that "if any temporal person of full age, whose wife not being divorced, nor willingly absenting herself from him, doth wear any gown or petticoat of silk, or any velvet in her kirtle, or in any lining or part of her gown (other than in cuffs and purfies\*), or any French hood† or bonet of velvet with any habilliment, paste, or edge of gold, pearl, or stone, or any chain of gold about her neck, or upon any of her apparel, have not found and kept a light horse furnished, except he have been otherwise charged by the statute to find horse or gelding, shall lose £10 every three months while he has so neglected."

The dress worn at this period pretty accurately defined the class and station of the wearer—persons in the middle rank of life generally dressing with much simplicity; indeed the gentry and higher classes, towards the end of this reign, would appear to have indulged in display only on great occasions, and the extravagancies of the field of cloth-of-gold became mere matter of history. During the reign of his son a soberer costume appears to have prevailed: the dress of the commonality is here given from the print of his progress from the Tower, through the City to Westminster, on the day of his coronation, published by the Society of Antiquaries, from the painting at Cowdray.

The female dresses are very plain; a hood or cloth cap, with a border hanging round the neck, is worn by the foremost figure, and a gown with a close collar and tight sleeves, having small puffs at the shoulders. The other female wears a cap, something after the fashion of the one immortalized by its constant appearance on the head of the unfortunate Mary Queen of Scots, and known to all persons as *her* cap. An open gown displays the neck, which was covered by the partlet, an article similar to the modern habit-shirt, and which lingered longest, as most comfortable fashions do, among the old ladies. The male figure is dressed in a plain jerkin, doublet, and hose, and wears a flat cloth cap on his head, of the fashion usual with citizens, and which was ultimately known as "the City flat cap:" it is the "statute-cap" of Shakspeare; so called because

\* Edgings or borders. Velvet gowns and martins' fur were prohibited to all persons but those possessed of 200 marks per annum; the fur of black genet was confined to the royal family, and that of sables to nobles above the rank of a viscount.

† See cut of Anne Bullen.

they were strictly enjoined to be worn by the 13th of Elizabeth, cap. 19, for the encouragement of the home manufacture; the law being, that "if any person above six years of age (except maidens, ladies, gentlewomen, nobles, knights, gentlemen of 20 marks by year in lands, and their heirs, and such as have borne office of worship) have not worn upon the Sunday and holiday (except it be in the time of his travel out of the city, town, or hamlet, where he dwelleth) upon his head one cap of wool, knit, thicked, and dressed in England, and only dressed and finished by some of the trade of cappers, shall be fined 3s. 4d. for each day's transgression."

The portraits of Edward VI. render this cap perfectly familiar to us, and it may be still seen upon the heads of "the Blue-coat boys," as the scholars on his foundation of Christchurch are called; indeed, their costume has come down to us the same in many points as at the period of its erection. The long blue gown, buckled round the waist, being the ordinary dress of a grave citizen of that time.\* The manners of the age, too, were influenced by the gravity and thoughtfulness of the youthful King, who possessed a mind far above his years, and whose untimely death produced an incalculable amount of evil to the nation. With such a King, and an all-absorbing thirst for knowledge on subjects of the gravest import felt by the community at large, the frivolities of fashion had but little claim on their attention, and plain serviceable clothing appears to have been that usually adopted by the great mass, while a richer quality, and a sparing amount of ornament, denoted the higher rank of the wearer.

It was not, indeed, until after the accession of Elizabeth that any striking change in costume occurred. Mary was too fully occupied in what she considered to be religious duties, to trouble herself much about the trifles of the toilet, and having, to her entire satisfaction, considered—

"Fire, and sword, and desolation,  
A godly thorough reformation,"

she set about the work with a zeal worthy of a better cause, and fully succeeded in earning herself an immortality the very reverse of that usually desired by her sex. During her awful reign the minds of all parties were too fully occupied to study fashions, and a great simplicity is visible in all contemporary representations of persons and events. The woodcuts in the original edition of Fox's "Martyrology," which depict many an event in this reign, will fully display the extreme simplicity that now appeared in the dresses of all classes of the community; and the portraits of Mary and her husband, as painted by Sir Antonio More, her court painter, exhibit little traces of the splendours that characterize those of her father, or her sister Elizabeth. She, indeed, was most stringent in her notions about apparel in general, and by enactments (1 & 2 Phil. and Mary, cap. 2) declared, "If any man born within the Queen's dominions (except it be the sonne and heir apparent of a knight, or the sonne of one of higher degree, or such as may dispend xx pounds by yeare, in lands, offices, fees, or other yerely revenues for terme of life; or be worth two hundred pounds in goods, or have been head officer in any citie, borough, or towne corporate; or be the Queene's servant in ordinarie, and wearing her liverie) have worne any manner of silke, in or upon his hat, bonet, nightcap,‡ girdle, scabbard, hose, shoes, or spur-lethers, shall lose ten pounds for each day's offence. And if any per-

\* See examples in Herbert's "History of the Twelve great Livery Companies of London," Burgon's "Life of Gresham," or the many portraits and effigies of citizens still existing in our metropolitan churches; particularly St. Saviour's, Southwark; St. Helen's, Bishopsgate; and St. Andrew's, Undershaft.

† Nightcaps during this reign and that of Elizabeth, and until the Protectorate, were richly wrought with lace and embroidery, and formed of costly materials. The portraits of the nobility of the age are frequently depicted in them, and the copies given by Lodge will afford many instances of this fashion.

son knowing any servant of his to offend herein, have not (within 14 days next after such knowledge) put him out of service, if he were no apprentice or hired servant;\* and if he were, then if he have not put him away at the end of his time, or if having put him away therefore, he have retained him again within one year next after the offence, he shall forfeit one hundred pounds."† I quote these sumptuary laws as much, or more, for the purpose of detailing the minutiae of dress at these times, as for the display of ignorant despotism they evince, none of the framers of these sapient enactments imagining, any more than the clamorous satirists, that the excess in apparel, which they declare would clothe many poor families, would, if restrained, never be applied to such purposes, while the demand by the wealthy for such superabundance clothed and fed many a workman who would else have starved.

Mr. Hollis's work on "Monumental Effigies" has furnished me with the originals for the above cut, which delineates those of Margaret and Elizabeth, the wives of Sir John Talbot (who died in 1550), and are buried in Bromsgrove Church, Worcestershire. They are exceedingly interesting examples of a style of costume that completely disappeared in the ensuing reign, after retaining its ascendancy for more than half a century. The diamond-shaped headdress worn by the first lady may be considered as the latest form of that peculiar fashion; the hair beneath is secured by bands, or ribbons; the gown is low in the neck, displaying the partlet, with its embroidered border, and the gold chains so fashionable with the upper classes at this time; the gown is encircled at the waist by a loosely-fitting girdle, and is held up in front by jewelled bands passing round the loins, displaying the petticoat beneath; the sleeves are wide, showing the pleated and puffed under ones, with the ruffle surrounding the wrist. A crimson mantle envelops the back part of the figure, falling over the shoulders and hanging to the feet; and the entire dress is interesting for its display of the modification and variation adopted since its first introduction to fashionable society, as we see it worn by Queen Catherine Parr, in the previous cut.

The companion figure wears her hair parted in front from the centre, in the simplest manner, and she wears a close-fitting cap of dark cloth or velvet, enriched with a border of gold lace and rows of gilt beads; it takes the shape of the head, and was frequently worn with a point descending to the centre of the forehead. A long gown, with a turn-over collar, envelopes the en-

tire figure; it is open in front down the whole length, being secured by ties at regular intervals, and having no girdle at the waist; small puffs are on the shoulders, from whence descend long hanging sleeves reaching to the knee, through which the arm was never placed, and they are ornamented by diagonal stripes. Ruffles decorate the wrist, but the entire dress is exceedingly, not to say unbecomingly, plain.

In 1558, the lion-hearted Elizabeth ascended the throne. She dressed, of course, as her sister had dressed before her, and so did the ladies of her court; but the queen, who could gather upwards of two thousand dresses of all nations for her wardrobe, and highly resent the conduct of an over-zealous divine for preaching against excess in apparel before her and her court in St. Paul's, was not the lady to remain clothed like her grandmother. We not only find a total change, therefore, in the female costume during her reign, but a superabundance of finery. We never think of her termagant majesty, as Walpole truly observes, without picturing a sharp-eyed lady with a hook nose, red hair loaded with jewels, an enormous ruff, a vaster farthingale, and a bushel of pearls bestrewn over the entire figure. "It seems," says Mr. Planché, "an act of supererogation to describe the personal costume of 'Good Queen Bess;' her great ruff rises up indignantly at the bare idea of being unknown or forgotten. Her jewelled stomacher is *piqued* to the extreme, and her portentous petticoats strut out with tenfold importance at the slight insinuated against their virgin mistress, who lived but for conquest, and thought infinitely less of bringing a sister-queen to the block than of failing to make an impression on a gentleman usher." Of a truth the tiger-blood of Henry VIII. was too apparent in the female members of his family.

The costume here given of a lady and a country-woman has been selected, by way of giving a fair notion of that generally worn about the middle of Elizabeth's reign. The lady has been copied from the print by Vertue, representing the Progress of Elizabeth to Hunsdon House; and it is supposed to represent Lady Hunsdon. The female beside her is copied from a brass, dated 1596, in the collection published by Cotman. Both figures require little in the way of explanation, and will be clearly understood by the allusions to the various articles of apparel worn at this time, which I shall quote from the works of contemporary writers. The most notorious of the satirists of the day was Philip Stubbs, who published his "Anatomie of Abuses" in 1583, and gave therein a luminous picture of the excesses reigning in England at that time, not, however, without highly colouring the picture with his own puritanical feeling. Thus he declares,—"No people in the world as so curious in new fangles as they of England bee," and laments, according to the fashion of all grumblers at apparel time out of mind, that it is

impossible to know "who is noble, who is worshipful, who is a gentleman, who is not," because all persons dress indiscriminately in "silks, velvets, satens, damaskes, taffeties, and such like, notwithstanding that they be both base by birth, meane by estate, and servile by calling; and this," he adds, with due solemnity, "I count a greate confusion, and a generall disorder: God be merciful unto us."

But let us listen while he descends into particulars. He is justly indignant at the painting of faces that now became usual; and, after some pages of argument, he speaks of the hair, "which of force must be curled, frised and crisped, laid out in wreathes and borders, from one ear to another. And, lest it should fall down, it is under-propped with forks, wires, and I cannot tell what, rather like grim stern monsters than chaste Christian Matrons. At their haire thus wreathed and crested are hanged bugles, ouches, rings, gold, silver, glasses, and such other childish gewgaws." Bad as all this is declared to be, he expresses his utter horror at the still worse custom of wearing false hair, and dying it "of what colour they list." Then comes a tirade against French hoods, hats, caps, kerchiefs, "and such like" of silk velvet and taffety, which even merchants' wives "will not sticke to goe in every day," with close caps beneath of gold and silver tissue; and, worse than all, "they are so far bewitched as they are not ashamed to make holes in their ears, whereat they hang rings, and other jewels of gold and precious stones;" but this, he says, "is not so much frequented amongst women as men."

But the zeal of Master Philip absolutely boils over when he speaks of the great ruffs worn by the ladies; and "the devil's liquor, I meane *starche*," with which they strengthen these "pillars of pride." His rage increases when he considers that, "beyond all this they have a further fetch, nothing inferiour to the rest, as, namely, three or four degrees of minor ruffles, placed *gradatim*, one beneath another, and all under the *maister devil ruffe!*" each of them "every way pleated and crested full curiously, god wot. Then, last of all, they are either clogged with gold, silver, or silk lace of stately price, wrought all over with needle worke, speckeled and sparkeled here and there with the sunne, moone, and starres, and many other antiques strange to behold. Some are wrought with open work doune to the midst of the ruffe and further; some with close work, some with purled lace so closed, and other gewgaws, so fastened, as the ruffe is the least part of itself." In those days, when umbrellas were unused, much did it delight these saints to see the ladies caught in a shower, for "then their great ruffles strike sayle, and flutter like dishecloutes" about the necks of the wearers, the poor "drowned rattes" they so religiously detest.

They also wore "Doublettes and Jerkins, as men have here, buttoned up the breast, and made with wings, welts, and pinions on the shoulder pointes, as mannes apparell is for all the world. Their gounes be no lesse famous then the reste, for some are of silk, some of velvet, some of grograme, some of taffatie, some of scarlet, and some of fine cloth, of x, xx, or xl shillinges a yard." To add to the extravagance, they are overlaid with lace two or three fingers broad, or else edged with velvet six fingers broad, with sleeves hanging to the ground, or "cast over their shoulders like cowe tails." Then they have equally costly gowns and kirtles, "so that when they have all these goodly robes upon them, women seem to be the smallest part of themselves, not naturall women, but artificiall women; not women of fleshe and blood, but rather puppets or mawmets, consisting of rags and clouts compact together."

Not having the space that Stubbes allowed himself, I cannot do more than allude to the gaily-coloured silk, worsted, or cloth stockings he descants upon. The corked shoes, pantofles and slippers, black, white, green, and yellow, covered with gold and silver embroidery; the

\* That is, engaged for a stipulated time.

† Lambard's Eirenarcha, or office of Justice of Peace, 1599.

scarfs, the velvet masks, the scented gloves, with "the devil's spectacles,"—their looking-glasses, which they carried with them at the girdle wherever they went; must be dismissed with a mere mention.

The figure beside the lady in the previous engraving is a plain countrywoman of the time, with a simple ruff, and unpretending petticoats. Her head is covered by a kerchief which descends over the shoulders; a comfortable fashion, much in vogue with the soberer portion of the female community, and of which this is a good example. However, we are told that the country was at this time going rapidly to ruin, and simple innocence for ever put to flight by the inundation of London fashions. Listen to the lamentations of two old gossips in their chimney-corner, as given by William Warner in "Albion's England."

"When we were maids (quoth one of them),  
Was no such new found pride.

Then wore they shoes of ease, now of  
An inch-broad-corked high.  
Black kersey stockings, worsted now,  
Yea, silk of youthfull'st die:  
Garters of list, but now of silk,  
Some edged deep with gold,  
With costlier toys for coarser times,  
Than used perhaps of old.

Fringed, and embroidered petticoats,  
Now beg. But heard you named,  
Till now, of late, busks, perriwigs,  
Masks, plumes of feathers, framed;  
Supporters, postures, farthingales,  
Above the loins to wear?  
That be she ne'er so slender yet,  
She cross-like seems four-square."

They continue in strong terms to reprobate gray-headed wives who wear "youthful borrowed hair," condemn starch, and are highly indignant at the girls who will dress before the looking-glass, when they were obliged to be content with getting now and then a peep in "a tub or pail of water clear" when they were young.

Now, let us see what the gentlemen were doing all this time. Philip Stubbes has "anatomized" them as well as the ladies; and most efficiently has he wielded his lancet, and cut them up in a very workmanlike manner, from the crown of their heads to the soles of their feet. His satire will illustrate the points of costume exhibited in the above engraving; but I may just mention the authorities from which the figures are derived. The gentleman without the cloak is taken from the woodcut frontispiece to "the booke of Falconrie or Hawking," published in 1575; the cut representing Elizabeth and attendants enjoying that sport. The second figure is Lord Howard of Effingham, from the picture published by the Society of Antiquaries, representing Elizabeth's progress to Hunsdon House.

The great ruffs of the gentlemen, with their "supportasses or under-props of wire, covered with gold thread, silver, or silk," are condemned sufficiently; but the horror of it is, that "every peasant hath his stately bandes and monstrous ruffles, how costly soever they be." Then the shirts of all who can find money to purchase them by fair or foul means, "are wrought

throughout with needlework of silke, and such like, and curiously stitched with open seame, and many other knacks besides, more than I can describe: in so much as I have heard of shirtes that have cost some ten shillings, some twentie, some fortie, some five pound, some twentie nobles, and (which is horrible to heare) some ten pounce a peece; yea, the meanest shirt that commonly is worn of any doest cost a croune, or a noble at least, and yet this is scarcely thought fine enough for the simplest person that is."

The long-breasted doublets then come in for their share of censure: they were an Italian fashion, and are seen on the figure engraved above; they fitted the body tightly, and were carried down to a long peak in front, from whence they obtained the name of "peascod-bellied" doublets, and they were stuffed or "bombed" to the required shape. Then their "hosen," or breeches, are "of sundrie natures, some be called French hose, some Gallie, and some Venetian." The French hose are very round or narrow, and gathered into a series of puffs round the thigh. The "Gally hosen" are made very large and wide, reaching down to the knees only, with three or four guardes a peece laid down along either hose. And the Venetian hosen, they reach beneath the knee to the gartering place of the legge, where they are tied finely with silke pointes or some such like, and laid on also with rows of lace or gardes, as the other before."

The enormously wide breeches are shown in the figure engraved from the "Book of Hawking," and were much condemned by the satirists of the day; they were sometimes so inordinately stuffed with wool and other materials, that a gallery or scaffold was erected expressly to accommodate Members of Parliament who wore these monstrosities. Douce quotes a ballad which condemns those folks who

"—furnyshe forth their pryde:  
With woole, with flaxe, with hair also;  
To make their bryches wyde."

And among the Harleian MS. is preserved a "lamentable complaint of the countrymen for the loss of their cattelle's tails," which were used for stuffing such breeches. The best description of those articles of apparel is, however, in Thynne's poetical "Debate between Pride and Lowliness," typified under the form of a pair of cloth breeches of homely form, and a pair of newly-fashioned velvet ones. The former

"—were but of cloth, withouten pride  
And stitche, nor gard upon them was to siene;  
Of cloth, I say, both upper stock and neather,  
Paned,\* and single lined next to the side;  
Light for the wear, meete for all sort of weather"—

While the other

"—was all of velvet very fine,  
The neather stockes of pure Granada silke,  
Such as came never upon legges of myne,  
Their collar clear contrary unto mylke.

This breech was paned in the fairest wise,  
And with right satten very costly lined;  
Embroidered according to the guise,  
With golden lace full craftely engined."†

Stubbes also tells us that the nether-stocks were "curiously knitte with open seames doune the legge, with quirkes and clocks about the ancles, and sometye interlaced with gold and silver threads, as is wonderful to beholde." Then they wore cloaks of the richest material, covered with lace and embroidery; corked shoes, pantoffles, or slippers, equally richly ornamented, to the utmost of their means; and this extravagance was anxiously followed by men of all classes. In Thynne's poem just quoted, we have a description of a tailor, who appears in

"A faire black coat of cloth withouten sleeve,  
And buttoned the shoulder round about;  
Of xxs. a yard, as I beleve,  
And layd upon with parchment lace withoute.

\* Quilted and stitched across diagonally, so that they resembled the losenge-shaped panes of the old lattice windows.

† Invented.

His doublet was of satten very fine,  
And it was cut and stitched very thick:  
Of silke it had a costly enterlyne;"

His shirt had bandes and ruff of pure cambrick.

His upper stockes of silken grograine,  
And to his hippes they sate full close and trym,  
And laced very costly every pane:  
Their linyng was of satten as I wyn.

His neather stockes of silke accordingly;  
A velvet girdle round about his waist."

The soberer costume of the time may be seen in the next cut; the figures represent two celebrated men of the period: Tarlton, the famous actor; and Banks, the proprietor and exhibitor of a learned horse, which astonished all Europe by its pranks; but, travelling too far south, the Italians, believing it possessed by an evil spirit, and its master in league with the devil, burnt the unfortunate pair as sorcerers.

The figure of Banks is copied from the woodcut in the title-page of a pamphlet entitled "Maroccus Extaticus, or Banks's Bay Horse in a Trance," 1605. The figure of Tarlton, with his pipe and tabor, occurs in Harleian MS., No. 3885, and represents him, we are told,

"When he in pleasaunt wiae,  
The counterfet expresse  
Of clowne,† with cote of russet hew,  
And startups with the reste."

Sturtops was the name given to the boots reaching to the ankle and laced at the side, or fastened, as Tarlton's are, by a leather strap there. He wears a plain cap of cloth, a close-fitting doublet, fastened by a girdle from whence hangs his pouch, and long trousers. These two figures may be taken as fair average examples of the ordinary costume of countrymen and townsmen at this period. Banks's hat is of a fashion introduced in the early part of Elizabeth's time, and which eventually superseded caps altogether. Stubbes mentions, in 1593, "hats of a certain kind of fine hair, these they call bever hats, of xx, xxx, or xl shillings price, fetched from beyond the seas." They were also made of velvet, taffety, saraset, and wool, sometimes "sharpe on the croune, pearking up like the spere or shaft of a steeple; othersome be flat, and broad in the croune like the battlements of a house:" these hats were frequently decorated with feathers, and bands formed of gold and silver lace, and ornamented with jewellery. The many portraits of distinguished persons, living in this reign, will amply furnish all who consult them with many examples of fashions, to which I cannot even allude.

[The description of the clerical, legal, and military costume of this period will be printed next month, the space already occupied, and the necessity for considering it pretty much in detail, precluding the possibility of doing the whole in this number.]

\* Lining.

† Countryman.

## THE BRITISH INSTITUTION.

EARLY in the last month the usual exhibition of works of old and deceased British painters was opened to the public. The collection numbers 191 works of Art, sixty of which are productions of Sir Joshua Reynolds, and many of these among his most celebrated works. Sixty-two are by painters of the Italian and Low Country schools, and the remainder by deceased British painters, with the exception of two, which were added to the exhibition in compliance with a wish expressed to see some specimens of the modern German school: although two pictures are but a qualified compliance with the wish. Gladly would we have acknowledged an assent more freely pronounced, in the exhibition of a fair average sample of German Art, for the public are infinitely mystified thereat, discoursing of its professors as of veiled prophets, whose oracular dicta seem already to have obtained currency as tried proverbs.

On looking round a collection of the works of Reynolds, his manner is undoubtedly more obtruded upon us than on seeing occasional pictures. With regard to him, this is more striking than in respect of any other artist of our school; and had he ever seen a collection of his own works, they must have suggested to him thoughts similar to those entertained by a spectator. He is not, however, to be judged upon the score of manner, which more or less stamps the works of the greatest men. Foreigners, may even our own countrymen, call Reynolds a mere portrait painter. He was not a mere portrait painter; but granting this position, since portraits must be executed, there is surely infinite honour due to him who paints them best; and it cannot be denied that Reynolds painted heads of a certain character in a style superior to that of any other man who has ever broken such ground. This we are among the loudest in lamenting that he had not confined himself to simple and approved materials; the consequences of his discursive experiments have been the destruction of many valuable pictures.

## WORKS OF SIR JOSHUA REYNOLDS.

No. 4. 'George III. in his Robes'—The Royal Academy. This full-length picture is unpleasant; there can be no doubt of its truth; it is perhaps this which we cannot like. The composition is poor; but, on looking at the head, the grand accomplishment of Reynolds is there declared.

No. 5. 'The Death of Cardinal Beaufort'—Col. Wyndham. An upright gallery picture, with figures beyond the life size. This is not the style of Art wherein Reynolds shone; there is here no field for his power and sweetness. The Cardinal lies upon a bed with little else but his head and right arm seen; the extreme agony is upon him, and he grasps the bedclothes convulsively, under, as we may suppose, a foretaste of the torments to which Shakespeare condemns him. The expression is that of the despairing flesh, already forsaken by a soul seized upon by surrounding demons; the head is singularly disproportionate to those of the bystanders.

No. 6. 'Portrait of Sir Joshua Reynolds'—The Royal Academy. This is the well-known portrait with the red robes and Italian cap: it is too famous to require any eulogy here; the extremely heavy and opaque shadow, however, cast by the cap upon the head, so brilliant in other parts, is one of those aggravated absurdities into which this great man so often fell in his search after novelty.

No. 8. 'Strawberry Girl'—Samuel Rogers, Esq. This is the title given to the celebrated study of a child with a strawberry pottle on her arm. She looks, *povertella*, as if she were in utter disgrace, afraid to go to her mother, and yet not knowing whither else to go. There is nothing in this picture of a high tone; it is, however, extremely brilliant and beautiful. It is much to be lamented that the shoulders and upper part of the figure have been so loosely painted: so flat are those parts, that the head seems thrust forward from them.

No. 9. 'Girl leaning on a Pedestal'—Viscount Palmerston, M.P. We find, in parts of this figure, the liquid depth of shadow which is wanting in so many of the most valuable productions of the author. Portions of the picture are surpassingly beautiful.

No. 10. 'Queen Charlotte'—The Royal Academy. A companion portrait to No. 4 (George III.), and

being somewhat better than that work. The figure is extremely stiff, and looks too conscious of being painted.

No. 13. 'Lord Lansdowne, Lord Ashburton, and Colonel Barré'—Sir Thomas Baring, Bart. A conversation. The two lords wear robes, and are seated, while the Colonel stands habited in a plain flush brown suit, a favourite colour with Sir Joshua.

No. 15. 'Sir W. Chambers'—the Royal Academy. This portrait is sufficiently well known; the figure is seated, wears a maroon velvet coat, and is busied with an architectural design. The head is turned, but the glance is only momentary; he is so occupied with his ground plan that he has not a word for the spectator. This is one of the most powerful and characteristic portraits ever painted by Sir Joshua.

No. 16. 'Lady Cockburn, and her three Sons,'—Sir James Cockburn, Bart. One of the most beautiful productions of its class. Sir Joshua here has not only been "thinking of a ripe peach," but also of a bouquet of the rarest flowers: the lady is seated, with her children disposed most gracefully around her. This work, unlike so many by the same hand, is in a state of perfect preservation; the colour is, as usual, a prevalence of rich golden hues, the composition is unexcelled, and in the whole unequalled in its class.

No. 17. 'The Fortune Teller'—Earl Amherst. This has been often engraved. The fortune-teller is a gipsy, who is about to pronounce, anent the lines of the hand of a maiden, at the desire of a lover, or brother sitting by her. This is a celebrated picture, but its merit does not equal its reputation. The laugh of the girl is too hoydenish; nay, more, there is in it vacancy—imbecility, initiative of the intended effect.

No. 22. 'Admiral Lord Keppel'—Her Majesty. This is an admirable full-length portrait. The veteran stands on the sea-shore, leaning on the fluke of an anchor. Few pictures exhibit more prominently than this the license of Art; and we verily believe that if Reynolds could have induced the old fire-eater to acknowledge himself sunk in shadow up to the neck, he would have so painted him. Light and shadow divide the figure; the lower parts being darkened in a manner to tell even against a dark background.

No. 19. 'The Marquis of Granby'—Her Majesty. The figure, in a military dress, stands by a spirited charger. The composition is remarkably fine, but the head is unsupported, it is a spot in the picture.

No. 20. 'The Snake in the Grass'—Sir R. Peel. Cupid untying the girdle of a nymph who is extended on a shady bank. This celebrated picture has been engraved. Into what part soever of the composition the spectator may look he cannot escape the eye of the principal figure; and, having seen it once, its expression (for there is but one eye visible) will never be forgotten. The pose is not easy; it is characterised by that distortion which arises from leaning on the elbow.

No. 21. 'The Infant Academy'—Viscount Palmerston, M.P. This conceit is beautifully wrought out, by a group of children, one of whom is seated at the easel, while another plays the model with a most ludicrous effect. This valuable and beautiful production is one of the best of the remains of its author, though it exhibits imperfection in drawing.

No. 23. 'Lord Camden'—Duke of Grafton, K.G. The figure is seated and habited in black robes. The utmost simplicity prevails in the treatment of this portrait; nothing, however, can exceed the force and substantiality of the head: it is full of life and thought.

No. 26. 'Garrick between Tragedy and Comedy'—John Angerstein, Esq. No similar conception has ever been more felicitously realised than this: the *historiette* is made out in the perfection of the most intelligible allegory. Tragedy would retain Garrick; but in vain, he is triumphantly borne off by the laughing, fair-haired nymph Comedy; and his epology to Tragedy is one of the most eloquent passages of natural expression that has ever been painted.

No. 29. 'Mrs. Musters'—Col. Wyndham. A full-length figure in a garden scene. The face is one of those beautiful studies of which Reynolds well knew how to secure the most effective traits.

No. 34. 'Lady Hamilton as a Bacchante,'—T. Chamberlayne, Esq. The forcible and expressive abandon of this face is another of the triumphs of

the great painter. She is a bacchante in nothing but the face; this, however, is the picture, and it carries us beyond the mere canvas into the past and subsequent histories of a life.

No. 36. 'Madame Schindelin'—Earl Amherst. A head, which, if not known to be by Sir Joshua, is assuredly open to question. It is more thinly painted, finished with less freedom than usual, and strongly resembles some of the best French portraits of the middle and latter part of the last century.

No. 37. 'Mrs. Nisbett'—Hon. Edmund Phipps. Another head, the features of which are extremely beautiful. While looking at the half-closed twilight eyes we forget the towering mass of powdered hair which overhangs them.

No. 39. 'Sleeping Child'—Earl of Aylesford. Much, in effect and management, like some of the clearest of Rembrandt's pictures. It is surprisingly forcible; the light falls in unbroken breadth on the head and shoulders of the infant, bringing it out like a round and palpable substance; the flesh seems warm, as if it would yield to the finger, and the pose of the body and the nerveless yet life-like arm are highly descriptive of sleep.

No. 42. 'His Royal Highness the Duke of Gloucester'—Her Royal Highness the Princess Sophia Matilda. Not so happy as many other portraits of children. His Royal Highness is here perhaps seven or eight years of age, and is habited in the Cavalier costume; the arrangement will remind the spectator of Vandyke, without his spirit. It is below the average of the infant portraits of Reynolds.

No. 43. 'The Student'—Earl of Warwick. The title is unsupported by the character of the picture, which represents a boy carrying a large volume. The expression of the countenance is meant to point to toil and privation, but it is rather the assumed mask of canting beggary.

No. 44. 'Cupid and Psyche'—Samuel Rogers, Esq. This is rather a large picture, with the two figures presented under the effect of lamp-light. Cupid is sleeping on a shady bank, while Psyche contemplates him with a lamp in her hand, the light of which is admirably broken upon her and the sleeping figure.

No. 48. 'Count Ugolino'—Earl Amherst. The following passage from Dante supplies the subject of this picture:—

*I non piangeva, sì dentro impetrai  
Piangevan ell; ed Anselmuccio mio  
Disse, tu guardi sì padre che hai?  
Pero non lagrimai, ne rispos'io  
Tutto quel giorno, ne la notte appresso.*

Nothing can exceed the intensity of the despair depicted in the countenance of Ugolino—this is aided by the convulsed clasping of the hands; hope has forsaken him, and he seems only waiting until life also shall leave him.

No. 49. 'Puck'—Samuel Rogers, Esq. A very celebrated picture. Puck, it will be remembered, is triumphing on a toad-stool, having procured for Oberon the wished-for flower, Love-in-idleness. With respect to this figure, as an elfin in the abstract, the head is the most marvellous effort of its class; it is all that could be desired in a fleshly reality; we hear its chuckling laugh, and feel the intense scintillation of its restless malign eye. This has never been equalled, but as a whole he is too material. It is useless to say that any form could be assumed without injury to general character; in cases of this kind the main spirit of the subject can never be overlooked with impunity.

No. 55. 'Lord Richard Cavendish'—Duke of Devonshire, K.G. A gentleman habited in maroon velvet, having the light concentrated on the head. A very valuable work, exhibiting a greater degree of care than usual.

No. 56. 'Resignation'—Jeremiah Harman, Esq. A male figure, seen in profile, seated, and attired in a loose blue robe. The head is painted after the same model as that which has supplied the Ugolino. The expression is not that of resignation, for it is evident that there is an emotion within, yet alive to passing events.

No. 57. 'Innocence'—Jeremiah Harman, Esq. Portrait of a child in profile. She is seated on the ground, with a landscape background, and may be accounted among the most charming of the infantine figures of this great painter; the colour is pure, the texture fleshy, and the expression innocence itself.

Although every one of the pictures we mention

are sufficiently well known to require no comment here, it is nevertheless our duty to notice them, inasmuch as to these same works the English school is indebted for so much of the good which distinguishes it. Many of them are riven asunder by cracks—many look more faded than works that have been executed for four hundred years—sufficiently showing that those which have been most simply painted are the most durable. Among the works in the middle room are some of the highest excellence, and others valuable only on account of the names which attach to them.

No. 81. 'Group of Children,' RUBENS—Earl of Pembroke. Three or four children, one of which, with flaxen hair, is seen in all his pictures. The shadows are extremely thin and sketchy, and the lights of the flesh not sufficiently rich to afford texture; there is a consequent hardness, which extends even to the outlines. The picture is, however, as brilliant and pure as any work can be.
